Light was thrown on this by a further check at the University of California. Just 3 of the 77 faculty members in the physics department had signed the petition. One signature came from the biological sciences department—the field of science that is most concerned with radiation effect. Most of the signers at the university were in astronomy, mathematics, engineering, metallurgy, and statistics.

Why some take issue: Some scientists who were approached took issue with Dr. Pauling. One, Dr. Joel H. Hildebrand, wrote in a letter to Dr. Pauling that Dr. Pauling himself did not actually know the truth of some of the scientific statements he made in the petition.

"Scientists should be sure of their ground before claiming scientific authority for alarmist assertions," wrote Dr. Hildebrand, who is head of the department of chemistry at the University of California.

Another group, the Federation of American Scientists, makes frequent public criticisms of the United States Government's testing and development of nuclear weapons. The federation has about 2,100 members, and it, too, caught public attention about a week after the Pauling petition appeared, calling for an international ban on large nuclear explosions.

Once again the headlines read, "2,100 Scientists Seek Test Ban." Actually, the Federation's 2,100 members are by no means all scientists. Engineers are included. No scientific or other professional qualification of any kind is required for membership.

Even if the 2,100 members of the Federation were all scientists, and you added them to the 1,351 signers of the Pauling petition, you would get a total of 3,451 persons. This is about 1.3 percent of the 250,000 scientists in the United States.

Where scientists look: Scientists themselves look for information and guidance to such organizations as the National Academy of Sciences. This is a privately operated and supported group of 550 top scientists. The Academy was created by Congress in 1863 with a charter signed by Abraham Lincoln. Its chief function is to make scientific investigations for the Government.

Last year the Academy sponsored a study of radiation effects, which was conducted by leading men of science in the various fields concerned. The reports that the Academy issued on this study are now regarded by Government authorities and the scientific world in general as the most authoritative material available on the subject of radiation.

Administration's Long-Range Mineral Policy Not Effective

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. BARING. Mr. Speaker, the amount of thought, economic skill, and knowledge of the domestic-mining industry that has been put into the new

administration long-range mineral policy is well illustrated by the recommendation on copper which reads:

Copper has not been included in view of the continuing good price and the fact that a 2-cent excise tax comes into effect when the price falls below 24 cents. The current rate of domestic production is expanding, and the market situation is stable under current conditions.

Secretary of the Interior Seaton delivered this dictum to the Senate Interior Committee on June 4, 1957. At this time, the copper prices were beginning to fall and already had dropped from a high in early 1957 of over 55 cents per pound for electrolytic copper in New York to 31.288 cents per pound on June 6, 1957, and then on June 19 in London, the price was 27½ cents. Domestic mining companies have already started to curtail production, and at least one large company has been forced to a 5-day week rather than lay off men, the New York price now having dropped to 29 cents as of today.

Since the original Copper Tariff Act was passed with the 24 cents peril point, it has been pointed out by representatives of the copper industry that because of rising costs, the peril point now should be at least 30 cents per pound and the tariff or excise tax restored to at least 4 cents when the price falls below the peril point.

One of the principal mining unions points out in discussing the Seaton-Wormser program:

The situation in copper, while not yet as serious as that in lead and zinc, also contains many dangerous possibilities. A 30-percent drop in the price of copper in the past year, plus the accumulation of world stocks, in the face of rising supplies, similarly threatens the future life of many United States mines.

The statement continues:

The present administration's failure to project effective remedies for the now critical situation of the United States nonferrous metals industry places the issue squarely before Congress. Drastic remedies are now required to prevent what could develop into a collapse of an essential United States industry.

So much for the Secretary's knowledge of the needs of the domestic producers of one metal. "Continuous good price" and "stable market"—poppycock. And most of his reasons for not doing anything for a long list of other minerals are about as valid.

Use of the Word "Congressional"

SPEECH

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

The SPEAKER pro tempore. Under the previous order of the House, the gentleman from New Jersey [Mr. THOMPSON] is recognized for 1 hour.

SUGGESTED AMENDMENT OFFERED TO A MEASURE REGARDING CONGRESSIONAL QUARTERLY

Mr. THOMPSON of New Jersey. Mr. Speaker, I have seriously considered the two bills offered by the gentleman from Michigan [Mr. HOFFMAN] to bar from the mails certain publications having titles which convey the false impression that they are official publications of the United States Congress and to prohibit the use of the word "Congress" or "Congressional" as part of the title of any publication where the use of such word can reasonably convey the false impression that such publication is an official publication of the United States Congress.

The more I think about these two bills the more I am convinced that the gentleman from Michigan has called attention to a most serious and important problem.

My contribution to this important and timely matter would be to point out that these two bills deal with a far too limited part of the problem which arises from the unquestionably misleading use of names which, by long usage, surely import connections, or approbation, by official segments of our Government to the firms and businesses involved in such a way as to mislead the most perceptive citizen.

Take, for instance, the beverage known as Senators Club.

Even though this beverage by the quart or the fifth may never have been purchased by a Member of the other House it is my opinion—my curbstone opinion, that is—that the word "Senator" should never have been included in the name of this beverage.

The consumer, the buyer of goods and services, which all of us are, must often be under the impression when dealing with firms having certain words in their title, or when buying goods and services using these same words, that he is dealing with, or relying upon, a part of the Federal Government or purchasing items approved by it.

Nor should we be misled into placing too much reliance on such magazines as Editor and Publisher, the trade publication for the newspaper field.

I include here the following article and editorial from Editor & Publisher and an editorial from the Toledo Blade, Toledo, Ohio, of June 1, 1957, as part of my remarks:

[From Editor & Publisher of June 8, 1957]

SCHROTH SAYS CONGRESSIONAL QUARTERLY REPORT IS IMPARTIAL

WASHINGTON.—Representative CLARE E. HOFFMAN'S attempt to bar Congressional Quarterly reports from the mails (Editor & Publisher, June 1, p. 10), grows out of a politician's objection to having his voting record exposed, Thomas N. Schroth, Congressional Quarterly executive editor, declared this week.

The Congressman would also make it illegal for a private organization to use the name "Congressional."

Mr. Schroth maintained that Congressional Quarterly renders an impartial measurement of congressional activity to the press and public. "As a Congressman votes," he said, "so is his record put down by the systematic methods designed over the years by Congressional Quarterly."

The editor suggested that Mr. HOFFMAN'S pique may be due to the fact his own record of rollcall votes shows that his support of the President's program "consistently has been among the lowest in Congress, his direct opposition to the President's program among the highest."

Republicans and Democrats alike, Mr. Schroth said, rely on Congressional Quarterly measurements.

"Congressional Quarterly," he said, "is proud of its statistical studies and their contribution to better reporting. The studies are the first successful attempt to show clearly what the men on Capitol Hill actually are doing. It's to be expected that some Congressmen do not like this, but editors, reporters and—even more important—newspaper readers do."

Mr. Schroth denied Representative HOFFMAN'S assertion that Congressional Quarterly lists absence as a vote against the President's program. He said Congressional Quarterly counts only "yea" and "nay" votes and divides the votes cast by a Member in agreement or in disagreement with the President's position by the total number of votes included in the tabulation.

[From Editor & Publisher of June 8, 1957]

WHAT'S IN A NAME?

Representative CLARE E. HOFFMAN goes too far in his political retaliation against Congressional Quarterly. The Congressman would have been within bounds if he had limited his attack to criticism of the publication which seems to upset him. But he stepped out of bounds when he introduced legislation to bar it from the mails and to prevent its use of the names "Congressional" or "Congress" simply because he doesn't approve of its methods.

In fact the proposals are a little ridiculous. Congressional Quarterly has been in business for more than 13 years and no one has questioned its right to report on congressional activities and use that name prior to this time.

Congress has no vested right in either of those names. In the Washington telephone book there are 30 organizations listed under the name "Congress" and an additional 34 under the listing "Congressional." There is a monthly Congressional Digest published in Washington (with no official connection) and a Congress Weekly published in New York (by the American Jewish Congress). There are also the Congressional Information Bureau and the Congressional Film & TV Service in Washington. Does Representative HOFFMAN contend they shouldn't use the names either because they might imply some official connection?

We hope the Congressman doesn't contend that the voting records of Senators and Congressmen and the activities of Congress should not be reported and interpreted by anyone that chooses to do so.

[From the Toledo Blade, Toledo, Ohio, of June 1, 1957]

MORE THAN A NAME

In presenting a bill to bar fom the mails any publication bearing a name which conveys the false impression it is an official publication of the United States Congress, Republican Representative CLARE HOFFMAN, of Michigan, makes no bones about gunning for one particular periodical, the Congressional Quarterly. But the reason for his animus toward this digest, it is plain, derives from more than an objection to its name.

Congressional Quarterly is a reference and feature service subscribed to principally by newspapers of varied political position—Republican, Democratic, and Independent. It provides background information, statistics, and analysis dealing with the actions of Congress and its committees. Certainly none of these newspapers has the false impression that this service has any official connection with Congress nor are their politically literate readers likely to be misled as to the source of information provided by it.

Mr. HOFFMAN reveals a little more about the nature of his peeve when he asserts that Congressional Quarterly is spewing forth its pro-Democratic propaganda while it masquerades as a nonpartisan, objective source of information about the United States Congress. But competent editors of whatever political outlook are perfectly capable of detecting partisan propaganda without requiring an act of Congress to protect them. It is unlikely that even Democratic editors would pay out good money for a Democratic-slanted reference service much less those of Republican and Independent leanings. A propaganda bias in such a service would render it useless—a fact of which editors are probably more keenly conscious than is Representative HOFFMAN.

The information Congressional Quarterly contains usually speaks for itself—the voting records of individual Congressmen, their support of the President and their party, etc. How it is interpreted depends on the views of the interpreter. But Congressional Quarterly may be distressing some Congressmen merely by laying out the record so that it is somewhat easier for editors, the public, and other politicians to check on.

The United Press got into the act with this story which appeared in the Washington (Pa.) Observer:

HOFFMAN WANTS PROTECTION FOR WORD "CONGRESSIONAL"

(United Press story dated May 31, 1957, appearing in the Washington (Pa.) Observer)

WASHINGTON, May 29.—The Congressional Limited, Congress Variety Shop, and Congressional Roller Skating Rink better watch out.

Representative CLARE HOFFMAN, Republican, Michigan, wants to protect the words "Congress" and "congressional" from being used by just anyone.

The Congressman introduced bills Tuesday that would ban use of "Congress" or "congressional" in a publication title when that would convey the false impression that the publication is authorized by Congress. The bills also would ban the publications from the mails.

But that could be just the beginning. The Government already bans all commercial enterprises from implying they are Federal agencies by use of such titles as "United States" and "U. S." Congress might decide to extend the law to cover "Congress" and "congressional." And what about such hallowed words as "Senator," "Senate," and "House"?

The Washington telephone book alone contains 64 listings under "Congress" and "congressional" including the Library of Congress, which doesn't have to worry, and Eugene A. Congress, who might have to.

The listings include the Congress Barber Shop, Congress Beverage Co., Congress Heights Service Station, and Congressional Intelligence. The last listing is the name of a firm, not an editorial comment.

Then there are the listings under "Senate." They sandwich the United States Senate, also see United States Government, between Senate Delicatessen and a fellow named Sam Senator.

The House list is equally interesting. It includes House of Beauty, House of Beef, House of Prayer, House of Representatives also see United States Government, House of Spirits, House of the Good Shepherd, and Miss Werdna House.

Finally, there are the Washington Senators. But some baseball fans contend they need a change, anyway.

Considering all these matters, and confident that Editor & Publisher must somehow be biased, and must have some New Deal connections, and, at the very least, is undeniably New Deal in its sympathies—as can be plainly seen from the substance and tone of its June 8 editorial—and can, therefore, be totally ignored, I therefore, offer an amendment to the measures sponsored by the gentleman from Michigan, and trust that he will accept it in the spirit in which it is offered, to provide that it shall be illegal for any privately conducted enterprise to use as a part of its name those appellations calculated to convey the impression—obviously false—that such enterprise or enterprise or product or service has some connection with or authorization from any recognized agency of the United States Government or any of its departments or agencies or independent establishments.

I must confess I was shocked, when I got into this study I made, to find such a large number of the kind of listings in the Washington, D. C., telephone directory using the words "United States," "Congress," "Congressional, "President," "Presidential," "Senate," "Supreme Court," "Armed Forces," "Army," "Navy," "Marine Corps," "Air Force," "Coast Guard," and "Government."

Without exhausting the list of enterprises which thus, obviously, are misleading the public, including Members of this House, I am going to take a minute or two to list for your consideration some of the firms using words to which we must object.

Now, surely, anyone not familiar with the situation would suppose that these firms were managed by the Congress of the United States, or that the Congress had a financial interest in them.

This mistaken conception leads, in turn, no doubt, to the belief that the President's budget is more inflated that it really is.

Let us see how this works, for instance, in regard to the Congress Beverage Co., the Congress Barber Shop, the Congress Construction Corp., the Congress Hotel, the Congress Investment Corp., the Congressional Apartments, the Congressional Builders and Decorators Supply Co., Inc., the Congress Paint Manufacturing Co., Inc., the Congress Roofing Co., Inc., the Congress Theater, the Congress Development Corp., the Congress Variety Shop, the Congressional Beverages.

So far, there are two beverage companies, one barber shop, also construction, investment, development, and building supply companies involved, as well as two hotels, an apartment house, a variety shop, and a theater. This doesn't begin to exhaust the list, though it does exhaust me, somewhat.

Here, for the record, are the other firms which use the name "congressional": Congressional Camera Center, Congressional Cemetery, Congressional Cleaners, Congressional Club, Congressional Country Club, Congressional Daily, Congressional Day Camp, Congressional Digest, Congressional Drug Store, Congressional Electric Co., Congressional Films & TV Services, Congressional Florists, Congressional Flying Service, Inc., Congressional Information Bureau, Congressional Insurance Co., Congressional Intelligence, Inc., Congressional Liquor Store, Congressional Lumber Co., Inc., Congressional Manor Sanitarium, Congressional Meeting Hall, Congressional Motors, Inc., Congressional Radio & TV Sales & Service, Congressional Roller Skating Rink, Congressional School, Congressional Shopping City, Congressional Tile Co., Congressional Trucking Co.

Undoubtedly, consideration must also be given to the Republican Capitol Hill Club, the Congressional Relaxitorium of famed restaurateur Mike Palm, as well as to such beverages as Senator's Club. There is, also, the matter of the United States Rubber Co., probably one of the better known companies in this area.

So, it would seem, not only the citizen buying goods and services, but the taxpayer, too, whose dollars support the Federal Government is misled as things stand at present.

Undoubtedly, the taxpayer, who is not able to take the time to make a profound study of the subject, is led to think that the Congress is in the cemetery business, the club business, is running drugstores, electric companies, liquor stores, insurance companies, a roller skating rink, a trucking business, a flower shop and so on.

That trucking business, at this time, is most unfortunate, for, in the mind of the harried taxpayer, the Congress is tied in or linked up with Dave Beck.

So, while the Federal Government is large, goodness knows, it is, undoubtedly, not nearly as large as many taxpayers and citizens surely must believe that it is.

My proposed amendment will aid in correcting a false impression which must be held by a large body of citizens, as to the extent of the enterprises in which the Federal Government is engaged.

With this in mind accordingly, I have developed the following amendment and commend it to the attention of the gentleman from Michigan:

Amendment to H. R. 7803 offered by Mr. Thompson of New Jersey; On page 2, strike out line 1 and all that follows and insert:

"SEC. 712. False advertising or misuse of name to indicate connection with the United States Government: It shall be unlawful to use the words 'United States,' 'Congress,' 'congressional,' 'President,' 'presidential,' 'Senate,' 'Senator,' 'Supreme Court,' 'House of Representatives,' 'Armed Forces,' 'Army,' 'Navy,' 'Marine Corps,' 'Air Force,' 'Coast Guard,' 'Capitol Hill,' or 'Government,' or any combination or variation of those words, as a business or firm name, where the use of such words alone or with other words is reasonably calculated to convey the false impression that such business or firm has some connection with, or authorization from, the United States or any branch of the Government thereof, or any department or agency thereof, where such connection or authorization does not in fact exist.

"Whoever violates this section shall be fined not more than $1,000 or imprisoned not more than 1 year, or both."

(b) The analysis of such chapter 33 is amended by adding at the end thereof the following:

"SEC. 712. False advertising or misuse of name to indicate connection with the United States Government."

MORE ON THE PRESIDENT'S LEGISLATIVE PROGRAM

I took the floor on Wednesday, May 22, to discuss the President's legislative program and its lack of support by the so-called modern Republicans.

It was extremely interesting that the gentleman from New York [Mr. DEROUNIAN] took the floor immediately preceding me to launch an attack on the Congressional Quarterly.

The publisher of the Congressional Quarterly, we were informed, at one time, served with the Office of War Information under a Democratic administration.

This is supposed to be conclusive proof that the facts which the Congressional Quarterly cited were unquestionably wrong.

This attack upon Congressional Quarterly reminds me of the story of the old lawyer's advice to the novice just out of law school:

If the law is with you, talk about the law.
If the facts are with you, talk about the facts.
If the law and the facts are both against you, talk about your opponent.

Late in the evening of May 22 the gentleman from Montana [Mr. METCALF] was given the floor for half a minute and he asked a highly significant question.

That question and the reply for the Republican Party by the gentleman from New Jersey [Mr. FRELINGHUYSEN] was as follows:

Mr. METCALF. Mr. Speaker, will the gentleman yield?

Mr. DEROUNIAN. I yield to the gentleman for a half a minute.

Mr. METCALF. I wish either the gentleman from New Jersey [Mr. FREYLINGHUYSEN] or the gentleman from Wisconsin [Mr. LAIRD], one of those gentlemen who has been attacking the weighting of the Congressional Quarterly, would explain something to me, because I am interested in it, due to the fact that I am attacked at every election for not supporting the President and I am somewhat chagrined. Would the gentleman explain how we should weight these various rollcalls? How would you weight the difference between a rollcall on contribtuion to the World Health Organization and a rollcall in support of the President's Middle Eastern proposition?

Mr. FRELINGHUYSEN. I would say on that that I would certainly not myself make an effort at delivering a major speech on the basis of such thoroughly unreliable information which everybody should realize does not represent support or opposition to anybody.

Of course, it can readily be seen that the gentleman from New Jersey simply begged the question.

He did not answer the gentleman from Montana, nor, so far as I can find, has anyone else on the Republican side answered the question.

Attacking the Congressional Quarterly clearly is no answer.

You will be interested in the fact that I have found that the members of the Republican Party take an entirely different approach to this publication when they think it is politically expedient to do so.

I have been doing some research on this and in order to set the matter straight I am presenting here some statements showing what the Republicans have said at those times when it suited their purpose to rely on the Congressional Quarterly.

I want to say at this point, that it is very interesting to find Republicans taking out after the Congressional Quarterly as they did at the time of my speech on May 22 and as they have several times since.

And then, on other occasions, quoting the Congressional Quarterly favorably when it suited their purpose.

So, as I say, in order to set the matter straight here is what my research has turned up.

Consistency is a virtue, I think, and what I would say to my good friends on the other side of the aisle is that they should make up their minds on this matter and not continue to blow hot and cold on alternate days on such an important matter.

For good measure, here also are what editors of newspapers have said about the Congressional Quarterly. I must point out that they, as a rule, have been much more consistent in their support of the Congressional Quarterly.

Some occasions when Republicans cited the Congressional Quarterly to their advantage:

[From the Washington Post and Times Herald of September 28, 1956]

TRUTH SQUAD DEFENDS REPUBLICANS IN CONGRESS

KANSAS CITY, MO., September 27.—The Republican congressional truth squad today rebutted charges made here last night by Democratic presidential nominee Adlai E. Stevenson that Republicans in Congress had failed to support President Eisenhower.

The truth squad, composed of Representatives WILLIAM WIDNALL, of New Jersey, and DONALD L. JACKSON, of California, called the charge "loose talk."

The Congressional Quarterly shows they said, "that Republicans supported Mr. Eisenhower 72 percent of the time on 99 rollcalls while the Democrats voted with the Administration only 48 percent."

Republican memo dated July 21, 1955, issued by the staff of the Republican Policy Committee, volume 1, No. 28, pages 2 and 3:

SURVEY SHOWS DEMOCRATS LAGGING ON PRESIDENT'S PROGRAM

The Congressional Quarterly, a private publication of Washington, D. C., specializing in congressional affairs, reported July 15 another one of its running box scores on the President's batting average with the Democratic-controlled 84th Congress. Although Democratic leaders pledged cooperation with the President last January, they are certainly dragging their feet as Congress turns into the home stretch, the survey shows.

Of 200 Presidential requests for legislation between the opening of the session and June 29, the score looks like this:

Enacted into law, 52 (or 26 percent).
Still in process, 79 (or 39.5 percent).
Setback (but may be revived), 5.
Rejected, 5.
No action, 59.

PARTY SUPPORT

On a total of 69 rollcall votes (40 in the Senate and 29 in the House) in which President Eisenhower's proposals were in issue:

	In Congress as a whole	Senate	House
	Percent	*Percent*	*Percent*
Republican support	64	71	62
Democratic support	53	57	51

PARTY OPPOSITION

On the same 69 rollcalls, the measure of party opposition was:

	In Congress as a whole	Senate	House
	Percent	*Percent*	*Percent*
Republicans in opposition	23	15	26
Democrats in opposition	37	30	39

In other words, whether party performance is measured by support or opposition, Republicans in the 84th Congress to date have a better record of cooperation with the President than have the Democrats.

Republican memo dated August 18, 1955, volume 1, No. 32, page 7:

The Democratic-controlled 1st session of the 84th Congress caused President Eisenhower's batting average on his legislative program to drop to 0.463 from the sparkling average of 0.646 the previous Republican 84th Congress gave him in 1954, Congressional Quarterly weekly report reported August 12.

The publication, a private journal of Washington, D. C., which specializes in congressional affairs, said the batting average compilation indicated the extent of Mr. Eisenhower's success with his requests to Congress.

Congressional Quarterly said it tabulated 207 Presidential requests to the recent session, including 31 requests resubmitted to the 84th Congress from the 83d Congress. Of this total, Congressional Quarterly said the 84th Congress approved 96, or 46.3 percent. On the other hand, the Republican-led 83d Congress received 232 legislative requests, and approved 150 for an average of 64.6 percent. The publication said only specific requests for legislative action by the President himself were used for the compilation.

Newsweek magazine said in its issue of August 15 that President Eisenhower's criticism of the Democratic Congress for failing to enact important parts of his program "underscored this fact: Of his 200 most important recommendations, only 52 were passed. The year before, with a Republican Congress, the President had got 150 of his 232 recommendations through."

Republican National Committee news release dated October 20, 1954:

EISENHOWER GOT 53 PERCENT BETTER COOPERATION FROM CONGRESS THAN TRUMAN DID

President Eisenhower got 53 percent better cooperation from Congress in enacting his proposals than Truman did during his administration.

Leonard W. Hall, chairman of the Republican National Committee, said that an analysis of a box score compiled by an independent and nonpartisan news service organization in Washington, the Congressional Quarterly, shows that as a leader Mr. Eisenhower did remarkably better with Congress than did his predecessor.

For the 6 years from 1947 to 1952, Mr. Truman got 42.9 percent of his proposals approved by Congress. Mr. Eisenhower did 53 percent better than that, getting 65.9 percent of his proposals adopted in the 2 years of the 83d Congress.

In considering the 64 key or major legislative projects proposed by the President to the Congress this year, the score is even better. President Eisenhower got 54 of these enacted into law, for a batting average of .840. The Congressional Quarterly tabulates all the proposals submitted by the President to Congress.

Mr. Hall pointed to the comparison as a convincing reason for electing a Republican House.

In Washington with Harold Lovre, volume 8, No. 29, dated August 2, 1956:

It's too early to evaluate the work of this Democratic-controlled Congress, but it can already be shown that much less support

was given to President Eisenhower's legislative program than in the session ending 2 years ago. In 1953, under a Republican-controlled Congress, the President received 73 percent support and in 1954, 65 percent approval. Under the Democrats this fell to 46 percent in 1955 and probably will be around 35 to 40 percent this year. He was citing Congressional Quarterly figures.

Newsletter, Your Washington Review, by Congressman JERRY FORD (Republican, Michigan), August 23, 1956:

According to figures of the Congressional Quarterly the Democrat controlled 84th Congress backed President Eisenhower on 72 percent of the 192 rollcalls in both sessions that presented clear-cut tests of support for his views. In comparison, the Republican 83d Congress supported Ike's position on 164 or 83 percent of 198 rollcalls involving his legislative program in 1953 and 1954. According to this same nonpartisan digest my overall box score supporting President Eisenhower in the 84th Congress stood at 91 percent. In this last session which ended several weeks ago my Ike batting average was 94 percent.

Newsletter, memo by Congressman JOHN W. BYRNES (Republican, Wisconsin), July 31, 1956:

IKE SUPPORT

It is perhaps symptomatic of the President's popularity that one of the Democrat leadership's boast, as Congress adjourned, was that the Democrats had given Ike 75 percent of what he asked for. Unfortunately, this boast does not square with the compilation made by Congressional Quarterly, a nonpartisan reference service, which stated that the 84th approved 46.1 percent of the President's program, compared to 73 percent of Ike's program enacted by the Republican 83d Congress.

SUPPORT OF DEMOCRAT PROGRAM

In addition to judging the Congress on how well it supported Ike, the standard set by the Democrat majority itself can be used. Last November, Senator JOHNSON, Senate majority leader, proposed a 13-point "program with a heart"; 42.8 percent, or about half, of this program was enacted. Question: Will Democrats, who like to give Congresses a name, now call the 84th "the half-hearted Congress"?

Mr. Meade H. Alcorn, Jr., chairman, Republican National Committee, on Meet the Press, NBC television program, June 2, 1957:

Mr. ALCORN. One of the major issues will be the fact that we have seen, I think, a very unusual and a very unhappy spectacle during this Congress. Ninety-four percent of the President's program is still unacted upon and is still bottled up in Congress. And I think one of the issues, if not indeed the major issue, will be that in 1958 in order to have an effective administration of the people's affairs—unless the people simply want a stalemate and I don't believe they do—the executive should be entitled to have a Congress which will be at least in part sympathetic with the program of the party. In 1953 and 1954 when we had a Republican Congress, the President of the United States was successful in getting about 75 percent or 76 percent of his program through; in 1953 well over 60 percent; I think 65 percent in 1954. Then when we had a Democrat Congress come in in 1955 and 1956, the Congress gave him about 46 percent of his program. Now those figures don't lie and they demonstrate—(interruption).

These figures cited by Mr. Alcorn are taken from Congressional Quarterly tabulations.

Robert C. Crane, publisher, Elizabeth (N. J.) Daily Journal:

We find this material the best and most succinct reporting on the Washington scene, as well as the most educational material we can use in our columns.

Barry Bingham, editor, The Louisville (Ky.) Times, The Courier-Journal:

The Courier-Journal finds Congressional Quarterly news features a source of unusual and interesting material which is not available elsewhere. We believe it adds to the thought content of our paper.

J. Walter Greep, editorial writer, Lubbock (Tex.) Avalanche-Journal:

Since most editorials on present day topics require considerable research, your service renders a real service to the editorial writer.

Edward Lindsay, editor, Lindsay-Schaub Newspapers:

We find Congressional Quarterly material quite useful in our editorial pages, both daily and Sunday. In the main, it is not only factual and thorough, but well presented background material on major issues, along with a running reportorial job on the behavior of Congress not available in quite so usable a form elsewhere.

J. R. Wiggins, executive editor, the Washington Post and Times Herald:

We find the material from Congressional Quarterly extremely helpful and useful, not only for publication, but as background and reference.

Wright Bryan, editor, Cleveland (Ohio) Plain Dealer:

We use Congressional Quarterly primarily as reference material for our editorial writers and our Washington Bureau. Occasionally we publish some of your material as prepared by you.

Arden X. Pangborn, editor, Oregon Journal:

Congressional Quarterly not only provides us with innumerable exclusive news stories, many of them vitally important to our own Northwest area, but also offers an invaluable editorial page reference service.

Its completeness, accuracy, and impartiality insures its constant use.

John Whalen, editorial page editor, Mitchell (S. D.) the Daily Republic:

I think Congressional Quarterly is doing a bangup job of providing important background and other supplementary information on issues involving Congress and the executive branch. What's more, it is doing so in a fearless and unbiased manner. We use Congressional Quarterly largely as documentation in editorials but also occasionally run the articles as editorial page features.

Richard F. Pourade, editor, the San Diego Union:

The makeup of Congressional Quarterly enables us to break complex issues up into many parts so that the reader does not become confused with an intermingling of facts, opinions, controversy and debate. The reports are strictly objective and the arguments separated and well balanced.

Leslie Moore, executive editor, Worcester (Mass.) Telegram:

We find the Congressional Quarterly quite valuable. Our Telegram staff uses it regularly both for reference purposes and for background articles on the editorial page. The material is accurate and highly informative.

Robert G. Spivack, Washington Correspondent, New York Post:

I have found Congressional Quarterly the single most valuable service we get since I have been in the Washington Bureau of the New York Post. It's especially useful in preparing my column, "Watch on the Potomac." I can't calculate how many times I have referred to it or, for that matter, how much money it has saved my newspaper on research.

Reed Sarratt, executive editor, Winston-Salem (N. C.) Journal:

We find Congressional Quarterly material useful. We use it primarily in our editorial page department for reference purposes. We also print approximately half of the Congressional Quarterly new features.

James Osborn, editor and publisher, the Yuma Daily Sun:

I thought you would be interested in knowing that I have had quite a number of favorable comments on my use of Congressional Quarterly material. I use it from time to time in my page 1 column, Editor's Notebook.

Of course, we also use it to put the local or Arizona angle into features and editorials, too.

P. S.—Your special service of telegraphing the rollcall votes of the Arizona delegation we find is well worth the extra cost.

James R. Doran, editor, the Harrisburg (Pa.) Patriot-News:

We have found Congressional Quarterly to be invaluable for background and a gold mine of information political and otherwise.

Kenneth MacDonald, editor, the Des Moines Register and Tribune:

We find Congressional Quarterly valuable as an up-to-date reference work on congressional voting, status of legislation, position of congressional leaders on specific issues and other facts bearing on the legislative picture.

J. J. McManus, editor in chief, the Boston Post:

We use the Congressional Quarterly news features in both the daily and Sunday Posts and have for years. Even without the features, however, the Congressional Quarterly service would be invaluable because of the weekly reports, which provide a complete and well-indexed source of information on everything that happens in Congress. These reports have saved us from more than one printed boner when our library was unable to come up with the right answer.

WHAT PRESIDENT EISENHOWER SAID AT HIS WHITE HOUSE PRESS CONFERENCE

We have seen numerous Members from the Republican side saying different things on different days about Congressional Quarterly.

I would say to my Republican friends that it is not a matter of the Congressional Quarterly at all.

What is involved here is support or lack of support for the President's program—no more, no less.

What will the opposition do with articles from the New York Times and other publications which discuss the lack of Republican support for the President.

Are we to believe that this, too, is all a part of a Democratic-hatched plot?

Is anyone so gullible as to believe that these articles in stanch Republican newspapers and magazines are misinformed and uninformed?

For that matter, are we to believe that the President at his White House news conference does not know what he is talking about when he discusses the lack

of support for his program in the Congress?

Let our critics explain the articles from the New York Times of May 23 by James Reston and W. H. Lawrence, which I include here.

For that matter, look at what transpired at the President's White House news conference on May 22, when the President replied to Robert J. Donovan, of the New York Herald Tribune, and W. H. Lawrence, of the New York Times.

All of you saw on the front page article in the New York Herald Tribune Monday morning, June 17, by Rowland Evans, Jr. The title, not by Congressional Quarterly, nor by me, but by this great Republican house organ is as follows: "President Presses Drive for Unity in Congress." I include this article as part of my remarks.

My Republican friends may argue that, after all, the New York Herald Tribune, the New York Times, and other publications are wordly journals smelling of the market place and inclined to be cynical.

I don't think that they are, anymore than I think Congressional Quarterly is politically biased and New Dealish.

So I give you this remarkable article from the Christian Science Monitor of Thursday, June 13, 1957.

The article was written by William H. Stringer, Chief of the Washington News Bureau of the Christian Science Monitor, and here is what Mr. Stringer says:

[From the Christian Science Monitor of June 13, 1957]

EISENHOWER TRIES SUASION ON BUDGET BALKY

(By William H. Stringer)

WASHINGTON.—At the White House they tell you:

"Wait and see. The President's battle for his budget and legislative program isn't over yet. Maybe the President didn't get into the fight too late after all. We may win out yet."

This could be wishful reasoning. So far, the presidential drive seems to have gotten results on the foreign-aid bill. Defense cuts are touch and go. Civil-rights legislation, the school bill, are in jeopardy. Yet budget cuts are biting as deep as first threats indicated.

EFFORTS STEPPED UP

But whatever the ultimate result, the White House has most certainly stepped up its drive to get Mr. Eisenhower's program through Congress. If one merely tabulated the number of phone calls to Capitol Hill, or the number of lawmakers dined quietly at that executive restaurant inside the White House, the scope of the effort to persuade Congress would be apparent.

President Eisenhower is criticized for not working more with the rank-and-file when Congress bigwigs oppose him. It is argued that he should wield a bigger patronage club, should threaten recalcitrant legislators. But at the White House they contend that the drive is more powerful, more varied, than some critics know or would admit. For instance:

1. Of course Mr. Eisenhower works primarily with his GOP legislative leaders. There are the weekly breakfasts, the regular conferences, the presidential phone calls to Senator WILLIAM F. KNOWLAND and Representative JOSEPH W. MARTIN, Jr.

But many an evening, around 6 o'clock, the President will be found meeting with a group of Senators or Congressmen at the White House—a session not on the appointment calendar—to discuss this or that bill.

STRATEGY WEIGHED

The Congress leadership knows of these meetings, but cannot control them. Mr. Eisenhower turns on his friendly persuasion, and more than one lawmaker goes away with his opinions changed to favor the legislation under scrutiny.

2. The Eisenhower political team is giving careful thought how to deal with totally recalcitrant Republican Congressmen back in their own districts. Strategy is not wholly jelled yet, because GOP National Chairman Meade Alcorn is still new on the job. But it's planned to notify legislators whose voting record for Eisenhower is virtually nil that they'll definitely be opposed in 1958 or 1960.

Take a certain Midwest Congressman who has opposed the Eisenhower program and indeed the GPO platform of 1956 far more than he supported it. He would be quietly made aware that a rival Republican candidate for his seat is being built up for 1958. This would be delicate business, but it's under active consideration.

[From the New York Herald Tribune of June 17, 1957]

PRESIDENT PRESSES DRIVE FOR UNITY IN CONGRESS

(By Rowland Evans, Jr.)

WASHINGTON, June 16.—President Eisenhower is now fully engaged in a concentrated, personal campaign among Republican Members of Congress in behalf of his program that has no equal in recent political history.

It was understood from qualified sources today that the President means to do no less in the months ahead than exert his personality directly on virtually every Republican in Congress, those in both the Eisenhower and conservative wings of the party. He has always, of course, had intimate weekly contacts with the Republican leaders in both the Senate and House. These leaders are about equally split in political belief between orthodox and modern Republican thinking.

In the last 2 or 3 weeks, it was learned, the President has invited some 20 Republican Senators, in small groups of 3 or 4, to hour-long conversations with him in the White House. Secrecy has cloaked these intimate sessions. The Senate visitors do not appear on the White House official calling list. The meetings have taken place in late afternoon or early evening. Participants are asked not to discuss them.

The President, it was understood, means to carry his campaign through the entire Republican membership in the Senate. His technique among the more numerous Members of the House is to invite Republicans in groups of 40 to breakfast with him at the White House.

Other evidence of the President's unprecedented campaign to gain and retain the support of congressional Republicans was a letter he wrote a week ago to a young California Republican, Representative CHARLES S. GUBSER. Mr. GUBSER, in a speech to the Republican State committee in California, had made the following assertion: "Some of our most faithful allies in the cause of promoting republicanism have contributed materially to what could be our downfall and what could also be the greatest landslide victory the Democratic Party has ever had."

The speech denounced "sniping criticism" against the President by the conservative Republican "Eisenhower wrecking crew." It said that "if modern republicanism becomes a nasty word, the word Republican will become obsolete."

After reading a copy of the speech, the President wrote Representative GUBSER: "A speech like yours on May 25 * * * is more heartening to me than perhaps you might realize. Always the easiest course in public affairs is fault-finding; the harder thing to do is to justify and explain and to correct misrepresentation.

"The harder course you have taken, and you have risen to the challenge, in my opinion, remarkably well. My conviction is that your approach is sound politically as well as sound factually, for I have yet to see solid facts stray far from good politics."

NEW INFLUENCE SEEN

The President has manifested his new role as active shepherd of the Republican flock in other ways. When Senator FREDERICK G. PAYNE, Republican, Maine, returned to the Capitol after a long illness, the President called him on the telephone to welcome him back. That might seem the most natural kindness in the world, but there are those who feel that in other days the President might not have felt such a responsibility.

Debate and voting in the House and Senate the past week show a level of Eisenhower support among the Republicans that seemed to be absent earlier in the session when his record peacetime budget was the fattest pitch in the ballpark. On final passage of the foreign-aid bill, only 8 Republicans voted against the new program, as opposed to 17 Democrats, including some whose political records show strong internationalist convictions. In the critical House vote rejecting the jury-trial amendment to the President's civil-rights bill, an estimated 40 or so Republicans left the Eisenhower fold. Previous estimates held that between 70 and 100 would support the Southern position.

NEW ENTHUSIASM

The prospect today is extraordinarily favorable to passage in this Congress, and probably in this session, of the civil-rights program. Although the Federal school-building program appears to be quite dead this year, enactment of civil-rights legislation would carry out a relatively substantial part of the Eisenhower program.

It is still too early to measure the full impact of the new and cozy Eisenhower campaign on either the party as a whole or the legislative program. What could be said is that the President has instilled a new enthusiasm among his strongest Congressional adherents to continue what up until very recently was a lonely and exposed fight. The Eisenhower Republicans have taken new heart, and they are hoping the President's efforts will attract new supporters and weaken the conservative opposition in his own party.

[From the New York Times of May 23, 1957]

(Excerpt from transcript of White House news conference, May 22, 1957)

Robert J. Donovan, of the New York Herald Tribune: "Mr. President, last week, sir, you were asked if you intended to punish Republican Members of Congress who didn't go along with your program. Leaving out the question, the concept of punishment, would you be more disposed to support those who do back your program and less disposed to back those who do not, next year?

Answer: "Well, if you want to make that statement within reasonable—and what I would call logical—grounds, I think it will be a pity if ever we tried to organize in this country political parties that are based upon slavish inherence to every detail and concept of government that can be advanced, because then you will have nothing but a whole group of splinter parties, probably 170 million political parties, as far as I can see. Therefore, each party should encompass a very great deal—I mean a very wide range—of political thinking.

"But, I do believe this: when a political party gets together and agrees upon a platform and that platform is presented to the American public as the political basis on which they are going to try to conduct the Government, if elected, they should remain true to it.

"I believe they should stick with it through thick and thin unless conditions so change that anyone would understand that some change would have to be made in this platform. So, I have no right and no desire to punish anybody. I just say this: I am committed to the support of people who believe, as I do, that the Republican platform of 1956 must be our political doctrine."

NOT "NAMBY-PAMBY"

W. L. Lawrence, of the New York Times: "Mr. President, to carry Mr. Donovan's question a step further, if I might, sir, in previous elections, both 1952 and 1956, you have always supported every Republican who was running for the Senate or the House without regard to their voting record. I am wondering whether that will continue to be your attitude in 1958, or whether you do have some degree of enthusiasm with which you support those who help you, and those who don't do anything for you?" [Laughter.]

Answer: "Now I hope that I will never be accused of being so namby-pamby that I don't have degrees of enthusiasm about people that stand with me and those that stand against me.

"Now, what I do want to make clear is this: I most earnestly believe that the Congress and the White House should be occupied and controlled by the same party, whenever this is humanly possible that this could be done, for the reason then you can fix responsibility."

[From the New York Times of May 23, 1957]

EISENHOWER BACKS FULL GOP SLATE—BUT FEELS MORE ENTHUSIASM FOR SUPPORTERS OF GOALS THAN FOR OTHERS IN 1958

(By W. H. Lawrence)

WASHINGTON, May 22.—President Eisenhower declared today that Republican Senators and House Members who backed his legislative program would get his enthusiastic backing for reelection.

But he pledged support, at the same time, to all Republican Senate and House nominess in 1958 without regard to their voting record on his legislative program.

"Now I hope that I will never be accused of being so namby-pamby that I don't have degrees of enthusiasm about people that stand with me and those that stand against me," the President said amid laughter.

He said it was important for the Republicans to control Congress as well as the White House, "and to that extent, of course, I am for whoever the Republicans of any particular State or district nominate.

"But when it comes down to who I am for enthusiastically, and who I am for merely because they are Republican, is a very wide difference," General Eisenhower declared.

KEEPS SWORD SHEATHED

By this answer at his news conference, the President once again refrained from using a political weapon some of his most ardent supporters think he ought to employ to command a greater degree of legislative support and party discipline. These men would have the President make room on his political coattails only for the Republicans who generally support the White House program.

He reiterated his statement of last week that he had no desire and no power to punish those of his own party who opposed his program. He said it would "be a pity if ever we tried to organize in this country political parties that are based upon lavish adherence to every detail and concept of government that can be advanced." Each party, he said, must encompass a wide range of political thinking.

"But I do believe this," he continued. "When a political party gets together and agrees upon a platform and that platform is presented to the American public as the political basis on which they are going to try to conduct the Government, if elected, they should remain true to it."

Once again, the President pledged to continue working to advance his legislative program by seeking to persuade individual legislators to back it. But again he declared his intention to respect the organization of the Congress, and not to deal with individuals behind the backs of anybody.

WON'T BE BLOCKED

At the same time, he made it clear he would not let the leadership veto any proposal he might have to seek votes of other legislators.

"If the leadership of Congress is definitely against a project in which I am interested," he went on, "I am not barred, and by no means do I ever expect anyone to try to bar me from seeing the individual Senators or Congressmen that I believe are sympathetic and can help. But the point is—you always go first to the leadership and notify them of what you are doing."

General Eisenhower declined an invitation to analyze the reasons why his smashing reelection victory in 1956 had not been followed by more general support for his program in this session of Congress. His questioner said recent public-opinion polls had shown that the President's popularity had fallen sharply.

"I believe that these so-called popularity curves tend to go up and down," he said. "This is the simple way I go about it; I made at least a limited campaign in 1956—at least limited as compared to 1952—and I took the Republican platform and I spoke for it and I made my pledges and promises to the people based on that platform.

"I intend to carry it out to the very best of my ability."

He said that all other Republicans who spoke in 1956 had accepted the platform at least implicitly if not explicitly and that those who disagreed with him now must put up something constructive in its stead.

[From the New York Times of May 23, 1957]

EISENHOWER FIRES BACK—A STUDY OF PRESIDENT'S INITIAL MOVES TO USE HIS POWER TO PRESS PROGRAM

(By James Reston)

WASHINGTON, May 22.—President Eisenhower has shown in the last 2 days what can be done when he mobilizes Presidential power and personal influence behind a legislative program.

In what have probably been the two most effective days of his second administration, he has regained the initiative over the opposition in his own and the Democratic Party. And he has done it merely by using instruments that have been available to him all along.

First of all, he has dominated the news. He is now, and always has been when he wanted to be, the principal source of news and information in the Nation.

This is a source of strength that he allowed to decline through the months of February, March, and April. And, as always happens, the vacuum was filled by his political opponents.

Second, he brought back to Washington for last night's television speech on mutual security the best speechwriter he has ever had—Emmet J. Hughes of the Time-Life-Fortune organization. Accordingly, this speech had bite and direction.

Third, he and his White House staff have been on the telephone with influential Members of Congress in the last week in a serious effort to pull the Republican Party together.

And, finally, today he used the Presidential news conference as it can and should be used: To inform, to follow up on major policy pronouncements, to clarify and to remind the Congress and the Nation that he does not intend to have his authority whittled away without a fight.

FOLLOWTHROUGH IMPORTANT

The question now is whether he will keep going. Both in golf and in politics, his backswing has always been better than his followthrough. Last week, he beefed up his first television address on his budget as a whole after alarmed warnings from the Republican House leader, JOSEPH W. MARTIN, Jr., of Massachusetts, and then minimized the whole performance by an I'm-not-mad-at-anybody attitude in his news conference.

Today, however, he followed through on last night's speech. Without abandoning his habit of avoiding personal criticism of his opponents, he made clear this morning that he is not going to treat his opponents precisely as he treats his supporters during next year's Congressional election campaign. And he promised a fight for his program.

This important change has not come about without a great deal of private and public pressure from individuals and institutions that have long been in his corner.

David Lawrence felt obliged this morning to remind him that, after all, he did have the power of veto over the Congress.

And Time magazine, which has not been his most severe critic in the last 4 years, remarked this week that his first television message was the closest thing to a political flop that Ike has ever had.

The surprising thing in all this is that it has taken the White House so long to turn around. The storm warnings have been up ever since the collapse of the administration's Middle East policy last winter.

OFF TO A BAD START

The Secretary of the Treasury, George M. Humphrey, rallied the budget-cutters against the President even before the big book had gone to Capitol Hill.

And the Democrats, starved for an effective issue, rushed into the breach in the unaccustomed role of defenders of the national economy.

Nevertheless, it was not until the President's best friends warned him that nice guys finish last in this kind of an executive-legislative struggle that he began to shift the emphasis this week.

Can he now maintain the initiative?

The feeling here is that he can if he will. The Democrats are divided and highly vulnerable to counterattack on the budget issue.

Even the most partisan of opponents have nothing to gain and the Nation has a lot to lose—by eroding the President's prestige 3 years and 8 months before the end of his term. And though his popularity may have suffered a little with the general public in the last few months, he is still the only political lion in the den.

RIGHT WING VULNERABLE

Even the right wing of his own party is highly vulnerable and leaderless. They maintained power only as a result of the President's personal popularity. They did not protest against a popular New Dealish Republican Party platform that was bound to be extremely expensive if its promises of collective security abroad and social security at home were to be redeemed.

And the President started reminding them of this platform in his news conference today.

Primarily his problem is one of articulation and political organization. He is not set up on a permanent basis to do the job of articulation. All his major political problems are highly complex—the budget, mutual security, defense policy.

All require vivid, and especially constant, exposition. But when he got in a jam this week, he had to summon Mr. Hughes from private life, and now that last night's speech is over, Mr. Hughes has gone away.

There is nothing in the present situation, however, to prevent him from mobilizing the articulate members of his party.

MORE NEWS CONFERENCES?

Men such as McGeorge Bundy, the Harvard dean, and William G. Saltonstall, the principal of Phillips-Exeter Academy, are only devoted supported of his administration, but also are in a position to mobilize like-minded Republicans in the universities and elsewhere. There are more of them than the White House realizes.

Nor is there anything in the Constitution that limits him to occasional news conferences. He can have, not two a month, but two a week if he likes, and he demonstrated today that when he wants to do it, he can be an effective advocate and keep his program from being overwhelmed on the front pages of the newspapers.

Finally, the record in Washington is full of evidence on how to organize administration support in the Congress. What General Eisenhower said last night about his so-called foreign aid bill is precisely what Franklin Roosevelt was saying about the lend-lease bill 16 years ago: namely, that the country could either provide a man and a gun or, alternately, provide the gun and let the allies provide the man.

The difference is that President Roosevelt organized his supporters in the Congress during the lend-lease debate. He established a system under which his backers on the Hill were in close liaison with the executive officials who had the facts.

ANSWERS WERE QUICK

And when damaging attacks were made on some aspect of that program, some administration supporter, selected in advance got on the phone at once for the effective facts and counterarguments.

Thus the debate was kept in balance under conditions that were much more adverse to the administration than those that pertain today.

Fortunately, these tasks of articulation and organization are not the kind of thing that puts too much physical strain on the President. He has come to enjoy the news conference. His gifts of personal persuasion with the legislators are still immense. And effective means of passing information quickly from the executive departments to the Hill can be arranged.

The point, therefore, is not whether the initiative can be maintained, but whether it will be maintained. And that is largely up to the President himself.

MEADE ALCORN CONCEDES EISENHOWER LOSS

After all the fuss about the accuracy or lack of accuracy of the figures in Congressional Quarterly I was astounded to find in the New York Times of June 3 a news story headed "Alcorn Concedes Eisenhower Loss."

The Times article jumps right into the middle of the argument and begins forthrightly in this way:

Meade Alcorn, chairman of the Republican National Committee, said today that it is not unusual for a second-term President to lose influence with members of his own party in Congress.

Mr. Alcorn, appearing on the National Broadcasting Co.'s television program Meet the Press, conceded under questioning that President Eisenhower might have undergone such a loss. But he said that the President's influence with the country, as distinct from Congress, was as great as ever.

I include this remarkable article here for the information of my colleagues. I say "remarkable" because we find the chairman of the Republican National Committee saying on television what the members of the President's party refuse to admit on the floor of this House.

I also include an article by George Dixon, a syndicated columnist, from the Washington Post and Times Herald of Thursday, May 30, 1957, entitled "Have Republicans Switched Horses Under Ike?" I include, too, an article from the Trentonian written by Lyle C. Wilson of United Press Association.

I include here, also, the lead editorial from the New York Sunday Times of June 2, 1957, which says in part:

President Eisenhower repeatedly makes the point that things would be better if both the executive and the Congress were in the hands of the same party—naturally, he thinks the party should be Republican—so that there could be a focusing of responsibility. However valid in theory his argument may be, the split control between White House and Capitol does not afford a satisfactory explanation for the poor legislative record that has been rolled up thus far. Until recently the President has done little leading even of his own party.

[From the New York Times of June 3, 1957]

ALCORN CONCEDES EISENHOWER LOSS—SAYS DECLINE OF A PRESIDENT'S POLITICAL INFLUENCE IS NOT UNUSUAL IN A SECOND TERM

WASHINGTON, June 2.—Meade Alcorn, chairman of the Republican National Committee, said today that "it is not unusual" for a second-term President to lose influence with members of his own party in Congress.

Mr. Alcorn, appearing on the National Broadcasting Co.'s television program Meet the Press, conceded under questioning that President Eisenhower might have undergone such a loss. But he said that the President's influence with the country, as distinct from Congress was as great as ever.

The Republican leader brushed aside a statistical survey showing that on 20 major issues in this Congress the Democrats had supported the President far more consistently than the members of his own party.

He said that "when the chips are down," as in unsuccessful attempts in the House last week to restore cuts in the Defense Department budget, most Republicans voted with the President.

The key vote, on a motion to send the bill back to the Appropriations Committee and restore $313 million of the $2,500,000,000 cut by the committee, was 242 to 151. A total of 203 Democrats and 39 Republicans voted against restoring the funds and 140 Republicans and 11 Democrats voted to restore them.

SEES DIFFERENCES WHOLESOME

Mr. Alcorn denied that there had been any split in the Republican Party over the President's $71,800,000,000 budget for the fiscal year 1958, which begins July 1, 1957. But he admitted that in recent regional meetings over the country he had found "a widespread belief that the budget should be cut if it could be cut without endangering national security."

He termed this a "wholesome differences of opinion * * * that will ultimately result in a stronger Republican Party."

He said he did not believe that the Eisenhower budget would be a factor in the congressional elections of 1958.

Mr. Alcorn refused to speculate on whether Vice President RICHARD M. NIXON, on the words of a questioner, "has it made" for the Presidential nomination in 1960. He said he had never discussed with President Eisenhower whether the President would take a hand in the selection of a nominee, but said he assumed the President "would make his influence felt."

He said he thought the results of the 1958 elections would "have a great deal to do with the nominee in 1960, and with whether he's successful or not."

[From the Washington Post and Times Herald of May 30, 1957]

HAVE REPUBLICANS SWITCHED HORSES UNDER IKE?

(By George Dixon)

House Republican leaders, who confer with President Eisenhower every Tuesday approached the White House for this week's meeting with a pious prayer on their lips that Ike had not seen the latest rundown sheet on their legislative performance. They came away temporarily relieved, at least. If the President had seen the form chart he made no mention of it.

A complete breakdown of the voting records of every Member of the House of Representatives has been made, however. It is enough to make Ike wonder if he hasn't secretly been unhorsed. He once declared he wouldn't change horses in midstream. The compilation should make him wonder if the GOP Congressmen didn't change horses on him, before he even saw the stream.

The horseplay is epitomized, by Mississippi. The six Ol' Miss' Representatives, all Democrats, have been voting as if they were Republicans.

They've been voting against the President.

The breakdown reveals that Congressmen who bellowed loudest in the last election campaigns, "Help me to help Ike," have been giving him the least help and that those who promised to fight him have been giving Ike the most support.

On every piece of legislation on which the White House has taken a position, Ike has had more support from the Democrats than the Republicans. There have been no exceptions.

The GOPsters talk about Eisenhower popularity, and "I Like Ike." Well—Franklin D. Roosevelt hit the bottom of his popularity with Congress after he tried to pack the Supreme Court, and Harry S. Truman lost popularity after a series of controversies in 1946. But at no time in their Presidency did either have less support from their party than Dwight D. Eisenhower is getting from his, right now.

It's beginning to seem as if "modern Republicanism" is still so new the GOP Congressmen haven't yet heard of it.

Let us take a few closeups: House Democratic Leader JOHN W. MCCORMACK, of Massachusetts, campaigned last year on the slogan, "Elect me to stop Ike." He has voted with the administration 95 percent of the time.

House Republican Leader JOSEPH W. MARTIN, JR., ran as an "I Like Ike"-er. He has voted with the White House 55 percent.

Of the 435 Members of the House, not 1 has gone all the way with Ike, but 7 have gone 95 percent. Six of these—MCCORMACK, MELVIN PRICE, of Illinois; CARL ALBERT, of Oklahoma; ROBERT E. JONES, of Alabama; CARL D. PERKINS, of Kentucky, and DANIEL J. FLOOD, of Pennsylvania—are Democrats. CHARLES WOLVERTON, of New Jersey, is the lone Republican.

There are two gentlemen named Bass in Congress. Perkins Bass, a Republican from Presidential Assistant Sherman Adams' New Hampshire, voted with the White House 29 percent. Ross Bass, a Tennessee Democrat, voted with Ike twice as much.

The lone Republican from Texas, BRUCE ALGER, voted to uphold Ike only 9 percent of the time. WRIGHT PATMAN, the Texas Democrat, whose fiscal philosophy most differs from Ike's voted 82 percent for the President.

The Democratic whip (ALBERT, of Oklahoma) has supported Ike 95 percent. The Republican whip, LESLIE C. ARENDS, of Illinois, only 50 percent.

Ike's golfing pal, JACK WESTLAND, of Washington, the former national amateur links champ, went only 50 percent of the way with his fellow divot-digger.

But the blow that struck nearest home was this: Ike's own Congressman, in Gettysburg,

Pa., S. WALTER STAUFFER, ditched his agrarian constituent on an average of every other vote.

[From the Trenton Trentonian of June 3, 1957]

THE PRESIDENT AND CONGRESS: EISENHOWER FAILS TO REGAIN PARTY COMMAND

(By Lyle C. Wilson)

Events are spelling out for President Eisenhower what it means to be a lame duck Chief Executive. He and his successors are barred by the Constitution from a third term.

What it means is this: The most widely supported President ever put in office by the voters is losing control of his party 7 months after his triumphant reelection.

Eisenhower moved urgently within recent weeks to regain party command. He made two television appeals to the voters for support in his budget battle with Congress. The first speech, dealing generally with the big new budget, seemed immediately to have missed the target.

The President's second speech was devoted to defense and foreign-aid spending, fields in which Eisenhower evidently feels a comforting self-confidence. Most politicians scored that speech as a direct hit.

White House press secretary James C. Hagerty shortly was telling questioners that Eisenhower's fan mail had been weighted heavily in favor of the President's appeal for defense and foreign-aid funds.

Hagerty made no such claim of approval after speech No. 1. It was assumed that Members of Congress also would hear from the home folk with blunt instructions to give Eisenhower the funds he sought. It seems not to have worked out that way.

The House of Representatives stood pat on its defense economies when the showdown votes came this week. The House clipped $2,565,275,000 from defense spending before sending the bill to the Senate by a vote of 394 to 1.

Mr. Eisenhower's loss of party control is not reflected adequately in the fact that only 39 House Republicans deserted him on an earlier key economy vote and that 140 Republicans stood firm. The President's role as party leader should be examined in the light of what he asked the House Republican leadership to undertake.

He asked the Republican congressional leaders to move to restore to the defense bill $1,274,000,000 of the sums lopped off by the committee which sent the bill to the floor. House Republican leaders sought to restore only about one-fourth of that sum—far less than Eisenhower had said was essential to the public safety.

By lowering their sights from the sum sought by Eisenhower to a much lesser sum, Republican House leaders believed they might hold the party line when the vote came. Had they come after the $1,274,000,000 as urged by Eisenhower, a great many more House Republicans unquestionably would have been recorded as voting for economy and against the Republican President.

[From the New York Times of June 2, 1957]

TWO MONTHS TO GO

The 85th Congress convened 5 months ago tomorrow; and as the legislators this week enter the sixth month of the present session, they have very little to show for it. There are only about 2 months to go before adjournment—2 months in which to build up a record of accomplishment that at the present time is almost nil, what there is being largely negative.

President Eisenhower repeatedly makes the point that things would be better if both the Executive and the Congress were in the hands of the same party—naturally, he thinks the party should be Republican—so that there could be a focusing of responsibility. However valid in theory his argument may be, the split control between White House and Capitol does not afford a satisfactory explanation for the poor legislative record that has been rolled up thus far. Until recently the President has done little leading even of his own party. * * *

Senate Republicans as a whole have given Mr. Eisenhower less than normal aid and comfort * * * the Democrats are visibly kicking up their heels as Majority Leader JOHNSON becomes less complaisant toward the President than formerly.

If the President expects to accomplish a considerable part of his program, he has to bear down much harder than he likes to do on his party associates at the Capitol. If he had been willing to use his vast personal popularity to win over a considerable segment of Republicans to his side, there is little doubt that there would have been enough Democratic votes at hand to give him a good deal of what he wants. The evidence is that he is beginning to put on the heat, particularly in the battle over the budget; but the big question now is whether such moves as he may make in this direction do not come too late.

At any rate, Congress hasn't done much during these last 5 months except to express horror over the size of the President's budget and then to hack away at it without much rhyme or reason while at the same time adding to prospective Federal expenditures by passing a few large-scale spending bills of its own. The Senate-approved rivers and harbors authorization, to the tune of $1.5 billion, is a case in point. It is now in the House, where one may not very realistically hope that it will either be drastically reduced or die altogether. Although the House has slashed its way through 11 major 1958 appropriation bills, the Senate hasn't yet passed a single one. Among the few bills of substantive importance that have been approved by both Houses of Congress in the 5 months of this session, there are the President's Mideast program and the tax-extension bill, both of which went through in March, and the housing program, which still has to be ironed out in House-Senate conference.

An analysis made a few days ago by Congressional Quarterly news service shows that of the nearly 200 specific legislative requests made by the President this year, only 6.6 percent have been approved by Congress, 4 percent rejected and more than 40 percent have not been acted on at all, even in committee. This is not an impressive record, especially when one considers that some of the major projects in both party platforms are still waiting in the wings. Civil rights, due for House debate this week; mutual-aid school construction, immigration revision, atomic-energy treaty, Organization for Trade Cooperation, Alaska-Hawaii statehood, aid to small business, minimum wage, campaign spending and lobbying regulations, item veto, billboard control, Niagara power—these are a few subjects of more than ordinary interest that need the attention of Congress. Not one of them has been completed by either House and some of them haven't even been started.

THE REPUBLICAN SCHISM

What is really at stake here, then, is not the Congressional Quarterly at all, as I see it.

I believe it is what the President says it is, a question of support for the Republican platform.

As the President says:

When a political party gets together and agrees upon a platform and that platform is presented to the American public as the political basis on which they are going to try to conduct the Government, if elected, they should remain true to it. I believe they should stick with it through thick and thin.

And the President said:

Now I hope that I will never be accused of being so namby-pamby that I don't have degrees of enthusiasm about people that stand with me and those that stand against me.

The difficulty of healing the Republican schism is a difficult one, because it is practically impossible for anyone or any two in the Republican Party to agree on what the Republican Party stands for.

I would like to document this statement of mine with the following quotations from Republicans across the country and Members of the Congress as well.

Dwight Eisenhower, press conference, November 14, 1956:

It is a type of political philosophy that recognizes clearly the responsibility of the Federal Government to take the lead in making certain that the productivity of our great economic machine is distributed so that no one will suffer disaster, privation through no fault of his own.

Now, this covers the wide field of education and health and so on, but we believe likewise in the free-enterprise system. We believe that it is free enterprise that has brought these blessings to America.

Therefore, we are going to try our best to preserve that free enterprise, and put all of these problems in the hands of localities and the private enterprise of States wherever we can, because it happens that the great difference, as I see it, between myself and people of a philosophy that believes in centralized government is that I believe, to have this free enterprise healthy, you must have, first, integrity in your fiscal operations of the Government; second, you must preserve a sound dollar or all of our plans for social security and pensions for the aged fall by the wayside, they are no good; and thirdly, in this dispersion of power.

Meade Alcorn, GOP national chairman, Baltimore Sun, March 19, 1957:

Then what does modern Republicanism really mean? Couldn't it be described as dynamic conservativism? Couldn't it be described as Republicanism alive, vibrant, responsive, and aggressive? If this be true, then all of us are modern Republicans.

Clarence Buddington Kelland, former executive director of the GOP National Committee and national committeeman from Arizona, CONGRESSIONAL RECORD, March 19, 1957:

Shall the Republican Party drag along, pale, anemic, lifeless down the middle of the road? * * * Are we going to adopt this heresy known as new Republicanism? * * * New Republicanism betrays every historical tenet and principle of our Republican Party. * * * I repeat and emphasize that the first Eisenhower election was in no sense a Republican victory but a personal Eisenhower victory * * * indeed, it was a Republican defeat * * * a national emotional orgy deriving from a sort of paroxysm of impassioned enthusiasm for the personality of Mr. Eisenhower.

Gov. Goodwin Knight, U. S. News & World Report, May 3, 1957:

As a modern Republican, I like to feel that, if I had been living 100 years ago, I would have stood with Abraham Lincoln.

A "GOP Demosthenes," quoted by John O'Donnell, New York Daily News, February 19, 1957:

I'll be damned if I know what this modern Republicanism is, but I've got a 20-minute spot on a broadcast to explain it. Thank

God it isn't a quiz program. Two years ago I got stuck with the job of telling the voters what Ike meant when he said we now had a party of "dynamic conservatism." That time I got trapped by having to answer questions. I like Ike, but I'd like to wring the necks of those smart boys who think up the labels and then take a runout powder when the going gets rough.

Representative JOHN TABER, of New York, U. S. News & World Report, May 3, 1957:

I do not know what a modern Republican is, but the difference between a modern Republican and one of the old-line Republicans is that a modern Republican does not think things out as carefully or as fully as the old-line Republicans used to.

Bertha Adkins, assistant chairman, GOP National Committee, Louisville Courier-Journal, May 11, 1957:

The Republican principles we've always had, being used to meet today's problems. There's nothing divisive about it.

New York Herald Tribune, November 9, 1956:

The challenge to the Republican Party is spelled out in boxcar letters. It is to reshape itself as a modern party, an Eisenhower Republican Party of ideas and popular appeal which seizes opportunity and responsibility.

Sacramento Bee, November 24, 1956:

Couched in such phrases the new Republicanism emerges as the old Republicanism altered only by forced acceptance of gains in the field of social responsibility established by the New Deal. * * * The real thinking of the present Republican leaders is represented by hard money, the starving of the Tennessee Valley Authority, the curtailment of Federal hydroelectric projects and a general rigging of tax laws and administrative agencies so big corporations get the lion's share of the pelf. The deviations in the present administration which depart from the more blatant and rampant "old guardism" are caused by acceptance of the inevitable.

Dwight Eisenhower, press conference, January 30, 1957:

Question. Would you spell out or define the difference between your philosophy of modern Republicanism and the so-called New or Fair Deal policies of the Democratic Party?

Answer. Well—and again I have done this, I assure you, before—but fundamentally the difference is this: I agree that there are many functions now performed by Government * * * that would have been unthinkable only as much as 50 years ago. * * * But this is what I say:

If we have respect for the kind of economy, for the institutions that have brought us to where we are today, with our productivity and our power, and our advance in every type of civilization on the intellectual, the educational, the health, physical, moral side, we will understand we must preserve the initiative of the people, which, in my opinion, means Government as close as possible to that person where he can take the maximum interest in it and influence it to the maximum degree.

If we don't have that kind of thing, he begins to say money comes from Washington or help comes from Washington free, and he wants more all the time, because it is coming from an outside source. Where he is paying all or part of that, he says, "Let's look at this with a jaundiced eye."

So the difference is this: I believe that, first of all, the Government must be honest fiscally. * * * I fail to find any such philosophy in what you called the New Deal. I believe in the decentralization of power geographically, back to the geographical units where it is best exercised, and finally, I believe in preserving the soundness of our money, in the interests of all of the people who are going to live on pensions and retired pay.

Representative CLARE HOFFMAN (Republican of Michigan), U. S. News & World Report, May 3, 1957:

Question. How would you define a modern Republican?

Answer. A New Deal internationalist.

Representative A. L. MILLER (Republican of Nebraska), U. S. News, May 3, 1957:

I would define a modern Republican as a free-wheeling, free spender who has surrendered his constructive conservatism to ride the current New Deal bandwagon.

Washington Post, April 17, 1957:

Eisenhower Republicanism is not necessarily modern Republicanism, Representative EDWIN H. MAY, Jr., of Connecticut told the Evening Political Study Group of the League of Republican Women of D. C. last night.

Roscoe Drummond, New York Herald Tribune, April 7, 1957:

The budget in its purposes and scope represents modern Republicanism in action.

Fletcher Knebel, Washington Star, March 22, 1957:

Modern Republican: A fellow who joins the New Deal 20 years late—then claims he invented it.

Indianapolis Star, November 25, 1956:

President Eisenhower recently outlined his views on what a modern Republican Party should stand for. His suggestions were, in our opinion, contradictory for they sought to expand the Federal Government's activities in the fields of health, education, welfare, highway construction and so on, while at the same time the President called for "dispersion of Federal power" and decentralization of governmental functions to protect free enterprise.

John O'Donnell, New York Daily News, February 13, 1957:

The decision of National Committee Chairman Alcorn's ghost writers to proclaim that the present Republican organization was a party of "inclusion" raised some eyebrows among the boys who looked the word up in their unabridged congressional dictionaries. With a whoop of delight, they were circulating around Capitol Hill the Webster definition that Alcorn's "inclusion" means: "A foreign body, gaseous, liquid or solid, usually of minor size, inclosed in the mass of a mineral."

Dwight Eisenhower, press conference, January 23, 1957:

Well, I don't know where it (the leadership for a program toward modern Republicanism) originates. I don't know why anyone should be stopped from having a good idea and putting it into effect. Certainly I am going to stand for it with my full might, and I think that the major figures in the Republican Party, the vast majority of them, believe the same thing and, certainly, the chairman of the national committee has the responsibility.

Edgar Bundy, president of Abraham Lincoln National Republican Club, New York Post, February 10, 1957:

The challenge has been thrown out by modern Republicans and the battle is on. We shall lay plans to drive out of Washington the weak-kneed men in Congress who have surrendered congressional prerogatives to the White House.

United Press dispatch, May 22, 1957:

Representative USHER L. BURDICK defined a modern Republican as a "yes man" who lets the Eisenhower administration do his thinking for him. The North Dakota Republican said the typical modern Republican "probably rode into Congress on the President's coattails and seeks further security by saying 'yes' to whatever he wants."

RICHARD M. NIXON, New York Times, May 15, 1957:

I should hope that all Republicans would want the party program geared to the problems of the modern age. I don't wish to divide Republicans into groups. The President's program is the program of the Republican Party.

Representative NOAH MASON, Republican, of Illinois, CONGRESSIONAL RECORD, January 31, 1957:

Ike's new Republicanism is a form of bribery, a program to buy votes with the voters' own money.

Meade Alcorn, Washington Post, February 13, 1957:

You wouldn't take a 1957 car, pull out the engine, and attach a horse to pull it, would you? Modern Republicanism is the engine that gives power, force and direction to a program designed to meet and solve the problems of today. We aren't changing the fundamental beliefs that were enunciated in Lincoln's day and continue to live today. We aren't uprooting one stone of the foundation that made our party great. But we are modernizing the superstructure.

Chicago Tribune, February 15, 1957:

It takes more than ballyhoo to sell something to the American people. You have to have a product, too. The product that Mr. Eisenhower and the palace guard are trying to foist on the public is underengineered and overpriced. The shell has been stretched until you can stick your finger through it. It's the worst gas eater ever put on the road. It's loaded with gadgets that the average driver will never find useful. And, worst of all, the design was stolen from last year's Democratic model. The original is still on the market. Selling modern Republicanism is like selling Japanese scotch in Edinburgh. The natives know better.

Roscoe Drummond, New York Herald Tribune, April 26, 1957:

It doesn't take fancy words to define modern Republicanism. Modern Republicanism is the 1956 Republican platform and it will be obsolete in 6 months only if the Republican Members of Congress make it obsolete by repudiating important parts of it.

George Rothwell Brown, in New York Journal-American, February 15, 1957:

To conservative Republicans of the old school it means the beginning of a new progressive movement similar to that of Theodore Roosevelt's in 1910 which wrecked the party in 1912.

Mrs. Robert Gunderson, GOP national committeewoman from South Dakota, Milwaukee Journal, May 15, 1957:

This phrase refers to persons not normally considered Republicans but who supported President Eisenhower in his two campaigns.

Meade Alcorn, New Orleans Item, April 8, 1957:

Modern Republicanism is the belief in an adherence to all of those traditional principles which have made our party great, but with one important added ingredient—a sense of mission.

Representative RICHARD M. SIMPSON, Republican of Pennsylvania, Cincinnati, Ohio, February 12, 1957:

The modern Republicanism in which I believe is the Republicanism of Lincoln and Taft.

Arthur Larson, U. S. News & World Report, May 3, 1957:

Modern Republicanism is simply Republicanism as it has been adapted under President Eisenhower's leadership to mid-twentieth-century responsibilities.

Chicago Tribune, February 5, 1957:

Modern Republicanism is in almost every aspect the welfare state. We shall spend and spend and spend, and tax and tax and tax, and everybody will be happy.

Secretary of Commerce Sinclair Weeks, CONGRESSIONAL RECORD, March 19, 1957:

Modern Republicanism is not something brand new, dreamed up recently. * * * Republican policies today are the expression of our party's great century-old principles, dressed in the clothing of this current age.

Dwight Eisenhower, press conference, May 15, 1957:

I thoroughly believe that any modern political philosophy that fails to study carefully the needs of the people today, not of 1860, of today, what do they need, by the complications that have arisen in our industrial life, in our economy, how are they going to get along, how are they going to take care of themselves in their old age, what happens if they are disabled and can't work for 5 months or so?

I believe the Federal Government cannot shut its eyes to these things, no matter how much it tries to work through States and get these responsibilities assumed by the States and the localities, it must assume some leadership.

I believe that unless a modern political group does look these problems in the face, and finds some reasonable solution, sticking as nearly as possible to the theory of the limited powers in the Central Government, then in the long run we are sunk, and that, I say, I have become more and more convinced, as I see the amount of money grow and grow in that regard, and I believe, therefore, I am more conservative than otherwise since 1952.

Chicago Tribune, February 15, 1957:

Thomas J. Curran, Republican chairman of New York County (Manhattan) had pointed comment on the sales campaign for Mr. Eisenhower's gimmick. "We live in an age in which articulate press agents make inarticulate politicians talk like philosophers," he told members of the National Republican Club.

"What's in a name?" And they said that our friend from Michigan goes too far in his political retaliation against the Congressional Quarterly.

Mr. HOFFMAN. Mr. Speaker, will the gentleman yield right there?

Mr. THOMPSON of New Jersey. I yield.

Mr. HOFFMAN. No political retaliation at all. I did not even read the Congressional Quarterly to learn my standing. It was only when some of my colleagues called my attention to it and, of course, I pay no attention to it as far as making any decision as to how I should vote.

The thing I was concerned about, and the gentleman touched it, was when they advertise they are an authoritative publication and call it the Congressional Quarterly I think many people believe it is an official publication because we have the CONGRESSIONAL RECORD and we have many reports coming out of congressional committees which are official.

Let me say this, I have no right, no one has the right to complain about what the other fellow is thinking or saying as long as the facts are not misrepresented, and even if each is entitled to express his opinion.

Mr. THOMPSON of New Jersey. Then the United Press got into the act with a story which appeared in the Washington, Pa., Observer May 31, in which it said, the lead was: "HOFFMAN Wants Protection for the Word 'Congressional.'"

Mr. CRAMER. Mr. Speaker, will the gentleman yield right there?

Mr. THOMPSON of New Jersey. I prefer not to yield until I have completed my statement.

Mr. CRAMER. But on the very matter touched by the gentleman from Michigan.

Mr. THOMPSON of New Jersey. I yield very briefly.

Mr. CRAMER. I would like to suggest to the gentleman that even the newspaper edited by the owner-publisher of the Congressional Quarterly also misleads the general public in accepting it as the official word of this Congress because it carried this article on the first page of the editorial section on May 11, 1957, by the owner-publisher, in the St. Petersburg Times, my hometown morning newspaper:

The extent of the congressional revolt is demonstrated in the Congressional Quarterly survey of support of the President in the 85th Congress. It shows that so far in 1957 the Congress backed the President on 61 percent of the rollcall votes, while in the Democratic 84th Congress—ahead of the 1956 election—its score was 72 percent; and in the GOP 83d it stood at 83 percent.

So it is clearly evident that the title of this magazine is clearly intended to give the general public the impression that the Congressional Quarterly is the official word on how people vote in Congress.

Mr. THOMPSON of New Jersey. I thank the gentleman.

Mr. CRAMER. That demonstrates the problem that the gentleman from Michigan, my distinguished coueague [Mr. HOFFMAN], is interested in.

Mr. McCARTHY. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from Minnesota.

Mr. McCARTHY. Unless we and the American people do have some independent evaluation of this kind, we and they would have to accept either what the Republicans said about their record in support of the President or what the Democrats said about their record in support of the President. Insofar as the public is concerned, it is clearly better to have an independent publication passing judgment than to have two partisan reports on the same question.

Mr. THOMPSON of New Jersey. I quite agree with the gentleman. The gentleman's point is very well taken. After all, the gentleman from Pennsylvania [Mr. SIMPSON] made an analysis. I think even he would not pretend his analysis was objective or nonpartisan any more than one which our distinguished leader [Mr. KIRWAN] would offer.

Mr. McCARTHY. I am sure that the gentleman agrees with me that the editors of the Congressional Quarterly must labor under a considerable disability in deciding which particular position of the President they are going to use as a standard, since his position on the same issue often varies from time to time.

Mr. THOMPSON of New Jersey. It is difficult, and I shall point out an example or two of that later.

Mr. McCARTHY. I remember the Republicans out our way before the 1952 elections were for a flexible price-support program.

Mr. THOMPSON of New Jersey. Yes.

Mr. McCARTHY. Suddenly they found that the President was for 90 percent support; they then turned around and supported the President. They went down the road with him; then in 1954 the President came out against 90 percent supports.

Mr. HOFFMAN. Mr. Speaker, I will have to ask that those words be taken down because the gentleman says "Republicans."

Mr. McCARTHY. The Republican candidates for Congress in the rural districts of the State of Minnesota. I was speaking of the State of Minnesota. This is the difficulty: First they were for flexible price supports and after the expression by the President in support of 90 percent, they came around to support him. They went down the road supporting him; then suddenly he veered off to 85 or 82½ percent.

Mr. THOMPSON of New Jersey. Would not the gentleman agree with the development of last year, for instance, the President's initial stand—or the initial stand of his spokesman—was one reflecting rigid principles and flexible supports; then it changed to a flexible principle and rigid supports.

Mr. McCARTHY. Then we got to the point where they were both flexible.

Mr. THOMPSON of New Jersey. Oh, yes. Now they are both fluid.

Mr. McCARTHY. I think that is about the story. There is the additional problem for the Quarterly editors; namely, that even when the President does not get what he likes, he generally likes what he gets, if from Republicans.

Mr. THOMPSON of New Jersey. I agree thoroughly with the gentleman.

Mr. CURTIS of Missouri. Mr. Speaker, a point of order.

The SPEAKER pro tempore. The gentleman will state it.

Mr. CURTIS of Missouri. I state, Mr. Speaker, that we are not proceeding in regular order. If the gentleman is going to yield to the gentleman from Minnesota, there should be a request of the Chair that he do yield. I have been trying to get the gentleman's attention and the Chair's attention to ask the gentleman to yield to me. Unless we follow the regular order, we cannot continue this.

Mr. THOMPSON of New Jersey. I will say to the gentleman——

Mr. CURTIS of Missouri. I am speaking to the Chair and I am asking that the regular order be followed. If the gentleman wants to yield to the gentleman from Minnesota and will not yield to the gentleman from Missouri, all right, but let us follow the orderly procedure.

The SPEAKER pro tempore (Mr. McGOVERN). The gentleman's point is sustained. The gentleman from New Jersey will proceed in order.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I decline to yield at this time, but I am going to yield to the gentleman in a moment because he was courteous enough yesterday to yield to me.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. The point I wanted to make is this, that the Congressional Quarterly does not confine itself to the use of the term "Congressional" in its title. The point I was making—and, in fact, I think it shows what they are up to—is their use of the byline on their front page "The Authoritative reference on Congress." So, it goes beyond this type of private enterprise that the gentleman was speaking of that used the term "Congressional."

Mr. THOMPSON of New Jersey. I thank the gentleman.

Mr. CURTIS of Missouri. The reason I am bringing it up is that the two should be considered together. I might agree with the gentleman that we ought to do something in all areas where use is made of the name "Congressional," but in this particular case of the Congressional Quarterly, we are confronted with the title plus the use of a by-line "The Authoritative reference on Congress."

Mr. THOMPSON of New Jersey. I thank the gentleman, and I will consider that. I might point out that the phrase to which he has referred is in quotes. Now, where they quote it, I do not know.

Mr. CURTIS of Missouri. I think I am right in saying it is not in quotes.

Mr. THOMPSON of New Jersey. I will be glad to look into it with the gentleman.

Mr. CURTIS of Missouri. It is not in quotes. It is "The Authoritative reference on Congress." I put it in quotes when I used it in my speech, but it is just a straight out byline.

Mr. THOMPSON of New Jersey. I thank the gentleman.

Mr. CURTIS of Missouri. Mr. Speaker, a point of order.

The SPEAKER pro tempore. The gentleman will state it.

Mr. CURTIS of Missouri. Mr. Speaker, I think the rules of the House should be obeyed as far as referring to Members of the other body is concerned. That can get into a ticklish point. I think the gentleman should refrain from such references.

The SPEAKER pro tempore. The gentleman will proceed in order.

Mr. THOMPSON of New Jersey. Republican Memo dated July 21, 1955.

Mr. CURTIS of Missouri. Mr. Speaker, I insist on the point of order with regard to references to the other body or Members of the other body.

Mr. THOMPSON of New Jersey. Mr. Speaker, may I address myself to the point of order?

The SPEAKER pro tempore. The Chair will hear the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. The quotation which I am about to give, and I certainly concede the point on the other matter, is from the Senate Republican policy committee. That is not an official body of the Congress of the United States any more than Old Senator Whisky is, and I trust that I can quote it.

Mr. CURTIS of Missouri. Mr. Speaker, if I may speak to the point of order, I think the reason for the ruling is a good one. I know I have insisted on it on occasions when my name was mentioned in the Senate, because I was not able to answer there nor was anyone in the Senate able to answer here. It was unfair. It creates a difficult situation in connection with the amity between the two bodies. The reason for the ruling there would apply to the specific case the gentleman is now embarking on.

Mr. McCARTHY. May I ask whether the gentleman from Missouri is referring to the remarks of the gentleman from New Jersey about the Senate Republican committee?

Mr. CURTIS of Missouri. I might say "Yes." Any reference to the Senate involving the action of the individual Members of the Senate should not come on this floor.

Mr. McCARTHY. The gentleman would not say that the Senate Republican committee was an official organ of the Senate?

Mr. CURTIS of Missouri. The rule of the House relates to reference to Senators. If you want to refer to a Republican political organization, that could be done.

Mr. McCARTHY. The gentleman would not object if we referred to the Republican Senate committee?

Mr. CURTIS of Missouri. I think the rules of the House refer to a reference to a Senator. I should like to see the debate go forward. I think the gentleman can make his point without referring to Members of the other body.

The SPEAKER pro tempore. The Chair would request to the gentleman from New Jersey that he not refer to any Member of the other body or to the body itself or any part of the body.

Mr. THOMPSON of New Jersey. Mr. Speaker, does the Chair consider that the Senate Republican policy committee is a part of the other body?

The SPEAKER pro tempore. Will the gentleman from New Jersey eliminate the word "Senate"?

Mr. THOMPSON of New Jersey. I thank the Speaker.

Mr. CRAMER. A point of order, Mr. Speaker. Does the ruling refer to other references preceding this point?

Mr. THOMPSON of New Jersey. Yes. Mr. Speaker, I ask unanimous consent that my references preceding this point to the Members of the other body all be deleted from the RECORD.

The SPEAKER pro tempore. Without objection, it is so ordered.

There was no objection.

Mr. THOMPSON of New Jersey. I thank the gentleman and I appreciate the spirit in which the criticism is made.

Mr. McCARTHY. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield.

Mr. McCARTHY. I wonder if the gentleman would venture an opinion as to whether, in the event that Republican percentages compiled by the Congressional Quarterly show an improvement in the next issue of that publication, there would be similar protests from the Republican side, or even from the Democratic side?

Mr. THOMPSON of New Jersey. I would say this to my friend from Minnesota. Yes; I think there will be protests but they will be diminishtd because clearly under the procedures established by the Congressional Quarterly, the batting average of the Democrats is going to go down since the last capituation.

Mr. McCARTHY. In other words, there will be some protests from some of the Republicans no matter what the record shows.

Mr. THOMPSON of New Jersey. Oh, yes.

Mr. McCARTHY. I think the gentleman might point out that the press has recently been pointing out that the Republicans have been giving more support to the President than they were giving him earlier in this session.

Mr. THOMPSON of New Jersey. Yes; I have an interesting relation of the history of that phenomenon, I might say, to follow.

Mr. McCARTHY. I wonder whether the gentleman would care to make an observation on the fact that this change in support came very shortly after he and a number of other Democrats sent a communication to the White House, informing whoever might have read it, that the President, if he was really interested in his program, did not really have to go to the American people or to the Democrats, but that it would be advisable for him to try to influence the Republican Members of Congress.

Mr. THOMPSON of New Jersey. I might say to the gentleman that we did send such a communication and that in response to it former Gov. Sherman Adams, the Presidential assistant, wrote each of us a very nice letter thanking us for our support, and asking that we continue it and saying that they intended to see into this thing.

Mr. McCARTHY. Mr. Speaker, will the gentleman yield further?

Mr. THOMPSON of New Jersey. Yes.

Mr. McCARTHY. The gentleman will recall that some time after Mr. Sherman Adams read our message he spoke to the Republicans at Trenton, N. J.

Mr. THOMPSON of New Jersey. Yes; he did. That is my hometown.

Mr. McCARTHY. The burden of his speech was that unless the Republicans did support the President the Democrats might obtain some advantage. Was not that the burden of his speech?

Mr. THOMPSON of New Jersey. Yes; he said that very clearly, and he indi-

cated that the incumbent of that particular district, who is myself, might very well be reelected, if he seeks reelection, if this continues.

Mr. McCARTHY. And following that first statement by Mr. Sherman Adams the President made a speech to the Republicans in which he indicated that the terrible thing about the failure of Republicans to support him was that this failure might result in a Democratic advantage.

Mr. THOMPSON of New Jersey. He did, and he pointed out to the Republicans that they have a platform which he considers a pledge and that they had better get behind it. We have particular reference and quotes from the President on this subject following here.

Mr. McCARTHY. I assume the gentleman is hoping as some of the rest of us are that the President will continue the breakfasts of ham and eggs for Republicans, that he will continue to call Republicans in Congress by their first names; since the press reports that these methods have moved the Republicans to their recent strong support of the President as we are approaching some of the really controversial pieces of legislation such as the foreign aid program.

Mr. THOMPSON of New Jersey. Yes, indeed, I hope he does; and I, and I know that you, and the gentleman from California [Mr. ROOSEVELT], the gentleman from Montana [Mr. METCALF] intend to do whatever we can to support the President's foreign aid program.

Mr. CURTIS of Missouri. Mr. Speaker, a point of order.

The SPEAKER pro tempore. The gentleman will state it.

Mr. CURTIS of Missouri. I submit that in not inquiring if the gentleman will yield the rest of us are put to a disadvantage, and that has not been done. If he wants to ask a question he should first ask the gentleman to yield; otherwise we have this Amos and Andy performance that is going on. My point of order is that the gentleman has not been proceeding in order, that there has not been a regular yielding, and it makes it impossible to gain the attention of the gentleman from New Jersey to ascertain if he will yield over on this side.

Mr. McCARTHY. I have no further requests to make of the gentleman from New Jersey. I appreciate his courtesy and the consideration of the Chair.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. Following this point: I would hope that the gentleman from Missouri did not intend to characterize the gentleman from Minnesota or myself as Amos or Andy or either one.

Mr. CURTIS of Missouri. Mr. Chairman, will the gentleman yield.

Mr. THOMPSON of New Jersey. I yield.

Mr. CURTIS of Missouri. The performance was that, not you as individuals, but the performance was.

Mr. THOMPSON of New Jersey. Or it might have been an Alphonse-Gaston performance also.

Mr. CURTIS of Missouri. Certainly.

Mr. THOMPSON of New Jersey. Whether we have an Amos and Andy performance or an Alphonse-Gaston performance, I yield to my friend from Florida.

Mr. CRAMER. I was very much interested in the statement by the gentleman as to the support they gave the President. Will they continue that support of the President's program?

Mr. THOMPSON of New Jersey. Certainly, that part of the program we approve.

Mr. CRAMER. I would suggest to the gentleman——

Mr. THOMPSON of New Jersey. I yield further to the gentleman.

Mr. CRAMER. I would suggest to the gentleman that he go back and look at the record of the vote on the corn bill, and the bill with the national defense increased funds amendments, and many other votes that are included in the CONGRESSIONAL RECORD, the vote on the Patman resolution, also on House Resolution 190, a bill from the Democratic side saying that the President should send up a new budget in the opinion of the Democratic side.

If you are with the President, you support him. If you do not, you do not. I suggest the gentleman put in the RECORD the vote of those who signed the telegram on the issues I have mentioned, as an example, and such other issues as he might see fit to include. I submit that in each of these issues the majority of the signers of the telegram opposed the President's position.

Mr. THOMPSON of New Jersey. That already is in the RECORD, as the gentleman well knows, because all rollcalls are in the RECORD. It may be perfectly well for the Congressional Quarterly, before or after it changes its name, to list any of them. I would also say to the gentleman from Florida that we should include yesterday's vote on rollcall No. 115 in support of the score because the distinguished minority leader, the gentleman from Massachusetts [Mr. MARTIN], said on page 8552 of the RECORD:

> It is one of the features of President Eisenhower's great humanitarian program to help the people. Floods and disasters respect neither individuals nor sections. They come unexpectedly to all people. We should all realize the necessity of doing something about this problem. Realizing the scope of recent disasters, the President would like to construct a program of aid. The President is in favor of this program.

The gentleman from Florida voted against that as did the gentleman from Missouri. Now, if the gentleman will permit, I should like to continue.

Mr. CRAMER. One point, if the gentleman will yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from Florida.

Mr. CRAMER. I opposed the amendment partially because it would cost, eventually, $5 billion and the program has not been adequately developed. I would suggest to the gentleman there is no use trying to shift responsibility. The chairman of the committee and the majority membership of the Appropriations Committee disapproved the flood insurance item and that committee is in the hands of the gentleman's own party. It was their recommendation that we were voting upon and which I supported.

Mr. THOMPSON of New Jersey. I concede that it certainly was the recommendation of the chairman of the committee and of the subcommittee who were in opposition. This does not alter the fact it was the President's program that the minority leader voted for with Democratic votes which were cast in favor of that proposition against the chairman of the committee and of the subcommittee and but for the Republicans who voted against it, who should have supported their President, this Nation would have flood insurance today, and the gentleman knows it full well.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. The gentleman declines to yield until he gets further into these quotes. Then I will be delighted to yield to the gentleman.

Mr. Speaker, I might say I have to take a few seconds here and there to delete that word which we discussed a while ago.

A Republican memo dated August 18, 1955, says about the Congressional Quarterly:

> The publication of a private journal of Washington, D. C., which specializes in congressional affairs said the box score was so and so and it tabulates that. I shall include this in the RECORD.

The Republican National Committee news release of October 20, 1944, headlines "Eisenhower Got 53 Percent Better Cooperation From Congress Than Truman Did."

Leonard Hall, chairman of the Republican National Committee, said:

> An analysis of the box score compiled by an independent nonpartisan news service organization in Washington, the Congressional Quarterly, shows that Mr. Eisenhower did remarkably better with Congress than did his predecessor.

He stated that the Congressional Quarterly tabulates all of the proposals submitted by the President to the Congress.

In Washington a former Member of the House, Mr. Lovre, said on August 2, 1956, that he had supported the President X number of times. I will include this in the RECORD.

Mr. ROOSEVELT. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from California.

Mr. ROOSEVELT. Does not the gentleman think it is rather unfortunate politically to have the chairman of the Republican National Committee go up to New England, as he did yesterday, and accuse the Democratic Congress of refusing to vote a flood control program when, in effect, it was his own party that defeated it.

Mr. THOMPSON of New Jersey. I do, indeed. I think if Mr. Alcorn had been fair, presuming that he was really for flood insurance as the President was, that he would have laid the responsibility to the chairman of the committee, to the chairman of the subcommittee, Democrats, and to the Republicans and the Democrats who voted against it; absolutely.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from Missouri.

Mr. CURTIS of Missouri. As one, incidentally, who voted against flood insurance, I would say that there was no question during the debate that the leadership, supplied on the Democratic side of the aisle was against it. Mr. MARTIN, the minority leader on the Republican side, was for it. I might state in regard to my own position—and it has a bearing on the issue of the Congressional Quarterly—that I always reserve and always have reserved the right of my own position as to the correctness of these measures. I have been able in the past to support the President overwhelmingly in a majority of the cases. But, the point at issue is not that so much but as to whether or not the Congressional Quarterly has abided by its own standards of selecting votes which show Presidential support, and I wish the gentleman would address himself to those specific things and not talk about collateral issues.

Mr. THOMPSON of New Jersey. I am not talking about collateral issues.

Mr. CURTIS of Missouri. I am talking about the 22 issues or 22 votes that the Congressional Quarterly used according to their standards, and I made the charge that they did not comply with their own standards.

Mr. THOMPSON of New Jersey. I regret saying this because I have great respect and affection for the gentleman from Missouri, but it is my considered opinion, having read everything that has been addressed to this subject since May 22, the gentleman's record, the record of his colleagues and that of my colleagues, having studied thoroughly the criteria applied by Congressional Quarterly, that they have indeed—and this has distressed me somewhat, too—not deviated from the standard which they have set. They are using the very same standard they used and which has been quoted by so many Members of the other body, this body, and your national committee.

And I might say to the gentleman that it is early in the ball game. If the gentleman will permit me to get on, we will have 15 minutes or so left to discuss this.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield for just one comment on that point?

Mr. THOMPSON of New Jersey. Yes.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield for just one comment on that point?

Mr. THOMPSON of New Jersey. Yes.

Mr. CURTIS of Missouri. What I am saying is that the debate should confine itself to the very position the gentleman has taken, that they have abided by their own rules. I have detailed in the RECORD and in my speeches here that they have not abided by their own rules and that is what I would like to discuss. I wish the gentleman would discuss how he figures that they have abided by the rules.

Mr. THOMPSON of New Jersey. I figure they did on the basis which I have set out in my foregoing statement. I have studied it thoroughly. I have a portfolio of information and criteria and I might say to the gentleman that my primary objective today was twofold; first, to suggest amendments to the bills introduced by the gentleman from Michigan [Mr. HOFFMAN], and secondly, to demonstrate, as was my original intention on May 22d, the lack of support up till that time of the President's program as evidenced by the record.

Now, I have cited the Congressional Quarterly. I have faith, absolute faith in their criteria even though they showed that my support score was lower than that of most Republicans last year. I am citing this and other material to show that you, indeed—and I use "you" editorially——

Mr. CURTIS of Missouri. The gentleman may use it personally, if he wishes.

Mr. THOMPSON of New Jersey. On that side of the aisle, indeed, have not been up until a very recent date, supporting your President, your leader.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield.

Mr. CURTIS of Missouri. For instance, 14 of the 22 votes were on 1 appropriation bill. I have written to the Congressional Quarterly and I have challenged them to come forward with evidence that indicates that the President of the United States took a position on those 14 points which, according to their rules of procedure, were proper test votes. The gentleman cannot point to it nor can they, nor can anyone else, because the President did not take any position on those 14 points.

Mr. THOMPSON of New Jersey. The gentleman from New Jersey [Mr. THOMPSON] can and if the gentleman from Missouri [Mr. CURTIS] will refrain from asking him to yield further, I shall attempt to do so.

Mr. CURTIS of Missouri. I thank the gentleman.

Mr. THOMPSON of New Jersey. I have here and I shall include as part of the RECORD testimonials to the Congressional Quarterly from some of the following newspapers:

Elizabeth (N. J.) Daily Journal, a Republican newspaper of my own State.

The Lubbock (Tex.) Avalanche Journal.

The Washington Post and Times Herald; the Cleveland Plain Dealer, the Oregon Journal; the San Diego Union; the Worcester (Mass.) Telegram; the Winston-Salem Journal; the Yuma Daily Sun; the Harrisburg Patriot-News; the Boston Post; and others.

We have seen numerous Members from the Republican side saying different things on different days about the Congressional Quarterly. I would say to my Republican friends that it is not a matter of the Congressional Quarterly at all. What is involved here is support or lack of support for the President's program, no more, no less.

What will the opposition do with the articles from the New York Times and other publications which discuss the matter of Republican support?

Do you gentlemen mean to tell me—and I shall extend at this point the rest of my remarks so that we will have time for colloquy, if you will give me about 2 more minutes—do you gentlemen mean to say that the President has not had to make an effort to stiffen support from the Republicans for his program? Do you mean to tell me, gentlemen, that the article in the Christian Science Monitor of June 13, 1957, entitled "Eisenhower Tries Suasion on Budget Balky," which I shall put in the RECORD, is an untrue article from a biased or partisan Democratic paper?

The New York Herald Tribune of June 17, 1957, said, "President presses drive for unity in Congress," referring to the schism in the Republican Party.

The New York Times' transcript of the President's news conference of May 22, 1957, in which Mr. Donovan, of the Herald Tribune, says:

Mr. President, last week, sir, you were asked if you intended to punish Republican Members who did not go along with your program.

He goes on:

The President said, "Well, if you want to make that statement within reasonable and what I would call logical grounds, I think it would be a pity if we tried to organize political parties based on slavish adherence to every detail.

He goes on to say:

But I do believe this: When a political party gets together and agrees on a platform and that platform is presented to the American public as the political basis on which they are going to try to conduct the Government, if elected, they should remain true to it.

Mr. Lawrence of the New York Times asked the President a question and said:

If I could take it one step further.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield.

Mr. CURTIS of Missouri. Although the Congressional Quarterly came into the debate because the gentleman originally referred to it as his basic authority, I do not think there is any question but that there are areas of disagreement in the Republican Party. I would say this to the gentlemen on the other side who give all this advice about the split in the Republican Party that it is sort of like looking at the speck in your neighbor's eye when there is a plank in your own, in view of the basic division that exists between what we might call the southern Democrats and people like yourself who represent northern districts. I hope there is always room for disagreement, and public disagreement, within my party on various issues.

Mr. THOMPSON of New Jersey. I can assure the gentleman that his wish is going to be fulfilled.

Mr. CURTIS of Missouri. The issue is there. But I think what the gentleman from New Jersey and some of his colleagues fail to understand is that what some in the Republican Party have been standing for is some responsibility on the part of the Congress, and not to have a rubber stamp Congress such as we experienced in this country during the Roosevelt and the first part of the Truman administrations. The Congress should assume some of this burden as an independent arm of the Government. I think in this debate it is perfectly proper to point out these differences, and to add them up to see whether there is a fundamental difference between Republicans

in the Republican Party, here in the House, for example.

I will put in the RECORD at the proper time an analysis of that because it is my opinion that actually the Republican Party, including our various groups running from the conservative to the liberal, is relatively close together, and any split you might anticipate, I am afraid the gentleman is not going to find occurring. I would suggest that he direct his attention to his own party if he wants to combat the unity of the Republican Party.

Mr. THOMPSON of New Jersey. Now the gentleman contradicts himself as he talks. He talks about the liberals and the conservatives and other groups within his own party, and then he ends up by saying it is unified. The gentleman is not serious in saying that there is a complete unanimity of thought on that side; is he?

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield.

Mr. CURTIS of Missouri. No, I said that there was not, but I said it was a basic unity. The differences are aired, and when those differences are ironed out, I think you will find that the Republicans are pretty well all together and pretty well follow a definite philosophy—political and economic and social philosophy just as I submit the ADA Democrats follow one that is pretty different——

Mr. THOMPSON of New Jersey. I do not know what the gentleman means by an ADA Democrat. Would he define that?

Mr. CURTIS of Missouri. I will be glad to. The ADA as exemplified by some of the writings of Leon Keyserling on Economic Philosophy. The personnel composing the ADA follow that particular philosophy in their speeches. I think it is a very definite line of thinking. That is what I am referring to.

Mr. THOMPSON of New Jersey. But what is an ADA Democrat?

Mr. CURTIS of Missouri. I would say ADA Democrats are those who signed the much referred to telegram stating they support the President. These Congressmen tend to follow that line. There will be some deviation, but essentially the economic and social and political philosophy of Leon Keyserling, which is a perfectly respectable one, I want to state, much as I disagree with it, but they do follow that particular philosophy. That is what I mean.

Mr. THOMPSON of New Jersey. I think, as a matter of fact, the ADA is a perfectly respectable organization.

Mr. CURTIS of Missouri. I do, too.

Mr. THOMPSON of New Jersey. But I do not like to be tagged as an ADA Democrat or have my colleagues tagged in that way because I do not know what one is. The term is not definitive enough any more than "Modern Republican" is a definitive term. I had to delete reference made about the other body and, therefore, 20 or 30 definitions of modern republicanism have had to be deleted from this RECORD because of the rules of the House. But there are enough here to prove my point that there is no definitive thing as a modern Republican and, in my opinion, there is no such thing as an ADA Democrat although I must say that in many instances I have agreed with the ADA as well as differed in many instances from the ADA.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield.

Mr. CURTIS of Missouri. Number one, I want to agree with the gentleman with reference to his reference to modern Republican. I do not know what that definition means either although I have tried to follow it. I have tried to pinpoint what I mean by ADA because that is a definite organization of specific people. It consists of certain men who some of whom are well-recognized economists. I want to state for the RECORD that I regard the ADA as an organization, much as I disagree as I say with its economic and political thinking, consists of certain known economists, and I named one of them, Leon Kyserling, who have and expound a definite political, social, and economic philosophy. And I am suggesting that there is a definitive group, and I think the gentleman probably thinks along those lines.

Mr. THOMPSON of New Jersey. I do not know; I have never seen a compilation of the thinking of the ADA. I do know that from time to time I have agreed with them and have many times disagreed with them.

I have, as has the gentleman, respect for the ADA as an organization. I have respect for the National Association of Manufacturers, for the United States Chamber of Commerce, and I certainly agree that there seems to be some unanimity among the Republicans, but a lot of the time I doubt the unanimity here; it is not reflected in the House. On the floor yesterday we saw the minority leader [Mr. MARTIN] stand up and say "This is the President's program." The whip [Mr. ARENDS] voted against it. The unofficial whip, or assistant whip, or whatever the distinguished gentleman from Indiana's title may be [Mr. HALLECK], also voted against it.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. There might be unanimity here in this body but it is not by any means anything approaching unanimous support by the Republicans of the President's program and of the Republican national program.

Mr. CRAMER. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. Just a moment.

We are under no obligation here, any of us, to do anything more than the gentleman from Missouri has so well stated. He hopes that there will always be the right to act as an individual and that a Member can always follow his own conscience as a guide.

But I say this to the gentleman that if he—and I do not know that he did—endorsed the Republican Party platform, if he said: "I like Ike and I like everything Ike stands for" as my opponent did, he has the obligation to the people to carry out his campaign utterances.

Mr. CURTIS of Missouri. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. Having referred to the gentleman I yield to him.

Mr. CURTIS of Missouri. I certainly want to say that I did not support any person with unanimity. In my campaign I was happy to state that on the majority of the issues I did agree with the President, and did agree fundamentally; but there were certain things I disagreed with him on, and I still do.

Mr. THOMPSON of New Jersey. The gentleman from Missouri is not only a distinguished and outstanding Member but he is perfectly honest.

The SPEAKER pro tempore. The time of the gentleman from New Jersey has expired.

(By unanimous consent, Mr. THOMPSON of New Jersey was allowed to proceed for 2 additional minutes.)

Mr. THOMPSON of New Jersey. I am certain that his constituents know that, and I mean in no way whatsoever to reflect on the gentleman.

Mr. CURTIS of Missouri. I thank the gentleman from New Jersey.

Mr. THOMPSON of New Jersey. I now yield to the gentleman from Florida.

Mr. CRAMER. I was most interested in your remarks about the pertinency of some of these votes and I wish to ask the gentleman in that he stated he has complete confidence in the Congressional Quarterly's standard. If that is the case I would like to address this question to the gentleman: Can you explain under that statement why the vote on the corn bill was included in the House score but not included in the Senate in that analysis?

Mr. THOMPSON of New Jersey. Has the Congressional Quarterly published as support or opposition the House vote on the corn bill?

Mr. CRAMER. Yes, they have; on the motion to recommit.

Mr. THOMPSON of New Jersey. Then I must say that I do not know the answer, but I have confidence that the House score which they published is accurate.

Mr. CRAMER. I do not question the accuracy of their tabulation but I do question their interpretation, this method of determining—is or is not a given vote for the President. Can the gentleman say conscientiously that there is any justification at all for eliminating the House roll call on Resolution 190 instructing the President to submit a new budget to the Congress? Would you not say that it was an anti-Eisenhower vote? There is not any question in the gentleman's mind about that, is there?

The SPEAKER pro tempore. The time of the gentleman from New Jersey has again expired.

(By unanimous consent, Mr. THOMPSON of New Jersey was allowed to proceed for 2 additional minutes.)

Mr. THOMPSON of New Jersey. The gentleman from Florida asks a question and makes a statement. The gentleman from New Jersey conscientiously believes everything that he says.

Mr. CRAMER. If the gentleman will yield I did not imply that he does not.

Mr. THOMPSON of New Jersey. Mr. Speaker, the gentleman from New Jersey

conscientiously believes what he says and I am answering. The gentleman from New Jersey has this to say about that fact: That is one fact where there is doubt because of the President's response to the request of the Congress.

Mr. CRAMER. If the gentleman will yield on that point.

Mr. THOMPSON of New Jersey. I yield.

Mr. CRAMER. Just on that score, the Quarterly itself states that the basis of their determination is the President's position at the time the vote was taken.

The gentleman's position is based upon something subsequent. These are examples of some of the methods of arriving at a support score that cause me to question that tabulation.

Mr. THOMPSON of New Jersey. If that is an accurate statement, I say to the gentleman I hope that the Congressional Quarterly does list that vote as a support or opposition vote. Does the gentleman agree with me that the vote on flood insurance yesterday should be included on the same basis?

Mr. CRAMER. I would not deny it for a moment. I am happy to have it recorded. I voted in opposition.

Mr. THOMPSON of New Jersey. There is no fundamental disagreement here. I do hope that the poor beat up, downtrodden Congressional Quarterly is let alone except for the legislation which the gentleman from Michigan has introduced and which I propose to offer an amendment to. We have gotten up to the level we intended originally and from which we deviated. We have gotten it up to the level of a discussion of support or opposition to the President.

Mr. ROOSEVELT. Mr. Speaker, will the gentleman yield?

Mr. THOMPSON of New Jersey. I yield to the gentleman from California.

Mr. ROOSEVELT. I would like to say to the gentleman with respect to the vote on the request of the President in reference to the budget, that there can be no question but what that was a friendly vote for the President, in view of his answer in which he thanked the House for the request and in which he pointed out the area in which he thought the budget could be improved.

Mr. THOMPSON of New Jersey. Mr. Speaker, I thank the gentleman. That is precisely why I said to the gentleman from Florida that this is a difficult area.

The SPEAKER pro tempore. The time of the gentleman from New Jersey has expired.

Address of Secretary Milton at Worcester Polytechnic Institute

---

EXTENSION OF REMARKS

OF

HON. PHILIP J. PHILBIN

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. PHILBIN. Mr. Speaker, I am inserting in the RECORD an excellent commencement address recently delivered at Worcester Polytechnic Institute commencement exercises by our distinguished, able friend, Hon. Hugh H. Milton, Assistant Secretary of the Army.

At the same time, Secretary Milton received the degree of doctor of engineering, and his thoughtful, able speech was widely published and widely acclaimed in my district and State.

Worcester Polytechnic Institute is recognized universally as one of our very best engineering and technical institutions. It bears an excellent reputation throughout the Nation and the world as a truly outstanding school, and its graduates have greatly contributed to the cause of science, engineering, good government, and in many other fields.

I was also pleased to note that at the same commencement the honorary degree of doctor of engineering was also awarded to my friend, Hon. Carter L. Burgess, former Assistant Secretary of Defense. I take pleasure in congratulating both of these gentlemen and devoted public servants.

The degree citations follow:

HUGH MEGLONE MILTON II—DOCTOR OF ENGINEERING

It is indeed seldom that a man achieves unusual distinction in two careers. Yet, such a man we honor today.

After service as a field artillery officer in World War I, he received his bachelor of science degree from the University of Kentucky in 1919 and his master's degree from the same institution in 1922. He was appointed to the faculty in mechanical engineering at New Mexico College of Agriculture and Mechanical Arts in 1924 and, in 1935, was appointed dean of engineering. In 1938, he was named president of that college, and he served in that post until 1947, when he accepted the presidency of New Mexico Military Institute. Eloquent testimony of his distinguished stewardship to higher education is the fact that at least four colleges have honored him with honorary doctorate degrees.

During his years of service to higher education, he continued his active interest and participation in the United States Army, graduating from several of its schools and being promoted through its officer grades. During World War II, he was advanced to the rank of brigadier general and fought in several campaigns in the Pacific theater. In 1951, he was recalled to active duty as a major general and placed in charge of Reserve and ROTC affairs for the Department of the Army. In 1953, he was appointed to his present post of Assistant Secretary of the Army.

For his conspicuous and distinguished services and achievements in higher education and in national security, Worcester Polytechnic Institute is honored to confer upon Hugh Meglone Milton II, the honorary degree of doctor of engineering.

CARTER L. BURGESS, DOCTOR OF ENGINEERING

(In absentia)

It was readily evident in this young man's career that his rare administrative talents destined him for unusual achievements.

Initially, he so stood out among his fellow volunteer Army officers during World War II that he rose in rank from second lieutenant to colonel, during which time he served in such responsible posts as aide de camp to the chief of staff of European forces; assistant secretary of the General Staff, Supreme Headquarters of the Allied Forces in Europe; and administrative secretary at the Casablanca Conference in 1943. Thereafter, he further served our country as special assistant to the Assistant Secretary of State in charge of administration, and as deputy executive secretary of the International Secretariat at the United Nations Conference in 1945.

Reentering private enterprise, he served as assistant to the president of Trans-World Airlines, Inc., and later in an executive capacity for the General Aniline & Film Corp. In 1953 higher education enjoyed his remarkable abilities when he became assistant to the president of the University of South Carolina. Even at this time, he found the energy to serve our country again as consultant to the President of the United States on White House staff organization and on Cabinet and staff organization, as well as to act as adviser to the Under Secretary of State on staff organization.

In 1954, he was appointed Assistant Secretary of Defense for Manpower and Personnel by President Dwight D. Eisenhower. His performance in this post attracted national commendation, notably the Defense Department's highest civilian award, the Certificate of Appreciation, for his "outstanding contribution to the national security." He has also been awarded the Legion of Merit, French and Belgian D'Honneur and Croix de Guerre, and the British Order of the British Empire.

Earlier this year, he assumed the presidency of Trans-World Airlines, Inc., thus becoming one of the youngest and yet, best-proved of executives in both American enterprise and Government administration.

For his conspicuous achievements in national security and in private enterprise, and—perhaps most of all—for the example and inspiration he is to American youth, Worcester Polytechnic Institute is honored to confer upon Carter L. Burgess, the honorary degree of doctor of engineering.

Secretary Milton's address in part follows:

ADDRESS AT THE WORCESTER POLYTECHNIC INSTITUTE COMMENCEMENT GIVEN AT THE AUDITORIUM BY MAJ. GEN. HUGH M. MILTON, ASSISTANT SECRETARY OF THE ARMY FOR MANPOWER, RESERVE FORCES, AND PERSONNEL

Dr. Bronwell, members of the graduating class and friends, as I sat here and looked over this group gathered here on this Commencement Day, I suddenly realized that I have today completed a full cycle in the academic phase of my lifetime. Once, just as you, I sat as an undergraduate and listened ot the commencement speaker extol the challenge of the future. As a professor I remained on the sidelines and watched my students at a similar ceremony which culminated their undergraduate work, and like you, Dr. Bronwell, as a college president I have also conferred many degrees. And so today it is I who stand here as the principal speaker at your commencement to breathe once again the atmosphere of the campus and of the classroom.

There is another and more important phase of today's ceremony which I have also shared. Mrs. Milton and I sat where you parents sit when our son completed his college work. In all humility and with humble pride I believe that as a parent I felt the deepest sense of accomplishment.

PRICELESS CONTRIBUTION

You parents have made a priceless contribution to these young people and to the future of this great Nation of ours. I pay you sincere homage for I realize the willing sacrifices which you have made. Today your dreams will become a reality.

Perhaps you graduates do not realize it but while you have looked forward to this day for several years, they mom and dad, have looked forward to it since the moment of your birth. It was at your mother's knee and in the home where most of you received the moral strength and the courage to pursue these long years of study and of acа-

demic work which has prepared you to meet the challenge of the future—a challenge greater than that which has confronted man at any other time in civilization's long and tedious march.

• • • • •

TREMENDOUS ADVANCES

Civilization today is in the midst of tremendous scientific and technological advances. The United States during the past half century has achieved a position of eminence merited by few nations since beginning of mankind. Our Nation has become a leader of the free world—a champion of peace—and a defender of freedom and liberty.

This position of international leadership was not sought after by the United States as a national policy; however, it has become our lot and we shall not repudiate the faith and the confidence of our neighbors in today's complex community of nations.

America's leadership in this new and uncharted era imposes a responsibility of greatness. It can be met only by a whole people, and will be achieved only if the people have responsible leaders—leaders who have been trained to think precisely and to act calmly and deliberately.

ENORMOUS REQUIREMENT

In the fulfillment of these responsibilities our Nation has generated an enormous requirement for just and positive leadership. It is about this which I should like to speak to you today. To each of you who is completing his undergraduate work I issue the greatest challenge.

It is well for us that the past has bestowed its gifts upon us in such generous measure. We have a renewed and imperative need of them. We now live, not in splendid isolation, but in intimate political contact with a world which modern technology has shrunk in terms of travel time to an area smaller than that of the 13 colonies at the time of the American Revolution.

In the same sense, Worcester is now closer to Moscow than it was to New York City at the time our forfeathers founded this Nation. And while frontiers are thus shrinking, population has been increasing at an almost explosive rate. It took the world a million years, more or less, to produce its first billion live human beings. It has taken less than a hundred years to produce its second billion, and we may expect a third billion to be added before the century closes.

BROAD TOILING MASSES

At this moment these broad toiling masses have for the first time the opportunity of a fuller and less burdened life. Science is at hand to spread a more bountiful table. Chemurgy yearns to overflow the cornucopia. Within the last half century the American farmer with two-thirds less labor has learned to produce one-third more corn per acre under cultivation. Our agricultural Middle West is the granary of the world just as the industrial heartland of our Nation has become the arsenal of democracy.

Shorter hours of labor, greater assurances against individual misfortune, a broader culture, a more consciously realized sense of social justice are the treasures which after all these generations of impotence and confusion are now within the reach of humankind.

We and our allies throughout the free world are sincere in our desires that every man, woman, and child in this troubled world have the opportunity to share in these benefits to mankind. We realize, however, that great segments of the world's people are not permitted to echo the hymns of peace nor chorus the songs of freedom and liberty. A rule of men, not laws, exists in many lands. Starvation still stalks among the people and disease continues to harvest its needless crop. This then is the challenge—our Nation is fertile to the cause of individual rights and social privileges of the individual—our liberties have been nurtured by the blood of our countrymen who in freedom's cause chose death rather than to relinquish these God-given rights of man.

• • • • •

That the United States has achieved its present position of world leadership is due in large part to our great leaders of the past. That we continue to maintain this position of eminence in the future you—the leaders of tomorrow—must insure.

• • • • •

The tremendous advancements which are heralded by the release of the atom's energy will tax the best brains of the world for many generations. The application of the atom to industry promises an even greater challenge.

• • • • •

VISTA IS BOUNDLESS

That Alexander the Great wept when he believed there were no more worlds to conquer demonstrates the narrowness of his vision. You need have no narrow vision—the vista of tomorrow is as boundless as the universe—the expectant world waits.

If we but grant mankind only the wisdom to avoid self-destruction the possibilities for the future are breathtaking in their import.

• • • • •

The fall of Rome, the Renaissance, and the industrial revolution swiftly and profoundly altered both the nature and the tempo of man's existence. As our great social structure went through its evolutions the people who comprise that society were required to exert themselves to the utmost in a series of great leaps in order that they not be left behind in the impersonal and ever-moving march of progress.

• • • • •

NEW LEVEL REACHED

Today the accumulative consequences of the industrial, economic, and political revolution of the last century together with our present-day scientific and technological revolution have brought us to another of those climactic points in humanity's long march.

Some of us are beginning to see that the attitudes, the thought patterns, the state of intellect and the spiritual preparation which have served us so well in the past may need revitalizing or revision if they are to continue to serve us fruitfully in the trying years ahead. The requirements of today, as we stand upon the threshold of tomorrow, are particularly exacting for all free men.

This is in many ways a sick and troubled world. As we look into tomorrow, it is for each of us to decide whether we shall raise our eyes to the brightness and purity of the stars or cast them into the darkness, groping our way through the gloom of ignorance and pettiness.

WISDOM REQUIRED

The problems of a distraught world are beating on our door with insistence. If we are to solve them and go forward to a better tomorrow, we must use all our skill, our wisdom, and our resolution.

• • • • •

And I ponder what it is that has caused empires like ancient Rome and democracies like ancient Greece to have passed from the scene of human action and influence and to have left nothing but this ruin of stones as a symbol of their once great promise to mankind.

It seems to me that those nations, once great but now gone, were in their days of decline made up of individuals who had lost their sense of personal responsibility to themselves, to their fellow man, and to their nation. The citizens of Rome and Athens sacrificed their individuality to the state. The individual had no responsibility to support the state, but rather the state was responsible to support the individual.

We today must keep reminding ourselves over and over again that the individual is the only true carrier of social value. The group has no identity apart from individuals who make it up. It is idle to speak of society or the government or the community as independent actors in the human drama. Nothing ever happens in government, in society, or anywhere else until a person, by himself or in concert with others, puts his hand, his mind, and his heart to some task.

For good or evil, the world's work is ultimately performed by individuals. We shall stand or fall in the future, not in response to some blind and random thrust of determinism but according to the way in which we as individuals solve our many problems. Since so much depends upon the individual, it is of importance that our social institutions allow him to fulfill to the maximum the potential of his individuality.

• • • • •

And lest we feel discouraged, let us remember that modern man, with his appreciation of beauty, his regard for truth and fair play, his great range of sentiments which include love and tenderness and a consciousness of the unity of brotherhood, is tremendously advanced over the savage, inarticulate brute he was 10,000 years ago.

Imperfect as they admittedly are, our human relationships have progressed a long way since the time when slavery was a universally accepted institution, and people offered up their children as living sacrifices to the sun. We have a long way yet to go, but we shall get there by solving our social problems, not by folding our hands and pronouncing them to be impossible of solution.

• • • • •

We shall also have to free ourselves of some intellectual hobbies which keep us from thinking clearly. There is the mental inertia which makes us prefer the evils we have to those we don't know about. There is emotionalism which blinds and distorts. There is ignorance and laziness. There is fear of failure, fear of the criticism associated with being unconventional.

Worst of all, perhaps, there is the sheer inertia generated by habit which sometimes we seem almost powerless to control. Having been trained by the national and individual habits of a lifetime to make a certain kind of response to one set of conditions, we find ourselves continuing to make the same old response even though the conditions have changed. Like the animals in the laboratory experiment, people may out of wrong habits consistently make wrong choices, even with the goal clearly visible ahead.

• • • • •

Human ingenuity is a basic condition for cultural progress. Another basic condition is the free exchange of ideas. There is no great idea, no great invention which is exclusively the product of any one nation or individual. Some of the principles expressed in the declaration of our independence from England came as much from Englishmen as from anyone else, although their roots were imbedded in the soil of the Greek city-state concept of man's right to certain freedoms.

SOURCE OF PROGRESS

It is only where men can come to know men, sharing ideas, experiences and beliefs, that progress has been possible. This is why civilizations have sprung up along rivers and oceans where easy communication by water made possible this all-important sharing of ideas. It is also why nations who have lived by the sea and who freely made use of its benefits have traditionally been the most enlightened and advanced in their times. Now that modern technology has given man the

physical means to extend his mass communication channels deep into the hinterlands it matters greatly what ideas are thus being communicated.

We must find additional methods of bringing the world's people closer together. We especially owe it to our selves to find ways of building more and better bridges of understanding between the United States and the rest of the world.

There is a compelling need for other people and other nations to see us as we really are—a Nation of plain, healthy, prosperous people whose greatness is due in large measure to our national faith in the gospel of work. They need to see America at work—with our hands and with our heads and with our hearts.

* * * * *

George Washington, our first President, led this fight for freedom in the new world. He helped to establish our Government. He assisted in the drafting of the Declaration of Independence, the guidepost for our way of life, which today is an accepted principle of the way of life which we of the Western world desire.

None of us can follow the career of George Washington, who strode his solitary way to greatness, without a warming glow in our heart. He sought no easy road to achievement; he traveled no short-cut to success. He had a great mind, a keen ambition, and an earnest and humble heart. He was a strong leader of unshakable will and tireless patience.

* * * * *

And so, my good friends, this is the challenge of tomorrow, a challenge to you and to your generation. I so often hear people say, "I am an American citizen, and I am entitled to the rights and privileges accorded to a citizen of the United States." But I say to you today that none of us have any rights and privileges which are solely our own.

TEMPORARY REPOSITORY

These rights and privileges were given to us by our forefathers in the drafting of our Constitution and our Bill of Rights. They have been protected and preserved for us by our parents and our grandparents. We are merely the temporary repository in which they rest today. It is our responsibility to see them handed unblemished to the generations yet to come.

That is the privilege of an American citizen—to pass on to his son and grandson, the freedoms and the principles which were preserved for him by his father.

I am confident as I look forward to tomorrow that we may hold our heads high and raise our eyes to those stars who in their course proclaim that the onward progress of the peoples shall not be barred. And that all of our efforts to perpetuate the spirit of America and to broaden the spirit of individual liberty and freedom so that all men on earth may share it may result in a better and happier tomorrow for all mankind. This is the destiny for which America was created.

Status of Forces Agreement

EXTENSION OF REMARKS

OF

HON. HAROLD C. OSTERTAG

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. OSTERTAG. Mr. Speaker, the current National Legislative Bulletin of the American Legion contains a useful and cogent summary of the status-of-forces agreements—how and why they were negotiated, what their effect has been, and the proposals now pending to rescind or abrogate certain arrangements under them which impair the constitutional rights of American servicemen. The Girard case in Japan has brought the issue to a head in a dramatic way, but the solution will take clear, cool, and probably protracted study and negotiation. The Legion has rendered a useful service toward that end, in its presentation of the problem, and under leave to extend my remarks, I include in the RECORD excerpts from its statement:

STATUS-OF-FORCES AGREEMENT

Thanks to the Girard case, unfortunate as the circumstances are, public interest in the welfare of our Armed Forces personnel stationed in so-called friendly countries has been aroused. This case points to the deviation from American principles of justice which are now authorized by the Agreement of Forces of North Atlantic Treaty, commonly referred to as the Status-of-Forces Agreement which was signed at London on June 19, 1951. It was later ratified by the United States Senate on July 15, 1953 by a 72 to 15 vote. It was approved by the President on July 24, 1953.

Initially, 13 countries joined in the NATO Agreement, in addition to the United States. On September 28, 1953, a similar agreement was signed in Tokyo, covering the United States Armed Forces stationed in Japan. The United States has subsequently entered into similar agreements with other countries.

The stated purpose of the agreement is "to define the juridical status of the forces of one North Atlantic Treaty country when stationed in the territory of another country." (The initial agreements were among North Atlantic Treaty Organization countries but the same principles prevail in other countries where such agreements have been reached.) "The development of a collective military defense in peacetime requires that forces of various countries which form part of the integrated force for the defense of the North Atlantic Treaty area be stationed in the territory of another treaty country." The agreement also recited that it was essential that there be uniformity of arrangements and procedures governing the status and conduct of such forces in countries other than their own, and their relationship to the civilian authorities of those countries.

The agreement undertakes to regulate this relationship by guaranteeing the Armed Forces adequate legal protection and at the same time doing so without infringing on the authority of the military command, fully recognizing the peacetime rights and responsibilities of the civilian authorities in the host countries.

The agreement applies to personnel belonging to land, sea, and air armed services as well as civilian personnel accompanying them.

The part of the agreement of forces which causes the greatest concern is contained in the provisions of article VII which have to do with the authority granted the host country to cope with members of our Armed Forces who allegedly commit crimes while stationed in that country. Said article VII reads in part as follows:

"3. In cases where the right to exercise jurisdiction is concurrent, the following rules shall apply:

"(a) The military authorities of the sending state shall have the primary right to exercise jurisdiction over a member of a force or of a civilian component in relation to—

"(i) offenses solely against the property or security of the state, or offenses solely against the person or property of another member of the force or civilian component of that state or of a dependent;

"(ii) offenses arising out of any act or omission done in the performance of official duty.

"(b) In the case of any other offense, the authorities of the receiving State shall have the primary right to exercise jurisdiction."

The American Legion has, since 1954, adopted resolutions urging revision of the Status of Forces Agreement. The current mandate is Resolution 135 adopted at the 1956 national convention.

In the 84th Congress, representatives of the American Legion, along with many others opposed to the provisions of article VII above quoted, appeared before the House Foreign Affairs Committee during July 1955, when hearings were held on House Joint Resolution 309, introduced by Congressman Bow, of Ohio. The American Legion strongly supported Congressman Bow's resolution. The committee withheld conclusions on the matter until March 8, 1956 when, by a 19-to-10 vote, it failed to report House Joint Resolution 309.

NEW DEVELOPMENTS

On January 3, 1957, Congressman Bow introduced House Joint Resolution 16. A number of other Congressmen have introduced identical or similar resolutions in the House during the current session. They are pending before the House Committee on Foreign Affairs. The American Legion has requested permission to testify in support of Congressman Bow's and similar resolutions.

Article XVII of the agreement provides that any contracting party may at any time request revision of any article of the agreement. The request shall be addressed to the North Atlantic Council.

Article XIX provides methods whereby the agreement may be "denounced."

Congressman Bow's House Joint Resolution 16 provides in section 1 (a) that the President shall forthwith address to the North Atlantic Council a request for revision of article VII of the agreement in keeping with the provisions of article XVII above mentioned, for the purpose of bringing about the prompt elimination or modification of article VII so that foreign countries will not have jurisdiction over American military personnel stationed within their boundaries.

Subdivision (b) of section 1 provides that unless the revision mentioned shall have been brought about, the President shall denounce the agreement in keeping with the provisions of article XIX at the earliest date permitted under such article which, in the case of the United States, is July 24, 1957.

Section 2 of Congressman Bow's resolution provides that the President shall forthwith take such further action as may be necessary, with respect to any other treaty or international agreement to which the United States is a party and which contains provisions permitting foreign countries to exercise criminal jurisdiction over American Armed Forces personnel stationed within their boundaries, either to eliminate or modify such provisions so that they will not apply to such personnel, or to denounce and withdraw from the treaty or agreement.

Among the more important reasons advanced by those who seek to modify or rescind that portion of the treaty which permits foreign courts to try American servicemen are the following:

(1) All through American history, the American flag followed our soldiers wherever they went and was their protection;

(2) There is distinct violation of the constitutional privileges and protection for our military personnel under the Agreement.

(3) That today, as soon as they are sent to a foreign country where the treaty is in force, our Armed Forces personnel no longer

have the protection of the Constitution;

(4) They cannot be tried by a jury of their peers in a foreign court;

(5) That any trials held in foreign courts, especially in Japan, take place in a "hostile atmosphere";

(6) That in many countries there is a denial of the right of appeal. In this connection it is interesting to note that some of the countries who are parties to this Agreement have laws which permit the prosecution to file an appeal from a conviction in the event the prosecution feels the sentence of the court was not severe enough to fit the crime

There have, of course, been many other reasons advanced but those mentioned are the most commonly referred to.

One problem that the American people must be prepared to solve is what is their attitude going to be towards troops of friendly foreign countries who may be stationed within the boundaries of the continental United States, and who violate our criminal laws. Are we willing to have these foreign troops tried by the courts of their respective countries, or are we going to insist that they be tried by the criminal court having jurisdiction within the United States?

It is unfortunate that the constitutionality of the Status-of-Forces Agreement insofar as trials of American servicemen abroad are concerned, has not been passed upon by the United States Supreme Court. As above stated, many of our people contend there is a violation of the constitutional rights and protection afforded thereby for our military personnel tried in foreign criminal courts.

The opponents of the treaty take the position that the general rule of international law as laid down by Chief Justice Marshall, and many other later and famous legal authorities, is that troops of a friendly nation stationed within the territory of another country, are not subject to the local laws of the other country, but are subject only to their own country's laws and regulations for the government of the armed services.

The recent decision of the United States Supreme Court in reversing itself in the cases of the two women who murdered their husbands, members of our Armed Forces, adds further confusion to the legal issues involved.

The American Legion urges its members and those of the American Legion Auxiliary and others to interest themselves in this problem.

MILES D. KENNEDY,
Director.

Address by His Excellency Jose M. De Areilza, Ambassador of Spain in the United States, at the Commencement Exercises of Loyola College, Baltimore, Md., Sunday, June 9, 1957

EXTENSION OF REMARKS
OF
HON. GEORGE H. FALLON
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. FALLON. Mr. Speaker, recently the State of Maryland was honored by the presence of His Excellency Jose Maria De Areilza, Ambassador of Spain in the United States, when he addressed the commencement exercises of Loyola College, in Baltimore, on Sunday, June 9, 1957.

I commend the reading of the Ambassador's address to the entire membership of the Congress, as well as the public at large. I feel his remarks on Communist infiltration and the devious paths this infiltration is taking are significant and should be digested by one and all.

I was privileged not long ago to visit Spain and was delighted to see the good faith on the part of that country. I talked with the people in charge of our foreign and military affairs who were in agreement that our relationship with Spain is highly cooperative and in the best interest of the United States.

Under leave to extend my remarks in the RECORD, I would like to include the Ambassador's address:

ADDRESS BY HIS EXCELLENCY JOSE M. DE AREILZA, AMBASSADOR OF SPAIN IN THE UNITED STATES, AT THE COMMENCEMENT EXERCISES OF LOYOLA COLLEGE, BALTIMORE, MD., SUNDAY, JUNE 9, 1957

It is especially gratifying for me as Ambassador of Spain in the United States to speak before you this evening at the commencement exercises of Loyola College here in Baltimore.

While we are gathered in this friendly and pleasant atmosphere, 130 million European Christians are continuing their daily tragic struggle for survival in the eastern lands of Soviet-occupied Europe. I mention them, not because I do not feel the same pity toward all the other hundreds of millions who are also under Communist domination in Russia, China, North Vietnam, or North Korea. I mention them because from that one-third of humanity which is now subjected to Communist rule, these are free people who, after 15 centuries of European Christian culture, have been thrown into the horrid melting pot of the Soviet Empire without any kind of moral, political, or social justification. The Second World War suddenly brought the frontiers of freedom and civilized life 1,000 miles back to the heart of the Old World and we do not realize to what extent that tremendous historic achievement will change the shape of the whole world itself in the near future. These 130 million European Christians, who are our brothers in faith and culture, have been undergoing the biggest and most atrocious technical process to eradicate the basic principles of their way of life. Since these countries were occupied by the Soviet troops, not only were the intellectual classes, the professionals, as well as the ruling members of society, killed or deported to Siberia, but even the churches, universities, archives, public libraries, and the centers of investigation were annihilated in order to start afresh a brandnew Communist education which is trying to change with a false picture even the past national traditions of these countries. This is one of the greatest challenges of history, and indeed one of the great challenges of our time. As one of the most prominent statesmen in Europe has put it recently: It is a new form of international delinquency which has appeared in the world after the Second World War, with a systematic attack on a free country by international Communists, not only through direct military threat or occupation, but also by the more subtle medium of infiltration, sabotage, occupation of key positions, radio-waved campaigns of smearing and slandering, economic pressure, organized riots, revolutionary strikes, and political assassination. This new terrible form of menace is a big dark cloud hanging over our future, which you young men of America do not realize yet, because you are privileged to live in a strong and free country, far away from the boundaries in which the free world finishes and the world of slavery begins.

And in a parallel way this same world, which, through technological progress of every kind, is becoming smaller day by day, has also discovered the new warfare of thermonuclear bombs and guided missiles. Thus, a whole new era has become apparent to the military minds and all the previous concepts of strategy have become obsolete. The terrific power of thermonuclear bombs, not only for their capacity to destroy human lives, but also for their long-range possibilities of hazardous effects on future generations yet unborn, has filled with deep concern the scientists as well as the statesmen and rulers in every country. Actually, there are only 2 or perhaps 3 great powers which today could wage a thermonuclear war with their own weapons. But the discoveries in that field are progressing so rapidly that it is not difficult to forecast the day in which the thermonuclear weapons could also be manufactured, not only by the big, but even by the small nations. The situation then could become terrific. A new conception of power will compel mankind to revise previous political and international points of view in order to prevent the destruction of civilization.

I should like now to bring to your consideration some of the responses that as a Western European I believe are adequate to that great challenge. I belong to an old country which was a world power in the past, and achieved some important goals in history, such as the discovery of the New World, the propagation of the Catholic faith to hundreds of millions, and the creation of moral principles which sustained the Catholic unity back to the 16th century, and produced such extraordinary human personalities as Ignatius of Loyola, my fellow-countryman of the Spanish Basque provinces, who founded what he called "the Army of Jesus," that is, the Jesuit Order.

As a Spaniard, I have had, along with others of my generation, a personal experience against the threat of communism. That great menace was not so well known to the world in 1936 when my country had to face the danger from the inside; when a left-wing government had given away the key positions of the State to pro-Soviet agents. The Spanish people had to fight fiercely for 3 long years to defend Spain's way of life against the forces of aggression which were attempting to turn our country into the first Soviet satellite state in Europe. Think of all the different circumstances under which the world would have lived in these past 21 years had Spain become a satellite country, located at the entrance of the western Mediterranean Sea, with a strong heritage and cultural influence in the 20 Spanish-speaking countries of America. Think of what could have happened in the Second World War and in these past years of the cold war had we been ruled in Madrid by a pro-Soviet government, manacing the whole system of Western free nations from behind the Pyrenees. Our fight, which was a terrible civil war, was carried out at a heavy cost in human lives, one-half million, and the total destruction of many cities, buildings, and industries. Shortly after we emerged victorious from that fight, the Second World War broke out and we maintained a strict neutrality in order to heal our own wounds and to restore the principles of civilization under law and order. A firm hand was needed, and General Franco provided it with his unimpeachable moral standing and the principles of the Catholic faith.

But when we think now of what remains to be done in the future, we believe that, primarily, it is not only a problem of shaping our national life on the patterns of this or the other political system, with more or less democratic freedoms, but to bring up the new generations, based on the fundamental principles of Christian faith, of per-

sonal dignity, of national pride, of love of country, of her freedom, which, in the long run, are the only foundations that can really bring a substantial antidote against the poison of communism.

Let us take the case of Hungary, for instance. In the uprising last October we read reports of the unbelievable heroic struggle of a small nation with no arms and practically no army, valiantly fighting for its very life against the overwhelming onslaught of the Soviets, who tried to crush the upheaval of the freedom fighters in Budapest. Everything seems to have been done by the Soviets in the past 10 years to eradicate the last vestige of the traditional way of life of the Hungarians. Hundreds of thousands of the ruling classes were killed or sent to concentration camps, and the state police seemed to have every thread in their hands. Nevertheless, it was the peasants, the young workers, and the young university students such as yourselves, who fought the battle with bricks, stones, iron bars, and small guns, against the big tanks of the Soviet tyrants. The issue was lost and, to short-sighted observers, it appeared to be a major setback, but certain it is that, at that time, the fight of Hungary for national freedom and independence started, and it will continue until, at long, last, she achieves her goal.

The example of Hungary affirms what I said before. The seed of the religious conscience, the sense of national freedom, the worth of human dignity, are such strong forces and are so deeply rootd in the soul of man that neither barbarism nor atrocity can ever destroy them, and they will always remain alive in the conscience of future generations.

With reference to the other big challenge, the tremendous danger of an all-out thermonuclear war which will destroy mankind in a satanic clash of forces, I will also say, as a Spaniard, what I think could be a sound response to that complicated question.

It is a source of great pride to us as Spaniards to think of our motherland as the one which made possible the discovery, civilization, and conquest of two-thirds of the whole American continent. It was one of the great epics of history. The most imaginative historian could never have foreseen that in less than 50 years—from 1500 to 1550—a handful of some thousands of Spanish soldiers and adventures, sometimes on horseback, but nearly always on foot, could discover, occupy, and colonize the land of the Americas, from Florida and the Mississippi, down to Cape Horn near the South Pole. It actually happened, and about 13 million of native Indians who lived, most of them, South of the Rio Grande, were baptized and converted to the Christian faith and settled down in thousands of cities, with a whole system of highways, bridges, ports and many centers of culture, schools, colleges and universities. But the challenge that the New World posed to the Spanish was not only one of nature and physical difficulties. They also had the intimate problem of finding some juridical principle which would justify them for dominating these vast lands and submitting to Spain, these millions of people who were more in number than the 10 million of Spaniards who lived in the Peninsula. It was a Dominican Friar at the University of Salamanca who, in the sixteenth century, at the time when Ignatius of Loyloa was fighting his battle in defense of the Pope and the unity of Christianity, wrote his famous immortal books in which he posed and solved the great question. Vitoria thought that the moral principles which ruled the Christian community of nations in the Old World could also be applied to the New World, not because of the fact that these new people had become converts of our religion but for the more fundamental fact that they were endowed by divine decree with an immortal soul, and therefore had the right to the respect and dignity of any man, whether Christian or not. There and then, international law was born, and I have many times seen, with emotion, the effigy of Vitoria depicted on the walls of the Supreme Court in Washington, as a tribute paid by the high respect of the judicial powers of this country to the outstanding personality of the founder of modern international law.

Vitoria said: "let us make a new law for a new world." Let us take his words as our motto. Let us make a new law for a new challenge. More than ever mankind needs today an international code of principles to which to refer in every dispute, friction, or tension. More than ever people can only feel at ease, to avoid a crazy road to destruction, by submitting these to the principles of an international code.

Before World War II, a famous French statesman said: "Peace is one and indivisible." We can today change these words and say that international moral is one and indivisible because there can be no international law nor international code to be applied to every country if there is not a previous acceptance of international principles, which, of course, need a previous acceptance of the same code of morals.

This is the great challenge, my friends, which the world offers today and in the near future. We face a terrific danger. Not only a physical danger of absolute destruction, but also something which is just as bad: the establishment through terror and barbaric methods of a society without any concern for man's dignity as a human being, without any recognition of the soul of man as a sparkle of God's intelligence, without any belief in the ultimate eternal projection of human actions and their moral evaluation, and therefore without any respect for human freedom. A society ruled tyrannically by an absolute monster, whether unipersonal or collective, who dominates with ruthless cruelty and uses men as mechanical instruments, as pieces of machinery, as robots of economic interest, thus changing society into an ant-hill or a beehive and shifting the sense of our existence from history to natural history, from spiritual values to statistics, from sentiments to figures.

We must arrive, I said before, to a universal code of juridical principles, to avoid the final disaster. Thus we must agree on a previous morality, on the definition of good and evil exigible to all. But a supreme spiritual principle must be also accepted to make the morals work. That brings us back to religion as the fundamental code of our individual or collective behavior. International communism is antireligious because it is itself a fanatic, demoniac religion, an antireligion I'd dare say. The Communists know that man needs a transcendental appeal to give a meaning to life. Therefore they have invented the historic materialism and the phony dream of a paradise on earth, an economic paradise, with no hope for an after-death existence.

Our response must be exactly the contrary: To awaken in every man the hope of eternal life through the grace of God; to emphasize his feelings of freedom, his personal dignity, his resemblance to the Creator. The Spanish poet and mystic Saint John of the Cross wrote: "One single thought of the human mind is worth the whole universe," because only the true believers in God are also the true believers in man. Once more in history not only religio est libertas (religion is freedom), but also religio est Pax (religion is peace).

In closing, I should like to say that when I read about the disarmament talks which are going on as a good approach to peace and, unquestionably, with good faith on the part of the free world, I think there must be a clear previous understanding of what will be the common moral that shall prevail in international agreements. As long as there is bad faith on one side, and no acceptance of these moral principles, all the disarmament talks will be disarmament appearances only, or political maneuvers, but the substantial threat will remain the same. As long as these fundamental questions are not solved, the free world must remain united, alert, and vigilant. The free world must likewise remain strong in all fields, even in the dangerous field of thermonuclear weapons. A passage in the Bible reads: "Una manu sua faciebat opus et altera tenebat gladium." (One hand made the work and the other held the sword.) And it was also said in the Book: "Beware of the disarmed prophets, because they will perish."

Truth will make us free, but let us protect the truth with a shield of strength, let us live for the truth and let us die for it if it becomes necessary.

Speech of David E. Finley, Chairman, the Commission of Fine Arts, at the Commencement Exercises of Winthrop College, Rock Hill, S. C., June 2, 1957

EXTENSION OF REMARKS
OF
HON. JOHN L. McMILLAN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. McMILLAN. Mr. Speaker, under leave to extend my remarks in the Appendix of the CONGRESSIONAL RECORD, I include a speech delivered by Mr. David E. Finley at the commencement exercises at Winthrop College at Rock Hill, S. C. Mr. Finley was formerly director of the National Gallery of Art here in Washington and is now chairman of the Commission of Fine Arts in the District of Columbia.

Winthrop College is considered one of the outstanding girls' colleges in the United States and I believe every Member of the House will enjoy reading Mr. Finley's excellent address which was delivered at the recent commencement exercises at Winthrop College on June 2, 1957.

SPEECH OF DAVID E. FINLEY, CHAIRMAN, THE COMMISSION OF FINE ARTS, AT THE COMMENCEMENT EXERCISES OF WINTHROP COLLEGE, ROCK HILL, S. C., JUNE 2, 1957

I felt greatly honored when your president, Dr. Sims, asked me to be with you today and to deliver the commencement address at Winthrop College.

My admiration for Winthrop is not confined to its atendance records or to the impressive group of buildings which today house its many activities on this campus. All this is cause for great satisfaction to anyone familiar with the history of this institution. But I am even more impressed by the kind of instruction given here and by the fact that the quality of education is being steadily raised, as proved by the records of your graduates over the last 10 years.

That is a matter of the greatest importance; and I only wish it could be said of all institutions, especially those producing qualified teachers, in all parts of this country. Certainly I do not need to tell this intelligent audience and one so interested in educational standards that the quality of

American education, not the quantity, is the matter that should chiefly concern all of us who have at heart the success of our great American experiment of education for all.

During the latter part of the 19th century we were still concerned, and rightly so, with the quantity of education available in this country, especially to women. But that need has long since been met, largely by the founding of colleges, such as Winthrop and many others. Now we must strive, as you are doing here, to see that quality in education is not sacrificed to quantity, as is being done, I am sorry to say, in many secondary schools and institutions of higher learning where science and the liberal arts are obliged to compete with a variety of courses, many of them of doubtful value.

This has come about largely by reason of a change in outlook and a consequent demand on the part of students for courses which they think will be useful to them in meeting the new conditions that have arisen. We are now predominantly a technological and urban, rather than an agricultural, civilization as we were even 70 years ago when Winthrop College was founded. Communication today is easier. New methods of transportation have changed not only the tempo but the mode of living in this country. It is to be expected, therefore, that institutions of learning should adapt their curricula to conditions in the world around us. It is a matter for regret, however, that so many of these institutions should find it necessary to offer courses, sometimes because such courses are popular, sometimes because they are easy, but which contribute little to a real understanding of life for which a sound and balanced education should prepare us.

We are able in the United States, because of our wealth and its wide distribution, to provide the amount and the kind of education we want for everyone. And we have long been committed to the American belief that everyone must have some education, not only for their own good but for the good of the state which in a democracy must have an educated electorate. Furthermore, we have in the public school system the instrument that makes it possible to achieve these ends.

The American public-school system is one of our great contributions to the civilization of the Western World. But the potentialities of that system have never really been explored, much less realized, as a means of arousing intellectual curiosity and teaching the child to think for himself. It is in the public school that he can first learn to look upon science, not as a materialistic but as a humane and civilizing force that may some day abolish wars because, with the development of atomic weapons, wars threaten the annihilation of the victor no less than the vanquished. Here the child may learn to look upon science as a beneficent force that will later provide the leisure in which to do the things that interest him most. It is also in the public school that the child can be made aware of what the humanities can do for him and of the important role which the arts can play in his life.

But the accomplishment of all this depends first upon the teacher and the degree to which his or her knowledge and enthusiasm for a subject can be transmitted to the pupil. If it can be transmitted, the influence of such a teacher never ends. In the words of Henry Adams, himself a teacher who still influences us through his writings: "A teacher affects eternity; he can never tell where his influence stops."

But the responsibility for making the public school effective in educating the child depends not only on the teacher; it depends also on the parents many of whom are not yet convinced that education can be achieved only by hard work. Too many parents in this country expect, even demand, that their child be passed in his examinations and allowed to go on to the next class, regardless of how little effort he exerts or how lacking in mental discipline the child may be. This is a grievous fault in our educational system; and, until it is corrected by a new attitude on the part of the parents, we are wasting educational facilities that could well transform the lives of our people and make America the force it should be as the leader of the free world. If America is to maintain such a position of leadership, we must provide special training in the sciences and in other fields for the unusually gifted boys and girls, who should be identified in high school and given an opportunity for later college or university training in subjects for which they have a special aptitude.

All that I have said as to the importance of providing instruction in the sciences and the arts in the public schools applies equally, of course, to the colleges and universities. We have emphasized technical or vocational training, so that many of our students have comparatively little knowledge outside of the vocation for which they have been trained. We are told, for instance, that we need more scientists, more engineers, more technicians; and we do need them to operate our mechanized civilization, which has raised our standard of living to an unprecedented height and has made life more comfortable and at the same time more exhausting than ever before in the world's history. We need them also to insure our safety, even our survival, in this troubled world in which we live. And we need them particularly to compete with the atheistic, scientific trained minds which are being educated in Soviet Russia in such vast numbers today.

To attract men and women into these professions and into other fields which are equally important if we are to become an educated people and to maintain a position of leadership in the world, we must offer greater rewards from the point of view of both money and prestige to those who submit themselves to these disciplines. We must also offer a more balanced system of education that will better equip them for the kind of world they will face in the foreseeable future.

As we all know, the average man and woman are not receiving a well-rounded education today; and what is the result? Those that have received special training are extremely efficient, as a rule, at the job for which they have been trained and by which they earn their living, whether it be a profession or business or trade for which special training is required. But unless their curiosity has been aroused and they have acquired some knowledge in other fields, such as the humanities, either during their school years or afterward, they may be equipped to lead a useful life but not necessarily the most interesting or enjoyable one, so far as they, themselves, are concerned. It is for this reason that it is so important, not only for the average person but for our scientists, our technicians, our professional men and women, to acquire some knowledge of the arts and literature, which can divert them, especially in those long, vacant hours that stretch ahead with the 40-hour week, with early retirement from the job and with increasing expectancy of life as a result of our fabulous discoveries in the fields of science and medicine.

From this point of view art has, at the very least, a therapeutic value. But it has a far greater importance than that in its spiritual implications and in the effect it can have on our daily lives, especially in the matter of self-discipline. Art is a serious matter—as serious as science—and should be given equal importance in any balanced system of education. For art, no less than science, is a method of knowing—a method that should prepare us to understand and enjoy the world we live in. Other fields, however, such as business and industry, promise greater financial rewards and quicker advancement, with the result that the average student is not willing to make the effort to acquire a more rounded education that would give him a wider range of interests and a fuller and more satisfying life.

The choice is not altogether the fault of our students. It is all part of the cult of success; and by that I mean worldly success on which too much emphasis has been placed in recent years. Today, I am happy to say, there are signs of a change in outlook. As in the days of Jeremiah, "The fathers have eaten sour grapes and the children's teeth are set on edge." The American people are beginning to realize that there is something lacking in their equipment for living under the stress and strain of modern life. They have determined to remedy this lack and, in doing so, they have discovered a new frontier to be explored and made their own—a limitless and ever-receding frontier within which the things of the mind, such as music and the visual arts and literature, can be enjoyed by all who have the will and the capacity to do so.

These things in this country today are mostly free in the museums, in the public libraries, and over the radio or television; or else they can be had at moderate prices in concert halls and in inexpensive editions of worthwhile books which are sold by the millions and can be bought everywhere, even in drug stores. As a result, this great legacy of cultural values, which has now been made available in this country, is being used and enjoyed by a greater number of people over a greater area than ever before in history.

All this is and should be a cause for great encouragement to us. It is also very impressive to visitors coming to us from other countries. In many instances it comes to them as a surprise, for they have heard more of our mechanical and industrial prowess than of our achievements on other levels. It is necessary, perhaps, to come here in order to realize what we have done in the fields of education, of culture, and humanitarianism.

But comparatively few visitors can come to us and we are not very adept, as a rule, in projecting a true picture of America to the outside world. For this reason, President Eisenhower has started a people-to-people movement by which he hopes "people can gradually learn more of each other." He believes there is a real job to be done in international relations by the American people themselves—a job distinct from the activities carried on by Government officials and agencies. He proposes large-scale development of contacts with other countries, such as is now being done in many instances by private groups, institutions, and individuals. Through such contacts he hopes for better understanding and progress toward peaceful solution of world problems.

Last autumn he called a conference in Washington of about 40 persons representing various segments of American life. He did me the honor of asking me to form a committee representing the fine arts, that is, the visual arts, for music is represented by a separate committee. We have formed such a committee and have a number of undertakings planned or under way. They will prove useful, I hope, in carrying out the President's idea; and I know we can count on your assistance as this program further develops.

As we survey the civilization of our own and other countries, we realize that many of our greatest problems are those we have in common. First of all, perhaps, is our need for self-control in our contacts with each other and in our duty to our country. Here in America our great technological advances have made such discipline even more difficult to achieve. Our mechanized civilization has given us a large degree of leisure, which we must use intelligently or it may do us great

harm. We have not yet learned how to use that leisure to the best advantage. We strive to save time in order to have more and more leisure; and then are at a loss to know what to do with all the time we have saved. The end result could be both lack of discipline and boredom, which is a situation to be avoided at all costs in a people with responsibilities, such as we have, for maintaining freedom and order in the world.

There is no reason to doubt our creative capacity on the cultural as well as the material level. But that is not a matter that need concern us today. The problem which we face now is the same that other civilizations have faced and failed to solve in the past. How can we educate our people so that they will know how to govern themselves in relation to each other and to the world at large? The question asked centuries ago by Socrates and the Greeks still waits for an answer: "Is education (in more than a technical sense) really possible?"

Somehow we must find the answer to that question if the great American experiment is to succeed. That experiment is based on the belief that men are capable of ruling themselves, always assuming that they can be educated to understand the issues of life and death with which they must deal. And to understand these issues and to deal with them as they arise, in their individual as well as their national life, our people must possess a collective wisdom which can be acquired only by a knowledge of the facts and a sense of moral values that impels them to right decisions.

I emphasize moral values because instruction alone is not enough. In the words of that great mystic and intellectual leader of the Middle Ages, St. Bernard, of Clairvaux: "Instruction makes men learned; love (of the truth) makes them wise * * *. There are many whom a wise philosophy teaches as to what may be done, while it does not set them in a glow to do it. It is one thing to know of many riches, another thing to possess them." He is, of course, referring to spiritual riches such as we are concerned with here today.

Finally, I would like to repeat to Winthrop College what Leonello d'Este said to the university at Ferrara when it was reopened in 1442: "It is an ancient opinion * * * that the heavens, the sea, the earth must some day perish * * * while only the understanding of things divine and human, which we call wisdom, is not extinguished by length of years but retains its rights in perpetuity."

To that I will add that here at Winthrop College, it is not enough merely to teach your students about these things. They must learn to possess them; and, if they do possess them and make them their own, they are immune to fortune. For neither time nor circumstances nor age nor even blindness can take from us those visual images, those harmonies of sound, those great ideas greatly expressed which have become part of ourselves and will make us not only an educated but a disciplined and happier and more contented people.

If your college can do that for your own students and for those who may come under their influence, your courses in the fine arts are worthy of all the effort you can make to establish them, not merely as a pleasant accessory of civilized living, but as a vital force in building the America we are determined to have now and in the future.

You who are graduating from Winthrop College have had the benefit of such instruction and should be qualified to play an important part in the future development of our country. During the years ahead you will have the opportunity and also the responsibility of carrying America to unprecedented heights as the exponent of a new philosophy in government—a philosophy that impels us to uphold peace and justice and a sense of moral values among our own people and in our dealings with other nations. At the same time we must set the example of a nation great and powerful enough to lead and unselfish enough to do so in a manner that will serve not merely our own best interests but the welfare of men and women everywhere in the world. If you can do this by your efforts and those of your generation, you can bring into being that orderly and happier world which, I have faith to believe, in the fullness of time will someday be realized.

The Supreme Court Rulings

EXTENSION OF REMARKS
OF

HON. CHARLES A. WOLVERTON

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. WOLVERTON. Mr. Speaker, the recent rulings of the Supreme Court criticizing and setting aside certain activities of the Un-American Activities Committee and the Congress, in dealing with communism and related subversive acts of Communists, I am fearful will greatly handicap and cripple the future effectiveness of congressional investigations in this respect.

I am additionally fearful that the application of the principles and views laid down by the Supreme Court will also adversely affect all other congressional investigations into all other forms of corruption and racketeering. This decision would seem to destroy or, at least, make unworkable from a practical viewpoint any and all endeavors of the Congress to inquire into the dark and devious ways of Communists, traitors, disloyal citizens, and crooks of all kinds. Such consideration that it has been possible to give to these decisions in the short time that has intervened since their delivery seems to indicate that any witness under examination can decide for himself whether the question is pertinent to a legislative purpose and, if he determines that it is not pertinent, then can refuse to answer. And, it then follows that long and drawn-out proceedings would be necessary to establish whether the witness was justified in so doing, or is subject to contempt for refusing to answer. Thus, by the time the proceedings would go through the usual court procedure to reach a final decision by the Supreme Court, sufficient time could elapse to possibly destroy the effectiveness of the testimony and make it worthless for all practical purposes.

This cumbersome procedure could kill future investigations. This thought has been forcibly set forth by David Lawrence, one of America's most eminent and conservative columnists. An article by him appearing in the Washington Evening Star, issue of Wednesday, June 19, 1957, reads as follows:

THE SUPREME COURT RULINGS: DECISION IN RED CASES SEEN CRIPPLING CONGRESSIONAL INQUIRIES' EFFECTIVENESS

(By David Lawrence)

The Supreme Court of the United States has crippled the effectiveness of congressional investigations.

By one sweeping decision, the Court has opened the way to Communists, traitors, disloyal citizens, and crooks of all kinds—in business and in labor—to refuse to answer any questions which the witness arbitrarily decides for himself are not pertinent to a legislative purpose.

This means that every time a Senator or a Representative asks a question in an investigation, the witness must be given a clear explanation of what the legislative purpose is, and this may even have to be confirmed by a resolution adopted in each case by the Senate or the House. Then it may have to be passed upon in a decision by the Supreme Court before it is really valid.

This cumbersome procedure kills future investigations that seek to expose the ways and means by which the Communists infiltrate America. It kills any searching investigation of racketeers in the labor-union movement, or any other kind of corruption. Had the Supreme Court's new law been in effect during the Harding administration it would have killed off any exposure of the Teapot Dome scandals. Had it been rendered in 1950, Alger Hiss could have avoided answering questions asked by the House Committee on Un-American Activities, whose charter of authority, held ever since 1938, now is torn to shreds by the Supreme Court.

Senator MCCLELLAN, of Arkansas, Senator KEFAUVER, of Tennessee, Senator EASTLAND, of Mississippi, and the chairmen of various House investigating committees might as well shut up shop. The power to investigate has been curtailed drastically on the ground that Congress has to particularize in every case and specify in its resolutions exactly why it wants certain questions answered. It must somehow anticipate all the questions the investigating committees may wish to ask. This is, as Justice Clark, a former Attorney General, declared in his dissent, both unnecessary and unworkable. He added:

"The resulting restraint imposed on the committee system appears to cripple the system beyond workability."

This is because the Supreme Court has now set itself up as knowing more about what Congress needs to know to legislate than Congress itself thinks it does. In the words of Justice Clark:

"The majority (of the Court) has substituted the judiciary as the grand inquisitor and supervisor of congressional investigations. It has never been so."

All the Justices, of course, are honorable men and conscientious in the pursuit of their duty. But for the most part they live in a legal vacuum. They display a curious unawareness of the actual operations of Communist subversion. To them, apparently, there is no Communist menace, no such thing as infiltration by stooges of the Communists, and if a man admits he has worked and cooperated with the Communists and then refuses to tell who else he met in such activities, this is construed now as a "right of silence" derived from the first amendment which, now added to the fifth amendment, makes it easy for treason to be protected.

The Supreme Court majority realized, to be sure, the gravity of its decision and tried to soften the blow by minimizing the future danger. All the Congress has to do now, the Court patronizingly suggests, is to take added care in authorizing the use of compulsory process. But, as Justice Clark realistically points out, the Court doesn't say how this added care could be applied in practice.

The Supreme Court majority—Chief Justice Warren, Justices Frankfurter, Black, Douglas, and Brennan—seemed to think that the desire of the individual to be spared any unpleasant publicity due to his past associations was more sacred and more important than the right of Congress to get information about Communist plots and infiltration in order to pass laws to safeguard the Nation against destruction. The ruling was proclaimed, too, by the Court that anyone hereafter can teach and even advocate the

forcible overthrow of the Government of the United States, but unless there is conclusive proof that these teachings are part of a conspiracy to incite someone to some action, the viewpoint expressed is merely abstract doctrine and not subject to punishment by any law Congress might pass.

There were other significant cases decided by the Supreme Court on Monday, June 17, 1957, which will make that day a fateful one in American history. State legislatures were told that they, too, cannot investigate and require witnesses to answer their questions except where it can be proved that the State has an overriding interest in a subversive individual which outweighs his right to silence, and this, in turn, might have to be reviewed in each instance by the Supreme Court of the United States.

In another case, the Court didn't decide the merits of the disloyalty charges against John Stewart Service but said the Secretary of State couldn't reverse his Under Secretary who had ruled favorably to Service. In still another case involving 14 persons convicted of Communist activity under the Smith law, 9 were set free and 5 ordered to stand trial—so as to ascertain the facts as to activities of the defendants relating to 1 word—"organize"—in the existing law. It could mean activities with reference to a new party or subversive group or a continuing process of organizing in Communist Party circles as the Department of Justice has contended. Since organization work in the Communist Party now is ruled by the Court to happen only at the creation of the party in 1945 and is adjudged not to be a continuing process, certain defendants are set free because they were not prosecuted within the time prescribed in the statute.

These decisions will cause much consternation throughout the country. They will make happy, in some respects, the so-called liberals who have long crusaded against congressional investigations of Communist activity, but it will make them unhappy in other respects because it gives crooked labor racketeers, shady business operators, financial manipulators, and other wrongdoers a means of escape from congressional exposure.

Naturally, Moscow should be happy. All they need do now is to instruct their Communist Daily Worker editorials how to adapt themselves to the new ruling. The Communist Daily Worker editorials have assumed all along that the Court would decide some day as it did this week, that a man can betray this country and in certain circumstances get away with it.

Mr. Speaker, in the article which I have quoted, David Lawrence has forcibly and clearly emphasized the tremendous harm that can result to the enforcement of law and order if these Supreme Court decisions are permitted to go unchallenged, or without sufficient clarification to remove the detrimental effects that seem possible to follow.

The necessity for some further consideration by the Court, on motion of the Attorney General, is undoubtedly necessary if a condition of havoc in the administration of law is to be avoided. And, in any event, there should be immediate action by Congress to establish its right to make investigations into crime and corruption in accord with the authority it has had throughout our history as a nation without the restrictions that now seem to be imposed by the decisions of the Supreme Court.

The situation that now exists in the administration of justice as a result of the decisions is such that a crisis can be said to exist. The Washington Daily News, in an editorial entitled "Crisis in the Law," issue of Tuesday, June 18, 1957, has emphasized the necessity of giving consideration to the situation that now exists to the end that a remedy may be found. It reads as follows:

CRISIS IN THE LAW

The Supreme Court yesterday added to its recent list of historic decisions which will profoundly alter both the administration of justice and legislative behavior.

The immediate application is to methods used to preserve internal security against Communist subversion. But the implications are vastly wider than that. They extend, by inference at least, to all law enforcement. And the Court seems to restrict severely the powers of Congress as an aid to law enforcement.

The Jencks case decision, now 2 weeks old, seems to have opened the FBI files to accused law violators, greatly complicating prosecution of Communist, dope peddling, and other cases. Jencks was a labor leader accused of taking a false anti-Communist oath.

The Schneiderman decision, delivered yesterday, greatly stiffens the rules for trials under the Smith Act, which makes it a felony to advocate violent overthrow of the Government. There is question whether the Smith Act can be further used against Communists. The decision freed 5 convicted California second-string Commies and ordered new trials for 9 more.

The Watkins decision, also delivered yesterday, may be most significant of all. This was the case of a man convicted of contempt of Congress by refusing to name Communist associates—a case similar to that of Arthur Miller, husband of Marilyn Monroe.

The decision reversing the Watkins conviction questions directly the investigative powers of Congress. Possibly it may be construed to prohibit such generalized investigations as those conducted on internal security by the late Senator Joseph McCarthy or on labor rackets by Senator JOHN MCCLELLAN. Propriety of the McCarthy hearings has been highly controversial. Authority of the McClellan committee was challenged by its principal witness to date, Dave Beck of the teamsters union.

We must look in both directions from these decisions. Whole new methods of procedure may have to be devised lest the guilty escape punishment and the Reds be turned loose on the country to conspire as they will. From quick study it appears amendment of the Constitution as well as new laws may be necessary.

Looking the other way, the jails, particularly the Federal jails, contain scores, maybe hundreds, who have raised the same issues covered in these decisions and still have been convicted. Will the decisions unlock prison doors for these criminals, upon appeal?

Frankly, no one knows or is apt to know for sometime, until the findings are digested and applied to specific circumstances.

Meanwhile the Jencks case alone is described as causing "havoc" in the Federal courts. In one view the effectiveness of the FBI is about gone.

Worst apprehensions may prove unjustified. They usually are.

But at the very least we have a crisis in our traditional methods of administering justice. And it will not suffice merely to curse the Court. Traditionally it is the protector of the Bill of Rights, standing between the citizen and overzealous prosecution.

Congressional powers of investigation are tied to its legislative function. Police or judicial powers are not vested in it. There is no doubt that on many occasions Congress has abused its investigation powers, and its Members have used the weapon of inquiry for reasons other than to get information to aid in the drafting of laws. Quite clearly, the Court seeks to curb this abuse.

Whether the Court has, in these instances, gone too far in hampering honest law enforcement is a matter of opinion which might be reserved.

But the wheels of justice obviously will be slowed as prosecutors stall for time until they can learn the score.

Congress, with its own powers directly questioned, certainly will speed inquiry into the need for new laws. It will be a long time before we hear the last of these decisions.

Mr. Speaker, I sincerely hope that there will be no delay in giving to this exceedingly important matter the fullest possible consideration by the Department of Justice, and by the Congress. A crisis does exist and we must meet it at once.

Hail to Police Chief Murray

EXTENSION OF REMARKS

OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a copy of a letter which appeared in the columns of the Washington Evening Star on June 19, 1957, in reference to Mr. Robert V. Murray, Chief of Metropolitan Police Department of the District of Columbia.

I, too, wish to praise Chief Murray, not only as an able, sincere, and conscientious police officer serving our District, but as a capable, efficient, and courageous administrator of the affairs of our police department. In my opinion, we can well be proud of his outstanding leadership, and I hope that we will be fortunate enough to have him at the helm of our police department for many, many years in the future:

HAILS THE CHIEF

Hail to Police Chief Murray. At long last someone in official position has denounced publicly the attempted intimidation of the Police Department by the NAACP. This attempted intimidation has been going on for years. Innumerable unfounded complaints have been filed by the NAACP and its ilk against white police officers with good records. Many police officers have been compelled to defend themselves before the Police Trial Board against such false charges. Of a large number of alleged violations of civil rights, several white policemen have had to undergo the expense and suspense of a trial on criminal charges before establishing their innocence of the charges. It would be quite interesting to learn the number of alleged civil rights violations investigated by the FBI at the instigation of the Washington chapter of the NAACP.

When the lowly private is a victim of false charges, has to stand trial, and is acquitted by the Police Trial Board, there is a cry of whitewash by the complainants. The public does not know how unfounded some of the charges have been. Neither does the public know how spotless are the records of some of the police officers involved. It is unfortunate that it was necessary to wait until the NAACP made the mistake of attacking the chief before the true character of this organization was revealed to the public.

This time the NAACP has set its sights too high. It has selected Chief Murray as its victim. Unlike the lowly police private, Chief Murray's integrity is known far and wide. Few people will take seriously the charges of the NAACP against Chief Murray. The Police Department files are replete with unfounded complaints of the NAACP and its kind, which will furnish Chief Murray plenty of ammunition if he chooses to use it. An investigation of this ridiculous complaint would not only reflect credit upon Chief Murray but would disclose the NAACP for what it is, i. e., a color-conscious organization not interested in justice or fair play but only in intimidation and persecution of those in authority who have white skin.

I challenge Mr. Davidson to show a single case in which his organization ever protested the treatment of a white citizen by a colored police officer. Or even a complaint of the treatment of a colored citizen by a colored police officer, excepting, of course, those complaints immediately withdrawn after it was ascertained that the policeman involved was colored.

A vast majority of the police officers of Washington, both white and colored, as well as Chief Murray, conduct themselves in such a manner as to deserve public support and commendation, not unfounded accusations.

LLOYD E. KELLY,
Former Deputy Chief of Police.

Twenty-Five-Million-Dollar Regret

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. GUBSER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial by Dick Barrett from the San Jose Mercury-News:

TWENTY-FIVE-MILLION-DOLLAR REGRET

When Judge George E. Crothers died May 16 in San Francisco at the age of 87 it was the end of a life span during which he had only one major regret—and it was worth $25 million.

The judge came to this county from Iowa with other members of his family as a small boy in 1883. As a child here he saw the materials for construction of the Lick Observatory, and later its 36-inch telescope, then the world's largest, arrive on flatcars on the South Pacific Coast Railroad, according to his possible biographer, Charles A. Gauld of Stanford's Hispanic American studies department. This narrow-gage railroad was owned by his uncle, Senator James A. Fair. Other things he saw included the arrival of Chinese tong war fugitives from San Francisco, and the destruction of San Jose's Chinatown by fire. In 1887 he witnessed construction of the San Jose City Hall and the arrival of James Lick's body to be sealed in the base of the great telescope on Mount Hamilton.

Crothers and his brothers saw the valley fill with orchards and they worked in the fruit to finance their college education. Their mother secretly rejected an offer from Senator Fair to settle $75,000 on each of her children when he sold his railroad to the Southern Pacific for more than $6 million. She felt that this sudden windfall would spoil them.

With two degrees in law from Stanford, Crothers moved to San Francisco in 1896 and there helped to settle the tangled $20 million estate of Senator Fair. It was he who suggested to his two Manhattan cousins, who were the heiresses, that they build a hotel atop Nob Hill and call it the Fairmont.

An important turning point of his life, though, was the day he went with two of his brothers to see Senator Stanford lay the cornerstone for the university at Palo Alto. He met Mrs. Stanford and she saw him a close resemblance to her deceased son, Leland. She retained him as her lawyer for the last 7 years of her life and made him the first alumnus of Stanford to serve on its board of trustees. He helped save the university legally and strengthened her resistance to appeals from relatives for money which she and Senator Stanford had promised the institution.

Mr. Gauld says that the 1 major regret of Judge Crothers' life was not his refusal of $250,000 in legal fees for his work for the university, or the $300,000 he and his brother, Thomas, lost in a mine deal in Chihuahua, Mexico. It was his decision to reject Mrs. Stanford's invitation to join her party on a trip to Europe. He was then involved in the fair litigation. It was while on this trip that Mrs. Stanford was persuaded, under pressure in New York, to sell her quarter interest in the Southern Pacific Railroad. Judge Crothers believed he could have talked her out of it by reminding her of Senator Stanford's prophecy that Southern Pacific stock would soar. He thought the difference in value between 1899 and the boom year of 1912 was probably $25 million, which would have been a tidy sum in the university's endowment. Mrs. Stanford sold to the Speyer Bros. bank and the Speyers turned a handsome profit in selling the stock to E. H. Harriman, who won control of the railroad.

Even without the $75,000 from his uncle, Judge Crothers did all right. He was able to give Stanford 2 dormitories and his biographical sketch ran for a record 56 years in Who's Who in America. He lived for 30 years at the Pacific Union Club atop Nob Hill in San Francisco.

I think the Crothers brother who achieved the greatest note by remaining in San Jose was Charles Fair Crothers, the real-estate man, who died a number of years ago. I used to drop into his real-estate office on Second Street occasionally to see what big deals were in the making. He was a law graduate of the University of Michigan, but remained with the law for only about 10 years, lured away by the realty business. He was a member and president of the advisory board of the San Jose Normal School and San State College. He was also president of the old San Jose Coffee Club, which was supposed to direct people away from the evils of drink.

Let's Grow Up

EXTENSION OF REMARKS
OF
HON. JAMES A. HALEY
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to include in the CONGRESSIONAL RECORD an editorial which appeared in the June 17, 1957, issue of the Winter Haven News-Chief, of Winter Haven, Fla.

The editorial is entitled "Let's Grow Up" and its subject is our foreign-aid program. It is particularly pertinent at this time since we soon will be called upon to consider legislation on this subject. I sincerely hope that each of my colleagues will read and give careful thought to this timely editorial which expresses the opinions held by many of my constituents. The editorial follows:

LET'S GROW UP

It's time that we Americans start growing up relative to our thinking about what our dollars can do and what they can't. Vice President NIXON, like a lot of others on Capitol Hill, still feels that we can buy friendships. It can't be done, never could, and never will.

A recent example is the way the Polish acted when we were going to give them a mere $95 million to sort of help put them back on their feet, after all these years of delightful help by the Russians. The Poles made it known that they felt slighted. They wanted a few billion and Old Shylock (that's us) was just so tight that he'd only shake loose with 95 million bucks.

Behind it all are the Commies. They envisioned new farm machinery by the thousands of units. New motors, pumps, trucks, etc., that would be used in Poland for a short time and then transshipped to the protecting country, Russia.

Let's grow up about this whole business of giving our hard-earned dollars away. All we get is our feelings hurt when the receiving country turns on us. Let the Russians help the Poles. After what Khrushchev had to say about the fine way they treat their satellites it would be absurd for a backward country like the United States to send all of these wonderful capitalistic things to help the Poles.

The Supreme Court Decision in the Communist Cases

EXTENSION OF REMARKS
OF
HON. STROM THURMOND
OF SOUTH CAROLINA
IN THE SENATE OF THE UNITED STATES

Thursday, June 20, 1957

Mr. THURMOND. Mr. President, the United States of America was founded under the Constitution as a Government of limited powers.

In the establishment of the 3 branches of the Federal Government, the Founding Fathers wisely provided for the balancing of each with the others, as well as providing for checks on all 3 branches.

However, in recent years much of the wisdom which our forefathers used in the founding of the Federal Government has been submerged under acts which have unbalanced the three branches of the Government and given practically free rein to the judiciary as against the legislative branch, and, in some instances, the executive branch as well.

Mr. President, I am convinced the people of this country are more concerned generally about the trend of recent decisions of the Supreme Court than at any time in our history. They have reasons to be concerned, because the Court has usurped the constitutional authority of the Congress, and, in effect, has itself employed the legislative power through judicial decree.

When this happens, the people have had their Government removed one step

further from them, because the Congress must answer to the people for its actions, while the Court answers to no one.

The concern of the people is clearly presented in an editorial which appeared in the June 19, 1957, issue of the State, a newspaper published in Columbia, S. C.

Mr. President, I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

SUPREME COURT MUST BE CURBED

On Monday the United States Supreme Court made more history and it is not the kind of history to kindle a feeling of pride in good American.

The Court reversed the Supreme Court of California, the trial court and the jury that convicted 14 Communists of plotting to teach and advocate the overthrow by violence of the United States Government. It granted new trials to 9 and ordered freedom for 5. Only Justice Clark dissented. He called attention to the fact that the Court had undertaken to pass upon the facts of the case and declare five not guilty. Justices Black and Douglas, as usual, concurred in the decision but said they would grant freedom immediately to all 14.

The Court also reversed the decision under which a former Communist, John T. Watkins, was convicted for refusing to name former Communist associates while testifying before the House Committee on Un-American Activities in April 1954. This decision apparently means that the Court will similarly decide in favor of several others who have been convicted for the same offense and who now have appeals pending.

About a year ago Justice Byrnes in criticizing the Court for basing the segregation decision upon the writings of a sociologist with Communist affiliations, predicted the present trend of the Supreme Court and urged that it be curbed by Congress. And we have taken a similar stand in a number of editorials.

Referring to Monday's decisions, Congressman HOWARD SMITH of Virginia said that he could not recall any recent case in which the present Supreme Court had decided against Communists.

The question the American people are now interested in is whether or not the Congress will exercise the powers granted to it by the Constitution and enact legislation regulating the jurisdiction of the Court, denying to it the right to hear an appeal from a State court which has convicted a person for plotting to overthrow by violence the Government of the United States.

The Court has usurped the power of the Congress, the State appellate courts and the juries of the States. In the exercise of dictatorial powers the difference between the Kremlin and the Supreme Court is that the Kremlin is composed of 11 men and the Supreme Court only 9.

The Supreme Court Jumps the Track

EXTENSION OF REMARKS

OF

HON. TIMOTHY P. SHEEHAN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. SHEEHAN. Mr. Speaker, the Chicago Tribune, in their lead editorial of June 19, had some very pertinent comments on the most recent decision of the Supreme Court.

It seems to me that the opinions stated in this editorial reflect the thinking of a great number of the rank and file of the United States citizens. The editorial is as follows:

THE SUPREME COURT JUMPS THE TRACK

In a mess of decisions Monday, the Supreme Court managed to perform major services for Communists and loyalty risks on the Federal payroll and at the same time to diminish substantially the power of Congress to deal effectively with any of them. Friends of the Court say that these decisions fortify the defense of individual rights. Others will be inclined to agree with Senator MCCLELLAN'S judgment that the decisions demonstrate that what the country sadly lacks is a Supreme Court of lawyers with a reasonable amount of commonsense.

In ordering that 5 California leaders of the Communist Party be freed from conviction under the Smith Act, and in directing new trials for 9 others, the Court managed to reverse its own interpretation of the Smith Act, handed down by a 6 to 2 majority only 6 years ago.

The Court's new line is that, to convict under the Smith Act, which makes it a crime to conspire to teach and advocate overthrow of the Government by force and violence, it is necessary to prove that action toward violent rebellion is being advocated. A simple showing of advocacy, said the Court, is not sufficient.

In its decision of June 4, 1951, the Court dealt with precisely this point. Interpreting the clear and present danger doctrine, the late Chief Justice Vinson said then:

"Obviously the words 'clear and present danger' cannot mean that before the Government may act, it must wait until the putsch is about to be executed, the plans have been laid, and the signal is awaited. If Government is aware that a group aiming at its overthrow is attempting to indoctrinate its members and to commit them to a course whereby they will strike when the leaders feel the circumstances permit, action by the Government is required."

The Court now renounces that outlook and maintains that such advocacy is little more than theoretical discussion and that it will be satisfied with nothing less than evidence approximating an overt act.

It seems to us that this reflects an unduly fastidious approach to the motivation of Communists, and that the United States Court of Appeals in New York, in its Smith Act opinion of August 1, 1950, was far more sensible in saying, "The jury has found that the conspirators will strike as soon as success becomes possible, and obviously no one in his senses would strike sooner."

Having dealt a crippling blow to the efforts of Congress to deter Communists through the Smith Act, the Court then proceeded to another decision severely impairing the powers of congressional investigating committees to compel testimony, on pain of contempt, from persons with subversive associations.

It overruled the contempt conviction of an Illinois labor-union organizer, John T. Watkins, who admitted to the House Committee on Un-American Activities that he had cooperated with Communists but refused to name Communist associates. The Court decreed that the committee had no power to expose for the sake of exposure, but that it is required to show a definite legislative purpose in its explorations. Congressional inquiries are thus confined to a straitjacket.

In still another case, the Court reversed the dismissal from the State Department of John Stewart Service, who was discharged in 1951 by former Secretary of State Acheson on authority voted by Congress vesting him with absolute discretion to terminate the employment of any Department official. Service, after a round of loyalty hearings, came before the civil-service Loyalty Review Board, which found reasonable doubt of his loyalty. Acheson expunged this finding but ordered Service fired. The Court ruled that he had no right to do so, even though Congress had given it to him, because a State Department loyalty board previously had cleared Service, and Acheson's subordinate, the Deputy Under Secretary of State, had approved the finding.

The taxpayers thus find that Service, a man arrested in the wartime Amerasia magazine scandal, in which 1,700 top-secret, secret, and confidential documents were extracted from Government files and handed over to notorious pro-Communists, is forced back upon them, together with a bill for 6 years of retroactive salary.

The boys in the Kremlin may wonder why they need a fifth column in the United States so long as the Supreme Court is determined to be helpful.

Ike's Bellyaches Cost Billions

EXTENSION OF REMARKS

OF

HON. EMMET F. BYRNE

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. BYRNE of Illinois. Mr. Speaker, I would like permission to insert in the RECORD an editorial appearing in the Southtown Economist of Chicago, Ill., Sunday, June 16:

IKE'S BELLYACHES COST BILLIONS

Americans holding investments in stocks are suffering a costly experience every time President Eisenhower's health is impaired. The moment news of his condition is made public, stocks plunge with a loss of billions of dollars in values.

As soon as Ike recovers, the market begins to climb, but the return to prices at the time of the plunge is slow and long.

Because investors everywhere are victims of this situation, something ought to be done to prevent a repetition. One thing that can be done at once is for the White House to withhold news of the President's indisposition until after the markets close for the day. That, at least, would delay a plunge until it can be established how severely ill the President is.

But the situation raises another important problem. Why should the President's health cause the Nation to go into an economic tailspin? Some bankers and stockbrokers say a change in administration would create uncertainty and that business and industry fear to expand or to launch new projects until the policies of the new administration are ascertained.

We don't understand why there should be uncertainty. Vice President NIXON'S attitude on important questions is well known, and even if it was not Congress still makes the laws of the Nation and can be counted upon to keep the Nation on an even keel.

As a matter of record, sweeping changes in governmental policy could have been expected if Adlai Stevenson had been elected President. He is an ardent New Dealer, and he revealed in his campaign speeches that he would have adopted the policies of the late President Roosevelt.

Even such changes would be no excuse to deflate the market because the country sur-

vived pretty well economically during the 13 years of the Roosevelt regime.

What the current situation amounts to is that the condition of the President's health is used by Wall Street bears to destroy values so they can reap a huge profit fast.

This is a matter that the stock exchanges throughout the country ought to correct with controls employed in the past to curb a runaway market.

The frequent loss of billions to small and large investors demands it.

He Brought New Honor to a Noble Profession

EXTENSION OF REMARKS
OF
HON. PETER FRELINGHUYSEN, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Daily Home News, New Brunswick, N. J., of June 18, 1957:

HE BROUGHT NEW HONOR TO A NOBLE PROFESSION

A recurrent phenomenon over the broad sweep of American history is the emergence of a man of the hour to meet the challenge of a period of crisis. This seems almost a pattern of destiny, and as the mind's eye looks back over our wars, and our depressions, our periods of corruption and pessimism, almost always a man has risen above his fellowmen to lead the fight to victory.

Here in New Jersey when famed Jersey justice fell into disrepute and red tape, when our judicial system was perhaps the worst among all the States of the Union, a man of the hour arose.

He was Arthur T. Vanderbilt. New Jersey's constitution of 1948 stands as a monument to him. So does the model system of courts set up under that constitution and administered and directed by him as chief justice since the adoption of the constitution. The framework of the new court system was sound and good. But even that framework might have availed little had it not been for the vision and determination and wisdom and vigor of Chief Justice Vanderbilt. He demanded and got a full day's work from his judges, perhaps a revolutionary accomplishment in the Garden State after years of ineffective court procedures.

There were many other facets to Vanderbilt's life, of course. He was a good teacher of the law. He was a leader in professional circles, having been president of both the American Bar Association and the American Judicature Society. He was seriously considered for appointment to the United States Supreme Court, and there are those who believe he could have had such a post had he wanted it. He was the prime mover in the choice of Associate Justice William Brennan to that Court.

Justice Vanderbilt was a perfectionist. His speeches and his writings were models of clarity. Wherever he went, whatever he did, he brought new honor to what should always be one of the noblest of our professions. Justice under law was the goal of his life, and in large and glorious measure he achieved that goal.

In the death of Arthur T. Vanderbilt, New Jersey has lost one of the very greatest of her sons.

The Paonia Reclamation Project

SPEECH
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 6090) making appropriations for civil functions administered by the Department of the Army and certain agencies of the Department of the Interior for the fiscal year ending June 30, 1958, and for other purposes.

Mr. ASPINALL. Mr. Chairman, in the printing of the Congressional RECORD for the House for the date of June 19, 1957, the printers inadvertently omitted a material part of the remarks which I made on that date when the public works appropriation bill, fiscal year 1958, was being considered. I am extending at this time in the RECORD my remarks in full on the subject of the Paonia reclamation project. The statement follows:

As the Committee has under consideration the public works appropriation bill, I would like to take a few minutes of your time to tell the Paonia project story.

Under recent date, each of you received a letter on the Paonia project from the North Fork Conservancy District of Hotchkiss, Colo. This letter gave you a part of the story on this 21-year-old orphan. I can speak with personal knowledge dating back to the beginning of my service here in Congress in January of 1949. Actually, this subject was a matter of concern also to my predecessor, the late Robert Rockwell, who resided in the area of this project and before that of the late beloved, Edward T. Taylor, who was chairman of the Appropriations Committee of the House at the time of his death. Although this project has been of continuing concern during my service, this pales in comparison to the concern of those citizens of the area who have been wrestling with this problem for nearly a generation. I am constantly amazed at the patience, dedication, and perseverance of these people. They have suffered many discouraging setbacks, setbacks which would have discouraged lesser men or moved them to anger. However, if you will refer to your recent letter, you will find them making a calm and reasonable appeal for consideration. I am happy to stand here in support of so reasonable and necessary an appeal.

The North Fork area of the Gunnison River was originaly settled about 1890. These early settlers carved farms from the then wilderness and provided irrigation facilities by their own effort. This was adequate for the area until about the 1930's when a combination of adverse economic developments and drought forced them to turn to the Federal Government for assistance in meeting the persistent problem of water shortage. I remind you that Federal activity to provide construction of a holdover reservoir began in 1936. The farmers of this area are still faced with the same adverse situation they had at that time. Surely, it is time that their long effort for this legitimate end be rewarded with construction contemplated nearly 20 years ago.

The first report of the Bureau of Reclamation was issued in August of 1938. On the strength of this report, the Paonia project was authorized under reclamation law in March of 1939 by Presidential approval of a feasibility recommendation by the Secretary of Interior. Appropriations were provided in 1940 and in 1942. In 1940, it became obvious that the project plans had to be altered. These alterations were ready by June 1947 and may be found in Senate Document No. 61, 1st session, 80th Congress. Public Law 117 of the 80th Congress (61 Stat. 181), based on this report, authorized the construction of the Paonia project and funds under this authorization were provided later in 1948. The farmers of the area then approved and signed a repayment contract with the Department of Interior for the repayment of Federal moneys expended. In August 1948, bids were opened for construction of the Paonia project. However, due to cost increases not related to the project, all bids were found to be in excess of the $3,030,000 authorization. I might here note that the estimated cost of the project is now nearly $7 million. No one has gained from postponement. Construction of the whole project was found to be impossible. Rather than lose all gains possible under the authorization, the conservancy district and the bureau agreed to enlarge the Fire Mountain Canal. This single phase of the project was then initiated and completed. The farmers of the conservancy district are now obligated for the repayment of this feature although it has not materially increased their ability to repay. Nor has it provided any substantial increase in the necessary water supply. This increase in water supply can come only from construction of the holdover storage facilities of such size as to provide late season water. This was the pressing need in 1936. It is still the paramount need in 1957.

The Korean emergency forestalled further development of the Paonia project, although legislation for its reauthorization was introduced by me during this period. It was then decided that if this vital storage feature was to be built, in view of the cost increase, it would have to be tied to the Colorado River storage project and participating projects, so that surplus power revenues from the storage project could be applied to construction costs in excess of the water users ability to pay. This legislation, with the Paonia project listed as the most immediately needed participating project, was passed last year. It was understood by all concerned that funds for the completion of construction of the Paonia project would be included in the budget for fiscal 1958 so that such construction could actually begin in July of this year.

If events had proceeded as scheduled, I would not need to rise today to tell this story of continuing disappointment. The program presented to the Congress last year clearly stated that two participating projects would be scheduled for construction this year. One was Paonia. Early reports this year in the Paonia project area, released by the Bureau, promised that a budget request would be made and that construction would begin. Only when the President's budget was actually released did the people of the area discover that they had waited in vain.

Trying to discover just why last year's schedule did not become this year's program of action is devious and difficult. I must confess to you that I cannot state positively just where the Paonia project was cut down, but I know it once was in the Bureau of Reclamation budget recommendations. I know it did not survive the Budget Bureau's consistent opposition.

The immediate excuse given by the Bureau of the Budget was that the required resurvey of the project by the Department of Agriculture and the final report of the Bureau of Reclamation was not in hand during their consideration of the budget requests. I ask you in all seriousness, would a project under survey and study for 21 years now require a resurvey? The features of the project construction are virtually the same as those outlined in the Senate document of 1947 previously mentioned, they have been known for at least 10 years and the Department of Agriculture was a party to that 1947 study.

No, my friends, these surveys and reports, and I remind you that Agriculture's resurvey has been completed and is now in Washington, cannot explain the omission of the Paonia project. Nor can it be explained away on the ground that Paonia is a new start, it is as new as an automobile with running boards. It was first authorized in 1939, reauthorized in 1948, and again in 1956. A case can be made that economy prevents construction, but I ask you only to hold today's need for saving a sum of less than a million against the economic privation of this area. Here is a rural area of some few thousand souls far removed from the Nation's Capital. These people live on small farms or in two small communities. We are not talking of new land to be brought into production, this land has been under cultivation for some 50 years. For the last 20 years, however, at least 65 percent of the area has faced an annual water shortage of some degree—ranging from slight to complete. They have made every possible effort to take care of their own needs, but the crippling shortage of the water supply for consistent production so reduces their income that local resources are inadequate. Only a holdover reservoir will solve their problem. No doubt they would have given up long ago if for 21 years, the carrot of water salvation had not dangled just over the horizon. It is time that such promise be funded with dollars and that these people be given the necessary boost, not only to repay an obligation they have already assumed for a project feature which gives them no value, but to go forward in the sure knowledge that they will have enough water to produce a crop each year.

Lastly, spring floods are now causing damage in this area—water is not only wasting away but causing waste. If the storage facility were constructed, this damage creating surplus could be caught and held and released in late summer to prevent crop failure.

Results of Questionnaire

EXTENSION OF REMARKS
OF
HON. JOE HOLT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. HOLT. Mr. Speaker, I recently sent out to the people of the 22d Congressional District, which consists of Hollywood and the San Fernando Valley, my Fifth Annual Legislative Questionnaire. The response I received was better than ever before and most gratifying. Approximately 50,000 returns have been received. Inasmuch as it is always difficult to ask questions on all legislation pending before Congress and the many governmental problems facing us today, I received hundreds of additional comments and letters from my constituents expressing their viewpoints and recommendations. Tabulation of the answers has now been completed.

The results are as follows:

	Percent
I. Please check 3 of the following 6 items you think should be cut most in Federal spending:	
Number of Federal employees	78
Construction of Federal public works, (highways, dams, airports, buildings, etc.)	19
Federal aid to States, municipalities, school districts, and local public agencies	44
Foreign aid	80
National defense	11
Federal aid to agriculture and small business	30
II. To put the Post Office Department on a pay-as-you-go basis, the administration has recommended two alternative proposals: (1) Combine airmail and first-class mail with a 5-cent rate. All first-class mail would then be sent by the fastest available means, whether by air, rail, or otherwise; or (2) increase first-class mail 1 cent to a 4-cent rate. Both plans include increases in 2d- and 3d-class mail rates (advertising matter, newspapers and magazines). I favor:	
Plan (1) above	32
Plan (2) above	47
Neither plan and no increase	16
No opinion	5

	Percent		
	Yes	No	No opinion
III. Do you favor—			
(1) Reduction of Federal taxes even though it unbalances the budget?	32	63	5
(2) Our Government inviting to this country for conference the heads of foreign states with whom we do not agree?	65	30	5
(3) Requiring all new National Guards men and Army reservists to take 6 months' training on active military duty?	68	17	15
(4) Congress authorizing the admission of a greater number of immigrants to the United States from Hungary?	31	58	11
(5) A special tax reduction or some type of special relief for small business?	70	20	10
(6) Union welfare funds being more closely regulated by the State and Federal Governments?	89	8	3
(7) Labor unions being allowed to make contributions to political campaigns by using funds from their regular membership dues?	12	83	5
(8) Including private business in partnership with municipalities, States, and the Federal Government, for the development of water uses in irrigation, flood control, power production, domestic and industrial uses?	51	32	17
(9) The sale and barter of farm surpluses to Communist nations?	30	61	9
(10) The "tight money" policy of the Federal Reserve Board, which is currently being used to check inflation, recognizing that this policy tends to restrict the availability of mortgage money?	65	21	14
(11) Stronger antitrust laws, including closer Government scrutiny of merger proposals of large companies?	76	14	10
(12) Controls by the Federal Government of rents, wages and prices in peace time?	13	83	4

Security Crux of Girard Case

EXTENSION OF REMARKS
OF
HON. CHARLES S. GUBSER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. GUBSER. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

SECURITY CRUX OF GIRARD CASE

The term extraterritoriality sounds vaguely legalistic and very impressive. It is both.

It is just another way of saying that one nation's citizens cannot be tried in the courts of another nation for crimes alleged to have been committed in that country. As a legal concept it is a hangover from the days of empire and colonialism when standards of justice varied widely between the colonizers and the colonized.

As a legal concept it was just in the frame of reference which produced it, although even then it was subject to abuse.

Today extraterritoriality is largely outmoded and the practice of it represents a decided threat to the security of the United States.

These facts lie at the very core of the so-called status-of-forces treaties between the United States and the several nations in which our troops are stationed, and this, in

essence, is what the shouting is all about over the case of Army specialist William S. Girard, whom the Japanese want to try for manslaughter.

We do not pretend to know the intimate details of the Girard case, or even whether his alleged offense falls properly within the rigid limitations of our status treaty with Japan. The Department of Defense seems to think it does, however.

But one thing stands out crystal clear: Until the day of the intercontinental ballistic missile arrives, the security of America and of the entire free world depends on the maintenance of American overseas bases, and these bases must be maintained on a basis of mutual respect between America and the sovereign powers of the lands where they are located.

National pride is a touchy thing, as witness the flag waving and prating about constitutional rights indulged in by the opponents of the status treaties. But national pride is a sword that cuts two ways; other peoples have it, too, and our very existence these days is bound up in getting along with many other peoples.

The supreme irony of the entire Girard situation is that those who are waving the American flag the hardest may unwittingly be playing the Communist game of divide and conquer.

Changing the Pattern in Supplemental Appropriations

EXTENSION OF REMARKS
OF
HON. HAROLD R. COLLIER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. COLLIER. Mr. Speaker, the action of the House of Representatives in defeating the Third Supplemental Appropriations Bill on Tuesday was a source of some encouragement to me and I trust it was to millions of Americans who feel that the budget cuts effected by the Congress were made only because they are politically fashionable.

It is common knowledge that authorities on our national economy and fiscal policies have sneeringly questioned the sincerity of the Members of Congress in voting appropriation reductions. Yes, and many of these experts, journalists and commenators have termed the action "budget cuts for home consumption" or "for political show." Certainly the pattern and backlog spending and constant approval of supplemental and deficiency appropriations in the past have justified their mockery of the economy motives of many Members of this House in the past 2 decades.

And so, Mr. Speaker, I would like to feel that the action taken by the House in not only rejecting this appropriation bill, but in also voting down legislation that proposed to put the Federal Government in the insurance business, will be consistent with the action which will be taken on future supplemental and deficiency appropriation bills. We will, undoubtedly, be confronted by this oft-repeated situation, that of being asked to spend beyond the sums provided in original bills which were pared by this body.

By consistent and determined action in not yielding to demands for more money, we can serve notice on Members of the other body, department heads and their under secretaries, and all those who might otherwise fall into the category of bureaucrats, that we intend to hold the line. We will, at the same time, confound the mass of economists and experts who have pointed to the economy efforts of the House as political maneuvers rather than as a sincere effort to slash the cost of government.

I, for one, did not particularly like an article which appeared in the local press recently calling attention to the budget cuts voted by the Congress as a means of staging a political exhibition for the appeasement of the folks back home. Past performances, however, certainly gave the author of this article every right to this conclusion. Now we have an opportunity to change this attitude. The author of the particular article to which I refer noted that budget items cut in March and April are restored by means of supplemental and deficiency appropriation requests. So frequently in the past, Congress has rubberstamped these requests from the executive departments. Hence, when the various department heads and their top-ranking assistants observe this pattern, it is natural that they assume that when Congress says, "No," it means "Maybe," and when Congress says "Maybe," it merely means, "Wait a while and you will get your money but not right now while the voters are looking."

Well, Mr. Speaker, I hope that Tuesday the Members of this House who voted to defeat the third supplemental appropriations bill, in doing so served notice that assumption must no longer prevail.

I took particular pleasure in the action we took on the proposed tungsten subsidy request for $20 million. Now, under this tungsten stockpiling program, we have managed to accumulate a 6-year supply of tungsten at a magnanimous 48 percent above the regular market price. This is a 6-war-year supply. Used at normal rate of consumption, it is estimated that this supply of tungsten will last us—if not another ounce of the expensive metal is produced—until 1984.

This in itself is ridiculous. But there are even more weird facets to this situation. For instance, 10 percent of the entire program is distributed among the 682 so-called small producers while 90 percent of the money goes to a handful of others.

The purpose—if there could have been any purpose to a measure such as this—was allegedly to help the small producer of tungsten. It obviously did not nor would it accomplish this purpose.

This tungsten measure was admittedly a subsidy program. It was brought before us at a hearing of the Interior and Insular Affairs Committee, and its proponents had difficulty explaining the measure away. In fact, always when an outright subsidy is proposed, those who propose it find it extremely difficult to explain for the general good of the people rather than a special few why they are making this effort. Their explanations always ring just a little hollow. Even those receiving the subsidy must find it a little difficult to explain to themselves whence came this manna.

And when the proponents of these subsidies can dig up a reasonable explanation for them—such as wartime stockpiling of tungsten—the subsidies, Federal aid programs and Federal giveaways have a tendency to outlive their usefulness as well as their creators. Once on the books, it is hard to tear these subsidy programs away from the Federal charge account.

Wartime taxes have continued because wartime programs have been resuscitated when it would have been kinder to let them die, and, in some cases, kinder still to have strangled them. When many of these Federal subsidy programs are faced with the reality of natural death, there are those who come racing forth with the pulmotor of the Federal Treasury to revive the patient who would be better off if laid to final rest. In most cases the mourners would be few indeed.

The tungsten program we voted down Tuesday was certainly one of these attempts to revive the patient for a few additional years of lush life at the expense of the already heavily laden American taxpayer. In my estimation no such future programs should be undertaken in view of the demands of the taxpayer for relief from this sort of thing, and in view of the already monstrous $270 billion debt.

What we did Tuesday, then, was in its own small way a refutation of the old law that what Congress refuses to give today, will be gladly donated tomorrow, when the voter and taxpayer is looking the other way.

It should be carefully noted by the Cabinet officers and their underlings as a warning of things to come. For the first time in a decade it appears that Congress is in no mood to trifle with the taxpayer's pocketbook. We have been dipping into his wallet too often, he is tired of it.

May the department heads come to the full understanding that what we are cutting now, will remain cut. In the past the Cabinet officer has looked at his sliced budget, apparently murmurred that it is the way the ball bounces, and bided his time. In March of the next year he sends a little note up to the Hill and tells us, quite calmly, quite blatantly, that he has spent all his money, and he needs more. And, Congress has so often obliged him and abetted him in this winking at the law. We obligingly introduce and pass 1, 2, or 3 emergency supplemental appropriations bills. Then on April 15, the American taxpayer sadly accepts the tab while the national debt remains at its astronomical level.

We have made a good beginning in the House; we have this year received more cooperation than usual from the other body. Now, we must drive home to everyone in the executive departments that we are not fooling either ourselves or the taxpayer. We cannot afford the luxury of so many supplemental appropriations while our Government and our people are so deeply in hock.

Opposition To Recognition of Red China by the United States

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. SAYLOR. Mr. Speaker, the internationalists are urging that the United States follow the British trade example, deserting the Nationalist Government on Formosa and welcoming the Communist Chinese into the world of nations, with full recognition.

I do not agree that "recognition is inevitable, so let us do it now," because I am thoroughly convinced that to do so would be a serious mistake in our foreign policy, now and in the future.

I am inserting in the RECORD a letter which I have written to the chairman of the Senate Interstate and Foreign Commerce Committee, and an editorial which appeared in the June 15 edition of the Johnstown Tribune-Democrat.

The letter and editorial follow:

JUNE 19, 1957.

Hon. WARREN G. MAGNUSON,
Chairman, Committee on Interstate and Foreign Commerce, The United States Senate, Washington, D. C.

DEAR SENATOR MAGNUSON: As Representative of Pennsylvania's 22d Congressional District, I submit this statement in opposition to any change in the official policy of the United States Government with respect to the total embargo on trade with Communist China.

I remind the committee that in the military prisons of this country there are today a number of military men convicted of cooperating with Red China during the period of their captivity by that renegade government. There has been no change in the political or philosophical makeup of that government. It is comprised of the same tyrants who were responsible for the invasion of South Korea, who drove captured American soldiers like despised beasts across the Yalu River into the illegitimately acquired territory beyond the Manchurian border, who tortured our men and boys without respect for the rules of war or the laws of God or man, who even today are holding more than 400 American soldiers, if they have not already put them to death by the sword or through starvation and disease.

These are the brigands with whom the State Department suggests that we do business. The abrupt about-face prompts the question of whether that has been brainwashing carried out right under the American flag in recent months. The fact that Great Britain has decided to widen its commercial channels with Red China is not a satisfactory answer, for the British merchant ships were conducting trade with that country at the very time that our men and boys were dying on Korean soil.

I implore your Committee to do everything in its power to uphold the American tradition of refusing to trade with the enemy under any circumstances. To open avenues of trade between the United States and Red China would serve to the advantage of the enemy alone. It would aid in building up that country's industrial potential, in return for which the United States could expect the greatest opium-smuggling effort in history as a means of obtaining our dollars.

The material disadvantages to the United States are obvious, but that consideration cannot be the determining factor. Any breakdown in the trade embargo with Red China would be a surrender to the forces of evil and would decimate the symbol of Uncle Sam as a moral leader in this confused world.

Sincerely,

JOHN P. SAYLOR,
Member of Congress.

MAO MINIMIZES BUT CAN'T DENY MURDERS

Mao Tse-tung's speeches of last February and March have come to light, in which the Chinese Communist dictator admitted that security forces of his regime liquidated—a less brutal word to describe the brutal fact of murder—800,000 enemies of the people between the Communist takeover in 1949 and 1954.

Heretofore the number of Chinese dissidents murdered by the Communists has been estimated as up to 20 million, with 10 million a probable average of the informed guesses. In huge China, with a present population of almost 600 million, either number could disappear without marked effect on the country. And it is safe to assume that Mao would make his own estimate as low as he thought he could get away with, without seeming ridiculous.

Since 1954, Mao is quoted as saying, "We are no longer using methods of terror," and instead have substituted "persuasion and education." The reports which have leaked out of China suggest that these words also conceal some extremely brutal facts. The stories told by our servicemen who were captured during the Korean war indicate that the persuasion used on Chinese must have been pretty intense.

Mao dealt with many subjects in his speeches, which were obviously designed to paint his regime in as favorable light as possible. He announced a new doctrine of "Let 100 flowers bloom," or "Let 100 schools of thought contend"; but those who take this to mean they can argue with the Communists would do well to think twice, or they are likely to end up as cut flowers.

The mere fact that it has taken months for such a major speech to emerge from hidden China itself indicates the nature of the regime with which, according to some schools of thought, the West can resume normal relations. The fact is, and probably will remain for a long time, that this is an absolute despotism over the Chinese people, which will suffer no genuine expression of popular will. And we discover daily in the reports from Korea that it will pay no attention to honor in its relationship with the West.

It suits the Chinese dictatorship now to pretend that it wants to become a respected member of the family of nations—without, of course, giving up its usurped place in Korea or abandoning its subversion throughout Asia. When there is some tangible evidence that the Chinese Communists have changed their brutal nature, it might be worth considering a change in America's relationship with them.

Until that time, however, any indication that this country is watering down its hostility to the things Mao and his Communists represent can only do harm to the anti-Communist cause in Asia, and make our friends there wonder if they, too, shouldn't start dickering with the Communists in Peiping.

Television Broadcasting Industry

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. CELLER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address delivered by me before the Federal Communications Bar Association, at the Washington Hotel, Washington, D. C., Thursday, June 20, 1957:

I am very happy to have the opportunity to discuss with you today the hearings of our House Antitrust Subcommittee and the subcommittee's report on the television broadcasting industry. It is, of course, not possible, in the few minutes that I have, to go into all the matters which were covered. I shall limit myself, therefore, to outlining a few of the problems posed by the investigation which are of particular interest to you as members of the Federal Communications bar.

At the outset, let me point out that the Antitrust Subcommittee's television inquiry originated in its lengthy hearings in 1955 on current antitrust problems posed by new forces active in the economy. In the course of these hearings, disturbing testimony was presented that Federal regulatory agencies, including the Federal Communications Commission, not only had become unduly industry minded, but had, contrary to antitrust principles, sanctioned and fostered excessive economic concentration in industries subject to their jurisdiction.

This testimony, so far as the Federal Communications Commission and television broadcasting were concerned, was particularly disquieting since there is no field in which antitrust objectives assume greater significance. It is hardly necessary to point out that monopolistic control of television broadcasting would enable a handful of individuals to convert the public airwaves into a medium for force feeding the American viewing public with handpicked opinions and programs. It would mark the end of hoped-for multiplicity of independent local outlets devoted to the discussion of local issues and the development of local talent. And it would negate the fundamental principle that mass communications in a democratic society call for the widest dissemination of information from diverse and antagonistic sources.

In these circumstances, the antitrust subcommittee concluded that it was of crucial importance to examine closely into various facets of this industry, and into the manner in which the Federal Communications Commission has exercised its regulatory responsibility in the public interest. To this end, the committee staff conducted an extensive preliminary investigation which included interviews with numerous persons associated with the industry, careful analysis of testimony before other congressional committees dealing with broadcasting matters; and thorough examination of the files of the Federal Communications Commission and of the industry. I am happy to say that the committee received excellent cooperation from the industry and from the Federal Communications Commission in connection with the inquiry.

Thereafter the committee conducted extensive hearings in June, July, and September of 1956, in the course of which it received testimony from members of the Federal Communications Commission, the president of each of the television networks, the past and present heads of the Antitrust Division of the Department of Justice and many other persons familiar with various aspects of television. It was on the basis of the record made in the course of these hearings that the subcommittee issued its report on June 10.

What are some of the important conclusions flowing from this investigation?

To me a matter of most serious concern is that the Federal Communications Commission has failed to perform its statutory obligations adequately, that it has not infrequently failed to conform its regulatory activities to the letter and spirit of the antitrust laws; and that it has, for many years,

fumbled the vital problem of station outlets and frequency allocations. What is more—and this should be especially disturbing to members of this bar—the committee found that the Commission has been unduly informal in its relationships with members of the industry. In fact, for many years such an air of informality has surrounded the Commission's adjudicatory process that members of the Commission have repeatedly discussed with interested parties the merits of pending cases. It is needless for me to point out that such practices by members of a quasi-judicial agency are clearly repugnant to fundamental principles and tread dangerously close to, if they do not transgress, the outer limits of due process of laws.

It is inconceivable that members of this specialized bar association will tolerate continuation of this situation, which is so inconsistent with order and fairness. I am confident that you will assist in the formulation of procedures necessary to assure that the Commission will act as a truly quasi-judicial body.

As a first step, it is imperative for the Commission promptly to adopt a code of ethics that will prohibit further ex parte discussions of pending issues between Commission personnel and litigants and restore due process to its adjudicative process. I recognize that adoption of such a code will not in and of itself solve the basic problem of effective broadcaster regulation. What is required is appointment to the Commission of persons dedicated to serving the public interest. In my opinion there has never been a greater need for qualified personnel in the Federal Communications Commission, both at the staff and the Commission level. For a number of years the Federal Communications Commission has simply not measured up to the standard of public service required to inspire public confidence.

In the exercise of its licensing function, for example, the Federal Communications Commission has a unique opportunity and responsibility for protecting the public interest in a competitive broadcasting industry by closely scrutinizing both the nature of the transactions underlying license applications and the antitrust background of the applicants. The Commission's official policies recognize and assert that responsibility. Yet in practice the Commission has on several occasions subordinated the public interest in these respects. The NBC-Westinghouse station exchange of 1955 is a case in point. In that case, NBC persuaded Westinghouse to give up valuable Philadelphia stations in exchange for NBC's Cleveland stations plus $3 million. The Commission had reports from its staff expressing concern over the concentration and overlap of NBC coverage which would result from this transaction. It had detailed information from its staff reporting that Westinghouse was reluctant to surrender its Philadelphia outlets and may have been coerced to agree, or face possible loss of NBC network affiliation in several cities. Nevertheless, the Commission approved the exchange without a hearing, without giving specific consideration to the antitrust backgrounds of the various participants and without maintaining adequate liaison with the Antitrust Division of the Department of Justice, to whose attention it had specifically called the case, and which had been investigating the transaction.

The NBC-Westinghouse case is not an isolated example. A recent decision by the Commission affecting the Boston area again highlights the Commission's disregard of antitrust principles in its licensing process. In that case one of the applicants already owned newspapers and radio stations which were dominant in the area and was controlled by persons who had frequently run afoul of the antitrust laws in the past. Parenthetically, it was rated by the Commission's chief hearing examiner as tied for last place below two other applicants. The Commission awarded this applicant the license over all competitors notwithstanding the Commission's avowed policy of favoring diversity of ownership of mass communications media and of considering a history of antitrust violations in licensing proceedings. Let me emphasize that decisions of this nature shatter competition in the mass communications field.

The Antitrust Subcommittee did not investigate this transaction because it had completed its hearings before the Commission acted. However, it is to be hoped that the House Commerce Subcommittee on Legislative Oversight, which was recently established, will investigate the Commission's handling of this matter.

In yet another field, the area of frequency allocations, the Commission has proved incapable of correcting the chronic and critical station shortage which is one major obstacle to achievement of a nationwide competitive system. Although the Commission repeatedly declared the use of UHF to be essential to such a system, for many years it not only failed effectively to encourage UHF development, but until recently, its every action further strengthened and entrenched VHF. As a result UHF stations face an impossible competitive situation due largely to the absence of all-channel set circulation. After 12 years, the situation still cries out for constructive solution.

In a related area the Commission has been remiss in failing to bring to a conclusion either of the two long-pending proceedings that bear on the difficulties of rural television stations that are not in the A. T. & T. transmission system in obtaining network programs for live broadcast at reasonable transmission rates. One of these proceedings, initiated in 1954, seeks permission to construct and operate private relay facilities whenever the cost of American Telephone & Telegraph services is disproportionate. The other, which has been pending since 1948, is a formal investigation of American Telephone and Telegraph common carrier charges for network transmission services. In view of the importance of these proceedings to the achievement of national objectives for broadcasting, the length of time which they have been permitted to drag on is unconscionable.

Turning to the problems of concentration in the industry, the committee's study revealed that CBS and NBC today occupy a dominant position in television broadcasting, accounting for over 40 percent of the entire television broadcast business. By virtue of that dominant position, these two networks, using spectrum frequencies that are a precious natural resource belonging to all the people, exercise vast influence and determine in large measure what the American people may see and hear on their television sets. It must not be overlooked, however, that they have done much that is in the public interest. Thus they have engaged in extensive pioneering activities, assumed large financial risks and brought to the public programs of great popular appeal. These factors explain in part their present dominance. There are other factors too which have contributed to the present concentration in CBS and NBC. These include physical considerations such as the natural limitation of frequency space which prevents unrestricted entry into broadcasting, and shortage of station facilities that has been aggravated by faulty frequency allocations. Various practices that have had a detrimental effect on competition have also, however, contributed to the present economic concentration in the control of television broadcasting. These practices include option time, must-buy, first call arrangements, possible tie-in of network time sales to the sale of programs in which the networks have a financial interest, quantity discounts granted by networks to large advertisers in the sale of time, multiple station ownership by networks, long-term exclusive network talent contracts, and broad caster activities in the field of music.

I would stress that the Federal Communications Commission and the Department of Justice have ample statutory authority to correct virtually all the foregoing restrictive practices. In this context, the solution does not lie in the enactment of extensive new legislation at this time but rather in the exercise by the Government agencies of authority which they have already been provided by the Congress. Only if the agencies fail to carry out their responsibilities will appropriate legislative proposals have to be considered by the Congress.

There is, however, one area where additional legislation is now required so as to amend section 2 of the Robinson-Patman Act and section 3 of the Clayton Act. In the sale of time, the networks allow advertisers a variety of quantity discounts which run as high as 25 percent and which are not related to any cost saving. Such discriminatory discounts in the sale of goods would constitute violations of the Robinson-Patman Act. However, since the act is not applicable to the sale of services, the large network advertiser can obtain a competitive advantage solely because of superior mass purchasing ability. This is true notwithstanding there is no distinction in principle between a discrimination in the sale of goods and in the sale of services. Similarly, section 3 of the Clayton Act which bans certain tie-in arrangements is not applicable where services are involved. To plug these loopholes, I have introduced a bill today to amend the Robinson-Patman and Clayton Acts so as to make them applicable not only to the sale of commodities but also to the sale of services by independent contractors.

In respect of the other recommendations, I think the past record of the Antitrust Subcommittee demonstrates that its reports are not issued merely to be filed. On the contrary, it is the policy of the committee to keep a watchful eye on the steps taken to carry out committee recommendations. In this connection I may mention the effectiveness of past recommendations of the committee with respect to such matters as conflicts of interest cases; adoption of a code of ethics by the Department of Justice; employment of WOC's; measures to improve enforcement of the Celler-Kefauver Antimerger Act and other antitrust statutes; activities of the Civil Aeronautics Board in respect to policies concerning a general passenger fare investigation, and the licensing of travel agents.

In accordance with its policy, the subcommittee has made formal request to the Federal Communications Commission and the Antitrust Division for detailed progress reports as to steps these agencies undertake to carry out each of the committee's recommendations pertaining to television broadcasting. Beyond this, the committee will continue to scrutinize carefully the manner in which the Commission and the Antitrust Division carry out these recommendations and implement the congressional policy of a nationwide competitive system of broadcasting. The public interest requires no less.

On Court-Martial of Civilians

EXTENSION OF REMARKS

OF

HON. B. W. (PAT) KEARNEY

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. KEARNEY. Mr. Speaker, under leave to extend my remarks in the Ap-

pendix of the RECORD, I should like to include the following editorial entitled "On Court-Martial of Civilians" by David Lawrence, which appeared in the Washington Evening Star of June 17, 1957:

ON COURT-MARITAL OF CIVILIANS

(By David Lawrence)

The Supreme Court of the United States added several complexities to the judge-made chaos of our times Monday when it handed down a decision freeing two American women who murdered their soldier husbands. The reason for acquitting them is that, because they lived in military quarters overseas, they were denied a civilian trial by jury.

Maybe Congress now will be encouraged to give the same civil rights of trial by jury to both white and Negro citizens in the South who don't commit murder but are merely charged with criminal contempt under vaguely worded court injunctions.

Eight Justices participated in the decision and the ninth refrained because he had not been on the Court long enough to hear the whole case. But the ruling and dissenting opinions, which covered more than 25,000 words, do not give Members of Congress or anyone else the slightest inkling of what is or is not the supreme law of the land on this particular issue.

Four Justices ruled that the wives of servicemen cannot be tried overseas or anywhere else by court-martial but must be tried by civilian courts, either foreign or specially provided for by the United States.

Two justices in separate opinions agreed to dispose of the case by freeing the two women because they said they had not had a jury trial and that in the matter of a capital offense—punishable by death—there has to be a jury trial. They declared that other kinds of offenses committed by civilians attached to the Armed Forces might possibly come within military jurisdiction but declined to be specific about future cases.

Two dissenting justices said the evidence showed that two women brutally killed their husbands, both American soldiers, while stationed with them in quarters furnished by our Armed Forces on its military installations in foreign lands.

These justices wanted to uphold the ruling of the military tribunal which had sent the women to prison for life.

Now it so happens that these two cases were decided the other way—the military court was upheld—in a decision handed down a year ago by the Supreme Court.

The High Court seldom reverses itself. If it does, it usually contends that some new facts have been brought out that weren't available before. This time the majority of the Justices say frankly their previous decision was wrong. Justice Frankfurter in his separate opinion goes to considerable pains, however, to show that the ruling rendered a year ago was based on a previous decision in another case that really doesn't resemble the facts or circumstances surrounding the present case.

One wonders after reading Justice Frankfurther's explanation why 4 of the 6 Justices who voted to release the murderers didn't at least give some such explanation when they reversed the famous opinion upholding separate but equal facilities in schools. This decision was rendered originally in 1896 and was then reversed in 1954 when the Court merely said it believed sociological considerations had somehow grown more important, a concession to expediency. Frankfurter in his opinion last Monday, however, in arguing for the idea of giving explanations when reversals by the Court occur, quoted approvingly of the following concept:

"If a precedent involving a black horse is applied to a case involving a white horse, we are not excited. If it were an elephant, then we would venture into thought. The difference might make a difference. We really are concerned about precedents chiefly when their facts differ somewhat from the facts in the case at bar."

The foregoing will be quoted again and again to point out that the Supreme Court in reversing the separate but equal doctrine 3 years ago just didn't have any new facts but decided to go along with the trend of the times. Justice Frankfurter in his latest opinion warns belatedly that reversals must be based on judicial principle, and he adds: "Legal doctrines are not self-generated abstract categories. They do not fall from the sky; nor are they pulled out of it. They have a specific juridical origin and etiology."

Looking up in the dictionary the word etiology, one finds it means custom, which makes the phrase mean judicial precedent and the customs of the people, which the Supreme Court certainly ignored in the integration cases.

The Supreme Court, moreover, ventured into a lot of other fields with its variegated opinion on the two murder cases which it decided Monday. Four of the Justices—Chief Justice Warren, Justices Black, Douglas, and Brennan—said a significant thing about how treaties or agreements with foreign governments cannot supersede the Constitution. Presumably, even if the United States agreed by treaty, for instance, to let William Girard be tried by a Japanese court, this doesn't mean the treaty or agreement under which such action were taken is constitutional. It could mean that Girard has a right to trial at least by an American military court.

Senator Bricker, sponsor of the much-discussed amendment to the Constitution to assure that a treaty cannot supersede the Constitution, feels reassured by the new pronouncement but points out that only four Justices subscribed to the declaration. It all adds to the bewilderment of the public, which is being solemnly told that it must always bow to the supreme law of the land, whatever that is today.

Let the People Judge

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I would like to add my voice to those of others who have praised Senate Majority Leader LYNDON B. JOHNSON for his great speech on June 6, 1957, before the Annual Conference of the United Jewish Appeal meeting in New York City.

This historic speech was entitled "The Open Curtain."

Senator JOHNSON said:

We must create a new world policy. Not just of open skies, but of open eyes, ears, and minds, for all peoples of the world. I call for the open curtain. Let truth flow through it freely. Let ideas cleanse evil just as fresh air cleanses the poisoned, stagnant mass of a long-closed cavern. Mankind's only hope lies with men themselves. Let us insist that the case be submitted to the people of the world.

The speech in which Senator JOHNSON advanced the concept of a regular interchange of ideas between the United States and the U. S. S. R., it appears to me, was generated in part by the appearance of Russia's Communist boss N. Khrushchev on the Columbia Broadcasting System radio and television program Face the Nation on June 2.

Since then there has been a great deal said and written on whether Khrushchev should have been permitted access to an American audience. I, for one, agree with the judgment exercised by the Columbia Broadcasting System in presenting this figure and permitting Americans to see this man in action so that they could formulate their own opinion as to his sincerity and judge for themselves the merits of his arguments. A great number of American newspapers have agreed with this view.

Mr. Speaker, I would like to submit the following editorial comment from the New York Times, June 3; the Washington Post and Times Herald, of the same date; the Minneapolis Morning Tribune, June 7; and the Pilot, a Catholic weekly of Boston, Mass., June 1, as a sample of newspaper approval of the Columbia Broadcasting System's enterprise and news judgment in arranging and presenting the program:

[From the New York Times of June 3, 1957]

KHRUSHCHEV FACES AMERICA

A moment of great irony occurred yesterday about one-third of the way through the televised and broadcast interview Nikita S. Khrushchev gave the Columbia Broadcasting System. There was the rotund Mr. Khrushchev's picture on the television screens of millions of American homes, there were his words coming out of millions of loudspeakers in our homes. Those words were defending the Soviet policy of jamming Voice of America broadcasts to the Soviet Union on the ground that that voice gets on one's nerves. That moment epitomized the difference between a free country and a totalitarian country. In our land Mr. Khrushchev was given an opportunity to propagandize our people with complete freedom. In his own land, Mr. Khrushchev arrogates to himself and his colleagues the right to decide what his people shall and shall not hear or see, using as the criterion what does or does not get on his nevres.

Mr. Khrushchev's appearance on our television and radio was a historic and salutary event. In a sense, the fact of his appearance was almost more important than what he had to say, and that fact belied Mr. Khrushchev's own words about our alleged iron curtain. Millions of our people had a chance to see Mr. Khrushchev in action and to form a judgment of him and his words. He certainly tried hard to project an image of earnestness, sincerity, and good humor. But from time to time during the interview traces of the hard, merciless human being that he is penetrated the outer image. No one who saw Mr. Khrushchev yesterday can doubt that in him we are up against a tough and determined opponent.

We Americans believe in the free competition of ideas. As an example of that belief put into practice, the Khrushchev interview was in our best tradition, and the Columbia Broadcasting System is to be congratulated for its enterprise. We may all hope that the time is near when the Soviet people can see and hear President Eisenhower as freely as we saw and heard Mr. Khrushchev yesterday.

But our concept includes also the notion of rebuttal, and rebuttal is necessary because many of the ideas Mr. Khrushchev uttered are questionable.

Certainly we welcome his avowals of desire for peace, for friendship, and the like. But we have heard such avowals from Soviet leaders before and found later, as in the

case of the invasion of South Korea, that those words were empty. The issue is obviously one of mutual confidence, and it is central because Mr. Khrushchev's proposals on disarmament require that we accept the word of the Soviet Union.

Mr. Khrushchev makes a great mistake if he does not understand that past experience has made us chary of accepting the Soviet Union's word. We know that the Soviet Union does not keep its word to its own people. Only a few weeks ago, for example, Mr. Khrushchev himself announced the virtual repudiation of the Soviet Union's internal debt. In the tragic experience of the Hungarian revolution little more than half a year ago we saw an example of the basest Soviet treachery. Under the cover of conducting negotiations for withdrawal of Soviet troops from Hungary the Soviet Union prepared and then delivered the treacherous blow which again enslaved the Hungarian people.

Nor can our lack of confidence in the Soviet Union's words be removed when we see the obvious sophistry to which Mr. Khrushchev resorts on key questions. Hungary last November showed how rapidly Soviet troops in large numbers could be moved into a neighboring country. Yet Mr. Krushchev yesterday tried to claim that mutual withdrawal of American and Soviet troops from Europe would be of equal significance to both countries, since some cities in eastern Siberia are as far away from Europe as is the United States. The troops which attacked Hungary last fall were not brought from Irkutsk or Vladivostok, but from the Soviet territory immediately adjoining Europe.

Or, to take a second example, there is Mr. Khrushchev's appeal yesterday that we should not look upon each other as robbers, but we should look upon each other as honest people. Surely Mr. Khrushchev knows that honest people do not systematically lie about their neighbors. Yet the Soviet press systematically, and recently in increasing amount, has been portraying this country as a land where millions are starving, where corporations wax fat on the systematic robbery and degradation of the people, and where plans for deliberate aggression are being hatched. This is not honest. People who spread such untruths are not honest people.

Many similar points could be made, but our judgment of Mr. Khrushchev's speech should not be entirely negative. It is good that he appreciates the catastrophic consequences of any future nuclear war, even if he still cherishes the delusion that in some way communism might triumph in the ruins of a shattered world. It is good too that the Soviet Union, on his word, is willing to begin disarmament agreements by accepting first some small step that might lead to something bigger. Finally, and not least important, we welcome Mr. Khrushchev's advocacy of more contacts between the Soviet people and our people. If there are enough such contacts then perhaps well before Mr. Khrushchev's grandchildren come of age the Soviet people will be a free people, permitted to see and hear anyone they want regardless of whose nerves may be put on edge.

[From the Washington Post of June 3, 1957]

KHRUSHCHEV INTERVIEW

Nikita Khrushchev apparently had no intention of uttering a threat yesterday when he told the American people by means of a television interview that their grandchildren will live under socialism in this country. Rather, he seemed to be expressing a deep-seated conviction that communism is an immortal idea that mankind will increasingly embrace. In any event, the most dominant note in Mr. Khrushchev's replies to some pointed questions on Face the Nation was a professed desire for peace, for competition between capitalism and communism in industry and trade and ideas, and for an increasing cultural exchange. He professed to believe that the system which has greater support among the people will come out on top.

The first fatal contradiction in Mr. Khrushchev's performance lies in his unwillingness to trust the peoples of Russia or the satellite countries to make their own decision in this matter. His flimsy pretense that the Soviet Union jams the Voice of America because it might misrepresent the American people will amuse the Russians as well as the rest of the world. To a question as to why the Kremlin does not allow the Russian people to make decisions for themselves, he replied only that the old scheme of dividing the Soviet people from their government is discredited. He came close to saying that the Kremlin is the Russian people. Under such a system there can be no free competition of ideas. While pretending to believe in a peaceful contest between rival economic and cultural systems, the Soviet boss made it unmistakably clear that his side would cling to the weapons of tyranny and unlimited power to insure the triumph of communism.

The second grave contradiction in the Khrushchev performance was his repeated assertion that the peace-loving Soviet Union is worried by American preparations for war. He could point to no instance in which the United States is menacing its neighbors; nor could he show that the United States has set up puppet governments in neighboring lands or launched aggressive conquests, as the Kremlin has done on a large scale since World War II. In the moments when he is honest with himself, Khrushchev must know that the United States is no menace to the peace of Russia or any other country. It is a menace only to the type of aggressive conquest by which the Kremlin has sought to extend communism to freedom-loving peoples.

The Soviet leader is to be highly commended for submitting to the interview, and there were some optimistic notes in his comments. He is willing to take a small first step toward arms limitation if satisfactory understandings can be obtained. He approves wider travel privileges for diplomats in Russia on a reciprocal basis. He recognizes the general calamity that a nuclear war would entail, although he believes communism would survive it and capitalism would not. The perilous element in his philosophy is that he elevates communism above all else and remains determined to fasten it upon mankind by fair means or foul. This ideological threat backed by the enormous power of the Soviet Union remains the greatest problem of our time.

[From the Minneapolis Morning Tribune of June 7, 1957]

CBS AND THE KHRUSHCHEV INTERVIEW

The Columbia Broadcasting System, in our opinion, ought to be commended for persuading Soviet party boss Khruschchev to appear on its televised program, Face the Nation, last Sunday.

Millions of Americans got a chance to see Khrushchev in action, hear his replies to—and evasions of—questions asked by three American correspondents, and thus obtain a little more information on which to judge the Soviet leader.

As a consequence, we were disappointed that President Eisenhower, at Wednesday's press conference, implied disapproval of the show and dodged a question as to whether he thought Columbia Broadcasting System was remiss in its news judgment in getting Khrushchev to appear on its program.

In answering several questions, as shown in the partial text on this page, the President seemed to take the position that Columbia Broadcasting System should not have carried the show because Khrushchev spouted the Communist line and tried, by using propaganda, to split America from its European allies.

We hope that the President isn't adopting the position of Secretary of State Dulles (with respect to permitting American reporters to go to Communist China) that the American press should in effect be used as an agent of American foreign policy. The press, including television newsmen, ought to be able to inform the American people as to what is going on in the world. Unpleasant facts from Communist China ought to be reported. Unpleasant Russian leaders such as Khrushchev ought to be interviewed, even when we don't like or approve of what they have to say.

Mr. Eisenhower correctly pointed out that Khrushchev's appearance on television was not the same thing as a kinescope of an American Presidential press conference. "We know that there are no prepared questions here and no prepared answers," Mr. Eisenhower said. "It is a matter of trying to deal honestly with each other and then putting it * * * in the papers and on the radio and * * * on the television screen, and this other performance of last Sunday afternoon was far from that."

However, on the basis of statements of B. J. Cutler, the New York Herald Tribune correspondent who participated in the interview, was well as those of CBS officials and press association reporters who covered the event, the President's assumption that both the questions and answers were prepared in advance seems to be unwarranted.

All reports indicated that the reporters and Khrushchev agreed in advance on covering a certain rather lengthy list of subjects, but this is not the same thing as preparing questions and answers in advance. The President does not put any such limitations on his own press conference, to his eternal credit, but it was not so many years ago that an American President did insist on getting written questions in advance of a press conference at which he answered them.

Mr. Eisenhower at one point in his press conference said that a "commercial firm in this country, trying to improve its own commercial standing, went to unusual effort to get someone * * * that really made a unique performance in front of our people, and he could do that because this is a free country * * *"

This performance illustrates one of the virtues of a free enterprise system, of course. CBS in the true spirit of the private enterprise system signed up Khrushchev for a television program, told the American public about it in advance, and then captured a big audience because the people wanted to see and hear the Russian leader. And CBS was able to do all this without any prior approval of the United States Government.

Even if we didn't like what Khrushchev said, CBS still ought to be commended for making it possible for him to appear on America's television screens. It was a triumph for the free enterprise system and for the principle of freedom of the press. We believe that the President, when he thinks through the implications of the questions raised at his own press conference, will agree.

[From the Pilot, Boston, Mass., June 1, 1957]

EASY, EASY

Nearly everyone knows about a program called Face the Nation. It is a radio and television show sponsored by Columbia Broadcasting System in which some prominent person of special qualification faces several newsmen and answers the questions and problems proposed by the news panel. An informative and often entertaining presentation of certain current problems, it also provides an opportunity to see just how the expert comes through what is often a rather persistent and probing questionnaire.

Last week Columbia Broadcasting System announced the expert for next Sunday, his name was Nikita Khrushchev.

Almost at once certain wheels began moving and Columbia Broadcasting System has found itself with protests piling on its desk, one notably from the Catholic War Veterans of the United States. The argument is that Khrushchev is bound to use this television opportunity for selling the Soviet line and so, it is assumed, use the large and impressive facilities of Columbia Broadcasting System for Communist propaganda. The Catholic War Veterans suggested either canceling the program or plainly labeling it Communist propaganda.

This approach, in our judgment, is very nearly hysterical. Everyone of any intelligence in America is aware that Khrushchev is the Communist Party boss and is sure that he will be presenting the party line. He has been doing this for years. Four American newsmen however will have opportunity to challenge him publicly and point out the flaws in his presentation. Are we so afraid of the truth of the American position that we feel that it cannot be more persuasive than the Khrushchev line? Are all the brains with Khrushchev?

Communism is not some magic weed that grows everywhere its name is mentioned or its program described. In open debate and faced with the facts, it should not have a chance against the freedom of America. Khrushchev is no Communist Pied Piper who will mesmerize the land and start a Communist parade across the Nation. American brains, and American newsmen, can hold their own against Communist lies and promises. We have no reason to be thrown into terror; Communists are not superior to free men.

Retirements in Navy

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. MULTER. Mr. Speaker, on March 14, 1957, I introduced my bill, H. R. 6025, to amend the Career Compensation Act.

In support of my bill, I commend to the attention of our colleagues the following article by Hanson W. Baldwin, which appeared in the New York Times of June 20, 1957:

RETIREMENTS IN NAVY: AN ANALYSIS OF THE SERVICE'S INABILITY TO RETAIN SOME OF ITS TRAINED OFFICERS

(By Hanson W. Baldwin)

A Medal of Honor winner, Capt. Richard H. O'Kane, and Capt. Chester W. Nimitz, Jr., son of the Fleet admiral, are among 89 junior captains of the Navy who applied for retirement in the fiscal year 1957, which ends June 30.

The Bureau of Naval Personnel said recently that it was not concerned about these figures and that the figure of 89 represented only a slight increase over the 73 captains who voluntarily retired in the 1956 fiscal year. But many other naval officers and some of the senior officials of the Navy have expressed considerable perturbation. Twenty-three of the 89 officers are specially trained in engineering and these represent a high proportion of officers of this category. Thirty-four are staff officers, 32 from the unrestricted line. These latter are the officers qualified for command or any regular line duties.

Many have exceptional records and much professional schooling. A few of them failed for selection to admiral.

The bureau said that three preponderant reasons were given for requesting retirement, a privilege to which a naval officer is entitled after 20 years' service in accordance with certain conditions laid down by Congress and the Secretary of the Navy. Five years in the grade of captain is one of the requirements, but Captain O'Kane and perhaps others who have requested retirement have served less than 5 years as captains.

NAVAL PAY CRITICIZED

The first reason given in official retirement applications was inadequacy of naval pay to support a family, particularly when children are of college age. This reason is underscored by the recent Cordiner report, which urged a revision of service pay and considerable higher pay scales for merit and for those promoted to senior ranks. The report has been largely tabled, at least for this session of Congress, by the administration, and this action has aroused some bitterness in the service.

Pay also figured in the second reason given for requesting retirement. Some of the captains simply felt the pay was inadequate, as compared to private industry, to compensate for their responsibilities.

The third reason offered was hardship of a physical nature, a reason that meets one of the requirements for retirement. An officer's wife, for instance, might have asthma and be required to live permanently in a particular area, and thus would be unable to accompany her husband when he changed stations.

The official reasons given for requesting voluntary retirement were not, however, in all cases the major reasons—as was evidenced yesterday by a talk with Captain O'Kane, a noted submarine commander.

Captain O'Kane, 46 years old, graduated from the Naval Academy in 1934, won the Medal of Honor and three Navy Crosses in the war, and has attended the Naval War College and the Armed Forces Staff College. He and many others among the Navy's most promising young captains, who in time could look forward confidently to promotion to admiral. They are the kind of men the Navy would most like to keep.

DEFICIT FINANCING

Captain O'Kane conceded he was going into deficit financing to send his two children through college, but other reasons for retirement appeared to be paramount. Now on duty in the office of the Chief of Naval Operations in the Navy Department in Washington he said he had had 10 changes of station since the war and too little time in each job to do more than give him "a feeling of uselessness and futility."

He said, too, he remembered his oath of loyalty to the United States and he put that above loyalty to a single service. He obeyed orders, he said, but he had been called on frequently to support naval policies with which he did not agree.

He had to take the Navy's position, he said, when he believed there should be just 1 fighting service instead of 4.

"What I have accomplished in 1 year," he declared, "could be done in 1 month."

Captain Nimitz, son of the famous commander of the Pacific Fleet during World War II, graduated from the Naval Academy in the class of 1936. He holds the Navy Cross and has an outstanding record. He now is in command of the Orion, a submarine tender, which is at Guantanamo Bay, Cuba, at the present time. Captain Nimitz could not be reached for comment about his retirement.

These applications for retirement, which have shaken some of the officers in the Navy who know about them, illustrate the compound nature of the problem of naval—and service—morale. Pay is a factor, an important factor, but it is by no means the major factor. Unnecessarily frequent changes of duty; too narrow an interpretation of service loyalty, and above all the absence of a sense of a job worth doing and well done have too often stultified the most energetic and the most ambitious. The Navy's personnel policies require very thorough study.

Foreign Factories We Helped Rebuild Seen Gaining Competitive Advantage

EXTENSION OF REMARKS
OF
HON. CHARLES A. WOLVERTON
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. WOLVERTON. Mr. Speaker, there has been a growing feeling among our workers in industry that the help we have given foreign nations in an effort to assist their industrial rehabilitation has reached a point where it is beginning to prove detrimental to our own industries and our own workers.

This viewpoint has been forcibly and well set forth in an article by Constantine Brown appearing in the Washington Evening Star, issue of Wednesday, June 19, 1957. We recognize Constantine Brown as a man of great ability and unusual talent in expressing his opinions on matters of national and international affairs. This is eminently true in the article to which I have referred. It is an article that should have widespread distribution and serious consideration by Members of Congress and all other Government officials who are charged with formulating our national policies.

The article reads as follows:

WHILE THE UNITED STATES HELPS OTHERS: FOREIGN FACTORIES WE HELPED REBUILD SEEN GAINING COMPETITIVE ADVANTAGE

(By Constantine Brown)

Spectacular developments recently in international relations, in financial domestic issues, such as the reduction of the budget, and in revealing congressional investigations in the field of labor leadership have obscured one of the major issues concerning the rank and file of labor. This is our competitive posture in regard to the foreign factories which we have helped rebuild since the end of the war with the most modern equipment available.

The problem which many dedicated labor leaders who are not politically ambitious are examining is now but a cloud on the horizon. It concerns the competition of foreign goods in our domestic markets and the difficulties we shall encounter eventually in competing with other industrial nations in an open world market.

At no time in the history of civilization has the working man enjoyed the material benefits, safe and healthful working conditions and the opportunity for recreation which have been achieved in this Nation. Of course these are directly attributable to the high prevailing wage scale which is paid to the producers of America's wealth.

Political leaders who direct our foreign affairs have been moving more and more

toward international agreements which place our products in a disadvantageous position. It might be noted that most of the high officials who devise these international agreements are political men—a part of the vast administrative overhead of our society.

Each time we build a factory in a foreign country and train the people in how to make products which they formerly purchased from us we chip away our economic advantages. It must also be noted that in the course of world developments, countries which in the past relied principally on the wealth of the soil for their economic prosperity are now becoming rapidly industrialized. And each time we allow cheaply made foreign goods to enter our domestic markets we injure some segment of our society.

A substantial portion of the price of any American product is the charge for labor. Most Americans don't squawk at the price because they feel that those who work with their hands are entitled to a fair share of the reward. The great strength of this country is that our working people can be homeowners, can enjoy material benefits, such as automobiles, and can rear and educate their children comfortably.

If we keep moving into an international labor community, however, something has to give. Either wage scales of all people in the world must be raised to our level, and this is, of course, highly unlikely, or our wage scale must be reduced to the lowest common denominator. Statistics show frequently a true picture. The following interesting figures show the difference in wages between the American, British, and Japanese workingman:

An unskilled laborer receives $2.41 an hour in America; 56 cents an hour in Britain and 18 cents an hour in Japan.

A bricklayer draws $4.15 an hour in this country; 65 cents in Britain and 23 cents in Japan.

Carpenters in the 3 countries receive, respectively, $3.57, 65 cents, and 21 cents.

Structural iron workers receive $3.97, 62 cents, and 22 cents.

During this reporter's last trip to Japan he found that the foreman in a seamless tube plant near Tokyo, a highly skilled workman, was receiving $47.65 a month. This represented half the weekly wages of an ordinary factory hand in this country.

The result of these discrepancies is that in order to keep the illusion of being an exporting country, we are being forced more and more into a position where we have to give our goods away under some arrangement or other before they can enter foreign markets.

The American textile industry is already hard hit by the import of cheap textiles from Japan. Yet, it is argued in the highest quarters, we must give the Japanese people a chance to make a living and cannot close our gates to their products.

The American automobile industry, which used to laugh at the little foreign cars, is now becoming anxious. The German Volkswagen is becoming increasingly popular because of the low price and the low gas consumption. A concern in Japan has developed a new car which is intended to displace all Western automobiles in the south Asian markets. Recent reports in Tokyo papers are that the manufacturer intends to adapt the little cars for the American market and the estimated cost will be about $800 delivered on the west coast.

If we continue to make political concessions for the sake of that will-o'-the-wisp peace in our time, the problem is going to become acute in many American industries.

Unified Bay Area Planning Advised

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 6, 1957

Mr. MILLER of California. Mr. Speaker, Bill Stokes, a fine feature writer on the staff of the Oakland Tribune, has reported an interview that he had with Prof. William A. Robson, one of the world's greatest authorities on governmental organization. A professor at the University of London, England, he has just completed a term as an exchange visiting professor of political science at the University of California. Professor Robson discussed the lack of coordination in the many political entities that go to make up the San Francisco Bay metropolitan area.

He points out that with the rapid development of the area we must have an orderly growth if we are to reap the rewards of good local government.

Professor Robson does not paint a pretty picture of our area but he paints a factual one.

The article is provocative and should quicken the conscience of all of us who are fortunate enough to live in the bay area.

I am happy to include Bill Stokes' article from the Tribune as part of my remarks.

The article follows:

UNIFIED BAY AREA PLANNING ADVISED

(By Bill Stokes)

"The bay area has reached the absolutely critical stage in its development. What happens in the next 5 years will mean the difference between chaotic conditions and orderly growth in the future."

These words should provide food for deep thought by city and county officials throughout the bay area. For they come from Dr. William A. Robson, one of the world's great authorities on governmental organization, who is preparing to return to the University of London after a term as visiting professor of political science at the University of California.

Sitting relaxed in an easy chair in the living room of his pleasant rented home in Berkeley, Robson expressed his views in an exclusive interview from the standpoint not only of a governmental expert, but as an "outsider who has come to love your delightful area."

"There is no place in the entire world to match what you have here. It saddens me to find you have not taken full advantage of your great beauty and location."

LACK OF UNITY

The big trouble with the bay area, as Robson sees it, "is the mass of Balkan states"—the cities and counties—and the fact that no one is "thinking and acting bay area."

The bay area, he said, "is unmistakably a genuine metropolitan area—it is an outstanding example of a metropolitan area."

Yet, he added, "you have not realized that you cannot make great progress by dealing with your problems one by one on a piecemeal basis, and you have not faced the fact that overall problems in a metropolitan region cannot be solved without metropolitan government."

Robson thinks the bay region has placed too much reliance on special purpose districts, set up to deal with only a specific problem.

"Take rapid transit, for instance," he said. "This is a long-term and very costly plan which will determine the whole pattern of living, working, and recreation in the bay area for years to come.

BROAD EFFECTS

"Initiation of this plan without full consideration of its broad implications and without overall planning and government could be quite dangerous because of the broad effects rapid transit will have on every aspect of life in the bay area.

"Merely increasing the horde of workers who travel to and from the central cities daily to work is bound to intensify your problems. London has the best rapid transit system in the world, but it has merely exacerbated our problem by making it possible for more and more people to travel longer and longer distances at a faster rate to and from work.

"Transportation should be the servant of man, not his master."

He cited Los Angeles as a horrible example of what can happen when the only consideration is to build more and more freeways and other transportation facilities simply to enable people to move faster and for longer distances.

"Los Angeles is transportation gone mad," he said. "It is a prime example of endless, senseless urbanization sprawling aimlessly.

"If I had the power, I would put up in the council chambers of every bay area city a big sign saying, 'Beware Los Angeles,' to serve as a constant warning."

What bay area leaders should do, Robson said, is to begin coordinated efforts to control growth, to develop planned, coherent cities around the triad of peoples' lives—home, work, and play.

This can be accomplished only through a metropolitan government which would consider the large questions of your future—the questions such as smog, transit and traffic, decentralization, sewerage, industrial development and the like which are not even being considered now or, if they are, are being looked at on a piecemeal basis.

Robson emphasized that the metropolitan government which he describes would not interfere with the continued operation of city governments in dealing with purely local problems and affairs.

TORONTO CITED

This is the type of metropolitan government which now embraces Toronto and 12 neighboring cities. Robson said the bay area could have a much better metropolitan government than Toronto by such means as providing for the direct election of at least a majority of the members of the legislative body.

Such a government, he said, could do much to reverse the trend to steadily longer movements of people from home to work, the major traffic flow which has created most of our present-day problems in metropolitan areas.

In addition, an overall government could act to remedy the political schizophrenia which afflicts people who live in one area, work in another and feel allegiance to neither.

Robson thinks bay area communities enjoy a uniformly high standard of governmental services. But he also had some harsh words to deliver on this subject.

SHORELINE MESS

"I am shocked by the appalling misuse of the bay front on the east side of the bay," he said. "This should be your shop window—a real scenic attraction. Instead, you use it to burn trash and as a refuse dump. It is one of the worst pieces of vandalism I have ever seen."

He said he feels planning arrived too late in Oakland and that the result is a frightfully dreary and unrelieved urban sprawl.

But service on the east side of the bay, he said, is absolutely shocking, adding that one of the prerequisites of an efficient metropolitan area is good public transportation.

Robson, who is professor of public administration at the University of London's School of Economics and Political Science, is author of Great Cities of the World: Their Government, Politics, and Planning. He leaves Berkeley Wednesday for a 5-week tour of the United States before sailing for England in July.

The High Court Splits Hairs

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 18, 1957

Mr. SCOTT of Pennsylvania, Mr. Speaker, recent decisions of the Supreme Court, in the Communist Party cases, are cause for serious congressional concern as to how it will be possible to draft laws to forestall plots against the safety of the United States. The Smith Act, upheld in 1951, is now having so many holes punched in it by Supreme Court decisions that one wonders what kind of precautions against the advocacy of the violent overthrow of the United States Government can be drafted which could escape being declared unconstitutional by the Supreme Court.

Perhaps we should consider a bill to increase the number of Supreme Court Justices by one—and require that he be a psychiatrist.

Under leave granted, I include an editorial in the Philadelphia Inquirer of June 18, 1957, entitled "The Supreme Court Splits Hairs":

THE HIGH COURT SPLITS HAIRS

Yesterday's remarkable decision by the United States Supreme Court, freeing 5 convicted Communist leaders and ordering new trials for 9 others, establishes a new interpretation of the Smith Act that may seriously hamper Government efforts to repress the Communist conspiracy in this country.

The Smith Act makes it unlawful to teach or advocate the violent overthrow of the United States Government and under it many of the top officials of the Communist Party in America have been sent to prison. In 1951, the Supreme Court upheld the constitutionality of the act and the conviction under it of 11 Reds.

The case decided yesterday concerned 14 California party heads who were convicted in 1952 on charges of plotting to teach violent overthrow of the Government.

In upsetting the convictions by resort to some astonishing legalistic hairsplitting, the Court majority has been charged by the lone dissenter, Justice Clark, "with usurping the function of the jury." Many persons are likely to believe that the function of Congress may have been usurped as well.

Congress did not write the word "instigate" into the Smith Act. But Justice Harlan, in writing the majority opinion in this case, has proceeded to do so.

The Court holds, the Justice stated, that the Smith Act does not forbid teaching and advocating forcible overthrow as an abstract principle "divorced from any effort to instigate action to that end." The Smith Act, he added, "was aimed at the advocacy and teaching of concrete action for the forcible overthrow of the Government, and not of principles divorced from that action."

Here, in this schoolroom approach to a vital issue, we have something vastly different from prior interpretations of the Smith Act and its power to punish those plotting the overthrow of our free institutions. Justice Harlan's insistent requirement of "concrete action," of "instigation," hark back to the then-dissenting opinion of Justice Douglas in the 1951 decision, which pointed out that the Communist defendants were not accused of any overt act and that the case against them dealt with speech alone.

If an overt act of attempted overthrow has to be proved against suspected Communist conspirators, if the teaching and advocating of which they are accused must be bound up with proved instigation to violence, Government prosecutions under the Smith Act may be considerably handicapped.

Are we not to be permitted to head off an overt act?

In writing the majority opinion in the 1951 case, Chief Justice Vinson had this to say: "The words 'clear and present danger' cannot mean that before the Government may act it must wait until the putsch is about to be executed, the plans have been laid, and the signal awaited."

Unfortunately, the new majority lineup in the Supreme Court does not share Vinson's opinions in the matter. It prefers to narrow the scope of the Smith Act and in so doing to dull the edge of an instrument which has been highly effective in dealing with the ringleaders in the Communist conspiracy.

Even if the new theory of the Court majority should hold, it is difficult to understand why the Government should not have an opportunity to present its evidence against all the defendants under the changed conditions.

Meanwhile, as others accused under the Smith Act race into court with the new decision clutched to their chests, it might be well for Congress to take a searching look at the law that it wrote, and perhaps amend it or rewrite it in such a way that no legalistic loopholes are left for Communist plotters.

Hon. Paul G. Hoffman Addresses High School and Junior College Graduating Class at La Grange, Ill., the High School From Which He Himself Graduated

EXTENSION OF REMARKS
OF
HON. CLYDE DOYLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. DOYLE. Mr. Speaker, by reason of unanimous consent heretofore granted me so to do, I am pleased to present for the reading and information of you and all my other distinguished colleagues the text of an address by Hon. Paul G. Hoffman, at La Grange, Ill., Lyons Township High School and Junior College, on June 13, 1957.

It was my pleasure shortly before said date to be at a meeting at which this distinguished American and former president of the United States Chamber of Commerce and highly successful American business executive related some of his experiences throughout the world as American representative and executive in connection with the United States international and foreign assistance problems. In again having the pleasure of visiting with him for a few minutes and renewal of a rather long acquaintance we exchanged with each other the fact of early dates by each of us to give commencement or graduation addresses to high school graduating students. When he informed me he was to make such at the high school and junior college from which he had graduated about 50 years ago, I asked for the privilege of inserting said address in the CONGRESSIONAL RECORD. I, therefore, have pleasure and honor in doing so:

Lyons Township High School has grown so amazingly and has achieved such eminence as an educational institution that it is a high honor indeed to be invited to participate in these commencement exercises. I was gratified but not surprised to learn from friends of mine in the academic world that Lyons Township High School is regarded as one of the top-ranking schools in the entire United States from the standpoint of preparing its graduates for college.

I understand that there are 500 graduates receiving their diplomas this evening, and that there are some 3,500 people in this audience. If I remember correctly, there were 25 of us in the graduating class of 1907, and by dint of much effort we succeeded in cajolling 150 people to come and see us get our diplomas. Quite a growth.

There is serious question in my mind as to whether Mr. Olson and the trustees acted wisely in inviting me to speak to you. Fifty years have passed since I graduated—a half century. So much has happened in that 50 years, and I think I have learned so much, that the temptation to devote all the time allotted to me to reminiscing and offering advice is well night irresistible. However, I can recall quite vividly my own attitude in June 1907 when I received my diploma. I was not interested in the past. I was intent upon the present and future. Nor was I too receptive to advice, no matter who offered it. Consequently, a part of my talk tonight will deal with the present and the future, but you must not expect me wholly to resist an irresistible temptation. I propose subjecting you to some brief comments on happenings in the past half century, and I shall close my talk with a few words of advice.

In the 50 years between 1907 and 1957, history, as someone has put it, has been written with a rushing pen. Change, bewildering and ceaseless, has been the hallmark of this period. Ancient empires have crumbled and many new nations have been born whose people previously had slumbered through centuries. In almost every field of human endeavor more change has been compressed into this brief span of years than in the previous 500 years. It is small wonder that the world today bears little resemblance to the world of 1907—just about as much, in fact, as the Lyons Township High School of 1957 bears to the small high school from which I graduated.

It is in life in the United States of America perhaps that the biggest change of all

has taken place. In the past 50 years we have seen the invention or rapid development of the automobile, telephone, airplane, radio, television, the atomic bomb, and now nuclear energy. We have witnessed startling increases in the use of nonhuman energy in our manufacturing plants and on our farms. In 1907 an industrial worker had about 1 horsepower to help him. Today he has almost 10. The simple manually-operated machine of yesterday has been replaced by giant automatic machines of unbelievable complexity that feed themselves, adjust themselves, and in fact do everything but think for themselves. In many cases one of these new machines can turn out more pieces per day than 100 men could formerly turn out on a hundred machines. It is this progress we have made in putting horsepower behind musclepower and in mechanizing our manufacturing plants that accounts for the fact that the United States, with one-sixteenth of the world's population, turns out almost one-half of the world's industrial goods.

We have every right to take pride in the extraordinary progress we have made industrially. It is an important advance but by no means as significant as other changes which have taken place in the American way of life in the past half century. From the standpoint of half of our population, the improved status of women is far more important; to most of us the fact that prosperity is more evenly spread has a more visible effect on our daily lives; and for every American who loves his country, the most significant change of all has been the progress we have made toward achieving genuine equality of opportunity for every citizen regardless of race, color, or creed.

Speaking first of the status of women, in 1907 a girl who wanted a career had to think in terms chiefly of schoolteaching and nursing. The great majority confined their ambitions to finding a man who could provide them with something different. If they didn't find that man or didn't take up either of the professions considered respectable for their sex, they were condemned to the rather unattractive fate of living with some male member of the family or a female relative who had made the grade, matrimonially speaking. Today there is almost no field that is not open to women. We have women in the professions as doctors and lawyers. We have women in government as ambassadors. We have women in every type of position in business. And women have invaded the field of sports extensively. We have women in tennis, in swimming, and in baseball. And it wouldn't startle me at all if next fall the coeds started playing football. Finally, as might be expected, women control far more than half of the wealth of the country.

Only those of us who have lived through the past half century can appreciate the change which has taken place in the manner in which our wealth is distributed. In 1907 we had classes and masses and there was a sharp difference between the way the classes and the masses lived. The average factory worker received about $12 a week and worked 60 hours a week. The pay for clerical workers ranged from $5 to $12 per week. The average family had an income of far less than $1,000 a year. Only the wealthy had automobiles or even a telephone or even a bathtub. Today the income of the average family is almost three times what it was in 1907 in terms of the same kind of dollars. Almost every family has one automobile, to say nothing of a radio, a television set, automatic dishwasher, and various and sundry other household appliances. From the standpoint of useful material possessions, the factory worker today is far better off than the factory owner of 50 years ago. Furthermore, class distinctions have become so blurred that we can with honesty say that ours is a classless society. We are all part of one great middle class and proud of it.

I said earlier, and I now repeat, that the most significant of all changes which have taken place in America in the past half century is the progress we have made toward making a reality of what I believe to be the great American dream, and that is of a society in which every child born into it would be assured of full opportunity not only to make a good living, but to have a good life. By a good life I mean one in which there is an opportunity to grow and develop intellectually and spiritually.

Lyons Township High School and this graduating class symbolize dramatically the enhancement in educational opportunities that has taken place in our country. In 1907 only about 1 out of 10 young people between 14 and 17 years of age was in school. Today the proportion has grown to 5 out of 6. The number of high-school graduates has been increasing about 13 times as fast as the population, and the number of college graduates 6 times as fast.

In spiritual matters we may have made the most—or the least—progress. Nothing is harder to gage because it is at once the most important and most intimate part of any individual. However, it surely can be counted as a spiritual gain that we have passed from the smug disregard of inequalities and injustice to minority groups to a lively awareness that we can never have a firts-class country as long as we have second-class citizens. I think it was in 1907 that President Theodore Roosevelt shocked the Nation by inviting Booker T. Washington to have luncheon with him. That was front page news at that time. Today it would be front page news if the President of the United States refused to have luncheon with any visitor because of race, color, or creed. We still have a long way to go before we can claim that we are fully living up to our obligations to our fellow men, but the fact that we know it is perhaps the greatest encouragement of all.

Turning now from the past to the present, the tragedy is that these gains are not secure—they cannot be secure—unless there is a change in the basic policy of the Russian leaders from one of aggressively attempting to communize the world to one of genuinely accepting peaceful coexistence. They have given lipservice to peace, but ever since the end of World War II they have kept the world in a cold war which all too often has been on the verge of being hot.

The effect of this Russian policy on the lives of you young people has been substantial and direct. The financing of your further education has been made difficult for your parents by reason of the high taxes which are an unavoidable consequence of the high cost of defense. Even more important has been the problem you young men have faced because of your uncertainty as to whether or when you would be called by your draft board. It is ironical, isn't it, that men 10,000 miles from LaGrange can make decisions so vitally affecting our lives.

Is there any chance that Russian policy may change? My answer is a qualified "yes."

I would like to make it crystal clear that my hope for a shift in policy does not rest upon any change of heart on the part of Russia's present leaders. The hearts of Khrushchev, Bulganin, and the other leaders, despite the honeyed words of Mr. Khrushchev a week ago Sunday, are filled with hatred of the free world, and their heads are still filled with dreams of world conquest. They are going to change only if forced to do so. But these leaders, whose hands are covered with the blood of a dozen purges, are hardheaded realists. If they are squarely put up against the danger of being purged themselves or changing policy, they will change.

My hope that Russian policy may change is based upon many factors, including, of course, United States foreign policy and myriad activities within the United Nations. But if a change should come, much of the credit must be given to a group of young people no older than you members of this graduating class. I am talking about the freedom fighters of Hungary, almost 30,000 of whom died fighting for freedom. The spontaneous revolt and sacrifice of these young people has had such a profound impact upon the situation within Rusisa that it must be giving the Russian leaders real pause.

In the dream of empire cherished by Lenin, Stalin, and Khrushchev, trustworthy and subservient satellites were essential to a realization of their ambition to communize the world. The Russian hopes that this goal could be accomplished rested largely upon a program set up in 1946 under which hundreds, perhaps thousands, of the brightest young people in the satellite countries were brought to Moscow for intensified training to qualify them for Communist leadership. The idea was that by this type of hothouse education the youth of the satellites would become dedicated Communists, willing and eager to respond to every call from their masters.

But the program misfired. Many of the leaders among the Budapest freedom fighters were those bright young Hungarians who had been given special training in Moscow.

A similar situation prevails in the other satellite countries. In Poland it is the students at the universities who are most restive, who refuse to accept Russian-imposed slavery as their continuing lot. Even in Russia the young people—for the first time since the Communist regime was established—have begun to ask questions. Why shouldn't they? For years every trick and device of the mammouth Communist propaganda machine was used to persuade them that Stalin was the prince of peace, a God-given creature. A year after his death the propaganda machine reversed itself and Stalin became the devil incarnate, a creature to be despised by every good Communist. Such a sudden shift even in a regimented nation is bound to induce skepticism.

It is not only in the satellite countries that the young people are helping to shape the future of their countries. I recall clearly my first post-war visit to Germany. I was curious as to whether there was any real zeal for democracy among the German people. I had assumed that I might find it among the older Germans, who had known some measure of freedom before Hitler. I did not expect to find anything other than hostility toward free societies among the German youth, who had, of course, been subjected to decades of indoctrination. Among the older Germans I found a few people who were passionately dedicated to democratic ideals—men like Konrad Adenauer and Franz Blucher. But too many of the older Germans had been so corrupted by Hitlerism that their only complaint against Hitler was that he had lost the war.

What a different situation I found among the young Germans. I spent quite a little time at the Free University of West Berlin talking to students, some from Berlin and many from East Germany. Almost all the young men were veterans of World War II and of the Hitler youth movement. Some of them had been storm troopers. Without exception these young students were completely convinced that any and all forms of totalitarianism did violence to human dignity and that it would have been a tragedy if Hitler had won. They were eager to learn about democracy—about the freedoms that you and I take for granted. These students at the Free University are, I believe, fairly typical of the youth of Germany. Largely because of this, I think there is a solid basis for hope that Germany will be a stalwart

member of the Atlantic community of free societies.

The reason why young people have such a clear understanding of and steadfast devotion to democratic ideals is not hard to understand. Young eyes, unclouded by the prejudices we older people acquire quite unavoidably, can see clearly. Young minds, uncontaminated by the compromises life is apt to bring, can think sharply and with integrity. And young hearts, unburdened by self-imposed fears and timidity, can act with boldness and courage.

And now I would like to return to those young freedom fighters of Hungary. I have heard friends of mine deplore the fact that they acted with such impetuosity. Don't let anyone tell you that those young Hungarians who fought for freedom and died gave up their lives in vain. In the long sweep of history that revolt will, I am sure, take its place as the most important event which has transpired since the end of World War II. The tragic happenings in Budapest opened the eyes of the 900 million peoples in the uncommitted nations as to Russia's real intentions. They no longer are seeking aid from Russia. Rather, they are looking to the free world for the guidance and help they need in bettering their situation.

We dare not disappoint them because this change of attitude on the part of the underdeveloped countries offers us our one best opportunity to force a change of policy on the part of the Russian leaders. Despite the defections in the satellite countries, Russia can, in the foreseeable future, suppress any revolt. But if her leaders are convinced that they have lost the opportunity to convert or subvert these underdeveloped nations to communism, they should, unless totally blind, see that it would be to their advantage to change from a policy of aggression to one of live and let live.

We in the United States should, in my opinion, welcome such a shift in policy. Despite Mr. Khrushchev's statement that our grandchildren will all be living under Communist regimes, I, for one, haven't the slightest doubt as to the outcome of a nonviolent struggle between the free way of life and the totalitarian way of life. Even if the contest were solely between economic systems, we would win out, because freemen can outthink and outproduce robots. But that is not the real criterion. The real criterion is the impact of a way of life upon people as individuals. Our way of life gives people the opportunity to grow and develop intellectually and spiritually. Theirs makes rigid the mind and withers the soul.

We will not have to wait too long to find out whether the Russian leaders are serious in their offer to live and let live. If they will agree to take a step however small, toward disarmament, we will have grounds for optimism. I hardly need say that no step should be taken unless our interests are properly safeguarded. The Russian leaders have long since forfeited any right to expect other nations to rely upon their good faith.

You young graduates may well ask, But what's all this got to do with us? What can we as young high school graduates do to help bring about the desperately needed change in Russian policy? I shall try to answer that.

Clearly, you can't take up arms, as the young Hungarians did, because, praise God, there are no Russian soldiers here and no puppet regime. But what you can do is to be responsible citizens of the United States of America. You can give thought to world affairs, which are in a very real sense your affairs. You can weigh the pros and cons of domestic issues, such as desegregation and form enlightened judgments. Then you can fight for what you believe to be right with all the zest and enthusiasm that only youth can muster. Above all, you can give your support to all who are waging peace—waging it with dedication, imagination, and boldness. I am not being political when I name President Dwight D. Eisenhower as the world's great leader in that all-important struggle. So much is at stake in its outcome, not only for you, but for the children and grandchildren you may have some day.

The 50 years in which I have lived since I graduated from high school have been interesting, exciting and fruitful. But, if we achieve peace, the 50 years which lie ahead will mark the biggest advance the human race has ever witnessed. It is a wonderful period to which to look forward, full of the richest potentialities. I would like to see every one of you young graduates realize on these opportunities. I am not sure that any advice I have to offer will help, but it might.

First—and this was quite a dismal discovery on my part—there is no substitute for work. I found this so difficult to accept that for many years I kept a card under the glass of my desk so I would be reminded of it every morning.

Second, do not take too literally the guaranty given you of your right to the pursuit of happiness. Happiness is never the lot of those who pursue it directly. It is always a byproduct, a byproduct usually of generous activity on your part in behalf of others.

Third, do not succumb to the temptation of going up and out. The danger of going down and out is not overly great. The danger of going up and out is ominous. You go up and out whenever you stop growing, and that means that you should not only keep on growing, even though you now have your diplomas, but that you should try in every way to speed up the process of growth. Complacency is a most deadly enemy.

Fourth, contribute all you can to see that everyone has a fair and equal chance, regardless of race, color, or creed. In that way you can help make the American dream come true.

Fifth, be brave. Act the way your conscience tells you to act. What matters most is that you act as you know you ought, even at the risk of unpleasant consequences. That is the discipline of freedom, and that is the essence of bravery.

And finally, may I express the hope that in the year 2007, 50 years following your graduation, you will be enjoying life as fully as I am in this year of 1957—50 years after mine.

Plight of the Arab Refugees

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Thursday, June 20, 1957

Mr. HUMPHREY. Mr. President, members of the Rochester, Minn., Association for the United Nations recently wrote to the editor of the Rochester Democrat and Chronicle a letter on the important problem of Palestinian refugees. The article is deserving of widespread attention.

Recently I returned from the Middle East with many impressions similar to those set forth in the article. I ask unanimous consent that the text of the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Rochester (N. Y.) Democrat and Chronicle of April 28, 1957]

REFUGEES HELD KEY TO ISRAEL-ARAB DISPUTE—LOCAL U. N. GROUP PROPOSES SOLUTION

As they have studied the entire Middle East problem, the members of the policy committee of the Rochester Association for the United Nations have become increasingly concerned over the plight of the Arab refugees. They hope that this statement will focus the attention of readers on this phase of the Middle East question.

In the excitement over Suez, the Gaza strip, the Gulf of Aqaba, and the Eisenhower doctrine, we are apt to lose sight of one of the basic problems of the Middle East. This is the unsolved question of the Palestinian Arab refugees, who have contributed in such large measure to the chronic tension between Israel and her Arab neighbors. The R. A. U. N. wishes to direct the attention of the public to this tragic human problem by raising some key questions and then seeking to answer them.

Who are the refugees? They are the Moslem and Christian Arabs who fled from Palestine at the time of the creation of Israel in 1948. They number approximately a million, including children born since 1948. Most of them are able to exist only through the help supplied by the United Nations Relief and Works Agency, and many live in camps built by UNRWA. The largest number of refugees are close to Israel's frontiers, in Jordan and in the Gaza strip; others are in Lebanon and Syria.

Why is the refugee problem so explosive politically? It is the refugees from whom are recruited the fedayeen or commandos who periodically raid Israeli territory. Refugee leaders have been the most insistent in claiming that the only solution to the Arab-Israel problem is to push the Israelis into the sea. Pressures from the refugees have contributed to the truculence of Arab governments, notably in Jordan where their riots played a major part in ending the traditional British connection and alining the government with Nasser's Egypt.

Almost a decade has passed since the refugees first emerged; why hasn't the problem been solved in this time? It is not for want of trying by UNRWA that no solution has been reached. Economically, the refugees could be resettled, in the Sinai Desert east of the Suez Canal, where UNRWA has proposed a major irrigation scheme drawing water from the Nile; in the Jordan Valley, where the plan advanced by Eric Johnston would enable Israel and Jordan to make fuller use of the Jordan's waters; in Syria and Iraq, two Arab states that, unlike Egypt and Lebanon, can absorb an increased population.

The forces blocking permanent resettlement of the refugees are in part financial; to a far greater extent they are political and psychological. UNRWA has been hampered by a shortage of funds and by the fact that only two U. N. members—the United States and Great Britain—have given it really substantial contributions. But UNRWA has been hampered still more by lack of cooperation from the Arab governments with whom it has to work and from the refugees themselves.

Everywhere among the Arabs UNRWA officials find themselves mistrusted or even hated as the agents of a world organization that sanctioned the birth of Israel. The result has been the thwarting of one project after another; the Johnston plan a scrap of paper because Jordan refuses to cooperate with Israel; Sinai irrigation impossible because Egypt asserts she cannot spare the water for it; refugees resisting transfer from

a wretched tent camp to more permanent quarters supplied by UNRWA because the element of permanence suggests abandonment of their reiterated hope of returning to their old homes tomorrow or the day after; the question of possible compensation and repatriation of the refugees clouded by the absence of a well-defined Israeli policy on these issues.

What, then, can be done about the refugees? The RAUN suggests that this tragic human problem is not quite so hopeless or insoluble as it may appear to be. First, the members of the U. N. should give UNRWA the financial wherewithal to support a permanent resettlement. Second, Israel in her own self-interest should seek a permanent settlement of this issue that has made conditions on her frontiers so unstable. She should make the refugees a firm offer of at least partial monetary compensation for their former property in Palestine. Some experts believe this would greatly reduce the sense of grievance that has made the refugees so hard to deal with.

Finally, both the United States and the U. N. should apply the utmost ingenuity to get the Arab governments to abandon their intransigent and unrealistic refusal to admit Israel's existence.

How may this arduous task be accomplished? One way may lie through enlisting the support of the Asian neutral powers, particularly India. Another and perhaps more fruitful way may be to promote plans for the economic development of the Arab world as a whole rather than the piecemeal development of the separate Arab States. Such positive goals as regional economic advance may eventually distract the Arabs from their negative anti-Israeli policy and prepare the ground for a durable peace in the Middle East.

Dr. John B. Christopher, Chairman; Miss Lucille Bowen, Mrs. Albert Craig, Jr., Alex Gaby, Dr. Winthrop S. Hudson, Dr. William S. Litterick, Mrs. Benjamin E. Lull, Dr. Robert E. Marshak, Mrs. Charles C. Marvel, Dr. Justin Wroe Nixon, Miss Mary Sheehan, Dr. Glyndon G. Van Deusen, Mrs. Clarence Wynd, Mrs. David M. Allyn.

Elect Supreme Court Justices?

EXTENSION OF REMARKS

OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. BYRD. Mr. Speaker, as one who has become increasingly disturbed by the rulings of the highest court of the land on matters affecting our Nation's security, I wish to call to the attention of our colleagues Mr. David Lawrence's article entitled "Elect Supreme Court Justices?" The article, which appeared in the June 20 issue of the Evening Star, follows:

ELECT SUPREME COURT JUSTICES?—MOVEMENT REPORTED BEGUN TO MAKE JURISTS SUBJECT TO BALLOT, AS IN STATES

(By David Lawrence)

Now that the Supreme Court has transformed itself into what is being termed "another legislative body," a movement has started to bring about the election of the high court Justices by the people. It would require a constitutional amendment.

The idea, of course, is not novel. This happens to be the custom in the several States with few exceptions. Thirty-six States elect their highest court judges at the polls, 4 States elect their top judges by vote of the State legislatures, and only 8 States follow the Federal custom of appointment by the executive with the consent of the legislative.

Since the Supreme Court of the United States has set itself up as having the right to tell Congress how to run its committees and the executive departments that they must retain employes they don't like, the question of how the Supreme Court, itself, shall be held accountable for its acts has arisen. This has happened several times before in American history.

The late President Franklin D. Roosevelt thought the answer to an arbitrary or capricious Court was to increase the number of Justices so he could appoint those who would decide cases as he thought they should be decided. This scheme was called court-packing. It required legislation and was frowned on by Congress in 1937. Former President Theodore Roosevelt, as a candidate for the Presidency in 1912, urged that there be a system of recall of judicial decision so the people, by referendum, could affirm or reverse decisions, especially in State courts.

Today the Supreme Court of the United States has rendered so many conflicting and confusing decisions that many lawyers throughout the country are perplexed and bewildered. The issue was succinctly stated by a member of the Supreme Court itself, the late Justice Robert H. Jackson, who, in the course of an opinion in 1953, wrote:

"Rightly or wrongly, the belief is widely held by the practicing profession that this Court no longer respects impersonal rules of law, but is guided in these matters by personal impressions which from time to time may be shared by a majority of Justices. Whatever has been intended, this court also has generated an impression * * * that regard for precedents and authorities is obsolete, that words no longer mean what they have always meant to the profession, that the law knows no fixed principles."

For the last 20 years many of the professors of law in the university law schools, particularly in the East, have raised a whole generation of so-called liberals who believe the Supreme Court should make "policy" and that to adhere to historic principles is out of keeping with the spirit of the times. This is the type of thinking which has bred throughout the country a feeling that the Court pays more attention to sociology or political science or ideological considerations nowadays than it does to fundamental interpretation of the Constitution and to the enduring principles of jurisprudence.

If, therefore, the Supreme Court is to make "policies," to whom should it be responsible? It now places itself above both the Congress and the Executive, which are themselves accountable to the people. The Justices, however, are accountable to no one but themselves. Such an autocracy was never envisioned by the Founding Fathers when they authorized life tenure for Justices. The several States have wisely written into their constitutions that judges must go before the people—sometimes after 6-year and sometimes after 12- or 14-year terms. But there is a check by the people.

Criticism of the Supreme Court is mounting. Unfortunately, it is a criticism that attributes political or ideological motives to the justices. Many Republicans and Democrats, moreover, are blaming President Eisenhower for the peculiar attitude Chief Justice Warren has taken since being on the High Court. "Why was Warren ever appointed?" is asked repeatedly in political circles. He was known as a middle-of-the-roader for many years. Eisenhower, however, is reported to be as much surprised as the general public that Warren has become enamored of the Douglas-Black philosophy and consistently follows the radical line without the slightest show of independence.

Justice Black wrote extensively on the rights of congressional investigating committees when he was a United States Senator, and so did Justice Frankfurter before he came to the court. They both thought investigating committees shouldn't be restricted in gathering information and in browbeating recalcitrant witnesses. They wrote approvingly of the harassment of the businessmen of those days. But when the harassment now turns to persons who have had past associations with Communists and who conceal their connections, both Justices Frankfurter and Black seem to become champions of the very individual rights which they once urged should be denied as businessmen sought to exercise them against the witch hunting and fishing expeditions of congressional committees.

So, since it is all so obviously political, there are many persons here in Congress who are coming reluctantly to the conclusion that election of judges for fixed terms, with the right to run for reelection, is the only way out of the political dilemma which the present Court has created by its legislative decisions.

Retirements in the Navy

EXTENSION OF REMARKS

OF

HON. JOHN J. SPARKMAN

OF ALABAMA

IN THE SENATE OF THE UNITED STATES

Thursday, June 20, 1957

Mr. SPARKMAN. Mr. President, there appears in today's issue of the New York Times an article entitled "Retirements in the Navy," written by Hanson W. Baldwin. In the article he relates conditions and situations which should give concern to all of us.

I commend the careful reading of the article to all. Therefore, I ask unanimous consent that the article be printed in the Appendix of the CONGRESSIONAL RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

RETIREMENTS IN NAVY

(By Hanson W. Baldwin)

A Medal of Honor winner, Capt. Richard H. O'Kane, and Capt. Chester W. Nimitz, Jr., son of the fleet admiral, are among 89 junior captains of the Navy who applied for retirement in the fiscal year 1957, which ends June 30.

The Bureau of Naval Personnel said recently that it was not concerned about these figures and that the figure of 89 represented only a slight increase over the 73 captains who voluntarily retired in the 1956 fiscal year. But many other naval officers and some of the senior officials of the Navy have expressed considerable perturbation. Twenty-three of the 89 officers are specially trained in engineering and these represent a high proportion of officers of this category. Thirty-four are staff officers, 32 from the unrestricted line. These latter are the officers qualified for command or any regular line duties.

Many have exceptional records and much professional schooling. A few of them failed for selection to admiral.

The Bureau said that three preponderant reasons were given for requesting retirement—a privilege to which a naval officer is entitled after 20 years' service in accordance with certain conditions laid down by Congress and the Secretary of the Navy. Five

years in the grade of captain is one of the requirements, but Captain O'Kane and perhaps others who have requested retirement have served less than 5 years as captains.

NAVAL PAY CRITICISED

The first reason given in official retirement applications was inadequacy of naval pay to support a family—particularly when children are of college age. This reason is underscored by the recent Cordiner report, which urged a revision of service pay and considerably higher pay scales for merit and for those promoted to senior ranks. The report has been largely tabled—at least for this session of Congress—by the administration, and this action has aroused some bitterness in the service.

Pay also figured in the second reason given for requesting retirement. Some of the captains simply felt the pay was inadequate—as compared to private industry—to compensate for their responsibilities.

The third reason offered was hardship of a physical nature, a reason that meets one of the requirements for retirement. An officer's wife, for instance, might have asthma and be required to live permanently in a particular area, and thus would be unable to accompany her husband when he changed stations.

The official reasons given for requesting voluntary retirement were not, however, in all cases the major reasons, as was evidenced yesterday by a talk with Captain O'Kane, a noted submarine commander.

Captain O'Kane, 46 years old, graduated from the Naval Academy in 1934, won the Medal of Honor and three Navy Crosses in the war, and has attended the Naval War College and the Armed Forces Staff College. He and many others—among the Navy's most promising young captains, who in time could look forward confidently to promotion to admiral. They are the kind of men the Navy would most like to keep.

DEFICIT FINANCING

Captain O'Kane conceded he was going into deficit financing to send his two children through college, but other reasons for retirement appeared to be paramount. Now on duty in the Office of the Chief of Naval Operations in the Navy Department in Washington he said he had had 10 changes of station since the war and too little time in each job to do more than give him "a feeling of uselessness and futility."

He said, too, he remembered his oath of loyalty to the United States and he put that above loyalty to a single service. He obeyed orders, he said, but he had been called on frequently to support naval policies with which he did not agree.

He had to take the Navy's position, he said, when he believed there should be just 1 fighting service instead of 4.

"What I have accomplished in 1 year," he declared, "could be done in 1 month."

Captain Nimitz, son of the famous commander of the Pacific Fleet during World War II, graduated from the Naval Academy in the class of 1936. He holds the Navy Cross and has an outstanding record. He now is in command of the *Orion*, a submarine tender, which is at Guantanamo Bay, Cuba, at the present time. Captain Nimitz could not be reached for comment about his retirement.

These applications for retirement, which have shaken some of the officers in the Navy who know about them, illustrate the compound nature of the problem of naval—and service—morale. Pay is a factor, an important factor, but it is by no means the major factor. Unnecessarily frequent changes of duty; too narrow an interpretation of service loyalty, and, above all, the absence of a sense of a job worth doing and well done have too often stultified the most energetic and the most ambitious. The Navy's personnel policies require very thorough study.

Statement of Rev. James L. Vizzard, S. J., Vice President, National Catholic Rural Life Conference Before the House Foreign Affairs Committee for the United States Mutual Aid Program of 1957

EXTENSION OF REMARKS

OF

HON. JAMES G. FULTON

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following:

STATEMENT OF REV. JAMES L. VIZZARD, S. J., VICE PRESIDENT, NATIONAL CATHOLIC RURAL LIFE CONFERENCE BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE FOR THE UNITED STATES MUTUAL AID PROGRAM OF 1957

Father VIZZARD. I want to thank the committee for its courtesy in giving us the opportunity to express our observations and convictions on the mutual security program. I would also like to congratulate the committee for its wisdom and its deep insight into reality. By the very fact that these hearings are now being conducted the committee makes plain its judgment that in the grave and basic decisions we as a nation must make, moral and spiritual considerations not only are pertinent but, when everything else is said and done, are overriding.

In consultation with Dr. C. J. Nuesse, who will appear here on June 5, it was determined that our testimony might conveniently be divided into two distinct parts. It will be my function and privilege to present the teachings of the church, that is, the ideas and principles which influence the practical judgments which informed Catholics make on issues such as we are facing today. His testimony will present the concrete evidence of Catholic convictions in the form principally of statements and policy resolutions of Catholic organizations and spokesmen. He will also offer specific recommendations on the mutual security program which have come from the same sources.

My comments on the military aspects of the mutual security program will be brief. To be sure, they also have their moral implications, but their justification, as has recently been clearly explained, lies chiefly in our own urgent defense needs. What previously has been presented under the guise of foreign aid is now seen to be largely American aid, and should be so billed. We have here, to put it directly, a very cheap way to buy ourselves essential military security. No doubt in this phase of our defense program, as very likely in others, some money can be saved by careful planning and administration. But we might well ask ourselves if we can afford to haggle or to try to make political advantage over a relatively few dollars when our lives may be at stake.

Neither will I spend any time on the more technical budgetary, fiscal, or administrative details of economic development and technical assistance. As I understand the chief purpose of these hearings, it is to reestablish, to emphasize, even to dramatize the moral and religious bases of our programs. It is the motivation and the spirit rather than the details which are under consideration today.

As everyone here is quite aware, a great variety of reasons have been given to explain and justify the mutual security program: Our expanding economy demands overseas markets and sources of raw material. We need to win friends and thus bolster our national security. We need strong allies to check further Communist expansion. If we don't help, the Communists will. As a last resort, appeal has been made to our fears. Our flesh has been made to creep with vivid warnings of the horrors all of us may suffer and few of us may survive if we fail to support this program adequately.

No one would reasonably question the validity and even urgency of each of these motives, for they reflect different aspects of our national interest. But it has been the discouraging experience of many of us that where we have suggested that moral motivation might be more urgent, and even more practical, patronizing realists have tried to embarrass us into silence.

They clearly imply or even bluntly state that charity and justice have no real pertinence to the issues, that these virtues represent only the sentimental idealism of international do-gooders. Moral interest, they claim, has nothing to do with national interest, and they'd be happy if we wouldn't complicate the matter.

This attitude is a strange one in a nation founded by men who so clearly spelled out the moral basis of our political society. The Founding Fathers understood that our national interests is a much broader concept and reality than is embraced by military security, political stability, and economic advantage. For, unless our Nation has interests and responsibility rooted in moral principles, just how do we differ from the arbitrary legality of totalitarian states?

Unless our national interest is based upon moral interest, our society and our objectives can claim no superiority over those of the Communist nations. Unless our foreign economic policy recognizes opportunities and obligations which far transcend narrowly conceived selfish and temporary interests, then do we not deserve to be weighed and judged by the world, and by God, in the same balance as Russia?

What's more, even in the terms of narrowly conceived national interest, motives of justice and charity have validity and value. It is my conviction, and I believe the results of these hearings will bear me out, that the mutual-security program will win much more sincere and practical approval from our citizens if it is explained and undertaken in terms of moral and religious conviction. In very concrete political terms, I believe that taxpayers and voters will respond more quickly and more heartily to this kind of appeal than to any other.

Moreover, again in terms of actual achievement of our goals, programs undertaken for and guided by these motives are far more likely to achieve, as byproducts, the stated aims of our foreign policy. It is the universal experience of mankind that gratitude and friendship cannot be bought. Neither individuals nor nations can be bribed into secure alliances. But disinterested service, genuine love, rarely fails to call for a similar response. If we want friends and dependable allies, we will win them only if we can make it plain that we are interested in them for their own sake, and for God's.

On the conviction, therefore, that whether national interests be conceived either narrowly, or broadly, moral and religious considerations are pertinent, I would like to explore these sources.

Start from the fact that while we and those in the world's relatively few other favored countries have been likely in our prayer to pass unthinkingly over the petition, "Give us this day our daily bread," in large parts of the world hundreds of millions have known no prayer more urgent. Hunger, poverty, disease, and death have been their daily bread.

To this situation contrast the fact that we have an enormously productive economy, that as a people we possess a disproportionate share of this world's wealth, that we enjoy a standard of living almost intolerably

superior to that of a great portion of the world's people.

What, then, are our moral obligations?

I'm sure that we would not subscribe to the proposition that God created the resources of this world for the exclusive benefit of those who might have had the power to seize them, or the luck to stumble upon them, or the good fortune to be born into them. I am sure we would agree that it would be supreme egoism for us to assume that God has granted us such material riches for our own use alone. We are not members of some kind of exclusive club, the sole residents of a high-walled garden of paradise, somehow specially chosen of God to enjoy the best of His creation while the great bulk of mankind struggle outside for a meager and precarious subsistence.

One of Christ's parables comes to mind: Dives and Lazarus. We have no reason to expect that the fate of a nation which might scorn the obligations which go with wealth will be any different than that of the man whose very name implies wealth, selfishly and exclusively enjoyed. In today's world no one could mistake what nation is cast in the role of Dives.

It is also a fact, and it should be a disturbing one, that in the only portrayal of the final judgment which we have from Christ's own lips, the decision of the Judge is based on the very simple and direct criterion: Did you feed the hungry, clothe the naked, heal the sick? We have no reason to believe that nations will be judged on any other basis.

A simple sense of decency and justice must convince us that we possess God's bounty not only that we might enjoy it ourselves, but also that we might share it. In God's sight, we are His stewards. He has given us the opportunity and responsibility and privilege to use His blessings so that all might benefit. Justice suggests, demands that wealth be administered to the welfare of all; and, if Christian teaching means anything, this is true of nations as well as of individuals.

But there are higher motives still than fear of judgment or the obligations of justice. The law of love, the law of charity, which has been taught by all great religions, was summed up in the simple but dramatic admonition of Christ, "Thou shalt love thy neighbor as thyself." And we were not left in doubt as to who is our neighbor. The lesson of the parable of the good Samaritan is that every man is our neighbor, even the stranger by the side of the road in a faraway land. The works of charity do not demand a passport. The obligations of charity do not end at our own shores. Our neighbor is any man who needs our help wherever he may be found and reached; and when he is found love dictates that we approach him, as it were, with an apology for having come so late to help him.

Someone who may have heard these last words of mine may agree with their religious idealism but insist, perhaps sadly, that charity is the responsibility of individuals and not of states. Such a belief is common, but it ignores the fact that states come into being to fulfill for us collectively what we cannot do individually. As individuals we are bound to charity toward all. But in a world so vast and complex, in our private capacities we cannot reach all who need and have a claim on our charity. The state, therefore, acts as our agent. When the state helps, it is ourselves helping.

One is also rebuffed by some opponents of foreign aid who with an uncompromising air of finality remark, "Well, these giveaways have to stop. After all, charity begins at home." For them that ends the argument. It is difficult to understand why, for the statement claims no more than that charity begins at home. It doesn't end there. It is not completed and perfected until it reaches out to the farthest ends of the earth, and embraces in its warmth and love all who are in need.

A number of other objections can be heard almost every day and can be read in almost any paper: We have not won friends; the countries we have helped most are still uncommitted; our generosity is not appreciated. Somehow these objections seem almost petulant and they have already been dealt with. Why should we expect friendship and gratitude, when in the past our aid has been explained and justified exclusively on the basis of our terms, our aims, our self-interest?

Others making the outraged charge that our foreign operations are shot through with inefficiency, boondoggling, and graft. There have been, I am sure, cases in which this has been true, and wherever it has been found it must be eradicated and every effort must be made to prevent its recurrence. But no honest critic can make a universal indictment. The people we have sent out and the operations we have conducted have been no better or worse than we find in our own country. On the whole, a remarkable degree of integrity and success has characterized our activities up to now.

Perhaps the loudest and most persistent objection we hear these days is that our economy can't stand the strain, that we need tax cuts more than foreign handouts. Frankly I don't think we have to pay much attention to such nonsense. Our economy has stood, and, if called upon, could again stand the much greater strain and waste of war. We have not even begun to make the kind of sacrifices, personal and national, which we can sustain, and willingly sustain if we are convinced of their necessity. Moreover, the part of the mutual security funds which have been expended on technical assistance and economic development have been very small indeed, and even if eliminated entirely could hardly lead to a perceptible tax cut. And if it were eliminated, or even significantly cut, I think we'd have a harder time living with our consciences and with the consequences of our folly than we have now living with our budget and the necessary taxes.

In the mutual security program, we have the opportunity of providing the world with one thing it desperately needs: a shining example of pure, undefiled, and disinterested service. Our aid is and should be recognized as an important factor in stemming the advances of communism, but this program has an importance independent of the Communist threat. We should do the same things and even more even if communism were to disappear tomorrow. As stewards of God's abundance, we must make available to others what we ourselves enjoy. In doing so, we are not called upon to sacrifice our own prosperity. In the long run such sharing will return a hundredfold.

If we dedicate ourselves to a program for shared abundance, we may never again be called upon to dedicate our lives and our wealth to a program of shared disaster. We believe that here the United States has the opportunity and the privilege to give moral leadership to the world as it has provided political and military leadership.

Mr. VORYS of Ohio. You refer on page 6 of your statement to those who say that charity is the responsibility of individuals and not of states. I have been on this committee for 19 years and for at least a decade I have been challenged to find in our Constitution any place where Congress has any power to be charitable with taxpayers' money. Charity, St. Paul said, is the first of the virtues, but if I feel so charitable that I reach into somebody else's pocket through the Internal Revenue Department and force him to pay, you then bring up a dilemma which you have laid squarely before us.

I am interested in your analysis of it. I want to say that I think a program properly conceived in our own enlightened and far-seeing self-interest for the security and welfare of our own country will give moral leadership to the world and if the program is properly presented and administered, there is no occasion for us to attempt to get into the issue that you bring up. That was a statement but I would be glad to have you comment.

Father VIZZARD. You are carrying us into pretty deep waters when you ask for an analysis of our Constitution and of the powers granted to Congress. However, I will attempt to provide an answer, if I may.

Under the general welfare clause and under the general understanding of the responsibility of the Government to the people, it is to fulfill for the people what they cannot as individuals or as smaller groups, namely, of smaller political entities, accomplish for themselves.

If the people, themselves, are convinced that they have an obligation of charity, both individually and collectively, which goes beyond their reach, the people can quite properly call upon their elected representatives to act in their name—in my judgment. Obviously Congress must be quite certain that there is that kind of general consent, that the motive of charity and justice is strongly imbedded in the convictions of their constituents.

Perhaps I could illustrate it best by a little incident that happened a couple of weeks ago. Representative FULTON and Representative MCCARTHY were with me at a breakfast conference of the Catholic Association for International Peace.

My mother and father were in town from California. Strangely enough, I am afraid there is no party or any group of any party in the United States conservative enough for my mother if not for my father. How this happened I can't explain. It just happened. They were dead set against foreign aid. They were against taxes for this purpose and I have heard my father make complaints about his taxes going down a foreign rathole.

They were at this breakfast where Leon Keyserling gave the main address and Representative Fulton and Representative McCarthy each spoke for 10 or 15 minutes on the need for this kind of program out of self-defense, and out of self-interest but also on the moral responsibilities that we have. After the breakfast my father confessed that he would no longer complain about his taxes being used in that fashion. My mother was anxious to get back home to "straighten out those girl friends of hers."

There was a striking conversion, something of the nature of St. Paul's. I hope it is as permanent and as effective.

I use it only as an illustration of how the convictions of our citizens, your constituents, can be formed if the proper motivation and the facts are brought before them. My idea of the role of Government, the role of our elected representatives is that they can and must act in this fashion if the constituents have clearly expressed their need and desire for and their support for them.

Statement of Dr. C. Joseph Nuesse, Dean, School of Social Science, Catholic University of America, Supporting the Mutual-Security Program, Before the House Foreign Affairs Committee

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF DR. C. JOSEPH NUESSE, DEAN, SCHOOL OF SOCIAL SCIENCE, CATHOLIC UNIVERSITY OF AMERICA, SUPPORTING MUTUAL-SECURITY PROGRAM, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE

My name is C. Joseph Nuesse. I am dean of the School of Social Science of the Catholic University of America and immediate past president of the Catholic Association for International Peace.

My personal interest or experience in the field of international relations may be indicated also by mention of my service as a special representative of the National Catholic Welfare Conference in Germany during 1950–51 and my membership on the United States National Commission for UNESCO from 1950 to 1956 and on the President's Board of Foreign Scholarships since 1954.

I appear before you in response to your invitation, not in an official capacity but as an individual seeking to interpret public statements and resolution of American Catholic organizations on problems related to mutual-security legislation.

The organizations to which I shall refer specifically are the Catholic Association for International Peace, the National Catholic Rural Life Conference, and the National Council of Catholic Women, all of which have followed the development of foreign-aid programs with keen interest.

Permit me at the outset to associate myself with other representatives of religious bodies who have appeared before this committee in welcoming the recognition given in these hearings to the moral foundations of foreign policy.

The statement which I have prepared follows upon one made last week by the Reverend James L. Vizzard, S. J., who commended this committee for "its judgment that in the grave and basic decisions we as a nation must make, moral and spiritual considerations not only are pertinent but, when everything else is said and done, are overriding."

Father Vizzard outlined the fundamental moral principles by which informed Catholics are guided in their thinking on such questions as economic aid to foreign countries.

Perhaps I may begin by reminding the committee that these principles, derived in large part from the natural moral law, belong to an old tradition. They provide a continuing basis for cooperation in public affairs among men of all faiths.

They are to be found in the Old Testament and the Greek philosophers and, as part of Christian teaching, in the fathers of the church, the medieval scholastics, and the social pronouncements of modern popes. I should like to emphasize not only their age and universality but their importance as a frame of reference for the critical evaluation of questions of public policy.

To be specific, the conception of the common good as the purpose of the community is virtually as old as the tradition of which I speak. In our national life it is embodied in the term "general welfare." This is a conception which has had to be applied through the ages to the varying levels of community in which men have lived.

Through it men recognize obligations in their common life which demand subordination of their individual goods to the good of the whole, although their dignity and rights as human persons remain transcendent. There exists an international community with its own common good which, with the fact of the common humanity of men, imposes obligations in justice across national boundaries.

Awareness of these obligations is as yet all too dim on the part of millions everywhere who nevertheless, at least implicitly, admit the general principles on which they are founded and through which eventually they may be brought to awareness.

An application of the law of the common good which has relevance here may be found in traditional Catholic teaching on property. It is well known that this teaching has defended the right of private ownership; it is perhaps not so well known that the church has consistently distinguished the aspect of ownership from the aspect of use.

The former is individual, the latter social, since it concerns the common good. Pope Pius XI, in the celebrated encyclical, Quadragesimo Anno, reiterated as the unanimous opinion of "those theologians who have taught under the guidance of the church" that "the right to own private property has been given to man by nature or rather by the Creator Himself, not only in order that individuals may be able to provide for their own needs and those of their families, but also that by means of it, the goods which the Creator has destined for the human race may truly serve this purpose."

Pope Pius XII, speaking to delegates to a World Petroleum Congress in 1955, applied this principle in a way which is especially relevant here:

"What is true of individuals also goes for collectivities [communities]. The natural riches of a region, a country, or a continent are destined not just for the economic profit of the few, but for the improvement of living conditions—first of all, material, but also and paramountly moral and spiritual—of the groups of human beings who must live by exploitation of the earth's resources. The more and more apparent world character of economics and of the duties that fall upon privileged nations toward less favored ones will have their effect on the division of the goods produced."

This principle of national obligation to an international common good has been applied many times in policy statements of the Catholic Association for International Peace. In several such statements it has been used directly to support foreign aid. One may be selected for quotation:

"Economic and technical-assistance programs should be accepted as one of the most effective long-range means of more justly distributing the world's resources of knowledge and skill to all men, so that all countries and peoples may learn to use better the great natural resources with which the earth has been blessed in the divine providence of God for the needs of all His creatures."

It should be recognized that the basic principle which underlies this particular application in the international order has been applied most fruitfully in our national life.

As exemplified in the constitutional objective "to promote the general welfare," it has provided the ultimate justification for necessary regulatory and welfare legislation in domestic affairs.

I need not recount the applications of this concept in progressive income taxation, minimum-wage laws, protection of collective bargaining, social-security legislation, and numerous other measures. Through them the status of underprivileged groups has been improved for the benefit of all by a limited kind of redistribution of income or power.

What we have lately come to realize more clearly than ever before is that in defining by these measures the duties of ownership we have protected the right of private property itself, extended the possibilities of ownership in a complex industrial society, and so enhanced the dynamism of American capitalism as to transform it beyond recognition by those who have known only its classical image in European society.

Barbara Ward, former editor of the Economist, has stated succinctly the implications of our historical experience for the present discussion of foreign aid:

"The greatest single argument for some form of sustained western aid to Asia, some scheme for capital expansion on a long-term basis, is that it can help to mobilize the Asian mass market, just as between 1880 and 1940 active social measures in Britain and America—insurance, pensions, public works—helped to build up and sustain the consumption of the masses.

"Then and only then can the profit motive of private enterprise work fully to the public good, and then and only then can the mass of the people be converted from the chimerical promises and short cuts of communism to the elbowroom, dynamism, and free choice of modern democratic industrialism."

It seems to me that the challenge which confronts the Congress is to apply in the new world situation of the United States the basic principles which have been applied in the past through enactment of the kind of domestic legislation to which Miss Ward refers.

A dynamic application of this kind has been urged consistently by the National Catholic Rural Life Conference. At its 33d annual convention in 1955, the conference adopted a statement entitled "A Program for Shared Abundance" which reads in part:

"The basic problem is not simply that of sharing the results of our wealth. That certainly must be done. But more important is the unique opportunity of even increasing the abundance and of sharing the causes of our wealth. We have accumulated not only surpluses but also scientific know-how which under favorable economic and political organization has made our plenty possible. We believe that here the United States has an opportunity to give moral leadership to the world as it has provided political and military leadership."

The proposed course of action requires recognition of our obligations to an international common good which are proportionate to the needs of the international community.

The assumption of such obligations can be expected to have an eventual happy issue comparable to that which has occurred in our national development.

Failure to undertake the obligations which are commensurate with our national position and resources will obviously compound the injustices and disadvantages which already contribute to threats to our national security. In international as well as national affairs, self-interest can be enlightened and truly advanced only if it serves the common good.

A Christian proposes this course of action not only on the basis of a concept of duty owed in justice but out of motives of love, understood not simply in the sense of humanitarian benevolence but of brotherly concern for the children of a common Father. Very recently, addressing representatives of a Pax Romana, an international association of intellectuals, Pope Pius XII remarked:

"A Christian cannot remain indifferent to the development of the world. If he sees

roughly outlined under the pressure of events an ever more definite international community, he knows that this union willed by the Creator ought to culminate in the union of minds and hearts in a common faith and a common love."

Alluding to problems of international collaboration, His Holiness continued:

"The Christian will be ready to work for the relief of all material misery, for the universal development of basic instruction—in a word, for all those enterprises directly looking toward the betterment of the poor and disinherited—certain in that way to fulfill an obligation to collective charity, to prepare the accession of a larger number of men to a personal life worthy of that name, to promote in this way their spontaneous entry into the great comfort of efforts which will lead them toward a better state."

In view of the papal leadership expressed in this teaching, it cannot be surprising that Catholic organizations in the United States have given support to measures for assistance to peoples of other nations. Tribute must be paid to the organization by the bishops of the United States, during World War II, of the war-relief services of the National Catholic Welfare Conference.

Now operating as Catholic Relief Services, this organization offers assistance annually to 40 million needy persons all over the world without respect to color or creed. With the aid of United States Government surplus foodstuffs, the dollars contributed by Americans are translated into 40 times their worth in goods.

The generosity of the American people generally toward organizations for international relief indicates some awareness of personal duties of charity.

However indispensable and important, this kind of giving nevertheless does not discharge national obligations in justice.

It is true that some of the people who contribute to the work of voluntary agencies in international relief may complain loudly about governmental foreign giveaways. It would appear, however, that in the long run the prevention of suffering can be achieved only by assistance for technological and educational developments.

The object lesson of the success of the Marshall plan in Europe should be fresh in our memories. We celebrate today the 10th anniversary of its conception in General Marshall's Harvard address. Civic-minded leadership must call attention to its broader significance, as the National Council of Catholic Women has done in recommending "that the United States, along, with, and through international organizations, continue its participation in programs of economic and technical aid aimed at helping underprivileged peoples obtain a more just share of the world's wealth."

This resolution, adopted at its 28th convention in November 1956, has been printed in a handbook for study and discussion as one topic for concentrated action by 9 million Catholic women in more than 10,000 local affiliates of the national organization.

I should like to turn now to several recommendations concerning foreign-aid programs which have appeared in statements of interested Catholic organizations with such frequency and emphasis as to warrant consideration as representative opinion.

The first of these, on which Catholic groups would be unanimous, concerns the need for a positive statement of the moral objectives of such programs. As Barbara Ward has emphasized:

"The lack of any political or ideological framework is the greatest single source of weakness in the aid program undertaken by the West."

On the moral grounds which have been outlined before this committee, policies of the United States ought to rest on conviction and principle, not upon expediency and competitive bidding in the cold war.

This implies, secondly, that programs of military assistance and economic aid should be separate. This would eliminate much confusion now evident in American opinion and it would help to clarify American objectives abroad.

We may apply here a principle enunciated by the National Catholic Rural Life Conference in 1955:

"Nothing should be done to create the impression that technical cooperation is designed to serve any other end than the welfare of the peoples involved."

In the resolutions adopted last November, the National Council of Catholic Women asserted:

"Naturally, this program should be distinct from the military aid program."

These recommendations are linked with a third, that there must be a continuing long-range program. Every resolution on economic aid or technical assistance issued by these interested Catholic groups has assumed such a necessity. A policy statement of the Catholic Association for International Peace in 1951 urged preservation of "the basic original concept of the technical assistance program as a long-term program of self-improvement."

A more recent statement of the association urging a long-range program has already been quoted. Harry Flannery, president of the CAIP, writes in the current issue of Social Order, a monthly publication of a national Jesuit center for social studies:

"The present system of year-to-year authorizations and appropriations is demonstrably wasteful and inefficient for the kind of objectives which the program is expected to attain."

Mr. Flannery presents in this connection a further recommendation. It is proposed that a long-term program should include aid for capital expansion in underdeveloped countries, perhaps through loans for specific projects. A policy statement of the CAIP issued early in 1953 noted the lack of suitable machinery for fund transfers and urged:

"By doing as much as it possible can now, as wisely as it can, through point 4 and other programs, the United States can help many underdeveloped countries improve their own economic conditions so that they themselves will be in a better position eventually to contribute more funds to a scheme of greater magnitude for further, more complex and more expensive development. They would then be in a better position also to absorb and control industrial development for the widespread benefit of their own population."

Finally, every Catholic organization which has devoted attention to the administration of foreign aid programs has emphasized that such administration must not reflect what has been called the attitude of the technician, but must respect the essential values of cultures of recipient peoples. In his last Christmas message, Pope Pius XII stated this principle in compelling form:

"Social life, in fact, is something which has come slowly into being with much labor, and, as it were through successive strata of positive contributions furnished by succeeding generations. Only by supporting the new foundations on those established strata is is possible to construct something still new."

This is a principle which has many ramifications, as social science research has shown. Respect for its is indicative of an appreciation of the inherent dignity and worth of all men. Thus we return, even in a discussion of the means by which aid is to be administered, to the fundamental importance of moral considerations.

Mr. Chairman, our obligations in international social justice are clear and objectively determined. Our obligations in charity, in the Christian concept, make us our brothers' keepers. The Catholic groups whose views I have interpreted believe that the Congress must act to fulfill these obligations.

Thank you.

Chairman CARNAHAN. Thank you, Dr. Nuesse. On page 2 of your statement you say:

"To be specific, the conception of the common good as the purpose of the community is virtually as old as the tradition of which I speak."

Do you feel that the general-welfare clause in the Constitution is a restatement of that principle?

Dr. NUESSE. I feel that it is an application of it, and that placed in the preamble as it is, it incorporates this principle of the common good in the legal documents which state the objectives of our national life.

Chairman CARNAHAN. Then you wouldn't go along with those who say that search the Constitution as they may they can't find any justification in the Constitution for a foreign aid program?

Dr. NUESSE. I would not.

Chairman CARNAHAN. Do you consider the foreign aid program as the often used statement, a "giveaway program"?

Dr. NUESSE. No, I do not, sir. As I have tried to show in my prepared statement, I think this represents an attempt to discharge an obligation in justice which can't be considered a giveaway.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D. C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U. S. Code, title 44, sec. 72a, Supp. 2).

Appendix

Education: A National Responsibility

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. MORSE. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a very able address by our colleague, the Senator from Pennsylvania [Mr. CLARK], delivered before the Mid-Atlantic Regional Conference of the President's Committee on Education Beyond the High School.

I wish to say one only has to read this speech to know full well why this great liberal from the State of Pennsylvania was elected in the 1956 election. I commend the Senator from Pennsylvania for what I think is a most excellent speech, and I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EDUCATION: A NATIONAL RESPONSIBILITY

(Address by Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, the mid-Atlantic regional conference, the President's committee on Education Beyond the High School)

I am glad to be able to meet today with so many thoughtful persons concerned with the State of higher education in America. No problem facing our country is more worthy of your attention.

The problems which confront higher education are a part of the general crisis in education—and I want to discuss today the question of support for education generally, not merely education beyond the high school.

I need not outline the dimensions of the crisis—you have all seen the figures. We can agree that the President spoke truly last January when he described the task facing education as unprecedented in its sheer magnitude. He called rightly for the greatest expansion of educational opportunity in our history. And this committee, in its interim report, stated the inescapable statistic—that twice as many Americans were born in 1956 as in 1936.

For higher education, that means at least twice as many students in 1975 as in 1955—considerably more than that if we succeed in getting into college all the young people who should be there.

All this is numbers. But because the numbers have already engulfed us, the quality of education—which is what counts—has been falling for some time now. In any case, our standards of education are not nearly good enough. We are a sluggish giant educationally.

Let's look around us. We see hundreds of thousands of children getting only a part-time education; hundreds of thousands more are being cheated of effective instruction because classes are too large; hundreds of school buildings are in use that should be torn down as obsolete; thousands of teachers are employed who do not meet minimum qualifications, and in none of these aspects is the situation improving. The teacher shortage is moving upward—it is still acute in the lower grades, has reached the high schools, and is beginning to be felt in the colleges.

In the higher college and administrative levels, salaries will not buy even as much of the world's goods as they bought in 1904. And at no level, as Mr. Ruml has shown, have teachers' salaries kept pace over the past half century with those of coal miners or auto workers or electrical workers. Thus the teaching profession has been losing its drawing power and thousands of our ablest teachers have left, and are leaving. As for education beyond the high school, few communities, engrossed as they have been in building elementary schools and high schools, have truly comprehended the compelling need for new facilities and expanded programs. I am not at all sure that, as a Nation, our plans to handle the flood of children who will be of college age in the next few years are much more adequate than were our plans for the lower grades some years ago, despite what we should have learned from that experience.

That is the sorry picture as we look around us.

I do not believe that all this has come about because the American people have ceased to value education as they once did. Americans know, whenever we stop to think about it, that all of the goals of our society rest on education. Our material progress; the self-realization and happiness of the individual; the success of democratic institutions; the richness of our culture; the good life both individually and collectively; above all, the grasp and mastery of the challenges and the dangers that confront us around the globe, all depend on the development of skills, of knowledge, and of wisdom in our schools.

Yes, Americans still believe in education. We have not become so material minded that we are deliberately neglecting the institutions that mold the mind and spirit of America. We do want to provide our children with greater and greater educational opportunity.

Then, you may ask, why aren't we doing it? The answer, I am afraid, is this: We have allowed ourselves to succumb to a myth, a piece of folklore that has been sedulously propagated, for both altruistic and not-so-altruistic reasons, the myth that education is a State and local problem, that, therefore, the problem should be dealt with locally, and national action through the Federal Government would be improper or immoral.

The breakdown in education is not local in its scope, it is nationwide. It affects every State, almost every school district, and the vast majority of American homes. Its impact is not only on the local community but on the national economy, the national well-being, the national security. If Soviet communism outstrips us in education, particularly scientific and technical education, as they show every sign of doing already—that could determine our national survival. Does anyone contend that whether we survive is exclusively a State and local problem too?

Of course, there is a deep national interest in the breakdown of education. Let's admit it and start from there. That is why the White House Conference on Education was held. That is why this President's Committee was established. That is why, as a nation, we must either solve the problem through national action or satisfy ourselves that it is being, or can be, solved without it.

What we are talking about, of course, is dollars. Billions of dollars must be obtained from somewhere and poured into education—for buildings, for teachers, for better pay, for scholarships and fellowships to induce the fullest development of talent. We may debate just how much money is needed and how it should be used—but these are secondary. The basic issue is how to get the billions. It is a matter not of education, but of finance; not for educators primarily but for politicians and statesmen. And the basic issue, of course, is whether we tap our great and rising national resources on a national basis for the purpose.

It is my considered judgment that we must. The State and local governments simply cannot do what has to be done—certainly not with the speed and decisiveness that the national interest makes imperative.

I have been a local official, and I am intensely aware of the handicaps that communities are up against.

Some localities—not many, but some—lack the will and the leadership. We may decry this, but it is a pragmatic fact. You can say, "That's their funeral." Sure, but it's ours, too.

Where there is all the will in the world, there is still the severe limitation of local tax systems, which rest so heavily on the property tax. Our property tax is relatively inflexible, relatively less productive, and grossly unfair. Property is unevenly distributed; some school districts have a railroad or a powerplant to tax, some nothing but farms or houses. The location of large concentrations of taxable wealth bears no necessary relation to the location of children who need to be taught. Intangible wealth is rarely taxed at all. As the national income rises, the property tax base responds but slowly and unevenly.

State aid is only a partial answer. Wealth is also spread unevenly among the States. Some of the poorer States make the greatest educational effort in terms of the proportion of their per capita income spent on schools—and yet their schools are still below the average. State tax systems are inflexible, too, and in some States are hedged in with constitutional restrictions.

Finally, there is the fact of tax competition. In last Sunday's New York Times is the story of how General Motors and other industrial concerns are threatening to locate outside the State of Michigan if new corporation taxes are imposed to meet the needs of education. The president of General Motors says they have already been giving preference to low-tax States. The companies have also been avoiding metropolitan centers in the State and locating in low-tax suburbs. So the State or the school district that sets out to outstrip its sister States or districts in education does so at its peril. And with threats like these big taxpayers can beat down educational advance.

All this explains why State and local action has not been adequate up to now in dealing with our educational crisis. It explains why it will be even less adequate to cope with what is ahead. And, therefore, as long as we succumb to the myth that it has to be done that way, so long as we consider Federal action improper or dangerous or immoral, so long will we fail the children of America—and national safety itself.

Now, is there any good reason Federal resources shouldn't be employed? I don't think so. But, like other Members of Congress, I've been reading my mail, and I regret to tell you that the opponents of Federal aid to education have succeeded in raising three very live and formidable bogies.

I've been trying to lay these creatures to rest with my constituents, and I'd like to try to lay them to rest here.

The first bogey is Federal control.

There is no question but that this Nation is virtually unanimous in its opposition to Federal control of education. I know of no responsible person who wants the Federal Government involved in matters of curriculum or teacher training or educational policy in any sense. The President has denounced any such idea; so has every Member of Congress who has spoken on the subject; so, I think, has every educator.

There have been Federal-aid programs in other fields which involved Federal control; but that has been by deliberate choice, where uniform standards have been essential to the success of the program. To say that Federal aid must mean Federal control, whether or not we will it, is to deny our very capacity in America for self-government. Of course, we can do what we unanimously want to do. To say otherwise is to have no faith in democracy.

The bills which Senator MORSE and I have introduced, for Federal aid to public schools and for Federal scholarships, have as strong a prohibition against Federal control as anyone has found possible to write. If a stronger prohibition can be drafted, we will accept it.

I am sure that among those lobby groups who are agitating loudest against Federal aid are those who don't put any more stock in this Federal control bugaboo than I do. They aren't really concerned about keeping faith with Thomas Jefferson or about the sanctity of the 10th amendment. They simply believe that if they kill off Federal aid, the money won't be spent at all, for the reasons I've given—or, to the extent it is spent, it will be raised through a different kind of taxing system.

This difference in taxing systems is perhaps the most important point of all to understand. Once it is understood, it frames a new kind of issue—the issue of essential fairness.

The Federal tax system is progressive; State and local systems are not. The Federal Government collects most of its tax reevnue—more than 80 percent—from taxes which are related to ability to pay—mainly personal income taxes and corporation profit taxes. State governments, on the other hand, collect most of their revenue from taxes which pay no attention to ability to pay—more than half from sales and excise taxes. And local governments, including school districts, collect almost all of their revenue from the property tax.

As a consequence, State and local taxes fall twice as heavily on the lower income groups as do Federal taxes, and Federal taxes fall twice as heavily on upper income groups. And the trend is even more in the same direction; State tax systems are getting less, not more, progressive. To finance a bold program in the field of higher education, the Governor of my State is proposing a tax of a penny a bottle on soda pop, which is one of the least progressive taxes conceivable but about all that is permitted under our constitution.

So this issue of Federal aid raises another question: Not just whether the States and local communities alone can and will support public education but whether they should—whether these added billions that we need for education should be raised through sales taxes and property taxes or through income and corporation taxes on the time-honored basis of ability to pay. That's the essential issue: Which tax system do you prefer? I believe the Federal tax system is far superior from the point of view of equity and fairness.

Now we come to the second bogy.

This is the notion that the Federal Government has been usurping State responsibilities, and that the States and cities are lying down on the job and not putting forth the effort they should.

The facts are just the opposite. Since 1946, Federal taxes and other receipts per capita, in constant dollars, have gone up 16 percent. But State and local taxes have gone up 3 times as fast, by 49 percent. While the Federal debt actually declined in the last decade, States and localities have been forced to more than triple their debt, and many have reached the limit of their borrowing capacity. So it can truly be said that far from lying down on the job in this postwar period, the States and localities have strained themselves to a greater degree than has the Federal Government. The Federal taxpayers have indeed succeeded in pushing an increasing proportion of the total taxload onto the people who pay the greater share of property taxes and sales taxes, and when there are efforts now to push it further I doubt that supposed constitutional principles are in every case the most important motivation.

The third bogey in the public mind is that President Eisenhower's budget is so large that it threatens the strength of our economy, threatens our free-enterprise system with destruction.

This, of course, is economic nonsense, and vicious nonsense at that. From the economic standpoint, taxes are nothing more than the means for diverting expenditures from the private to the public sector of the economy. Taxes are the means—and the only means we have—for buying public schools and public roads, and all the rest.

I think it can be demonstrated that it is the public sector of the economy, not the private, that has been neglected. How many of you have seen sleek new $3,000 motorcars idling away at congested intersections because we have not built the roads they need? How many of you have seen fine new subdivisions of $30,000 houses, with a bedroom for every child, but the same child with barely room to sit down in school? Huge private investments in our fine old cities are threatened because of lack of public action to clean up congestion, blight, and slums. Our rivers are turned into life-killing sewers for lack of public control and public expenditure. And so it goes.

Yet I have just come from Capitol Hill, and I can tell you that oldtime Members of Congress say the pressure for cutting taxes has never been so great as now.

They tell us that Federal aid to education at any level is apt to be a casualty of this tax-cutting fever. In other words, we are in the midst of witnessing an epic of national shortsightedness.

There is a short-term and a long-term reason for this disaster. The short-term reason is this: When the Secretary of the Treasury attacked the President's budget at the time it was sent to Congress, the President didn't defend it. In fact, he virtually disowned it. For a long time, nobody at all defended the President's budget—it was abandoned on Congress doorstep like an unwanted foundling. I had the temerity to speak a kind word about it during a visit to Pennsylvania, and not even the Republicans defended me. All I got for my pains was twice as much antitax mail. By the time the President came to the defense of his budget, it was too late; the pressure against it was unstoppable.

The long-term factor in the present situation is the incessant propaganda campaign that has been waged nationwide against taxes. It carries a simple three-word theme, "Taxes are bad." You see it in the cartoons of the taxpayer clad in a barrel or with his pockets inside out. You see it in more subtle ways: I picked up a serious study of taxation the other day and found the word "burden" seven times on the first page. Try an association test on your friends. Ask them to repeat the first word that enters their heads when you mention "taxes." Most of them will automatically say "high" or "cut." It will be one man in a thousand who will say "services" or "benefits." People have been conditioned, like Pavlov's dog, to hate taxes.

Now, I am not being partisan when I say that, unfortunately, for 20 years one of our great political parties lent its weight to this propaganda—by campaigning unendingly on the theme that Federal taxes were too high and the taxpayer was being scalped unnecessarily. Millions of people came to believe it. They were convinced that when the Republicans came in, things would be different. Now they feel they have been betrayed. They are frustrated and they are angry. There may be a question as to whether it's fair for them to blame their Senators and Congressmen, but there is no question as to their mood. They sure feel like taking it out on somebody.

This is the national frame of mind that all of us who believe in public education must work to counteract. The time is short and the prospects may be slim, but we need to launch right now a concerted campaign to save Federal aid to education from being ground to death under the wheels of the economy drive that is underway.

Where the national interest lies, it seems to me, is clear. We need to tap our national resources on a national basis to raise the standards of education in America to where they ought to be—in the elementary schools, in the high schools, and beyond the high schools. It cannot be done without Federal action. It can be done without Federal control. We should not limit our vision nor apologize in our approach. We should proceed with a clear conscience to give a broad, general lift to education at all levels—not as an emergency matter but permanently.

At a time when we have the highest national output, the highest national income, the greatest corporate profits, the highest wage levels of any nation in the history of the world—when we are spending more on highways, more on cars, more on European travel and Caribbean cruises, more on alcohol and tobacco, more on pleasure seeking of every kind, it is ludicrous to say that we do not have the resources to do what needs to be done in the field of education.

This is a moral issue. Complacency and materialism are our enemies.

Let us measure the national need—and then let us fulfill it.

Commencement Address by John S. Knight at Culver Military Academy

EXTENSION OF REMARKS

OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, June 21, 1957

Mr. JOHNSON of Texas. Mr. President, the distinguished publisher, John S. Knight, recently delivered a commencement address at Culver Military Academy. Mr. Knight analyzed the world which our young people must face with realism, but with hope. He delivered an inspirational message well worth study. I ask unanimous consent that ex-

cerpts from the address by Mr. Knight be printed in the Appendix of the RECORD.

There being no objection, the excerpts were ordered to be printed in the RECORD, as follows:

SOME ADVICE TO GRADUATES: DON'T SHIRK RESPONSIBILITY

(Excerpts from the commencement address at Culver Military Academy, given by John S. Knight, editor and publisher of the Chicago Daily News and other Knight newspapers)

It is trite to say that we are living in a confused world.

But confused it is. The old order has changed.

Great empires have disintegrated. Nineteen new countries have won their independence since the end of World War II. The rising tide of nationalism is everywhere in evidence.

Two nations, the United States and Soviet Russia, through their superiority in nuclear weapons, hold the fate of the world in their hands.

The changes are sweeping, revolutionary in character.

Is it then any great wonder that we find the youth of today, with the draft and the uncertainty of beginning a career, disturbed and unsettled?

While, on the one hand, young people are growing up, socially, mentally, emotionally, faster than ever before, on the other hand, it takes much longer before they can begin to assume their place in the world.

Alexander Hamilton was a member of Washington's staff at 20 and a member of the Continental Congress at 25. Today, at 25, many young men have scarcely begun to find themselves, after years of military service and the added educational requirements for a suitable career.

EVERY GENERATION MAKES ITS MISTAKES

Still, this is the world in which you live, and not necessarily the kind of world in which you would prefer to live.

Every generation has had its challenge. Some have met it more successfully than others, some may be said to have failed.

It is customary at commencement time for speakers to dwell excessively upon the shortcomings of their own generation, a kind of self-flagellation in which I do not intend to engage.

True, we have made our quota of mistakes, just as other generations have committed them before us. It will be no different in this, or in succeeding generations.

However, all generations have ever attempted to find a better way of life. Significant progress has been made through the years in improving standards of living, by reason of vastly expanded research and modern technologies.

Our progress in the quest for peace has been much less successful. The world is still torn by dissension. Little men with large ambitions are too often found in positions of power. The art of diplomacy is poorly practiced.

Mutual trust and understanding have given way to threats and acts of violence. We have flouted our Savior's injunction to love one another.

These are the liabilities which your generation must inherit.

But since you have no option, but to view the world realistically, the time to start is now.

PROFIT-LOSS SYSTEM RETAINS ITS VITALITY

Fortunately, in looking ahead to your own career, there are many valuable assets on your personal balance sheet.

You are well prepared, by virtue of Culver's academic program to gain entrance to a good college or university.

You have been schooled in wholesome surroundings; you have experienced competition; you understand both the rewards and the responsibilities of leadership.

Another asset which you possess is that you are young men living in a country where opportunity still flourishes.

Yes, I know all about high taxes, Government regulations, the problems of businessmen and political chicanery. The doomsayers would have us believe that the trend toward a form of European socialism is sapping the capitalistic system and drying up free competitive enterprise.

I have probably viewed this trend with as much alarm as anyone in this audience. I do not like the growing dependence of the people upon the state, nor the tendency of our citizens to think in terms of their own security rather than of the opportunities they might embrace.

Still, it is only fair to concede that despite the "yakking" of our politicians and the clamor of the so-called liberals for more and more social welfare, our profit-and-loss system continues to show amazing vitality.

Yes, opportunity still knocks for those who are willing to open the door.

And, unlike the old saw, it frequently knocks more than once.

INDUSTRY'S NEED: MANAGERIAL ABILITY

General Spivey has asked me to discuss some of the qualifications which the talent scouts of business and industrial firms require of prospective graduate employees.

Primarily, they are seeking young men with trained minds who can later fill positions on the managerial level.

A trained mind must likewise be an analytical mind with the ability to look at a problem objectively, consider all of the factors involved, weigh the various possible solutions and come to a decision.

The reluctance or inability of so many individuals to make a decision is the curse of the business world.

In the newspaper profession we say of such individuals: "They never go to press."

Then, too, business and industry want young men of good judgment, or at least young men who, they believe, will develop good judgment.

Judgment usually comes with experience but a clear thinker with good powers of analysis can hardly fail to exercise good judgment.

I must not omit the importance of a pleasing personality, plus enthusiasm.

But, if I may use a Culver term, "the greatest number of quality points will eventually go to the young men who prove themselves best able to accept and discharge responsibility."

These are the rare individuals who move mountains, who see in every obstacle a personal challenge.

They are the men, in every field and profession, who stand out prominently as acknowledged leaders.

OVERSPECIALIZATION MAKES POOR CITIZENS

The emphasis these days is upon science and engineering.

Nevertheless, I should like to say a few words in behalf of a liberal arts education.

The demand for specialization should not overshadow the need for an appreciation of the arts and sciences, the languages, an acquaintance with the great philosophers, and a knowledge of the lessons of history.

Too often—much too often, in fact—we find the men trained solely in sciences and engineering have a wholly inadequate understanding of the science of government.

The leaders of the world, the men who shape our destiny, for good or for evil, emerge from a background of public service.

This may be fortunate, or unfortunate, according to one's own view, but it is nevertheless true.

Therefore, it is important to understand their motivations, to know their backgrounds, to appraise them objectively.

Since you can't measure a politician with a slide rule, and produce an exact calculation, the broader education at least enables you to get an approximate evaluation of a politician's character.

READ, READ, AND READ FOR TRUE UNDERSTANDING

Too many vital decisions, affecting all of us, are being made in the world today by men who seek personal power, or who lack the perception, balance, and judgment to adequately serve the people.

Then we have the aspiring candidates and officeholders who think of themselves and their achievement rather than of their nation's best interests.

We see businessmen so absorbed by material success that they have no time for culture or the broad knowledge that brings tolerance for the views of others.

An adequate exposure to the humanities can produce the well-stocked, orderly mind, a mind which is able to separate the true values from the false and through its perceptive qualities, make an enduring contribution to society.

Education is the process by which we are prepared for complete living.

Your exposure to education will be as rewarding as you make it.

While, as a part of your inheritance, you enjoy all of the marvels of science and technology unknown to the wisest men and women of 50 years ago, I respectfully suggest that education cannot be pumped into a lazy mentality through a coaxial cable.

I beg of you to read, read, and read—so that your thinking may be stimulated with respect to the intricate and trying social, economic, and political problems which constantly confront this Nation and the world.

THE THINGS THAT MAKE LIFE ZESTFUL AND RICH

You may have observed that I have not attempted either to praise excessively the good work you have done at Culver, nor to deliver a lecture on the shortcomings of the younger generation.

You, far better than I, know of your failures and successes.

I think you know what you are making—or failing to make of your educational opportunities, better than I do.

And I think you know the future has limitless possibilities, both for good and for bad—and that starry-eyed optimism is as silly and onesided as blank-eyed despair.

In conclusion, may I assure you that with character, intelligence, and a bit of humor, life can be interesting, purposeful, and rewarding.

As you face the future, gaze not upon the stars, but usefully and realistically look deeply into your hearts to find the answers that are not all contained in the textbooks, nor in the addresses delivered at commencement time.

Proposed Pepco Dam at Dickerson, Md., on the Potomac River

EXTENSION OF REMARKS

OF

HON. J. GLENN BEALL

OF MARYLAND

IN THE SENATE OF THE UNITED STATES

Friday, June 21, 1957

Mr. BEALL. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD an address delivered by Morris Kanfer, Esq., a Washington attorney, before the Rotary Club at Leesburg, Va., on June 13, 1957. This speech, Mr. President, is most timely, outlining, as it does, the

recreational potential to be gleaned from the construction of the Pepco dam proposed to be built at Dickerson, on the Potomac River.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY MORRIS KANFER, WASHINGTON ATTORNEY, TO ROTARY CLUB, LEESBURG, VA., JUNE 13, 1957

Mr. President and gentlemen, I am very grateful for the opportunity of meeting the leaders of this community. I want to thank your chairman for the introduction citing my recent accomplishments in the Washington area but of primary significance is the fact that my boyhood days were spent on a farm in upstate New York in a community, in many respects, similar to this area, which is also rich in history and tradition.

Farming, therefore, is not a new venture with me except that now the work is accomplished with machinery which seems to consume an enormous amount of gasoline, whereas, in my boyhood days, a team of horses were satisfied with a pail of water and a few quarters of oats now and then.

Therefore, when farming gets into one's blood, it is understandable that after a career in law, business, and civic activities, such as I have enjoyed in the Washington area, I would revert eventually to a farm and I am very happy that fortuitous circumstances led me to select one of the most beautiful farms in your area—on the banks of the Potomac River. I hope before long that our place will be completed and made suitable for entertaining some of our neighbors and friends.

I had occasion recently to talk with my neighbors in the Luckett area about the history of the Lost Corners and to learn that during the early part of the century, Noland's Ferry provided a means of transporting of Virginia-grown grain across the Potomac to Tuscarare Station, Md., where John Lamare & Son maintained a warehouse and grain business which, in some respects, were similar to the business activities of seed and fertilizer businesses of the present time.

My neighbor historian worked in the area during his boyhood days and I therefore consider the information to be reliable, although it may vary in unimportant respects from recorded history. He tells me that a Mr. Clark engaged in the business of cutting railroad and switch ties from the white oaks of the big woods, part of which is now known as "Road 662," leading from Luckett to the river. The ties were ferried across the river at Noland's Ferry. The ferry, built by Clark, was large enough to hold two teams of horses and wagons loaded with the railroad ties, but during the summertime when the water was low, the ferry was discarded and the teams forded across the river and then crossed the canal in Maryland over a wooden bridge. The first high water in the area washed out the bridge and when John Lamare died his business decreased and that was the beginning of the end of Noland's Ferry.

The road leading toward Noland's Ferry is presently a county road running northerly from Route 662 but terminates approximately one-half mile from the river where the State has placed a sign "State Road Ends." I assume, gentlemen, that Loudoun County still owns the right-of-way from the end of the State road to the river and in the interest of preserving the historic sites of the area and make them accessible, it would be a grand accomplishment if Loudoun County could be persuaded to reopen the road so that the residents of northern Virginia would find the river accessible for fishing and boating.

Recreation has become an important part of community planning and I am informed that Loudoun County does not have any public recreational areas for picnicking, where people may relax at the end of a hard day's work. It would be a tremendous asset to Loudoun County if we were to provide a sizeable recreational area at the point of Noland's Ferry, particularly in the event Pepco builds the dam which is contemplated, as a reservoir to cool the generators of its electric plant, scheduled for construction at Dickerson.

This might be an appropriate time to clarify a great deal of confusion that I found existed in the area with respect to Pepco's responsibility for locating the plant at Dickerson.

It is understandable that the taxpayers of Loudoun County hoped that Pepco would locate its plant in Loudoun County so as to increase the county's tax base, but in politics and love we must accept decisions that are made for us over which we have no control.

Pepco has decided to locate its generating plant at Dickerson, Md., and the contract for the construction of the plant has already been let. All that remains for us to determine is whether Loudoun County can derive some indirect benefits from the installation on the Maryland side. Pepco wants to construct a dam crossing the Potomac from its Dickerson location to the Virginia side which would create a lake from 4 to 5 miles long, backing the water up close to Point of Rocks. While there was still a possibility that Pepco could be forced to build its plant in Loudoun County, it was logical for our Representative in Congress to withhold his approval for the construction of the dam at the Dickerson location. It would be illogical, however, for us to continue to oppose the construction of the dam, thus depriving the people of northern Virginia, and Loudoun County in particular, the financial and recreational advantages which would flow from having a large body of water in the county where fishing and boating could be enjoyed at all seasons of the year. Loudoun County has an asset in its climate which may not be as apparent to the people of Loudoun County as it is to urban dwellers. When the temperature is 92 in Washington, people wilt, vitality is sapped, work decreases and pleasures cease. When the temperature along the banks of the Potomac was 92 several weeks ago, it produced no discomfort to my family. We have been enjoying the mountain breezes flowing down from Sugar Loaf as they meet the sea breezes coming up the Chesapeake and the Potomac. It seems as if the northwest, south, and east currents all converge at Lucketts, Va., which, in my humble opinion, would make an ideal summer resort for urban dwellers within a radius of several hundred miles.

Now, of course, I realize that many of us like privacy to such a degree that we would be reluctant to share our miles of mountain vista with city dwellers, but in this modern age it becomes essential, even for the promotion of our selfish financial interests, to invite tourists and summer residents from our neighboring States and areas.

While we do not expect to develop Leesburg as a tourist attraction comparable to Williamsburg, it nevertheless contains historic points of interest, plus a health-giving climate which could develop the area into a high-grade resort, but you cannot have a resort without an accessible body of water for fishing, boating, and swimming, nor can you hope to develop the area as a resort without the cooperation of the leaders of the community.

The Adams farm of about 500 acres at Lucketts, which has recently been sold, could be developed as a resort if the Pepco Dam is built, since the property has a frontage of about a mile on the river and is easily accessible on Route 662. The financial benefits which would flow to the business community of Leesburg in the event 100 summer homes were built on the 500 acres, are self-evident. Each dollar spent for construction of a home creates $7 or $8 additional purchasing power, since the velocity of money flows through business channels at a rapid rate. Such construction creates not only jobs for carpenters, plumbers, painters and masons, but will also stimulate sales of building material, furniture, furnishings, insurance business, groceries, and sundry supplies from soup to nuts, including, of course, banking.

We must not neglect the most essential segment which turns the wheels of industry. Isn't it a wonderful system when all you have to do is sign a piece of paper at a bank and feel rich enough to spend money to fill your needs and desires by signing other pieces of paper called checks? I am sure that our banker friends will be quick to realize the importance of bringing into the community desirable business which will help swell savings accounts and demand deposits upon which the banking business depends for its own earnings. You are fortunate, indeed, in having two progressive banking institutions in this community. I was particularly flattered when shortly after I purchased the Averill farm last summer, I received a telephone call one evening at my home, from the president of one of your banks, to extend a welcome and an invitation to open an account. That friendly gesture was indicative of a prevailing spirit I found in the Leesburg area and I want to acknowledge my gratitude to all of you who have made me feel so much at home during the short period we have been here. I, too, have had a small role in the banking career, having served as general counsel and a director of a comparatively small country bank in upstate New York. By way of contrast with the progressive spirit of your Leesburg bankers, I am reminded of a story concerning an upstate country banker who, upon retirement, found that he still lacked an adequate income to meet the high cost of living in this inflationary period. So, after careful deliberation, he decided to operate a gasoline service station to supplement his small retirement pay. He soon found that it was difficult to change the habits of a lifetime. On the very first day he opened for business, a man pulled up with his car and said to the banker in his new role, "Let me have 10." The banker timidly looked at the driver of the car and said, "Can't you get along with five?" I cite that story, I repeat, by way of contrast, since the Leesburg bankers would undoubtedly go to the other extreme. I am sure that when any of you gentlemen call at either one of these banks and ask for a loan of 5, the banker will turn to you and say, "Can't you use 10?"

That's the spirit I like in Leesburg. Lets double the rate of our effort in sharing the beautiful county and God's free air with desirable visitors from other areas who would leave some of their purchasing power with us and we hope some will discover Leesburg as my wife and I have discovered it about a year ago, and like it well enough to make this a permanent abode.

In conclusion, may I suggest for your consideration, the desirability of a committee of your organization to call on Congressman SMITH to express Loudoun County's appreciation for his effort in widening the county tax base by having tried to get Pepco's plant on the Virginia side of the river, but at the same time to impress upon Congressman SMITH the importance of allowing the Pepco dam to be constructed, which would give Loudoun County access to the much desired 5-mile lake. As you know, a bill is pending in Congress to permit the construction of the dam but that Congressman SMITH, until recently, has been able to delay passage of the bill. Obviously, Pepco cannot wait indefinitely for permission to build the dam,

which is required only as a reservoir of water with which to cool its generators. If congressional approval is withheld much longer, Pepco will be compelled to resort to an alternative method of cooling the generators by means of cooling towers. After commitments are made for the erection of such cooling towers, it may be too late to change plans and then build the much desired dam.

This proposed Pepco dam is to be only 15 feet high and will not flood any appreciable amount of farmland since the banks of the river at that point are very high. An opportunity does exist, however, for the residents of this area to join with the residents on the other side of the river, in opposing construction of a high-level dam at River Bend which the Army engineers are considering and which will be the subject of public hearings on June 25, 26, and 27. I believe that if congressional clearance could be obtained for construction of the low-level Pepco dam at Dickerson, before the scheduled public hearings on the high-level dam proposed at River Bend, it would serve as another forceful argument in opposition to the River Bend dam.

I believe that the leaders of this community, now in possession of the real facts concerning the proposed Pepco dam, will determine that to permit the construction of the Pepco dam will best serve their own interests and the interests of the people of Loudoun County and seek Congressman SMITH'S cooperation accordingly.

I want to thank you gentlemen for a very delightful evening and for the opportunity you have afforded me to talk with you.

Texas Takes Lead in Building New Highways

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. JOHNSON of Texas. Mr. President, Texas has taken a commanding lead in building the new system of highways authorized by the 84th Congress.

The Fort Worth Star-Telegram, a great newspaper in Texas and in the Nation, recently published an editorial explanation of what is happening in my State with respect to the building of highways. I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

TEXAS TAKES THE LEAD

Texas, largest State in the Union, has taken its rightful place of leadership in building the new National System of Interstate and Defense Highways. This is not merely because there is a lot of distance in Texas and Texans like to travel swiftly and in comfort.

Texas' response to President Eisenhower's plea for a superhighway system is a tribute to the farsightedness of State leaders and proof of the State's economic ability to provide needed facilities and services for its citizens. Texas' lead in new highway construction is enormous. Work already is underway or soon will be started on 267 miles of superhighways, and bids are now being asked for construction of 278 additional miles. North Carolina is a distant second with 239 miles either under construction or advertised for bids.

Even if the defense value is not considered, Texas' highways will play a tremendous part in the future growth of the State, already thriving with new industries and a rising population. State officials are to be commended for recognizing the need and acting swiftly to meet it when the opportunity arose.

More than a little credit also should go to a highway-conscious citizenry. If it had not been for the understanding and full support of the people of Texas, official action on this vital project might have been encumbered and harmfully delayed.

Radio in a Television Age

EXTENSION OF REMARKS
OF
HON. WAYNE MORSE
OF OREGON
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. MORSE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a speech delivered by Mr. M. S. Novik, radio consultant, after the 27th Institute for Education by Radio-Television, at Columbus, Ohio, on May 9, 1957.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

REMARKS OF M. S. NOVICK, RADIO CONSULTANT, AT THE 27TH INSTITUTE FOR EDUCATION BY RADIO-TELEVISION, COLUMBUS, OHIO, MAY 9, 1957, IN A PANEL DISCUSSION OF RADIO IN A TELEVISION AGE

We are gathered here this year to praise radio—not to bury it. This is quite a difference from the last 10 years, when many in the industry thought we were at a wake. We know that television didn't kill radio—just as radio didn't kill magazines and newspapers.

We know now that newspapers are livelier than ever; magazines are stronger than ever; and radio is having its biggest year in a decade.

Ours is a growing country. Every new medium of mass communication means that more people are being reached. And because we are a growing country, there are always more people to be reached.

It is true that radio today is alive and kicking. It is true that there are more radio stations on the air today than ever before. But it is also true that every radio station is in danger of remaining only so good as its competition. And the level is set by the worst of its competitors.

Radio today with some notable exceptions, is a business of broadcasting recorded music and news. The live programs, the talk, forum, discussion, comment and controversy programs that made radio the dominant medium of communication in the country—all of these programs are just about gone today.

Radio today is making more money, and has more listeners and more commercials; and it also has less public service programming, less community action programs, and less standing in the community.

It seems to me the time has come to take a sharp look at radio as it is today.

Years ago, the networks were the major factor in our business. And the biggest and best stations—in terms of audience and community service—were the network affiliates. There were some exceptions, sure. But by and large, the top stations were the network stations. And the networks, along with the entertainment shows, fed their affiliates news and comment and discussions and forum programs, fed them as commercial, fed them as sustainers.

When the road for radio got rough, the networks lost advertisers. To save money, they cut back programs. The affiliates lost their prestige network shows—the programs that gave them the edge over the independents—so the affiliates began to lose audience to the independents.

The affiliates had to compete with the independent stations for local audience and advertisers. So they used fewer of the few network programs.

Even the network owned and operated stations started copying the local station program patterns. It was a case of the bigger station fighting the smaller station, and in the fight, the stations and the networks became cannibals.

They ate up their public service programs, they forgot all about their forum shows, they ignored the public interest, necessity and convenience. The record, the music on a plate, once the backbone of the smaller, nonnetwork stations, because the backbone of all stations—network and independent.

Admittedly, radio was going through a critical stage. Things were tough and would get tougher. The need was for smarter, shrewder operations, some fresh ideas, and new program directors.

At a similar stage in their existence, both newspapers and magazines had the same problem to face. They sharpened their editorial treatment, spruced up their appearance, developed news features, became more active in their communities. And today, they are more vital than ever before.

But radio went the other way. Many of the pioneers sold out. Many news stations came into being. And a new breed of operator came into radio. They were businessmen; they had no training or background in radio; they were trained for just one thing: To make money.

They didn't know, they don't know, and no one is telling them about their responsibility to the community. They kept their staffs small, their overhead down, they became music and news stations, and they made money.

Radio, without the features that once made it a vital force, without the fresh and exclusive news, without the fresh exchange of ideas and opinions, radio could compete only by trying to operate cheaper than its competitor.

And so long as the competition—the new operators, that Commissioner Bartley called the fast-buck operators—so long as they could ignore the public interest, necessity, and convenience in their programing, and get away with it, just so long did the veteran broadcaster have to cheapen his operations to stay in business.

So radio today is, by and large, a case of canned music and canned news. And as their sharpshooting broadcasters expand their operations so do more and more stations have to lower their program standard.

I'll give you one example: The only station serving a one-county market. It is 90-percent commercial. The music it plays comes from records it gets free. Once a week it has a sustaining hour of popular operatic music. The SP records come from a listener. Public service is strictly transcribed spots. And once a week a transcribed quarter-hour that is distributed gratis by a foreign country. There is nothing controversial on the station; no talks, no discussions, no forums; and nothing local except the commercials and any news that shows up on the ticker.

This is no exaggeration. It is typical of many others. They are in little towns and

big cities. You know them—everyone in the industry knows them.

To the fast-buck operator, this sort of programing is not illegal. His lawyer tells him what to do and he does no more. He lives up to the minimum statistical requirements of the FCC. His is strictly a chain-store business; the most important document, like a grocery or shoe store, is the daily and weekly profit and loss report.

And this sort of operation is unfair competition to the station that tries to meet its public-service obligations—and to the stations that are holding the line even to a minimum degree.

There are independents and independents. There are independents that build local programs, that have dimensions and stature. The kind of music a station serves is not the criteria. Playing the classics and master works only is as wrong as the station that plays only the top popular tunes. I urge that the rules of the road be made clear.

The question is—how do these money-hungry operators get away with ignoring their community obligations? The answer, it seems to me, is that the FCC has stopped enforcing the public interest, necessity, and convenience portions of the Federal Communications Act.

Sure, the quick-dollar stations submit their annual program analysis to the FCC. And, sure, these analyses contain a presentable percentage of public service spots and programs. Because of its workload, the FCC is unable to properly check and review these program reports.

The only way a station gets into trouble is when it does something that hits the wire services, or gets talked about on the floor of Congress, or if a lot of letters are sent to the FCC, or if an advertiser violates the better business code; eventually, the FCC will start investigating.

But what about the original premise under which stations were licensed to operate in the public interest, necessity, and convenience?

The current downgrading of radio station programing can be reversed by the Commission. If the Commission recognizes the seriousness of the problem, it should take a few simple steps:

1. The FCC, because of the many newcomers in this business, should reaffirm its interest in local public service programing.

2. The FCC should license for 1 year only all new grants and all transfers, so that program performance can be measured against promise before a renewal is granted.

3. The FCC should not extend its current 3-year licenses to a 5-year term without providing an effective annual method of reviewing station program performance against promises.

Today the major networks are once again putting initiative and ingenuity into their radio programing, but they cannot force the affiliates to carry these programs. The affiliates, busy fighting the local stations for mass audience and ratings, cannot afford to, and do not carry these network public-service programs.

Sure, all stations carry public-service spot announcements. But let's face it. The technique of the spot announcement is nothing more than the technique of the slogan.

Slogans can sell a familiar product, but slogans can never resolve a complex problem.

The community need for schools or sewers, for throughways or hospitals, for municipal parking or honest local government will never be faced, examined, evaluated, and acted upon as the result of slogans or spot announcements.

The current emphasis on spot announcements is the easy way out. When that happens, the entire democratic fabric that is our way of life suffers. We suffer as broadcasters and as citizens.

In a town with a newspaper and a radio station, where the station ignores its community obligations, the paper will step in and take the play away from the station.

In the same town, if both the station and the paper ignore community service, then that town becomes a poor place in which to live.

There is no substitute for argument, debate, discussion, and controversy when it comes to facing a community issue. This is an American heritage that goes back to the earliest days of our democracy.

Unless radio faces these responsibilities, it will lose its identity as a dynamic force in the community. And when that happens, radio will be nothing more than a series of chainstores, identical in operation and differing only in the name out front and in the size of the building.

This is directly contrary to what the people of these United States want and likewise contrary to what Congress legislated in the Federal Communications Act.

We as a country cannot afford the dubious luxury of emasculated radio stations.

The time has come for all good men and women to raise their voices and ask the FCC to take a positive stand on the public interest, necessity, and convenience clauses of the Federal Communications Act and return radio to the heights of public service and community action.

Problems of the Tuna Fishing Industry

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. MAGNUSON. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD two letters which I have received from Mr. William E. Farrar, general manager of the Federated Fishermen's Association, Inc., and Mr. Joseph J. Madruga, president of the American Tunaboat Association, of the Pacific coast.

Mr. Farrar again brings to my attention a serious problem involving the domestic albacore tuna fisheries operations of the Pacific coast. Mr. Madruga tells of a growing crisis in the tuna industry, resulting from our lack of controls permitting the legalized dumping of 14,000 tons of frozen albacore tuna on our markets at $100 per ton below cost.

If we continue our present course in handling foreign fisheries trade negotiations, we are going to destroy a large segment of our domestic fish-producing industry.

In the case of albacore tuna, a fish that is an interocean traveler, the advantages we give to other nationals having government subsidies, monopolistic enterprises, and low cost labor may have the effect of depriving our fishermen from catching the same fish, and selling them on our own market.

I believe that administrative action is long overdue in formulating a policy of trade with other nations, that will insure some reasonable consideration for this phase of our industry.

The least the Government can do is to clearly inform our domestic fish producers, just where they stand in the overall economics of the industry.

We should not continue to allow, year after year, our fishing craft to remain idle in port, while unrestricted amounts of foreign fish absorb the domestic market.

Mr. Farrar and Mr. Madruga's letters clearly point out one of the serious problems facing the American tuna industry.

There being no objection, the letters were ordered to be printed in the RECORD, as follows:

FEDERATED FISHERMEN'S ASSOCIATIONS, INC.,
Long Beach, Calif., May 16, 1957.

Senator WARREN G. MAGNUSON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MAGNUSON: Referring to Senate bill 1796 introduced by the Honorable Senator ARTHUR V. WATKINS.

The Federated Fishermen's Associations, Inc., 745 Seaside Avenue, Terminal Island, Calif., has gone on record strongly favoring the passage of this bill.

For your information, the Federated Fishermen's Associations is an organization composed of all of the cooperative fishing organizations who fish for albacore white-meat tuna in Pacific-coast waters off the coast of Washington, Oregon, California, and northern Mexico.

The albacore fleet is now composed of not over 1,500 small vessels manned by from 1 to 5 men who range out to sea as far as 350 miles during the months of June through December in quest of the finest of the tuna family, albacore. A few years back, as many as 2,500 boats were engaged in this fishing; however, the terrific increases in Japanese imports of albacore tuna has forced many boats out of business. The following charts will give you a clear picture of the situation.

Source of information: United States Fish and Wildlife Service; Market News Service, California Fisheries, 1955; Market News Service, Seattle and Astoria, 1956.

TABLE 4.—*California imports of frozen tuna, 1950–55*

Year:	*Albacore, tons*
1950	1,960
1951	7,394
1952	9,620
1953	20,892
1954	19,069
1955	24,154

IMPORTS OF ALBACORE TUNA CANNED IN JAPAN

In 1954, 459,143 cases albacore which equals 9,183 tons.

In 1955, 669,047 cases albacore which equals 13,381 tons.

In 1956, 705,000 cases albacore which equals 14,100 tons.

In addition 10,914 tons of frozen albacore were landed in Oregon and Washington ports from Japan in 1955 making a grand total of:

	Tons
California imports	24,154
Washington and Oregon imports	10,914
Canned in Japan and imported	13,381
Total	48,449

The total catch of albacore tuna landed by American fishermen in 1955 was:

	Tons
California	11,009
Oregon and Washington	522
Total	11,531

COMPARISON
1950

American-caught albacore, 30,800 tons.
Albacore imported from Japan, 1,960 tons.

1955

American-caught albacore, 11,531 tons.

Albacore imported from Japan, 48,449 tons.

You will note that in 1950 the American catch was over 15 times as great as the Japanese imports, however, in 1955, Japanese imports were over 4 times as great as the American production.

This phenomenal rise in Japanese imports in the last few years has all but killed the American albacore tuna fishing industry and if not corrected will surely do so.

In 1947, 1948, and 1949 prices paid the fishermen for albacore ranged from $500 to $740 per ton. From 1950 to 1954 the price ranged from $400 to $410 per ton.

In 1955 it dropped at one point to $310 per ton and at the close of the 1956 season the price paid American fishermen was $300 per ton.

It is absolutely impossible to fish for albacore tuna at those prices and stay in business.

To make a further comparison, the American tuna clipper fleet composed of approximately 150 large boats and manned by about 2,000 fishermen and the American purse-seiner fleet composed of approximately 125 large boats and manned by about 1,400 fishermen who produce the ordinary light meat tuna, yellowfin, bluefin, and skipjack, in 1955 landed 158,565 tons of the above types of tuna in American ports.

The imports of these same types of tuna was 29,377 tons. You will note that the ratio of American catch to imports was about:

ORDINARY TUNA

American, 5+, to imports from Japan, 1.

Now look at the ratio on albacore tuna:

ALBACORE TUNA

American, 1, to Japanese imports, 4+.

By comparing the difference of ratios on the two types of tuna fishing you will see how completely unfair our Government is treating the American albacore tuna fishing industry.

Albacore tuna fishing is a completely separate kind of fishing. It is entirely different from the clipper fleet, purse-seiner fleet, or any other kind of fishing. It is deep-sea fishing requiring special kinds of boats and equipment. It is an industry in itself, the same as beef raising is different from other types of farming.

The albacore fleet to the last man know that we are being discriminated against. We have been hit harder by far than any other industry by the tremendous imports from Japan and if our Government doesn't do something to right this situation, our over 3,000 albacore fishermen with an investment in boats and equipment in excess of $22,530,000 will be forced out of business and an American industry which in 1950 produced $12,320,000 worth of albacore tuna (a natural resource) will be taken over by the Japanese.

The albacore fleet has been more or less unorganized in the past but today we are organized and intend to fight with every means possible for the right to follow our chosen profession and make a living for our families.

We sincerely solicit your support on Senate bill 1796 and any other legislation on quotas, tariffs, etc., which will save our American albacore fishing industry.

Sincerely yours,

WILLIAM E. FARRAR,
General Manager.

AMERICAN TUNABOAT ASSOCIATION,
San Diego, Calif., June 11, 1957.

Senator WARREN G. MAGNUSON,
Senate Office Building,
Washington, D. C.

DEAR SENATOR MAGNUSON: Your sympathetic letter of June 5 was much appreciated. For some reason or other we had not heard of your S. 1671 and we are most pleased to find that, as is usual, you are heading in a direction favorable to fishermen. It may be useful to you to have a quick summary of what is going on in the tuna business that affects your constituents as well as us.

The 14,000 tons of frozen albacore got dumped in this market at $100 per ton below cost. That is water under the bridge and can't be prevented. Neither can the damage which is going to flow from it.

This resulted in California canners inventory of white meat albacore this past 8 months being about a half million cases higher than normal. In reaction to this the price of white meat canned tuna this spring broke from about $13 per case (non-advertised brands) to about $11 per case, with some offerings as low as $10.50. This brought the price of white meat solid pack below the price of light meat chunk. As a consequence the price of light meat has now broken to meet this new situation. The break has been from a level of about $11.50 per case down as low as $8.50.

In the meantime, the albacore season in Japan has started off heavily and it looks as if this year's crop in Japan will be about the same size as the bumper crops of 1952 and 1956. Where the exvessel price of albacore was running as high as $335 per ton in Japan last year it has broken to $185 per ton this year, and an average of 1,000 tons per day has been landed since the last week of May.

Accordingly, your albacore people look as if they are really going to take a beating this year. Our vessels are already beginning once more to be held up in unloading at the canneries. This summer, fall and winter look rough.

We believe some little bit of help might come from these hearings being scheduled on the amendment of the Antidumping Act. Such hearings have a sobering effect on the Japanese Government, and it is with the Japanese Government that we are in competition with now. Anything you can do to push such hearings will be much appreciated by the tuna fishermen on this coast.

Sincerely yours,

JOSEPH J. MADRUGA,
President.

White House Pressure

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial written by Basil Brewer, and published in the New Bedford (Mass.) Standard Times, of June 18, 1957, regarding foreign-aid appropriations, and pressure by the White House.

There being no objection the editorial was ordered to be printed in the RECORD, as follows:

WHITE HOUSE PRESSURE

(By Basil Brewer)

Against the overwhelming sentiment of the people and against the judgment of a majority of the United States Senators, the Senate passed Friday the foreign-aid appropriation, virtually as the President had asked it.

A scare drive by the President by television and radio, in which the President threatened the people with war should the aid bill be curtailed—plus a robot type of followup testimony before Senate committees by Dulles—set the pattern for coercing the Congress and thwarting the sentiment of the people, who must foot the bill.

An incident of concern to followers of Robert A. Taft was the fact that I. Jack Martin, former executive assistant of the late Senator Taft and for some time now a member of the White House staff, kept the pavements hot in Washington between the White House and the Senate. His assignment was to pressure the Senators to relent in their determination to cut the fruitless orgy of White House foreign-aid spending.

The joint drive worked. The American people will continue to pay and pay in taxes, but not willingly or with their consent. They were scared by the White House and Dulles war threats, but they are not convinced and they will show their disappointment and skepticism in their voting in November 1958.

Never, since the days of the fabled Atlas, has one man or country tried to carry the whole world on its shoulders, as United States leaders are forcing the American people to do.

The worst thing about the whole hoax is that it does not work. The recent riots against the United States in Formosa, in Japan, and elsewhere show no indication we are winning friends by trying to buy them with American dollars.

In England, where we have given and loaned billions, we have few friends. An authority in England recently said most of this aid money had been used to socialize British industry and government. What little good will we may have gained was lost when we refused to support England and France in the Suez but joined with Russia in opposing them.

England now goes it alone, so far as the United States is concerned, in trade with China and otherwise. Other countries of West Europe are to follow. NATO is creaking and threatens to crack. Stassen, the most asinine of the White House staff, has goofed again in his disarmament chore.

We are the most liberal, and the clumsiest, nation in the world in diplomacy.

Ending the No Man's Land Between Federal and State Employment Relations Boards

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. WILEY. Mr. President, for a number of years I have urged the Congress to take action to end the deplorable no man's land which now exists between the handling of labor relations cases by the National Labor Relations Board in Washington and the various State employment relations boards throughout the Nation.

Unfortunately, Congress has failed to take action largely, I believe, because of the impasse over amending the Taft-Hartley law.

The other day, as a result of this failure, the Wisconsin Employment Relations Board once more faced the disagreeable problem of inability to deal with a matter which should certainly be handled at the State level.

The board pointed out that the Supreme Court continued to leave the no man's land which bars State action in a case remotely affecting interstate commerce, even if the National Labor Relations Board does not choose to exercise jurisdiction in that area.

The situation is described in an article in the June 11 issue of the Milwaukee Journal, and in an editorial of June 14, which pointed up this absurd situation which we have allowed to develop in the 48 States.

If there is any principle in the Federal system of Government which is sound it is this: That the States shall handle matters which they themselves are ready, willing, able, and eager to handle, rather than be dumping cases in Washington which sometimes does not want the cases.

I send to the desk the aforementioned article and editorial and ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal of June 11, 1957]

WERB SAYS IT CAN'T ACT—CITES COURT RULING

Applying for the first time in Wisconsin a recent United States Supreme Court decision, the Wisconsin Employment Relations Board (WERB) said Tuesday that the Federal ruling left "a veritable no man's land" for certain employees and employers where there was no established machinery to settle labor disputes.

The WLRB statement came in an order dismissing the petition of Madison local 442 of the chauffeurs, teamsters, and helpers' union for a representation election among 18 employees of the Coca-Cola Bottling Co., Madison, on the ground that it had no jurisdiction.

The board noted that the National Labor Relations Board (NLRB) had consistently refused to assert its jurisdiction in cases where a franchised employer received less than $500,000 worth of materials in interstate commerce from the franchise holder or if less than $50,000 worth of goods was produced for out of State shipment. The Madison firm does not qualify under either of the conditions.

In the past, the WERB has extended its jurisdiction to cover these cases in Wisconsin with the approval of the NLRB.

On March 25, however, the WERB ruling pointed out, "the United States Supreme Court, in three cases decided on that date, clearly and unequivocably determined and established that the various States do not have jurisdiction over employers whose business affect commerce where the matters involved are covered by the National Labor Relations Act, regardless of whether or not the National Labor Relations Board chooses to exercise its jurisdiction."

[From the Milwaukee Journal of June 14, 1957]

LABOR, EMPLOYER BOTH SUFFER

It is a preposterous situation that the Wisconsin Employment Relations Board faces.

The other day the WERB had to dismiss the petition of a Madison labor union for an election to decide whether the union can represent workers at the Coca-Cola Bottling Co., of Madison, a firm that sells its soft drinks locally but is in interstate commerce because it holds a franchise from the out-of-State parent company and buys sirup and bottles in Chicago.

The reason? The United States Supreme Court recently ruled that State labor boards may not meddle in such cases. They are under the jurisdiction of the National Labor Relations Board under terms of the Taft-Hartley Act. And it makes no difference that the NLRB has arbitrarily decided not to bother with minor cases. If a lot of employers and employees are thus denied access to any machinery for settling their disputes, the only remedy is for Congress to fix up the law.

The reasoning of the court may be sound enough. The hitch is that Congress shows no inclination to act. It didn't act in 1953 when an effort was made to give the States jurisdiction over public utility and building trades disputes. It didn't in 1954 when President Eisenhower specifically asked that State boards be allowed to assume jurisdiction when the NLRB refused to accept cases. It has paid no heed to a petition submitted by a conference of labor board representatives of various States that was held in Madison in April under sponsorship of the WERB.

If in the Madison case and others like it, a petitioning union has no recourse but to strike, does this mean the Nation must have a rash of unnecessary strikes before Congress eliminates the "no man's land" that exists in the field of labor relations?

By its refusal to change Taft-Hartley, Congress is inviting just such a consequence.

Lampasas Fighting Back With Courage and Humor

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, June 21, 1957

Mr. YARBOROUGH. Mr. President, Texans have met adversity with courage since the fall of the Alamo. And they are still doing it. I ask unanimous consent to have printed in the Appendix of the RECORD a feature column from the June 18 editions of the Austin (Tex.) American, written by Lorraine Barnes, one of my State's most talented newswomen.

The column, titled "Lampasas Fighting Back With Courage and Humor," describes how residents of Lampasas, despite losses of $4 million from floods, are rebuilding their homes and their lives.

The column does not note the most tragic fact of the Lampasas flood. Five upstream retention dams planned for the Lampasas area—on Sulphur Creek and some smaller streams—would have held the $4 million damage sustained by that central Texas commmunity to less than $1 million.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

LAMPASAS FIGHTING BACK WITH COURAGE AND HUMOR

(By Lorraine Barnes)

Can the naming of a colt born in a time of death and destruction symbolize the spirit of a Texas town? We think it can.

The following vignette is one of many personal experiences published in the first issue of the Lampasas Record to come off the press since Lampasas started digging out of the wreckage wrought by the flood of May 12, 1957:

"Fred McDonald's first thought, the Record reports, as the water crashed into his home just off Key Avenue, on Eighth Street, was to get his family out, but the speed and height of the water prevented.

"So he bucked the current to bring his registered Shetland mare into the front door. As the water rose waist deep the family went to the roof. He came down to offer sanctuary to four people in a flooded car near his home. This was only minutes before the big crest came, taking the car, and McDonald's grocery store, with it.

"They came back in the mud and slime of the house at 3 a. m., when the Shetland mare foaled. Lampasas Disaster was, of course, the proper name, and was so given."

When a man's business has been washed away and he can't see the future for the mire and debris in his living room, it takes wry humor to hang a monicker like that on a baby newcomer salvaged from the experience. But humor—masquerading for raw courage—is an old ingredient of frontier life, and Lampasas today is fighting back from the first, easy pronouncement of its death. Flood sales are underway, farmers are competing for labor against the extra work needed to repair damage to homes and businesses, the class of 1957 has been successfully graduated from Lampasas High, the routine of life again engrosses people.

Editor-Publisher E. M. Pharr is back in harness, catching up on the news after the most frustrating experience a newspaperman might expect: The flood washed out the Record shop and caused the paper to suspend publication during its biggest story. Just to keep the Record's record straight, Pharr announced the newspaper would go on numbering its issues as though the flood had not stopped operations; hence the current issue is numbered 44 through 47 of column 52, enabling the venerable Record to resume its regular order.

Not all the flood news could be crammed into the four-in-one issue, so Pharr will continue to report the flood story in future issues. That's all right with Lampasans. They've lived through enough excitement to fill a book.

Lampasas is an honest town, a front-page story notes.

Among things washed away by the flood was the cash register of the O. K. Rubber Welders containing $48 in cash and a number of checks. On the morning of May 31—19 days after the flood—a friend told "Lucky" Guess that a small cash register was lying on the north side of the square, and Guess went over and claimed his business equipment. He found the contents intact—including $48 in cold cash. Guess figures he isn't called "Lucky" for nothing.

Acts of heroism and escape from death were commonplace in Lampasas the night of May 12. Young Mike Mullican is credited with twice saving his father from being swept down Third Street and again when their truck was washed out from under them. Mrs. Gracie Storms, the mother of two children, removed at least 16 persons to a place of safety, making successive round trips in her car from the flood area to the Red Cross disaster station. Mrs. Storms can't swim, but the fact didn't keep her from negotiating the flood-covered streets time and again.

Knowing that C. E. Langford was still at the Burns Chevrolet Co., Garwood Burns went to warn him to get out when he learned Sulphur Creek had crashed over the levee. In turn, Burns was trapped by high water and the relentless current and took refuge in the warehouse just west of the agency's office building. There with new and used cars bounding and crashing into each other, he climbed atop a car which bounced slanting on a pickup—and lodged, more or less securely, the Record reports. Langford meanwhile had escaped to the attic of the office building.

When W. W. (Red) Wilson and Jess Rhoden climbed for safety into a window of the Lampasas House, they happened to enter the room occupied by Andy Bostick. Bostick was sitting there by candlelight clamly removing his shoes. Asked what he was planning to do, Bostick replied, not unreasonably: "Get to bed if I can get all these people out of the room."

Wilson and Rhoden investigated a pounding noise downstairs and found W. F. Palmer trapped in his room with water rising fast. They located a screwdriver, removed a door hinge at the top and made an opening large enough for Palmer to get through.

The Record illustrated its postflood issue with pictures taken by the Wooten Studio. The views show flood damage at its worst but there are also scenes of typical businesses all cleaned up and operating again soon after the water passed. The newspaper declares much can be read by a study of these pictures both as to destruction suffered and determination to carry on in a better way than ever.

The Role of Art in International Relations

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to insert in the Appendix of the RECORD an article written by Mr. Kirk Douglas, an outstanding actor and a discriminating and intelligent observer of international relations.

Mr. Douglas describes in this article in a most persuasive manner the role of art in international relations, and supports the idea of creating an Assistant Secretary of State for Cultural Relations.

This article is worthy of the attention of my colleagues, and I believe they will enjoy read it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

(By Kirk Douglas)

The guy who called America "the great melting pot" must have visited my neighborhood in Amsterdam, N. Y. As a boy I could make a world tour just by walking around the block. Some of our neighbors were Russians like my parents, but we had representatives from practically every European nation. I can still remember how one family would symbolize a whole country for me, and that whenever Germany was mentioned in school, I would immediately get a mental picture of the German family with their blond, round-cheeked, fat little kids that lived in the house behind us. Or when I read about Italy, I'd think of the dark-haired happy brood, two houses down.

One time while I was in high school, a Polish boy got in some difficulties with the authorities. In telling my mother about it I made some offhand, sweeping generalization that began, "All Poles are—" and I got no further.

"All Poles are different," interrupted my mother. "There's more to Poland than one family."

In other countries around the world, people today are making the same mistake I once did.

I have thought of this a great deal in the past several years as I have moved around Europe on movie locales. Accepting the antics of an individual as the character of a nation is one of the things that is holding back the world understanding that ultimately must be worked out on the level of the people.

I remember particularly a warm, sunny afternoon in Rome. I had time off from a movie that was being filmed there, and headed for the beach at Fregene. After weeks of being indoors on the movie set it felt wonderful to be outside again. Not content with merely sunning myself or running into the waves, I started to play tag with some children. We yelled and shrieked and raced along the beach, our flying feet showering sand on reclining sun bathers.

No doubt I was a ludicrous sight, whooping and hollering with a bunch of 8-year-olds. I felt like one of the gang until I overheard an irate Italian matron mutter, "Damn fool American."

I didn't think much of it at the moment. But that night I resented the implication. If I had done the same thing on any of the beaches near Los Angeles, the comment might have been "Damn fool actor."

For the first time, I realized that I was my country to everyone who noticed me and didn't have a wise mother handy to point out the fallacy of such snap judgment.

I wanted to go back and tell that Italian woman, "There's more to America than high-spirited actors kicking up sand on a foreign beach." I wanted to go back and tell a lot of people I had met that they ought not to judge America by me.

Suddenly I remembered a score of conversations in which my statements and actions were accepted as the official American point of view on a given situation. Phrases like, "So that's how America feels about it," and, "You Americans don't understand," came back to haunt me. I had been standing up, probably being a little pompous, tossing off opinions and ideas as if they were Government pronouncements. I probably made a few foolish remarks, but I doubt that I did any serious damage.

Forced to think about the situation, I was able at last to see some fairly obvious things that had been under my nose all the time. Most American tourists are judged solely as Americans. But American movie actors are judged in two ways—as Americans, and yet at the same time as a distant friend, a guy you feel you know and like although you have never met him. The world motion picture screen has given the American actor international stature.

On the streets of any European city, many people are inclined to treat American film stars as old friends. Having made their acquaintance on the screen, they yell out, "Bonjour, Gregory" or "Buon giorno, Spencer." It's as warm and casual as that. Even world statesmen do not receive such treatment. How many Europeans would recognize John Foster Dulles, or a United States Senator, or the head of a banking or business mission? And, if they did, how many would call out, "Bonjour, John?"

This seems to me to add up to one thing. Regardless of what one may think of their performances, motion-picture stars have an unusually high potential in building good will for this country abroad. Although without portfolio, they have it within their means to become American ambassadors of friendship in a troubled world.

In fact, all who are professionally identified with the arts—whether it be music or dancing or theater—are in a unique position of influence where world understanding is concerned. Artistic expression, of whatever form, speaks through thoughts and emotions that are common to human beings everywhere.

There are shining examples of the good that can be done to help people understand our country—such things as the Porgy and Bess tour of Russia and the rest of Europe, and Danny Kaye's tour around the world in behalf of the United Nations Children's Emergency Fund. Important projects for the future certainly must include Billy Rose's plan for an exchange of Soviet and American performers, which the State Department is now considering, and the fact that producer Michael Todd seems to have worked out most of the details for shooting an American film in Moscow.

Of course, we performers will run the usual risks in such a plan. Still, I think it would be better for Russians to throw tomatoes at bad actors than to hurl more lethal weapons at people in general.

All of this is on a large and significant scale. But equally important are the daily triumphs for international good feeling that can be achieved by American motion-picture stars in Europe.

Oftentimes these are simply things that an actor does by virtue of his training and experience.

During a recent stay in Italy on a movie location, I was asked to make a personal appearance for charity. My Italian vocabulary at the time consisted of good morning and goodby, but with the aid of some friends I worked out a four-line speech and memorized it phonetically.

When I stepped out on the stage and addressed the audience in its own language, the reaction was so great you would have thought I had suggested that Fort Knox be made an Italian colony.

The English translation would have been trite, indeed. It merely was to the effect that I was happy to be in Italy, had enjoyed my visit so far, and looked forward to making many Italian friends. I had spent all of a few minutes memorizing it in Italian. Never did so little effort pay off so big.

Another time I was asked to emcee a gala charity affair at Monte Carlo to help raise funds to fight polio. I was fortunate enough to be flanked by Gina Lollobrigida and Martine Carol. The event was a tremendous success financially, a result for which the major credit must go to the charm and pulchritude of my feminine coworkers. But what was most gratifying, and significant, to me was the flood of letters from French citizens and parents. They couldn't get over the fact that an American would take time out from his other activities to help raise funds for their children.

All this was inspiring evidence to me that people the world over have a strong, natural yearning for mutual understanding and friendship. Reaching them through common bonds and interests, one can release much of the suspicion, jealousy, and hate which binds the world's human relations.

Realizing this, our motion picture stars who today are working in foreign countries in increasing numbers should prepare themselves to accept the responsibilities that go with this great opportunity.

One of the first things an American actor in Europe has to remember is that being able to outfight the Indians in a series of westerns does not, in itself, qualify him to talk with authority on international politics. I am, of course, speaking from experience. Those European press conferences, which are a lot more rugged than a tussle with some hired Hopis, are quite a challenge.

In America, the questions newspapermen ask a movie star are very much of a pattern. How does it feel to kiss Lana Turner? Do you do your own stunts? How are you enjoying your stay in Dallas, or Cleveland, or St. Louis? What are your plans for your next picture?

The reporters ask these questions because they have found, I assume, that this is the kind of information their readers want.

But in Europe the reporters—and their readers—are not nearly so interested in whether you sleep in pajama tops or bottoms as they are in political or social affairs.

At one time or another in Europe I have been asked to predict the outcome of the segregation problem in the South, to discuss the differences of approach between the Democratic and Republican Parties, to explain America's interest in the Middle East, and to give my opinion on the desirability of unlimited trade with Iron Curtain countries. No one American—baker, butcher, doctor, statesman or actor—can come up with answers that will satisfy everyone. But by being ready for such questions—and having honest, forthright answers ready—the actor can help keep the respect most Europeans feel for us.

Many Europeans think of our country in terms of statistics: the highest buildings, the most cars, the most money, and so forth. This is not unusual because we ourselves think of other countries, like France and Italy, in general terms. The word "France" conjures up a montage of the Eiffel Tower, beautiful girls, the Folies Bergere, wine, and much franker moral standards. Italy, as everyone knows, is a country of spaghetti, opera singers and striking feminine fashions. If you know any Frenchmen or Italians, undoubtedly you know how much you must revise these false, but prevalent, impressions.

It is difficult for Europeans to establish much personal contact with the usual American tourist, whom they look upon chiefly as a source of income and not as a potential friend. They provide him with rooms, meals, travel accommodations and souvenirs, but it is a businesslike arrangement. There must be some way of breaking through this symbol-for-symbol relationship between countries. Certainly the international status of a movie star is one way.

Europeans do not hesitate to walk right up to an American actor and ask him questions about himself and his country—an approach they wouldn't exercise with an American State Department emissary, or an industrialist or other high level visitor. With a movie star they have a feeling of closeness and kinship. When a picture is being filmed, they will flock from miles around, and they like nothing better than to chat with the actors between scenes.

If a film star is not working during a European visit, he is usually the super-tourist, meeting more of the public in one day than most officials do in a month.

The actor must approach his role as an ambassador as he would any other part—he's got to learn the lines. In this case, that means he should learn to speak the language of the country he is visiting. Pantomine is wonderful, but contrary to the old axiom, words frequently speak at least as loud as actions. Because the people recognize the star, they are even more anxious to communicate with him. A few well chosen words in the native tongue can accomplish wonders. In the past several years of working on movie locations in Europe, I have taken my own advice and can now speak fairly fluent French, passable Italian and pretty miserable German.

Like others, I have found that in learning a foreign language there is always a temptation to put the first few words to immediate use—sometimes with amusing results. I remember walking into a small restaurant in Rome and, with feigned casualness, extending greeting in Italian. Those few words, coupled with the fact that the proprietor recognized me, brought forth a torrent of Italian.

I played the part straight. I nodded my head, grunted a few times, and sat down at the table. I'm still not sure what the man said, or what I had to eat that night; but it was one of the best meals I have ever had anywhere.

It is my feeling that, much too often, Americans figure it is the responsibility of the Europeans to understand English, and that there is no need for them to learn the language of another country. It is about time that a lot of us ask ourselves, "Who do we think we are?" This goes double for American movie stars abroad.

I have a strong feeling, too, that in the long run, as more and more people from this country visit Europe, those who have been abroad will have an important effect on American foreign policy. To travel in foreign lands is to get a perspective of your own country. I recall my ski instructor at Klosters, Switzerland, saying to me one day during a break in my lessons, "How do you know what it is like to be an American? You are one."

And he was right. We are so fortunate to grow up in a country where all sorts of freedoms and opportunities are taken for granted, we forget they are not an automatic blessing in every nation of the world.

I have always been an ardent supporter of the various plans to give aid and comfort to countries in need of it, without ever thinking there might be an adverse reaction by the beneficiaries. I guess I have considered these generous acts on the part of the American people in the light of a play in which the knight in shining armor comes galloping up in the middle of the third act to save the heroine and the kingdom.

But a French film worker gave me insight into the problem when he said, "It is not easy to be rescued in two wars."

Naturally, people are grateful for our help but, understandably, they are a little resentful toward any country that has so much while they have so little. With us, it is not merely a question of giving aid, it is essential that we also sell ourselves at the same time.

This dual feeling—appreciation of our aid and resentment of our ability to afford it—sometimes places an American in an ironic position.

One day in the delightful town of Arles, France, while we were shooting Lust for Life, I was sitting at a sidewalk table in a most attractive little bistro having lunch. It was a pleasant, relaxing atmosphere, and I felt nothing that my eye could see had changed in the past 50 or 100 years. Everywhere I looked it was tranquil. I felt at peace with myself and the whole world.

Some children were playing across the square, and from time to time they would look over at me and giggle. I wasn't sure whether it was because of my Van Gogh beard or because I was a movie star, but it was very much in keeping with the entire scene.

After a while I became conscious of a new element in the picture. Some teenage girls had taken up a position on a picturesque stone bridge and were watching me intently, obviously summoning up courage to come over and talk to me. I waved to them to come on, and as they did I noticed a sign which their legs had covered. There, in big splotches of black paint, was the advice, "Yanks—go home!"

The impact was startling. It almost destroyed what had been a memorable hour. The only thing that saved it was that I realized how much the sentiment of the country had changed. Certainly there had been a time when they wanted their country for themselves. It is not easy to take charity. Reminders like this pop up from time to time and the American must try to understand them in their proper context.

Memories of any trip or foreign interlude center around people as much as they do around places or events. I remember asking a cab driver in Tel Aviv why he had come to Israel. He answered that he had been inspired to do so by the writings of Spinoza, and he proceeded to quote at length some of the passages that had moved him. Never having read Spinoza, I could only agree with him.

I also have a vivid impression of the laundress who looked after my clothes in Rome. She was very proud that her church had a painting by Giotto (1266–1336). She practically demanded that I go and see it, which I did.

I don't say that a knowledge of the great philosophers is a basic requirement for cab drivers in Israel, or that all laundresses in Italy spend their spare time lecturing on art, but the incidents emphasize the European feeling for the arts.

This sense of identification with the classical tradition of the arts is much more common in Europe than in America for obvious reasons. Europeans have had centuries of exposure to the art forms, and their interest and knowledge of operas, paintings and symphonic music is as natural and uncomplicated as our passion for baseball, football, and jazz. Still—you do remember a laundress who boasted about a Giotto, or a cab driver who spouted Spinoza.

I find myself also recalling a restaurant in Brussels. It was located in a residential section and was a tiny room in an old home. It had been highly recommended and I was impressed by the beautiful linen and the gleaming silver and china that was set out. It was a room that contained not more than 10 tables, and the food was superb.

My American, mass-production mind went to work. I figured that with a little capital the owner could expand and provide gastronomical feasts for fifty or a hundred tables. I suggested the idea to him, but the groundwork had not even been laid on this castle in the air when he stopped me.

"No," he declared, "we cannot consider this. The quality of the food would suffer."

I admired him for his position. I hope that some day I will learn to say, in connection with any scheme, "the quality would suffer."

I like Europe. Visiting it as a movie star, and often working there in that capacity, I am convinced that, given the chance, Europe will like us. The night spots in Paris are crowded with people eager to hear American jazz as played by Sidney Bechet and other groups. Louis Armstrong and Lionel Hampton drew record-breaking crowds all over the Continent, and American movies do capacity business in almost every theater.

Art is a universal language and needs no translators. Particularly in Europe, with its long history of art, the creative person often is regarded with more affection than the businessman or statesman. An artist from another country is given a similar warm reception.

And that is where American movie stars can do something important about this great need for helping the people of the world to become better acquainted with us and our country. If actors will just consider themselves constantly on tour for this great drama called World Understanding, they can score triumph after triumph.

There are many responsibilities that go with it, but it is a tremendous role and the audience is highly receptive. Everywhere I have been on movie locations—in France, Italy, Belgium, Holland, and Israel—I have found that people are hungry for friendship and understanding. The movie stars can give the performance of their lives by carrying the message that Americans are their brothers.

Paying for Postal Service

EXTENSION OF REMARKS
OF
HON. W. KERR SCOTT
OF NORTH CAROLINA
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. SCOTT. Mr. President, I ask unanimous consent that a very thought-provoking editorial concerning the public postal policy appearing in the Saturday, June 15, 1957, edition of the Asheville Citizen be printed in the Appendix of today's RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PAYING FOR POSTAL SERVICE

If Congress is at last disposed, as seems likely, to vote a general increase in postal rates, some users of the mails will accept the decision resignedly, others more or less cheerfully, but probably still wishing for answers to unanswered questions.

The questions deal with the public-welfare services of the Post Office Department, the deficits involved in performing those services and the problem of the right or wrong attitude toward the deficits.

First of all in such a discussion the American people want good postal service and are willing to pay for it. Yet, as the cost of the service increases, the people are placing emphasis on this question:

What is the nature of the service rendered and how should its costs be apportioned among taxpayers?

There are some misconceptions about the nature of the postal service, and this causes confusion in analyzing the cost issue.

A well-known encyclopedia says of the United States Post Office Department that it is one of the largest business organizations in the world.

This is correct only in a general sense. Yet the fact appears, when you examine the kind of services rendered, that this Government Department is no more of a business than the Department of Labor, or the Department of Agriculture, as the Newark, N. Y., Courier-Gazette expresses it.

The point is that, from the beginning, the Post Office Department has been engaged in service for the welfare of the people, just about regardless of cost.

For example, the Department delivers a local letter on Charlotte Street for the same postal charge for delivering a letter in Honolulu 7,000 miles away. Hence, among the 42,000 post offices in the country, more than 90 percent of them are reported as losing money because the job of the Department is to carry the mails regardless of distance or cost.

Here are some other welfare services for which no charge is made by the Department: the franking privilege for Members of Congress and other Government officials; making collections for the Collector of Customs on mail received with duty charged; helping the armed services find relatives of deceased servicemen; distribution of income-tax forms; acceptance and transmission of funds for volunteer charities, public notary, and other services.

In a study of the postal service, the Citizen's Advisory Council submitted some conclusions as follows:

The people should pay their share of legitimate costs for mail services rendered. But the welfare and community service costs should not be paid from the Department's operating revenue.

The Newark Courier-Gazette sums it up better:

"The public services of the post office should be paid for by the public as a whole, and not charged up to mail users alone."

Soviet Occupation of Lithuania, Latvia, and Estonia

EXTENSION OF REMARKS
OF
HON. GEORGE A. SMATHERS
OF FLORIDA
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. SMATHERS. Mr. President, I ask unanimous consent to have printed in the Appendix of the CONGRESSIONAL RECORD, a resolution recently adopted by the Lithuanian Council of Miami, condemning the Soviet Union for the illegal occupation of Lithuania, Latvia, and Estonia, and the genocide policy toward these Baltic Nations.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

LITHUANIAN COUNCIL OF MIAMI,
Miami, Fla.

Resolution unanimously adopted at meeting of Americans of Lithuanian, Latvian, and Estonian descent of the city of Miami, convoked to commemorate the sad anniversary of the mass deportations of the people of the Baltic nations, Lithuania, Latvia, and Estonia, by the Russian police:

"Whereas Soviet Russia has enslaved Lithuania, Latvia, and Estonia, subjecting their people to brutal terror, oppression and mass deportations to Siberia and other parts of the Soviet empire; and

"Whereas the people of Lithuania, Latvia, and Estonia have no freedom and are mercilessly exploited by their Communist rulers; and

"Whereas the Government of the United States officially denounced the illegal incorporation of Lithuania, Latvia, and Estonia into the Soviet Union: Now, therefore, be it

"*Resolved*, That this meeting of Americans of Baltic descent of the city of Miami calls upon the President of the United States to do all in his power to help the people of Lithuania, Latvia, and Estonia to regain their freedom and political independence; and towards this end; be it

"*Resolved*, That this meeting requests the Government of the United States to support Senate Joint Resolution 87 which provides for a freedom authority to keep alive the spirit and hope of freedom from Russian Communist domination in the hearts of the liberty-loving people enslaved behind the Iron Curtain; and finally be it

"*Resolved*, That this meeting requests the Government of the United States to introduce in the United Nations a resolution condemning the Soviet Union for the illegal occupation of Lithuania, Latvia, and Estonia and the genocide policy toward these Baltic Nations."

A. D. KAULAKIS,
President.
OSKAR LINDER,
President Estonian Club.
TEKLA PETERSONE,
Representative, Miami Latvians.

The Girard Case

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BURDICK. Mr. Speaker, the action of the Government in this case is another black page in our national history. The exact situation is this: We are quartering our Armed Forces in Japan for the protection of Japan. Our soldiers were ordered there by the administration and are not there from their own choice. An area was set aside for the camp of our soldiers, and in this area the jurisdiction over crimes committed by our men remains with the army of occupation. In this manner, and that alone, can the constitutional rights of our soldiers be protected.

Girard was on guard duty at the time of this incident, and did exactly what he was ordered to do. He was to protect the area from trespassers and was provided with arms to enforce that protection. Some Japanese citizens came into the area and were ordered to leave. When they did not do so Girard, then on duty, fired a few shots to scare these trespassers off, and one of these shots accidentally killed a Japanese woman who came into the area and was a trespasser there.

If the shooting was not justified the United States Army court-martial had authority to make an inquiry, which it did, but because of the Status of Forces Treaty, held that he should be turned over to the Japanese for trial.

Whatever the outcome of this matter finally is, it means that we have tried to abandon one of our soldiers in time of trouble, and in order to appease the Japanese we have thrown this soldier to the wolves.

This action clearly demonstrates that under the policy of appeasement followed by this administration and the two preceding ones we are willing at any time to sacrifice one of our men if the Japanese Government cannot be conciliated in any other way.

The people of the United States should be advised on whose order Girard was turned over to the Japanese, and should further be advised that our altruistic policy toward the Japanese should be stopped at once, and every last soldier of the United States be withdrawn from Japan. The people of this country will never stand for any policy that keeps our soldiers in a foreign country for the protection of that country, and at the same time permits them to be tried by a foreign government.

When the NATO treaty was up for approval in 1953, under which it was agreed that members of our Armed Forces abroad should be tried by the NATO government of the countries in which our troops were stationed, I raised a protest and my statement appeared in the CON-

GRESSIONAL RECORD. But the appeasement slant to our foreign policy was so strong that it had no effect, and the treaty was approved.

The President stated that the agreement to have our troops tried in foreign countries is justified because that gives us the power and jurisdiction to try foreign soldiers in this country. What a statement. The President must have known that this country does not have to have foreign soldiers here for our protection, and that no foreign troops are here except a few for observation purposes. What a trade this was. To trade away the constitutional rights of thousands of our men in the Armed Forces for a chance to try foreign soldiers in this country—when we have none to try.

If we are powerless or spineless enough to abandon Girard, then we should immediately remove every last man of our Armed Forces in Japan. The same doctrine applies to any other foreign country where this treaty is in force. If we cannot protect our own men it simply shows just how weak and vacillating this great country has become, and it is time to call a halt to such procedure. Judge McGarraghy has called a halt on it by issuing an order enjoining the Army from turning Girard over to Japan. If the administration could muster up courage enough to follow this judge's decision we could end this whole squabble.

As court decisions are now coming out, this decision of Judge McGarraghy's is a bright spot in the present obviously confused judicial pronouncements.

Address by Melvin Handelman

EXTENSION OF REMARKS

OF

HON. RALPH. W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, June 21, 1957

Mr. YARBOROUGH. Mr. President, Texas takes great—and justifiable—pride in the ability of its youth. One youth of whom Texas Democrats are proud is Melvin Handelman, of Marlin, Tex., the youngest national officer of the Young Democratic Clubs of America. Mr. Handelman, now 29, was elected national treasurer of the Young Democratic Clubs of America at 27.

Last Saturday, June 14, in Chicago, Mr. Handelman addressed the Young Democrats of Illinois. His speech would do credit to a man of many more years and much more experience. I ask unanimous consent to have the address printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

LET'S TALK CENTS

(Address by Melvin Handelman)

Mr. Chairman, my fellow Young Democrats, I thank you for your friendly greeting. I feel every bit as cherished as one of the President's doctors, and I am reminded of a story. There was once a very wealthy and very spoiled child who broke his arm. (He may have gotten it caught when the lid was closed on the Dixon-Yates deal). His family insisted that he have the best of medical attention so they flew him to one of the President's doctors who promptly proclaimed that as soon as the cast was removed his arm would be better than new. A few days later, the lad went to the doctor in tears. He wanted to know if he could play the violin when the cast came off. The doctor, in his most confident manner, assured him he could. The lad grinned from ear to ear and said, "Doc, you're a modern miracle man. I never could play before."

It has been said that I am from Texas and I modestly admit this is true. Texans take their politics seriously, as you know. Texans in general, and the Young Democrats of my State in particular, take great pride in all our Democratic delegation in Congress, but we are especially proud of three people: (1) Mr. Democrat himself, Speaker SAM RAYBURN, of Bonham, who has been Speaker longer than any man in our history. Mr. SAM is a real friend of Young Democrats. He has said of his party—"We don't have any old fogies among us, nor do we have what is even worst, young fogies." (2) Senate Majority Leader LYNDON B. JOHNSON of Johnson City, who has eloquently summed up all of our thoughts when he said, "The Democratic Party at its worst is better than our opposition at its best." (3) We also take pride in our new junior Senator, RALPH YARBOROUGH, who has spoken at every Texas Young Democrats convention since our club was reorganized in 1952. So you see, Mr. Chairman, Texas Democrats have a great deal in which to take pride.

Another thing in which Texas Young Democrats take pride is our firm and true friendship for the Young Democrats of Illinois. I want you to know that I certainly appreciate being invited to be with you today.

I have many friends in Chicago and Illinois, and I remember the help I received from this State when I was elected in 1955. I considered it an honor to have support from the home State of that great American Adlai Stevenson. Every day that passes we find new reason to admire him for his wit, foresight, patriotism, integrity, idealism, and courage. Our country made a mistake in 1952 when it failed to call him to its service, and that error was repeated in 1956. A lesser man, being twice denied election, would have retired to the sidelines. Instead, he continues to give us the benefit of his wisdom and advice.

You, in Illinois, have also given excellent leadership to our party's youth group as well as to the senior party. Dick Nelson, whom I am proud to call my friend, was an able president of our organization. We made great strides forward under his guidance. Today my friend Sidney Kallick is proving to be, in my opinion, the most capable chairman of regional directors I have known since I have been acquainted with this organization. I know you take pride in the job he is doing for our clubs and the party in general. In fact, you have every reason to be proud of all of the people you have sent to represent you in the YDCA. They are liked and respected.

I see at this convention evidence of the fact that you are thinking about the national convention which will be in Reno in November. This is as it should be. I know it will be a wonderful meeting and I am looking forward to seeing many of you there.

As we approach the end of one Young Democrat administration and look forward to the start of a new one, it is fitting that we should pause to take a look at the Democratic Party, and particularly its official youth organization. When speaking about the YDC, I would like to discuss briefly the treasury—or lack thereof.

Before mentioning our party, I think we should take a glance at our opposition. Since 1952 the GOP theme has been "Let's don't tell the people what we're for so they can't criticize." In our lifetime, we have seen the difference between guided progress under enlightened Democratic leadership, on the one hand, and the irresponsible, vacillating and drifting that characterize this Republican administration, on the other. Perhaps it is not fair to discuss foreign relations. After all, our foreign policy might be different if Foster Dulles were still alive. Isn't it too bad that Dulles no longer has Democratic superiors to point out the brinks from a safe distance? The mistakes of Messrs. Dulles, Stassen, Hoover, Jr., and Herter are too numerous to discuss in detail, but we can mention Suez, Israel, Korea, and Formosa, as particular areas where we have suffered severe diplomatic setbacks, and certainly our relationships with our allies have never been more strained. We made Nassar and King Saud men among dictators, and we forced out Eden in England and St. Laurent in Canada who were always our trusted and loyal friends. We have fed our enemies while our friends starved. What the GOP called the bold new look has become in actuality nothing more than bundles for Bulganin. To me, my friends, no blunder is more striking, damaging to our prestige abroad, or more foreign to our basic beliefs, than the administration's handling of the William Girard case. When asked about it, Dulles was as nervous as a long-tailed cat in a room full of rocking chairs. We are told that it was a political decision to turn over to a foreign and former enemy nation, an American soldier accused of committing a crime while on active duty. This decision was not based upon a treaty which had been ratified by the Senate, but upon an Executive order. The American people are entitled to all of the facts. This case could become a precedent toward establishing the most serious threat to our Constitution since the Bill of Rights was adopted.

In the field of domestic affairs, the Republican record is almost as bad. Since 1952, ours has been a government of, by, and for big business. You will recall that a prominent Republican leader disclosed that he preferred one breed of dog instead of another breed. I think it significant that he did not say he liked dogs; he merely said he liked one kind better than another. Perhaps this is because these old guardsmen have what could be termed as basically a feline philosophy. For I have noticed that the fat cats always feed the Republican kitty. Too many times the special interests have gone to their friends in the little squirrel infested putting green on Pennsylvania Avenue and come away with a dam or a public forest.

Another thing thinking citizens do not like is the concept that the President cannot be criticized for the actions of his administration. As Americans, we Democrats have tremendous admiration for Eisenhower the man. As a soldier, his record is unparalleled. We respect his present office, the highest within the gift of man. Yet, we recognize, even though his own congressional leaders do not, that he is the chief of a Republican administration. We have every right—and indeed, duty—to complain about the errors of Republican misrule. We should no longer let the old guard hide behind a man they themselves ignore. We must continue to fight the kind of Madison Avenue soft-sell that says heart attacks and ileitis operations are good for a person's general health. The next step for those hucksters will be to tell us that atomic fallout is good for us. We will continue to criticize the policies without any reflection on the man. We will make only pertinent criticism, never the scatter-shot harping used by the GOP against those great Presidents, Franklin Roosevelt and Harry Truman. No, we will not answer in kind even though we remem-

ber the slings and arrows that were hurled personally at these statesmen. No man has ever served his people so well while being so vilified as the man from Independence. My only consolation is that a man of his accomplishments and leadership is also of sufficient caliber to overlook the rudeness of the few while remembering the gratitude of the many.

As Young Democrats, we have inherited and must preserve the record of these leaders. We must do all we can to make sure that each new generation of first voters has its own rendevous with destiny. As we approach a new national convention, I think it is fitting that we look back upon the platform of the last one. In it we came out for a foreign policy for the United States, something we do not have at the present time. In our platform we came out for public power, civil rights, civil liberties, and the protection of minorities, a sane farm policy, repeal of the Taft-Hartley Act, repeal of the misnamed and infamous right-to-work laws, and return to the principles of the Wagner Act, nonpolitical disaster relief, and a broader social-security program. We also came out in favor of small business, repeal of the McCarran Act, self-government for the District of Columbia, statehood for Alaska and Hawaii, support for the United Nations, a mental-health program, Federal aid to education, lowering the voting age to 18, the abolition of the electoral college and lower tariffs and greater trade among nations. In my opinion, this was the finest statement of beliefs our organization has yet adopted. I look forward hopefully to an even better platform this year.

However, my friends, we Young Democrats must do more than write our platform, for ours is, or should be, primarily a service organization. To justify our existence we must do more for our party. The first step toward the goal of a more vibrant organization is the obtaining of money with which to operate. As your treasurer I can tell you that happiness won't buy money. Many in our clubs would like the senior party to give some financial assistance to the YDC as the GOP helps its members, among whom are many young fogies. While I share this view, I do not blame our senior party. The fault is ours. Our top elected YDC officers, myself included, simply have not made the kind of presentation of our organization's needs and ambitions that is needed. Because I have the utmost faith in our party's leaders, I know they would respond favorably.

But we should help ourselves also. We should sponsor our own fund-raising activities. In addition to this, we must maintain our present system of dues—at least until an adequate treasury is developed. I have been greatly disturbed by the fact that there have been proposals to eliminate or cut our dues introduced at every meeting we have had for the past 4 years. A dues cut without compensating income would be reckless and irresponsible. As you know, almost half of the dues and charter fees paid in to sustain this administration was spent by our predecessors. Our successors will be in better shape. Besides this, they will know where we spent every penny, and they will know that the provisions of Federal law have been followed. Each delegate to the Reno convention will have more information than was made available to me when I became your treasurer.

To me, the matter of an adequate treasury with proper reports on the same to our membership is one of the most important tasks before us. But we must do more. We must encourage wider participation in our organization's affairs. I regret that not a single regional director is a woman. We have many outstanding women YDC members and they must receive their share of the duties of this organization.

We must also help our party in other ways, such as research, special issues, first voters, registration, and other committees. We should work in our precincts to help our party grow from the grassroots up, and we should seek the aid and advice of senior party leaders. We need their cooperation in building an organization that will do more for the party.

To sum it up, Reno presents real challenges for the young democratic clubs of America. I know that by working together we will meet the tasks that face us. By building an even better youth group we will aid in the election of a larger majority of Democrats in Congress next year, and we will do our part to elect a Democratic President and Congress in 1960. Then in 1961, on a cold day in Washington, we will see a spring housecleaning in January.

Thank you.

Commencement Address by Harold C. Case

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the fine commencement address of Harold C. Case, president, Boston University, entitled "This Land—Unsatisfied by Little Ways," at Boston University's first combined baccalaureate-commencement exercises in the Boston Garden on Sunday, June 2, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THIS LAND UNSATISFIED BY LITTLE WAYS

(Commencement address by President Harold C. Case, of Boston University, at Boston University's combined commencement-baccalaureate exercises, June 2, 1957, in the Boston Garden)

Members of this graduating class, you are is favored, and fortunate, group. You are completing a major unit in your education at a time when learning is uniquely cherished and when the results of higher education are socially significant. In fact, it is likely to determine the course of our Nation, and perhaps the theme of history. Jobs are plentiful. Shortage exists in most of the professions. You can put your knowledge to work. Opportunities for advanced study are more numerous than ever before in our Nation's history. Whether you define your aims in terms of goals possible of early attainment, or as a set of long-range objectives, if you have capacity, will power, and consistency, you may have reasonable hope of fulfillment.

On the other hand, you have a fearsome responsibility. Any simple action of yours may become a symbol of American conduct. A phrase may characterize a national idea. An influence for good or ill as expressed by any of you may go to the end of the earth, healing or hurting beyond power of recall.

Listen to Norman Cousins' estimate of your opportunity and responsibility. He says, "You are asked to think of a man. Think of someone, living or dead, whose life has enriched your own. Think back for a moment on the name or names that have given history a forward thrust, a sense of direction, an infusion of important knowledge, an encounter with the beautiful. Names connected to great ideas or causes or deeds or works of art.

"You are asked to do this because an intimate relationship, all at once, has come to exist between the life of such a man and your own. The turn of events has now made you the custodian of all his works. For it is now in your power—power on a scale never before possessed by human beings—to protect and fulfill those great works and ideas or to shatter them beyond recognition or repair.

"There is no achievement in human experience, no record, no thing of beauty that cannot now be rescinded and all its benefits and traces swept into void. It is this that distinguishes our generation from all previous generations: We possess total authority not only over our own time but over all the ages and works of man. Earlier generations have had the power merely to affect history; ours is the power to expunge it.

"We have managed somehow to unhinge the permanent. Everything that has occurred in history until now has suddenly acquired interim status. The mammoth struggles and sacrifies, strung together over a period of centuries, that have reduced barbarism and released the human individual for creative purposes—all these struggles are now fragile and uncertain as though they had never been won."

Our task, then, is not merely to confirm the deeds and dreams of the past, but to apply them with prophetic insight to the solution of the problems of the future.

For this task we need to breathe a new inspiration into a people. We are living in the age of the common man. The necessities of life—food, shelter, clothing, education, security—can be provided for every person. Equality of opportunity for all is barely around the corner. Now a new question emerges: What kind of person will common man be when he has the ingredients for an uncommon life?

What if our civilization, the product of education, training, discipline, religion, the unique contributions of a gifted minority, should stultify creativity and stimulate mediocrity?

Clearly, the problem before us at the midcentury, as Erwin D. Canham states it, is "one of awakening. Man has carried far toward fulfillment, his mastery of the material environment. This control can continue to go forward, doubtless at an accelerating pace. It is increasingly and widely evident that man's primary challenge today is to control himself, to solve his social problems, to apply more effectively the moral and spiritual truths he has always known and imperfectly lived" (Awakening: The World at Mid-Century, p. 197).

We now know that accessibility of material goods and even of intellectual insights cannot guarantee social sensitiveness, humane concern, and spiritual insights. Automation may increase leisure. It cannot guarantee integrity. The very instruments and techniques which have made mass wealth and mass culture possible may be used to vulgarize and stultify the masses.

Unless learning enjoys a spiritual foundation. If, as one skeptic puts it, "We are all aimless atoms ambling to annihilation," or if we believe that life is a "brutish burlesque, a foolish farce, or a meaningless muddle," then we are not likely to be summoned to any high design, in behalf of any lofty goals.

One of the talking-animal stories current some time ago had to do with two sardines. They were swimming together up the Hudson River. The current was swift. The tide was strong. The swimming was difficult. The sardines were complaining about the exertion. One said to the other, "Why do we swim at all? Why don't we go over and take the subway to 125th Street?" To which

the second sardine replied, "What, and be packed in like people?"

If we are only sardines packed in like people; that is, if we do not possess significance, or find cosmic meaning in other people—all people, then we are not likely to discover the inspiration for greatness.

If, however, we do regard every person as possessing infinite worth, and if we see ourselves as obligated to prove the dignity of our position in society, then we have a basis on which to produce large outlooks, strong motivations, and valid disciplines.

In thinking of the size of the dreams and of the dreamers in our past, Stephen Vincent Benet (in Listen to the People) says:

"Out of the flesh, out of the minds and hearts
Of thousand upon thousand common men,
Cranks, martyrs, starry-eyed enthusiasts
Slow-spoken neighbors, hard to push around,
Women whose hands were gentle with their kids
And men with a cold passion for mere justice.
We made this thing, this dream.
This land unsatisfied by little ways,
Open to every man who brought good will
This peaceless vision, groping for the stars,
Not as a huge devouring machine
Rolling and clanking with remorseless force
Over submitted bodies and the dead
But as live earth where anything could grow,
Your crankiness, my notions and his dream,
Grow and be looked at, grow and live or die.
But get their chance of growing and the sun.
We made it and we make it and it's ours.
We shall maintain it. It shall be sustained."

Moreover, stature in living requires appreciation to match all criticism. Important as it is to develop the critical mind, it is dangerous to live with hostility, always asking, "What is wrong here?" For shortly one will forget to inquire, "What is right here?" The persons who make the greatest contribution to the success of society do not seek self-aggrandizement. They are moved far more by need than by the prospect of publicity. They believe in values, not in propaganda. They never take anything for granted, but always take the experiences of life, good and bad, as if they have been divinely granted.

They find reverence before a sandwich or a sunset. They are attentive at a symphony concert or a seminar on human problems. They know that they do not deserve anything of life, except the opportunity to prove that they are worthy of it. They are not driven to despair by unexpected reverses, nor are they elevated to untenable heights of optimism by unprecedented successes. They can meet with triumph and disaster, and treat these two imposters just the same.

In this mood, one remembers Somerset Maugham, who used to stay at the old Ritz-Carlton Hotel on Madison Avenue, in New York. He always took the same bedroom and sitting room. One thing seemed curiously out of place, an old cracked cup sitting on top of the chest of drawers.

One day Jacques Chambrun asked Maugham about it. He smiled, "Why," he replied, "it serves to remind me that when all is said and done, the best things in life are the simplest—and the least appreciated, because we take them for granted."

He told of the cracked cup's history. In 1940 when France fell, the several hundred English citizens living in the south of France were evacuated in two small cargo vessels. They were forced to take a long zigzag route to dodge enemy submarines. Each ship was so crowded that there was hardly a free inch of space, and the blazing summer sun turned the decks into a furnace.

The big moment of each day came when the scanty supplies were rationed out. Grim, red eyed, hungry, and above all, thirsty, the passengers would line up for their share.

"That," said Mr. Maugham, pointing to the old cracked cup, "was what held my daily allowance of water. Whenever I feel myself getting a bit stuffy and inclined to take the comfortable places I stay in, and the good food I eat, for granted, I fill up my cup at the tap and drink it—slowly. It brings me to earth again in quite a hurry."

If ever you find yourself getting stuffy, feeling overconfident, taking your privileges for granted, will you find some old cracked cup, some symbol of hardship, some token to stir up your remembrance that life is terribly difficult, and will you fill it up, and drink slowly—returning again to a proper sense of gratitude—and of decent humility?

Your influence will be best, if you consistently support the ideal and the method of democracy. Judge Curtis Bok has said that in the "whole history of law and order, the longest step forward was taken by primitive man when, as if by common consent, the tribe sat down in a circle and allowed only one man to speak at a time."

This attitude of respect for another point of view, with attention to the ideas and convictions of different people, expressed one at a time, and without censure or heckling, is the essence of the democratic method.

In order to win the struggle for freedom we must believe in it, continue it in strength, and use it for the development of new avenues for the mind. Judge Learned Hand stated the issue in dignified prose, saying, "I believe that that community is already in the process of dissolution where each man begins to eye his neighbor as a possible enemy, where nonconformity with the accepted creed, political as well as religious, is a mark of disaffection; where denunciation without specification of backing, takes the place of evidence; where orthodoxy chokes freedom of dissent; where faith in the eventual supremacy of reason has become so timid that we dare not enter our convictions in the open lists to win or lose. Such fears as these are a solvent that can eat out the cement that binds the stones together; they may in the end subject us to a despotism as evil as any that we dread; and they can be allayed only insofar as we refuse to proceed on suspicion, and trust one another until we have tangible ground for misgiving. The mutual confidence on which all else depends can be maintained only by an open mind and a brave reliance upon free discussion."

The builders of the bold dream cannot give timid support to truth, nor fear that it is weaker than lies. The way of freedom is the way into the future for mankind.

Finally, your effectiveness in living, your value to your generation, your satisfactions will require an unending quest for knowledge. You are commencing, not ending your education today. You are promising to make it your consuming purpose to know more and more important facts about life. You will be called upon to help to stabilize our economy, so that runaway inflation does not destroy the promises of plenty for mankind. You will not fear living in a world in which there are competing political and economic philosophies. You will recognize that the death of civilization as we know it, awaits another holocaust of war, and you will strive with all of your strength, to prevent such a catastrophe. You will express effective citizenship, with a righteous ethic in relationship to government, and you will expect nothing less of your representatives at all levels of political life. You will strive to understand and to support the improvement of international organization. You will feel stronly moved "to proclaim and clarify to yourself and to the world, the spiritual significance, and the practical social consequences of the free-enterprise system, as the true and liberating revolution of human history." The binding burden of toil has gone, the dark blanket of ignorance has been dispelled, the bright beam of knowledge has become a guiding light. The essential dignity of each person, and the right of all to enjoy to the full, the benefits of the social order, has become a solemn commitment. We are suddenly called on to make it clear that we have a concern for mankind, as wide as the expanses of the planet, and that our concern prompts us to know the most, and to behave in the best way in order to hasten the coming of peace, freedom, justice, equity, brotherhood, and universal well-being.

The survival of values long a-building is at stake now. Each of us is called on to contribute, that "this land unsatisfied by little ways" may be "open to every man who brought good will," that every man may—

"Grow and be looked at, grow and live or die.
But get their chance of growing in the sun.
We made it and we make it and it's ours.
We shall maintain it. It shall be sustained."

My best wishes to you all.

Statement of the Very Reverend Father Constantine J. Kazanas, in Behalf of the Greek Orthodox Archdiocese of North and South America, Before the House Foreign Affairs Committee Favoring Passage of the Mutual Security Act of 1957

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. FULTON. Mr. Speaker, under leave granted to extend my remarks in the RECORD, I include the following statement:

STATEMENT OF THE VERY REVEREND FATHER CONSTANTINE J. KAZANAS, IN BEHALF OF THE GREEK ORTHODOX ARCHDIOCESE OF NORTH AND SOUTH AMERICA, BEFORE THE HOUSE FOREIGN AFFAIRS COMMITTEE FAVORING PASSAGE OF THE MUTUAL SECURITY ACT OF 1957

I am dean of the Cathedral of the Holy Trinity in New York City and have been delegated by His Eminence Archbishop Michael, to convey to you the views of our church in favor of the continuation, improvement, and expansion of our Government's foreign aid programs in the specific fields of economic development and technical cooperation.

We are well aware of the fact that such action has been supported admirably by representatives of larger church groups, such as the National Council of the Churches of Christ in the United States of America. It is our conviction, however, that the religious and moral considerations in favor of foreign aid are so basically important that we must add our voice to those which are being heard with rapidly increasing volume from the churches in our country that are urging constructive action for the underdeveloped areas of the world.

Parenthetically, I would like the committee to bear in mind that, although this testimony summarizes the views of the archdiocese, some of my remarks today are based on findings to which I contributed personally while on a factfinding mission of the church

in Greece, Lebanon, Syria, Israel, and Jordan between July and October 1953.

The Greek Orthodox Archdiocese represents over 1,200,000 Americans, and, as you know, it is directly related with the Eastern Orthodox Church of apostolic origin, with a total of 250 million communicants in the world today.

A great number of our Orthodox Christian brethren are prayerfully awaiting the day of deliverance from the oppression of godless communism. The foreign aid that we seek cannot satisfy their needs, but it could serve to destroy in time the hold of the Soviet bloc on the minds and hearts of these Christians.

The experience of our church in the free world, however, is sufficient to justify our emphatic support of economic development and technical assistance to those countries which are underdeveloped but whose citizens deserve everything that we enjoy in this blessed land.

The courageous men and women who pioneered across the country knew the suffering of scarcity and privation. They survived by sacrificing and sharing even the little they had. Yet they would be terror-stricken by our scandalous omission of similar action in this age of ever-increasing abundance. They would be justified, however, for in this last fiscal year the American people set aside for development assistance and technical cooperation with countries suffering such scarcity only one-tenth of 1 percent of our gross national product, which has surpassed the staggering sum of $410 billion per year.

Of course, we know how much the American people have contributed to countries abroad, but we submit that only a small percentage of our annual appropriations has been earmarked for the constructive, nonmilitary assistance for which we seek your earnest consideration today.

We respectfully suggest that direct military aid and defense support of friendly nations, which cost us some $3 billion this year, confuse the picture that the American public has of foreign aid. We justify such spending because we tend to see the division between the Communist and the free world as the great problem of our time.

Evidently we have missed the new, equally challenging problem that has developed since World War II, and that is the one presented by the underdeveloped nations of the world. This challenge will persist for the balance of this century, regardless of the evolution of the Communist threat.

Although the Eastern Orthodox Church and our Archdiocese of North and South America in particular are in accord with military assistance to foreign countries for world peace, we fervently believe that, in the final analysis, a dollar invested for economic development and technical aid in those very same countries will reap a richer harvest in economic stability, mutual understanding and confidence, and enduring peace than a dollar spent on military aid.

We urge, therefore, your earnest consideration of a long-range foreign-aid program that will have as a basic principle the sacredness of human life which is delineated in the Judaeo-Christian tradition inspiring millions of our fellow Americans.

With such motivation guiding our foreign-aid policy toward underdeveloped nations, we can reverently look for the fulfillment in our time of the prophecy of Isaiah that nations "shall beat their swords into plowshares, and their spears into pruninghooks: nation shall not lift sword against nation, neither shall they learn war any more."

Commencement Address by John Cowles

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES

Friday, June 21, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD excerpts from the excellent commencement address at Simpson College, Indianola, Iowa, June 2, 1957, given by John Cowles, president of the Minneapolis Star and Tribune.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

AMERICA CAN'T ENJOY PERMANENT PEACE AND WELL-BEING BY ITSELF

(Excerpts from the commencement address at Simpson College, Indianola, Iowa, June 2, given by John Cowles, president of the Minneapolis Star and Tribune)

We are living in a revolutionary age—perhaps the most revolutionary in recorded history. The world has changed more in the last 40 years than in the previous 400, much more in the last decade than in the previous century.

Technological progress is taking place at a rapidly accelerating pace. Each new scientific discovery stiffens the technoiogical competition in which the great powers of the world are now engaged. If this country fails to keep ahead of Russia—or at least stay abreast of it—the penalty may be national disaster. It may even be national extinction.

In our lifetime, most of the world's people have radically changed their forms of government. Since the end of World War II, 19 countries have won their independence. Throughout the world there has occurred what someone has well called the revolution of rising expectations. In this revolution, more than half the peoples of the world have rebelled against the social and racial discriminations and low living standards to which they had submitted for centuries.

Most of the new nations which have recently won their independence do not have a sufficient number of educated and trained leaders to staff their governments. While many have retained the revolutionary fervor that produced their freedom, they often lack the wisdom and perspective to act in their own long range best interest. The situation is further complicated by the skillful exploitation by the Russian and Chinese Communists, for their own selfish ends, of the aspirations and grievances of the earth's uneducated and underprivileged peoples.

It is, in fact, almost impossible to exaggerate the importance of American foreign policy in this revolutionary period.

Our foreign policy is a thousand times more important now than when I was a boy. Then we felt secure in the protection of the two oceans and behind the friendly shield of the British Navy. Today the two oceans no longer offer such protection and the friendly shield no longer functions.

WHY THE AMERICAN BUDGET IS BIG

The current fight over the Federal budget is only one indication of the immense importance of our foreign policy decisions. The budget inspires controversy because it is big, and it is big because the great bulk of our total Federal expenditures relates to national defense and foreign policy.

International affairs have become so complicated that the Secretary of State today with the single exception of the President, has the most difficult job in the world. Secretary Dulles is an indefatigable worker and a superb international lawyer. Perhaps he knows more about world diplomatic history than any other living American. Nevertheless, I believe that some important aspects of our current foreign policy, particularly those relating to Asia, should be dispassionately reviewed and then basically modified.

First of all, we cannot have a sound foreign policy unless the public is well informed. Secretary Dulles made a serious error, I believe, when he ruled that American newspaper correspondents could not go to Red China. Mr. Dulles has since offered a variety of different reasons to justify his decision, but his arguments, in my opinion, will not stand analysis.

Basically, Mr. Dulles simply fails to comprehend that the function of our foreign correspondents is to inform the American people of what is happening in other parts of the world, not to act as agents of the Government. Whether or not we officially recognize a foreign government is completely irrelevant as to whether our newsmen should be permitted to report what is happening in that country. American press corespondents should be permitted to gather the news wherever they can in the interest of our having a well informed American public.

Wholly apart from Mr. Dulles' ruling with respect to newspapermen, there is also the question of the wisdom of our overall policy toward Red China.

PROGRESS AND SUFFERING IN RED CHINA

Some people seem to regard it as tantamount to treason to suggest a re-examination of our China policy. I disagree sharply with that attitude. I believe that our China policy should be objectively reviewed, because I fear that if we continue the present policy we shall probably suffer a futile and humiliating diplomatic defeat.

Regardless of how ruthless the present Communist government of Red China may be, most Asians believe that Mao has accomplished many creditable things of a distinctively Asian kind in China. There is, to be sure, much suffering and starvation in China, but there always has been. We must not blind ourselves to the evidence that the Communist Chinese government has made, and is still making, significant economic progress. It is, furthermore, steadily consolidating its control over all mainland China.

The notion that Chiang Kai-shek's nationalist forces on Formosa will ever be able to invade and reconquer the Chinese mainland seems to me absurd.

Equally unrealistic, in the eyes of most Asians, is our State Department's contention that Chiang Kai-shek's Formosa government constitutes the true blood-stream of Chinese history.

At the last meeting of the United Nations General Assembly, the United States had extreme difficulty in lining up enough votes to prevent the recognition of Red China, instead of Nationalist Formosa China, as the Chinese United Nations member. Most informed observers think it is unlikely that we shall be able to block Red China's admission to the United Nations for more than one more General Assembly at the most.

If we adopted a more flexible and realistic policy toward Red China, we might be able to secure important concessions in return

for our acquiescing in its admission to the United Nations. But our present policy is a sterile one. We are walking down a blind alley that will end in nothing but a humiliating diplomatic defeat.

Let us shift from China to South Asia and to Africa and Latin Ameria. In these areas I believe that the United States needs a much bolder and more imaginative national policy relating to world economic development than we now have.

ECONOMIC ASSISTANCE IS NOT A WASTE

It is quite impossible for America to disassociate itself from the economic welfare of other countries. It is clearly in our national self-interest that the whole world experience a sound economic growth and increase in wealth. For one thing, such economic growth tends to promote political stability and, therefore, world stability. For another, the United States needs dependable supplies of raw materials from all parts of the globe.

Therefore, we should, I believe, substantially increase the amount of funds we are currently providing for foreign technical assistance and economic development. Contrary to the widely held misconception, we are not wasting billions on giveaway programs of foreign economic aid. Aside from our foreign military aid and defense support, we are spending only between 400 and 500 million dollars a year for genuine technical assistance and economic development aid.

This is the total for the whole globe. It amounts to less than $3 per year per American citizen. I think we would be wise to double or triple that amount.

The relationship between a giver of financial aid and the recipient is always a sensitive one. We should recognize this psychological fact by revising our foreign aid policy to encourage the recipient nations to give us something in return for the dollar aid that we extend them.

These underdeveloped countries would feel a sense of pride and satisfaction, I believe, if we made it clear to them that we believe they have in their cultures and civilizations things that we lack and want. We might ask them, for example, to provide us with teachers in their languages and their history and culture. These teachers would then come to the United States and serve in our educational institutions. We could learn much, too, from extended visits to our colleges by Asian philosophers.

Many of the economically underdeveloped countries of Asia and Africa would be happy, I believe, if we asked them to give us some of their art objects to enrich our museums, in partial return for our dollar aid.

Other countries might, for example, give us animals for our public zoos. In countless ways we could make our foreign aid programs more truly reciprocal, with resulting psychological, cultural, and financial benefits to everybody.

To those of you who may be inclined to feel that foreign economic aid should be reduced because taxes are already too high, I would suggest that there are other things in our governmental setup to which your attention could more profitably be devoted.

Perhaps the need that is of paramount importance is to redefine the roles and missions of our own Army, Navy, and Air Force so as to reduce the present enormous waste resulting from duplication or triplication.

Under the existing military setup, our Army, Navy, and Air Force constitute three largely independent defense establishments. Because of nuclear weapons and long-range guided missiles, the traditional definitions of the roles and missions of the three services are now meaningless. Whenever a new technological invention comes along, each of the three services tries to develop it without regard for the other two services.

MILITARY PROGRAM NEEDS REDEFINITION

While I lay no claim whatsoever to possessing any personal expert military knowledge, I have talked with enough military and scientific people of high competence to have reached the conclusion that we should probably completely redefine existing military roles and missions to produce two new complementary forces:

One of them should be a strategic force built around SAC's long-range bombers and intermediate and long-range guided missiles. This strategic force should probably also include many more atomic submarines than we now have, to serve as mobile platforms for launching guided atomic missiles.

The second major element should be a tactical force equipped with atomic weapons and the essential supplemental conventional weapons for fighting so-called brush fire wars. This second, or tactical, force should possess an airborne capability far surpassing anything we now have, so that we could quickly fly a couple of ground divisions to any part of the world and supply them by air.

If we redefined roles and missions along these lines, we would be greatly minimizing, if not completely eliminating, the separate, semi-independent entities of the present Army, Navy, and Air Force. The generals and admirals would henceforth have to think of themselves solely as officers of the United States defense establishment, not as officers of simply one of three separate—and frequently jealous and conflicting—services.

But even if we reorganized our military establishment along these lines, and eliminated several billions of dollars a year of overlapping expenditure and waste, I doubt that we could safely cut our total defense expenditures below their present levels. This is because the new weapons are fantastically expensive.

If we do not fundamentally reorganize our overall defense establishment, I think we are going to have to increase our defense expenditures unless we are willing, which I, for one, am not, to gamble with our national security.

We cannot safely make any enormous savings in our defense spending until we have achieved a foolproof, airtight, enforcible system of universal international disarmament.

WHY TAXES WILL CONTINUE HIGH

Our taxes are high, extremely high. Much as I favor governmental economy and hope for the elmination of every possible dollar of waste, I believe our taxes will have to stay high for years to come. It might be well for us to recall what Oliver Wendell Holmes said—"Taxes are what we pay for civilization."

And speaking of civilization, let us not forget that the great British historian, Arnold Toynbee, recently suggested that the 20th century would be remembered, not as the age of the atomic bomb, but as the first time when man thought it practicable to distribute all the benefits of civilization to all people.

We in the United States constitute only 6 percent of the world's population. The majority of the people of the world live in Asia. One-third of all the babies being born in the whole world today are Chinese. If one adds the other Asian countries, far more than half of all the babies born today are Asian.

We Americans must comprehend the fact that the concept of permanent peace and well-being for the United States has become indistinguishable from the concept of peace and well-being in the whole world.

A few weeks ago Dr. Edward Teller, one of the world's most distinguished nuclear scientists, told me his definition of an optimist. "An optimist," he said, "is someone who believes that the future is uncertain."

Well, I am an optimist. I believe the future is uncertain. But I also have a deep conviction that if the American people become sufficiently well informed on what is happening throughout the whole world today, we will support the right policies and do the right things.

In that way we will avoid a devasating world war III that might destroy what we call civilization, and instead help produce a new era of freedom and well-being—a richer, fuller life for all the peoples of the world than any of them has ever previously known.

The Lone Star Steel Co.

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. JOHNSON of Texas. Mr. President, the Lone Star Steel Co. has become a vital factor in Texas—not just economically, but in terms of the regard in which it is held by Texans.

It was a pleasure to discover in the June 15 issue of Business Week an article tracing the history of the company and its current status under the able direction of E. B. Germany.

I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TEXAS STEEL MILL PUTS ALL ITS BETS ON OIL

Less than 10 years ago, the War Assets Administration couldn't find anyone outside of Texas who'd bid much more than $3 million for a languishing iron operation in the piney east Texas hills, 150 miles from Dallas—even though it had cost Uncle Sam 10 times that sum.

Today, the Texas-born Lone Star Steel Co., with its original wartime facilities now augmented by the modern steel plant you see in the pictures, can boast a pretty impressive record. Last year:

Lone Star produced at 114.47 percent of capacity—the highest operating rate in the industry—against a national average of 89.8 percent.

In net income per ton of ingot capacity, Lone Star was first among carbon steelmakers with $18.46, more than double the industry average of $8.64.

Lone Star's net profit as a percent of sales jumped to 11.45 percent (third highest in the industry) from 7.39 percent in 1955. At the same time, the percentage for the industry dropped to 7.28 percent from 1955's 7.82 percent.

The company's sales hit $88 million, a steep climb from the $27-million figure only 3 years earlier, when the steel plant's open-hearth shop was put on the line for the first time. Net income of $10.1 million was almost 5 times 1953's $2.1 million.

Maverick—the company that has put on this performance is a sort of maverick of the industry. Though it's a fully integrated steel operation, Lone Star has deliberately put all its eggs in one basket. More than nine-tenths of its total income today comes from the sale of oil-country goods—casing, tubing, and pipe. And in the battle between electric weld and seamless pipe, it has put all its bets on electric weld.

Lone Star has staked its bread and butter and its whole future on the rough-and-tumble industry that has made the words "Texas" and "oil" almost synonymous. So it's wooing its rough-and-tumble customers with a genial caricature of themselves—a

symbolic figure that the company calls Joe Roughneck and bills as the heart of the oil and gas industry.

Balance sheet: In the race for the oil goods market, Lone Star has a couple of solid geographical advantages: (1) It's set down right in the middle of its ore supply, and (2) its market literally surrounds the plant.

Of course, it is true that the ore is low grade and has to be beneficiated; and the green, untrained labor available in the area was at first a handicap. On top of that, Lone Star has had to fight off the weight of a sizable debt; and life for stockholders has been barren of cash dividends. But President E. B. Germany is so firmly convinced that Lone Star's future is soaked in oil that he's ready to put more money on the line to back it up. The company is engaged in an $8 million expansion that will add, among other new facilities, a fifth open-hearth furnace.

I. ORE IN THOSE HILLS

Some observers say the "eastern dudes" simply missed the boat on east Texas iron ore. At any rate, it took a group of east Texas merchants and a few sharp Dallas bankers to turn a sickly war orphan into one of the hottest operations in the steel business.

For more than 100 years, many people knew the rolling hills of east Texas made pretty poor farming country because there was too much iron in the soil. But if there was too much iron for farming, there didn't seem to be enough for iron making. Attempts during the past century to start up an iron business ended up on the rocks.

Wartime spurt: But with World War II, iron came into critical demand, and a group of Texans, with typical enthusiasm, thought they saw a chance to do something with the ore. They arranged a deal in 1942 whereby the Defense Plant Corporation would build an installation (with the Texans putting up $1 million), and Lone Star would operate it for 7 years with option to buy. The plans called for an ore beneficiation plant, some coke ovens, a powerplant, and a blast furnace.

Start in life: The war, and the iron emergency, ended before the installation was completed. When the best outside bids for Uncle Sam's $30 million white elephant barely topped $3 million, Lone Star backers dug into their well-lined pockets and came up with a $6.3 million bid that the War Assets Administration O. K.'d.

The coke ovens and powerplant were operating and ore was being shipped, but the blast furnace was then only on a standby basis.

For a couple of years the company produced and sold pig iron, then took its first major forward step by installing a cast-iron-pipe foundry.

During these years, Lone Star leadership passed from John W. Carpenter (now board chairman of Southland Life Insurance Co., of Dallas, and still a Lone Star director) to E. B. Germany, an oilman turned steelman. Germany had started out in the unlikely role of high-school principal, then switched to oil and successful wildcatting. He was one of the original backers and directors of Lone Star, and is still president at a vigorous 64.

Leap into steel: With the cast-iron-pipe foundry running at capacity, and accounting for $3 million of 1951's $19.5 million sales, Germany and his associates were ready for the bigger push they had been preparing for.

A big leap into steel was the obvious move—and steel shortages, made more acute by Korea, provided the opportunity. The company was able to wangle a loan of $50 million from the Reconstruction Finance Corporation, and the National Production Authority provided another $37 million through second mortgage notes maturing in 1971. With this backing, Lone Star was able to build 550,000 tons annual steelmaking capacity, including 4 open-hearth furnaces, a rolling mill, and 2 pipe mills. It began making steel in 1953.

Multiplication: That's when sales figures started shooting skyward—and earnings followed along, after a slightly delayed takeoff. Steel accounted for $12.6 million in sales in 1953, $25 million in 1954, $62 million in 1955, $77 million of last year's $88 million total sales. Lone Star officials have their eye on $100 million in steel sales alone this year.

At the beginning, a lot of production bugs in steel had to be worked out, and an absolutely green labor supply meant using 2 or 3 men to do the work of 1. So in its first full steel year, 1954, Lone Star went more than $1 million in the red. But net income jumped back past $4.5 million in 1955 and hit $10.1 million last year.

II. PLACING A BET

Oil industry people have hassled for years over the relative merits of seamless vs. electric weld pipe. Lone Star, under Germany's leadership, plumped for electric weld as "the most salable end-use product for us"—but only after exhaustive studies by its consulting engineers, A. J. Boynton & Co., and the consulting geologist firm of DeGolyer & McNaughton. Seamless has been around much longer than electric weld, but in the past 25 years electric weld has been gaining on it.

Here's why Germany figured it was smarter business for Lone Star to go for electric weld. All oil company pipe is sold according to American Petroleum Institute standards, and one of the most popular kinds is API's "J–55." Since it's suitable for any well that goes down less than 9,000 feet, and the great majority of wells today are to depths less than that, the greatest demand for casing is for J–55. In performance and price, electric weld J–55 and seamless J–55 are the same.

But when it comes to getting into the business, an electric weld plant costs less to build than a seamless mill, and cost of production is lower.

Market: Beyond that, Germany figures it won't be too long before overall United States sales of electric weld come up to a par with the older seamless. And since Lone Star's total capacity output now can't supply as much as 15 percent of oil industry demand for J–55 casing, he has no fears about future markets.

III. IN ITS OWN BACKYARD

Despite the Texan ardor of its backers, and the easy accessibility of Texan ore, even Lone Star had a few qualms at the beginning as to whether the ore could be used profitably. It hired Kerr & Co., engineers of Los Angeles (certainly no spot for a pro-Texas bias), to make a detailed study.

Kerr & Co. came up with the categorical conclusion that Lone Star's beneficiation methods made its reserves "one of the lowest-cost supplies of iron ore remaining in the United States." Lone Star has acquired some 56,000 acres of ore-bearing land in the area.

The ore is strip mined, and as mined, it runs from 19 percent to about 25 percent iron. After beneficiation, iron content is raised to around 50 percent. That's close to the 51.5 percent standard that open-pit Mesabi range ore now has trouble reaching—though it lags behind the 63 percent of pelletized taconite or jasper concentrate.

As for costs, Kerr & Co. found Lone Star's weighted average cost per long ton was $3.05. At that time, ore with 51.5 percent iron content sold at lower Great Lake ports for over $8 a gross ton.

Scrap: As for scrap for the open-hearth furnaces, Germany says "we have this whole area to draw upon," and there's no trouble getting it at favorable prices and low freight costs. There's only one other user of scrap in that part of the country. Lone Star's ratio now runs normally at about 40 percent hot metal to 60 percent scrap. With technical changes to step up blast furnace capacity, plus the fifth open-hearth, it's expected to be 65 percent scrap.

Within reach: Lone Star also has extensive coal reserves less than 250 miles away in Oklahoma. It gets limestone from a Chico, (Texas) quarry, dolomite from Oklahoma manganese from Mexico. The east Texas fields supply plenty of cheap gas for fuel.

Labor comes out of the east Texas hills, too: 78 percent of Lone Star's nearly 5,000 employees are natives of the region. The rest are largely skilled supervisory personnel brought in from other steel centers to train the erstwhile farmers and stockmen.

Right in the middle: Lone Star's markets aren't quite confined to its backyard, but they, too, literally surround the plant at Lone Star, Tex. (offices are in Dallas). A year ago there were 2,712 drilling rigs operating in the United States, and 2,241 of them were drilling in Lone Star's seven-State trade area. Roughly 83 percent of all wells drilled in the United States were within an overnight haul.

The advantages are obvious: "The plant's location in the center of oil activity," says Germany, "enables drillers to order months in advance, pick up their pipe on the morning of the day they need it, and have it in the well by nightfall."

There has been talk for years of Jones & Laughlin coming into Lone Star's domain with a 1-million-ton mill near Houston to produce seamless pipe. Germany professes to be unworried, says the oil industry will double its activities in Lone Star's sales area in the next 5 years.

IV. ROCKS ALONG THE ROAD

A total of $87 million in funds from United States agencies—the amount Lone Star got from RFC and the National Production Authority together—is quite a hunk of cash, and might seem to take care of all financial worries. But it has its drawbacks, too.

For one thing, despite increasing profits, stockholders have yet to pocket their first cash dividend (though their shares have had a hefty rise on the over-the-counter market). That's because as long as the NPA loan is outstanding, the company can't pay dividends without Government consent. In February this year, Germany did get permission to pay a stock dividend.

Weight of debt: For the past couple of years, Germany's toughest job has been fighting the company's sizable debt, which peaked at something more than $88 million in 1954. Since then Lone Star has worked it down—it whittled off $26 million in the past 15 months alone—but almost got itself in a bind in the process.

In 1954, when Lone Star's cash position was at its worst, it got an agreement with RFC for rescheduling loan maturities and releasing certain unused construction loan funds for working capital. At the same time Lone Star agreed that, if requested, it would refinance its outstanding indebtedness by issuing some securities RFC thought would be more marketable.

This agreement would have involved issuing up to 1 million shares of common by March 1 this year, at $9.50 a share. But when the time came to think about issuing this stock, the common shares had climbed to $26—and 1 million new shares at $9.50 would have upset the existing stockholders' equity. Lone Star's phenomenal sales climb, however, enabled it to get off the hook by anteing up $7 million in cash by April 1 to pay off part of the debt and make the stock issue unnecessary. Now the financial prospect looks smoother, and expansion to enlarge Lone Star's slice of the market in oil country goods is well underway.

Ahead: Present schedules call for having the fifth open-hearth furnace in operation by year-end; and a stretch reducing mill is

now being installed at the plant. The $8 million expansion also includes a projected bar mill, which will use scrap from the pipe welding.

Despite recent rumors, Germany says Lone Star is not in the market for mergers at this time.

A Triumph for Senator Hill

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very fine article written by Doris Fleeson and published in the Evening Star, Washington, D. C., on June 14, 1957, concerning the legislative achievements of our distinguished colleague, Senator LISTER HILL, from Alabama.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A TRIUMPH FOR SENATOR HILL—POPULAR LAWMAKER WINS $32 MILLION EXTRA FUNDS FOR MEDICAL RESEARCH

(By Doris Fleeson)

A dedicated Senator, riding his personal popularity in the Senate, and putting to a test his feeling that the economy wave has receded from its peak, has succeeded in adding $32 million more than President Eisenhower had called for to the budget. The object was more medical research.

Senator LISTER HILL, the son of a distinguished pioneer surgeon, has been a sponsor of health legislation throughout his Senate career. It was he who first raised the question with the then Secretary of Health, Education, and Welfare Oveta Culp Hobby as to whether the Department had planned to meet the demand for Salk vaccine. It had not foreseen the demand, Mrs. Hobby declared, a statement later quoted in hundreds of Democratic speeches. It eventually was a Hill-sponsored bill which made possible free vaccine for all children between the ages of 5 and 20.

Senator HILL is in a unique position to further his interest in health matters. He is chairman of the Senate Labor and Public Welfare Committee before which such matters come. He also is chairman of the appropriations subcommittee which operates in the same field. He has made the most of his opportunity. Again and again Senate appropriations for medical research have outrun the proposals of the administration.

There is a certain amount of sublimation in HILL's devotion to the cause of health. Early in his career in the Senate he was chosen as whip under the leadership of Alben Barkley, at that time majority leader. The young Senator had a bright career before him, which certainly would have landed him the position of majority leader by now. It might have taken him to higher things.

The growing discord over the question of civil rights settled HILL's fate. He recognized that he could not sponsor Democratic civil-rights legislation as majority leader and remain as a Senator from Alabama. He resigned his post as whip. Since then he has concentrated on health and welfare matters.

HILL had been heard to say that he would not try to increase the health research appropriations unless he felt a change in the Senate's economy mood. In a number of instances lately that mood has been exhibited more fiercely than in the House. His judgment was apparently correct. There was not a single vote against his amendments.

On the contrary, even some of the most avid economists in the body practically fell over themselves in praising HILL. In the RECORD the praise appears fulsome enough to have done appropriately for a departed colleague of whom no one will say unkind things.

HILL went right down the line reaching for increases, playing no favorites among the enemies of mankind. Cancer research got an added $11.6 million. Mental-health problems received $4.2 million more, heart disease research $5.3 million extra, arthritis and metabolic diseases $5.6 million additional, and neurology and blindness $5.1 million more.

Although voting to support Senator HILL at every turn, the Senate salved its conscience in the matter of economy by voting more than $96 million less for the total labor-welfare appropriation bill than President Eisenhower had requested. It even managed to reduce the amount appropriated by the House by $38 million or so.

But for Senator HILL, no one would say him nay. It was a triumph not only over the winds of economy which have been blowing through the Congress, but over an administration he thinks has been lagging in promoting medical research.

The Soil Bank—Sentenced Without Trial

EXTENSION OF REMARKS
OF
HON. ROBERT D. HARRISON
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. HARRISON of Nebraska. Mr. Speaker, I wish to call the attention of the House to an editorial in the Schuyler (Nebr.) Sun. The editorial reflects the deep concern felt by many people on the farms and in the towns and cities of the Middle West. The folks believe the soil bank should be allowed to continue until proven a good or a bad element in our adjustment to new farm needs and problems. Now that the Senate has acted favorably on the soil bank, I am confident that the House conferees will reverse the course of the House and agree in continuing this helpful farm program. I earnestly hope that every Congressman and Senator interested in the farm situation in our country will read the following editorial:

SENTENCED WITHOUT TRIAL

Unless something drastic happens between now and June 30, the soil bank will pass into political oblivion on that date.

The infant, not yet 1 year old and reared in dire desperation, never stood a chance. It was suffering from patisanitis the day it was born and became progressively worse after election.

Was it a good idea? We'll never know because it was never given a fair test. And that seems to be the story of the farm program. Each year someone comes up with a brainstorm only to have it kicked around for political benefits and then after it has served its purpose, it is thrown on the dung-hill of farm programs—which, incidentally, is growing higher and higher as Congresses pass by.

Meanwhile, down on the farm, the tiller of the soil just doesn't know which way to turn. On the average, he is willing to try anything to help keep the farm economy from floundering like a waterlogged vessel. But, instead of sending out the lifeline, our lawmakers are loading the vessel down with ballast that moves from one side to the other, every time the wind shifts on Capitol Hill.

That the farmer needs help is apparent, for he is fighting drought and surplus both at the same time. No matter which way he turns, he's stymied. With drought, he has no crop—with surplus, he has no price.

Somewhere in between is the happy land. If he could reach it alone—without any Government intervention—he would be the happiest of men but, if he must have Government aid—it should be beneficial—not to the Republicans—not to the Democrats—but to the farmer and the United States. If it can't be done that way, it should not be done at all.

The soil bank is about to die. No doubt, another program will take its place, but it will be no better than its predecessors, unless it is born in harmony and with a sincere desire to regain its rightful place among the economies of the Nation.

Valuable Support of Hon. Robert L. Sikes

EXTENSION OF REMARKS
OF
HON. ROBERT E. JONES, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. JONES of Alabama. Mr. Speaker, it is with pleasure that I call to the attention of the House an editorial which appeared in the Wednesday, June 12 issue of the Huntsville Times, Huntsville, Ala., commending the valuable support for the missile Jupiter which is being rendered by Hon. ROBERT L. SIKES, of Florida, chairman of the House Appropriations Subcommittee on Army Appropriations. With your permission, I present this editorial, as follows:

VALUABLE SUPPORT FOR JUPITER

Encouraging support in behalf of the Jupiter guided missile, developed at ABMA, came in Washington Monday afternoon.

Representative BOB SIKES, of Florida, member of the House Appropriations Committee, called on Secretary of Defense Wilson for a prompt order "of full speed ahead" on the Jupiter, on the basis of the highly successful test firing conducted about 10 days ago at Cape Carneveral, on the coast of Florida.

"A realistic appraisal of the accomplishments of the Jupiter, and the success of this Army missile, should bring an immediate about-face, and an announcement that work will continue on Jupiter under the jurisdiction of the Army's team," he added.

He admitted that such a decision would require some "backing up" by Secretary Wilson, in view of his previous order that the Air Force should have operational control of the Jupiter as well as the Thor, both of which are intermediate (1,500 miles) missiles.

Strong out-of-State support, such as Representative SIKES has given, is not only encouraging, but valuable, in view of the fact that he is a strong and influential member of the Appropriations Committee.

Resolution Adopted by Baltic Nations Committee of Detroit

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following resolution adopted by the Baltic Nations Committee of Detroit at its 16th annual meeting on June 16, 1957:

The Estonians, Latvians, and Lithuanians of Detroit, at their 16th annual concert meeting on June 16, 1957, at the International Institute of Detroit, held in commemoration of the mass deportations by the Communists from Estonia, Latvia, and Lithuania, unanimously adopted the following resolution:

"Whereas in June 1940 the sovereign and independent Republics of Estonia, Latvia, and Lithuania were illegally occupied through treachery and deception by Soviet Russia and on June 1941 many thousands of Estonians, Latvians, and Lithuanians were seized and deported to the tundras of Siberia for tortuous death, thus beginning a series of acts of systematical genocide carried out by the Kremlin since; and

"Whereas the same Soviet forces brutally crushed the Hungarian revolt against communism in 1956 and the aim of the international communism still is the world domination, thus being a menace to the free world and to the world peace; and

"Whereas the United States of America 'will never make a political settlement at the expense of the captive nations, condemns and opposes the Soviet imperialism,' and still 'seeks the liberation of the captive nations because peace is in jeopardy and freedom a word of mockery until the divided nations are reunited and the captive nations are set free,' as officially stated by the honorable Secretary of State in New York City, on April 22, 1957: Therefore be it

"Resolved, That hereby we, who have assembled today to commemorate this tragic anniversary, once again express our deep gratitude to the United States Government for not recognizing the fabricated incorporation of the Baltic States into Soviet Union and allowing many thousands of refugees to find new homes in this land of liberty; and be it further

"Resolved, That this meeting unconditionally denounces and condemns the Soviet crimes of treacherous aggression, destructive occupation, and brutal genocide of the Baltic States and all the other enslaved countries and respectfully recommends and urges the United States Government, as a member of United Nations, to take the Soviet Union to the United Nations International Court of Justice for aggression and mass murder, and if necessary to follow the recommendations made by the Honorable Senator WILLIAM F. KNOWLAND on November 26, 1956, to bring Russia into line:

"1. Expel Russia from United Nations until the Soviets agree to obey the United Nations.

"2. Apply economic sanctions against Russia until she withdraws troops from Hungary.

"3. Withdraw recognition from the Soviet Union until she conforms to the United Nations resolutions.

"4. Establish a United Nations emergency force ready to help if another enslaved country appeals for it while fighting for freedom; and be it further

"Resolved, That if this should fail the United States should go it alone and establish a realistic, affirmative policy of tangible aid to these countries that revolt against Communist tyranny; and be it further

"Resolved, That this is the unanimous opinion of this meeting that the principals listed in article 21 of Declaration of Human Rights of the United Nations must also cover the peoples of Albania, Armenia, Bulgaria, Byelorussia, Czechoslovakia, East Germany, Estonia, Hungary, Latvia, Lithuania, Poland, Ukraine, Rumania, and Yugoslavia. That only free elections in the U. S. S. R. and the captive countries would bring world peace; and be it finally

"Resolved, That this resolution be forwarded to the President, Vice President, Secretary of State, majority leader of United States Senate, minority leader of United States Senate, chairman of United States Senate Foreign Relations Committee, chairman of United States Senate Foreign Relations Subcommittee on Disarmament, chairman of United States Senate Committee on the Judiciary's Subcommittee of the Internal Security, chairman of United States Senate Commerce Special Subcommittee, Speaker of the House of Representatives, majority leader of the House of Representatives, minority leader of the House of Representatives, chairman of the House Committee on Foreign Affairs, chairman of the House Committee on Un-American Activities, United States delegate to the United Nations, all Members of United States Congress of State of Michigan, the Governor of State of Michigan, and the mayor of city of Detroit."

Adopted in Detroit, Mich., this 16th day of June 1957 A. D.

THE BALTIC NATIONS COMMITTEE OF DETROIT.

Commies Are Jubilant

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BROWN of Georgia. Mr. Speaker, I ask unanimous consent to insert in the RECORD an editorial which appeared in the June 19, 1957, issue of the Augusta Chronicle, Augusta, Ga., entitled "Commies Are Jubilant."

This is a timely and most interesting editorial and I hope it will be widely read:

COMMIES ARE JUBILANT

The Supreme Court, in another of its weird decisions, probably has set the country back 20 years in the legal battle being waged against the Communist conspiracy in the United States.

There is jubilation among the Commies over the Court's decision reversing convictions of 14 top California Communists, 5 of whom were freed outright.

And no wonder they are jubilant. It gives the Reds, and the pinks, and the punks a new lease on life. It literally gives them carte blanche permission to continue their conspiracy, to keep boring from within, with virtual assurance that they cannot be reached by the law.

Seven of the upper bracket Communists involved in their legal triumph hailed the decision as the greatest victory the Communist Party in America has received.

Said Mrs. Dorothy Healey Connelly, former chairman of the Communist Party in Los Angeles:

"It will mark a rejuvenation of the party in America. We've lost some members in the last few years, but now we're on our way."

The key decision struck a near mortal blow to the Smith Antisedition Act. In companion decisions the Court virtually hamstrung congressional committees which have been working, with some success, to ferret out and expose disloyal Government employees or those persons whose loyalty to the United States is questionable.

The Court's decision is a perfect example of its penchant for glorifying and magnifying technicalities in lieu of supporting the general principle of laws designed to protect the country's security and its welfare.

In a display of legalistic straining at gnats, the high tribunal held that the judge (in the Communists' trial) failed in instructing the jury to properly "distinguish between advocacy of forcible overthrow as an abstract doctrine and advocacy of action to that end."

Some lawyers might agree with such legal hairsplitting, but the average laymen—and the Communists no doubt—will construe this to mean that a person can be a working member of the Communist conspiracy, dedicated to the overthrow of the American system of government, without fear of punishment, but he must refrain from putting a stick of dynamite under the National Capitol or the White House.

Something like that, no doubt, would be the action required before the conspirator could be legally punished.

The heart and core of the Communist movement in this country almost had been destroyed, and the Reds and their fellow travelers had been deserting the sinking ship like rats.

But this decision, according to the Reds themselves, will rejuvenate the party in America. It will be difficult if not impossible to get any more convictions against any member of the conspiracy.

Congressional Medals of Honor for the Four Chaplains

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ASHLEY. Mr. Speaker, in the 84th Congress I introduced legislation to award posthumously the Congressional Medal of Honor to the four chaplains who sacrificed their lives in the sinking of the *Dorchester* during World War II in order that the lives of other servicemen might be saved.

An adverse report from the Defense Department served to defeat the measure at the committee level. But it has not served to defeat the mounting interest in this legislation. Today I join my distinguished colleague from New Jersey [Mr. RODINO], and a bipartisan group of Senators, who have introduced similar legislation in the 85th Congress, by reintroducing this measure. I think the comments of the Reverend Norman Vincent Peale, who said, "All of us hope this bill will pass by unanimous vote," and Rabbi Eisendrath, president of the Union of American Hebrew Congregations, who fully supports the bill, indicate the growing demand that Congress give full recognition to the outstanding patriotism demonstrated by the four chaplains.

At this point, Mr. Speaker, under leave to extend my remarks, I submit for the RECORD the following resolutions adopted by veterans' groups in support of the bill I previously introduced in the 84th Congress. I respectfully urge my colleagues on the House Armed Services Committee to consider these endorsements and recommend favorable action on this or similar legislation during the present session of Congress:

NATIONAL CONVENTION OF THE AMERICAN LEGION HELD IN LOS ANGELES, CALIF., SEPTEMBER 3–6, 1956

Whereas THOMAS L. ASHLEY, Representative in Congress from the State of Ohio, introduced the bill H. R. 9931 on March 13, 1956, to authorize the President of the United States to award the Congressional Medal of Honor posthumously to Alexander D. Goode, Jewish rabbi; John F. Washington, Catholic priest; Clark V. Poling, Baptist minister, and George L. Fox, Methodist minister, the immortal four chaplains of World War II, and

Whereas the Congressional Medal of Honor is long overdue for these heroes whose bravery was so inspiring to the soldier and civilian alike during those days of World War II when victory was far from certain; and

Whereas the American Legion has continuously honored and revered the memory of these four chaplains and observes annually as "Four Chaplains Day" the Sunday preceding or following February 3 as a highlight of the Back to God Movement; and

Whereas it is proper for the American Legion to foster and promote the memory of this inspiring patriotic sacrifice which demonstrated beyond words the unity of purpose of the great faiths of America: Now, therefore, be it

Resolved, That the American Legion in national convention assembled in Los Angeles, Calif., September 3–6, 1956, does hereby memorialize the 85th Congress of the United States to act favorably upon a bill similar to H. R. 9931.

WITTSTEIN-MIDDLEMAN
POST, No. 524,
THE AMERICAN LEGION,
Cincinnati, Ohio, April 16, 1956.

CONGRESSMAN THOMAS L. ASHLEY,
House Office Building,
Washington, D. C.

DEAR SIR: I am happy to note in an article in the Ohio Legion News that you have so nobly introduced a bill (H. R. 9931) to award posthumously the Congressional Medal of Honor to the immortal four chaplains of World War II.

One of them, Alexander D. Goode, was a graduate of the Hebrew Union College, Class of 1934, Hebrew Union College, Jewish Institute of Religion, Cincinnati, Ohio.

Wittstein-Middleman Post, No. 524, the American Legion, on February 6, 1956, presented a facsimile of the painting, depicting the sinking of the U. S. S. *Dorchester* and the four chaplains at a special ceremony honoring Four Chaplains Day which painting was accepted by Dr. Nelson Glueck, president of the college.

I am writing Dr. Glueck of your action relative to H. R. 9931.

I assure you that our post will do all it can to write our Congressmen and Senators to support the bill.

Cordially,

HARRY M. COHN,
First Vice Commander.

Approved:

BEN ALTMAN,
Commander.

RESOLUTION OF GLENDALE POST 127 OF THE AMERICAN LEGION, DEPARTMENT OF CALIFORNIA

Whereas THOMAS L. ASHLEY, Representative in Congress from the State of Ohio, introduced congressional bill, H. R. 9931, on March 13, 1956, to authorize the President of the United States to award the Congressional Medal of Honor posthumously to Alexander D. Goode, Jewish Rabbi; John F. Washington, Catholic priest; Clark V. Poling, Baptist minister; and George L. Fox, Methodist minister, the immortal four chaplains of World War II; and

Whereas the Congressional Medal of Honor is long overdue for these heroes whose bravery was so inspiring to the soldier and civilian alike during those days of World War II when victory was far from certain; and

Whereas the American Legion has continuously honored and revered the memory of these four chaplains and observes annually as Four Chaplains Day the Sunday preceding or following February 3 as a highlight of the back-to-God movement; and

Whereas it is proper for the American Legion to foster and promote the memory of this inspiring patriotic sacrifice which demonstrated beyond words the unity of purpose of the great faiths of America: Now, therefore, be it

Resolved, That Glendale Post 127 of the American Legion, Department of California, hereby memoralizes the Congress of the United States to act favorably upon H. R. 9931; and be it further

Resolved, That a copy of this resolution be forwarded to the Los Angeles County Council of the American Legion and to the 20th district for transmitting to the Department of California of the American Legion for further action.

Adopted this 5th day of April by Glendale Post 127, American Legion, Department of California, at a regular meeting.

G. H. GILLILAND,
Commander.
GEORGE H. MORGAN,
Adjutant.

American Saga

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. OSTERTAG. Mr. Speaker, under leave to extend my remarks, I want to relate briefly an American saga. It began 60 years ago in the little village of Le Roy in my district in western New York. Pearl B. Wait and his wife, May Davis Wait, had been manufacturing cough medicine and decided to branch out into the newly developing packaged food business. They hit upon an adaptation of a gelatin dessert, which they put on the market under the name of Jell-O. Two years later, they sold the business for $450 because the sales were not promising. Orator Francis Woodward bought it.

In 1902, Jell-O suddenly caught on. Advertising, enterprise, imagination, and faith began to pay off. By 1906 sales were just under a million dollars annually, and in 1925 the Jell-O Co., together with the Postum Cereal Co. became the nucleus of General Foods Corp.

Today, more than a quarter of a billion packages of Jell-O are sold annually.

The little plant in Le Roy is now a big plant employing 450 people, and Jell-O is also manufactured in four other plants throughout the country.

Early this month the Jell-O plant in LeRoy celebrated its 60th anniversary, with civic leaders, editors, businessmen, and employees joining in the ceremonies. The plant is today a large and integral part of the community of LeRoy, a good neighbor in civic and charitable projects, and a vital factor in the economy of the village. The LeRoy plant alone now turns out more than a million packages of Jell-O daily, and incidentally, it sells for a cent and a half less than it did 60 years ago. Work is currently being done which will greatly increase this output. Jell-O has become as traditional a part of American life as apple pie and as symbolic of America throughout the world as ice-cream sodas.

This is a typical story of private enterprise under our system, Mr. Speaker, and on its 60th anniversary the plant and its management deserve and have received heartiest congratulations and good wishes.

As a measure of the esteem in which it is held, I include in the RECORD an editorial from the LeRoy (N. Y.) Gazette-News of Thursday, June 13, 1957:

CONGRATULATIONS

Jell-O division of General Foods Corp. is observing this week the 60th anniversary of the birth of Jell-O in Le Roy. Jell-O has been an asset to Le Roy all down through the years in its employment of those desiring it, and in its interest in making Le Roy a good community in which to abide, rear children, and enjoy life.

Jell-O has spread the name of Le Roy throughout the Nation and into foreign lands. As a company it has cooperated heartily in community betterment and needs, and contributed generously when asked for assistance.

We congratulate Jell-O upon its birthday and extend wishes for many happy returns. At the same time we would felicitate the other industries of Le Roy who have worked alongside and with Jell-O in advancing Le Roy's industrial and community growth. Of a major nature are the Lapp Insulator, Union Steel Chest, and Le Roy Machine corporations, plus a score or more smaller industries.

Their combined interest and cooperation has given to Le Roy an enviable reputation among the villages of New York State.

New Celotex Plant at Pittston, Pa.

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial

from the Pittston Sunday Dispatch of June 16, 1957, commenting on the new Celotex plant located at Harding, near Pittston:

GLAD YOU'RE HERE, TOO

Readers will notice in today's Dispatch an advertisement from the Celotex firm, Harding, headed "Glad To Be Here." The advertisement announces the beginning of production work at the new Celotex plant in Harding.

Well, we of Greater Pittston can say "We're glad you decided to come," and if you have any relatives induce them to come to this area too.

Celotex is an established, reliable firm, and it is nice to know that the firm is pleased with its local plant, and happy in its location here.

It is a good start for a new firm on the road to becoming a vital part of a strange community, but a community that gives it a vibrant welcome, and a promise of wholehearted community support.

Carthage Dam Next Step To Improve Cumberland

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks, I want to include a very fine editorial which appeared in the Nashville Tennessean, Nashville, Tenn., on June 15, 1957. The people of the Cumberland River area are looking forward to an effective control of the Cumberland River in the years ahead. I commend the editorial to the attention of the House membership.

The editorial follows:

CARTHAGE DAM NEXT STEP TO IMPROVE CUMBERLAND

Final approval of $5 million for next fiscal year's construction on Barkley Dam was voted this week by the full House appropriations committee. The funds were voted despite strong protests of Representative JOHN S. TABER.

But, according to Representative JOE EVINS (Democrat, Tennessee), who piloted the appropriation past both subcommittee and full committee opponents, it has a fine chance to pass both House and Senate without further danger.

A Corps of Engineers dam, even a large dam like Barkley, is considered over the hump as far as eventual completion is concerned if construction funds can be obtained for two straight years. Now that the first 2 years' funds seem to be assured for this $167 million structure on which work begins next week, it is time for the people of the Cumberland River Valley to take a careful look for the logical "next."

This is not to say that there can be any letup in battling for ever larger and larger appropriations for Barkley. Under present spending schedules, incidentally, it could require a full generation to complete. If it is to be built as the proposed 6-year schedule envisions, appropriations of up to $30 million annually will have to be fought for and obtained.

But, while Barkley's completion in a reasonable time is by no means guaranteed, the people of the valley need to consider what dam they would build next.

Stewart's Ferry on the Stone's River, Carthage on the main stem of the Cumberland, and Laurel and Devil's Jump on the far headwaters, all are up for consideration.

Local pressure has been strongest for Stewart's Ferry. This project, however, is in process of engineering review. It may soon be classified as a single-purpose, flood-control dam. The paring away of multipurpose features can assure that large local matching funds will be required.

With the heavy demands upon local government resources the move to a single government is likely to impose, neither city nor county is likely to be able to offer multimillion dollar bond issues for matching Federal flood-control funds for Stewart's Ferry. So that project would seem to go on the set-aside list for the time being. Certainly, the people of Murfreesboro who are fighting for a multipurpose project would not like to see the dam started as a flood-control project until they have more time to make their case.

Devil's Jump and Laurel, hundreds of miles upstream, are special cases. These dams will be built, if they are built in the near future, under some kind of special legislation for distressed-area projects. So they may not be considered competitive with Carthage Dam on the main stream.

That project located about 65 miles above Nashville would appear to be the most logical next selection from the standpoint of those who think in terms of the long-term welfare of the people of the valley. Unfortunately, in the present stage of its planning any provision for locks is lacking.

But last week the people of the upper Cumberland met at Gainesboro to plan a campaign for the inclusion of navigation facilities in the plans for Carthage. Without locks the rich coalfields of the upper Cumberland forever would be shut off from river transport.

The achievement of this group's purpose is an essential before there can be an effective drive for the start of construction. So, for the people who want a full development of the Cumberland River, the next roadblock to be removed is the omission of locks in Carthage Dam. The enterprise deserves the broadest possible public support.

Foreign-Aid Program

EXTENSION OF REMARKS
OF
HON. NOAH M. MASON
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. MASON. Mr. Speaker, the official total of the amount of American money spent or invested in foreign countries between July 1, 1940, and July 1, 1956, is $109 billion. If we add the amount appropriated for the current fiscal year ending June 30, 1957, it will amount to approximately $115 billion.

In addition to this huge sum of $115 billion, we left behind us billions when we brought the boys home at the end of World War II—billions of dollars worth of supplies, machinery, barracks, roads, and even scrap. We have also reduced our tariffs for the entry of foreign goods made with cheap labor at the expense of American industries and American workingmen's jobs.

Mr. Speaker, the three countries that have benefited most by our soft-headed American largess are Great Britain, Russia, and Nationalist China. Of these three, today only Britain is still a solid ally, and Britain is gradually breaking away, as shown by her Egyptian fiasco and her present attitude toward trade with Communist China, the direct opposite to our attitude.

Mr. Speaker, I ask those Members of Congress who have been voting for these giveaway billions: What have we bought with your squandering of the American taxpayers' hard-earned dollars? Why continue this foolish effort to buy friends? Why not spend some of these billions for the benefit of our own people, or leave the dollars in the American taxpayers' pockets for them to spend, or save, or use for their own special welfare?

These are questions that should be faced and answered by each and every Member of Congress. Let us face the facts as they are today. Let us take care of our own people first. Charity should begin at home.

Minerals Program a Joke

EXTENSION OF REMARKS
OF
HON. WALTER S. BARING
OF NEVADA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BARING. Mr. Speaker, on June 4 the Department of the Interior presented to the Congress, in an obviously jocular vein, what it chose to call the administration's long-range minerals program.

I use the term "jocular vein" advisedly because the program was a joke, and a cruel one at that, in view of the plight the American mining industry finds itself in. Thousands of miners already out of work, and thousands of others facing unemployment may be a joking matter with the Department of the Interior but I say it is a deadly serious problem that this Congress needs to face up to and provide remedies.

The program presented by the Department of the Interior calls for affirmative action in respect to only two minerals—lead and zinc—and the author of the lead and zinc so-called remedy must have had his tongue in his cheek when he wrote it.

It calls for an inadequate sliding scale import tax schedule in lieu of present inadequate tariffs on these two minerals.

But the real joker in the proposal, Mr. Speaker, is that the President already has legislative authority to accomplish what the Department is asking the Congress to do. Yes, even more than that, the President has adequate legislative authority to accomplish even more for lead and zinc than it is proposed that Congress act upon.

I call the membership's attention to the fact that section 7 of the Trade Agreements Extension Act of 1955 provided that the President has power to, and I quote, "Take such action as he deems necessary to adjust the imports

of such articles to a level that will not threaten to impair the national security." And, Mr. Speaker, I submit that there is more than adequate historical background for a determination of foreign imports that threaten to close down our domestic mines, which in the language of the statute is a situation that does "threaten to impair the national security."

And, Mr. Speaker, if that is not sufficient authority, under section 1364 of the United States Code annotated—the so-called escape clause—where articles are being imported into the United States in such quantities and I quote "either actual or relative, as to cause or threaten serious injury to the domestic industry producing like or directly competitive products" the President has authority, and I again quote from the statute, "to make such adjustments in the rates of duty, impose such quotas, or make such other modifications found to be necessary to prevent or remedy serious injury to the domestic industry."

In other words, Mr. Speaker, the Department of the Interior in the case of lead and zinc has asked the Congress to assume the responsibility of making a decision for the President.

Who Got It?

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. O'KONSKI. Mr. Speaker, who got the money from our grand give-away program? Here is a list of where the money went since June 30, 1945.

But the spenders say we had to do it to stop communism. Yet if you look at these figures close you will see that the two biggest Communist countries, Russia and Yugoslavia, got a big chunk. Yes; the givers want to see communism prosper, too, on taxpayers' dollars.

Here is a list of who got it:

Aid to international organizations	$1,126,325,000
Aid to unspecified areas in Europe	11,393,213,000
Aid to unspecified areas in Asia and in the Pacific	3,112,623,000
Aid to unspecified areas in Near East and Africa	1,746,502,000
Aid to "other" unspecified areas	402,612,000
Aid to unspecified areas in South and Central America	327,945,000
Afghanistan	4,254,000
Albania	20,444,000
Argentina	198,000
Australia	12,539,000
Austria	1,061,196,000
Belgium-Luxembourg	582,773,000
Belgian Congo	17,000
Bolivia	49,576,000
Brazil	26,914,000
Britain (England, Wales, Scotland, Northern Ireland, Isle of Man, Channel Islands)	3,763,332,000
British Bahamas	68,000
British Borneo	$216,000
British East Africa	90,000
British Africa (unspecified place)	15,000
British Guiana	170,000
British Honduras	439,000
British Leeward and Windward Islands	163,000
British Gambia	34,000
British Gold Coast	174,000
British Hong Kong	4,043,000
British Jamaica	807,000
British Malaya	695,000
British Malta	1,333,000
British Nigeria	50,000
British Sierra Leone	7,000
British Singapore	55,000
Burma	20,956,000
Cambodia	39,827,000
Canada	3,964,000
Ceylon	238,000
Chile	11,644,000
China—Taiwan	2,200,208,000
Colombia	9,496,000
Costa Rica	14,972,000
Cuba	1,705,000
Czechoslovakia	185,827,000
Denmark	247,634,000
Dominican Republic	2,223,000
Ecuador	9,710,000
Egypt	50,363,000
El Salvador	5,675,000
Ethiopia	9,872,000
Finland	3,522,000
France	4,333,707,000
French Africa (unspecified place)	299,000
French Algeria	107,000
French West Africa	13,000
French West Indies	17,000
Germany (East)	17,318,000
Germany (West)	3,793,559,000
Greece	1,677,991,000
Guatemala	31,770,000
Haiti	15,460,000
Honduras	6,734,000
Hungary	5,855,000
Iraq	8,902,000
Iran	187,839,000
Iceland	29,758,000
India	216,334,000
Indochina (unspecified as to whether aid went to Cambodia, Laos, or Vietnam)	111,317,000
Indonesia	118,476,000
Ireland	18,346,000
Israel	251,151,000
Italy	2,574,663,000
Italian Somaliland	43,000
Italian Trieste	48,155,000
Japan	2,360,520,000
Japanese Ryukyu Islands	221,133,000
Japanese Islands—miscellaneous	13,000
Jordan	28,988,000
Korea	1,497,449,000
Laos	65,502,000
Lebanon	17,208,000
Liberia	6,981,000
Libya	27,931,000
Mexico	105,685,000
Morocco	780,000
Nepal	3,549,000
Netherlands	911,239,000
Netherlands New Guinea	23,000
Netherlands Surinam	526,000
New Zealand	2,300,000
Nicaragua	11,701,000
Norway	236,482,000
Pakistan	223,552,000
Palestine	175,000
Panama	10,802,000
Paraguay	9,102,000
Peru	17,437,000
Philippines	763,531,000
Poland	364,978,000
Portugal	18,217,000
Portuguese India	349,000
Portuguese Africa (unspecified place)	61,000
Rhodesia and Nyasaland	1,000
Saudi Arabia	$4,255,000
Soviet Union (since 1946)	465,434,000
Spain	116,638,000
Spanish Canary Islands	16,000
Sudan	6,000
Sweden	87,143,000
Switzerland	1,803,000
Syria	1,026,000
Tangier	17,000
Thailand	52,000,000
Tunisia	339,000
Turkey	495,068,000
Uruguay	2,183,000
Venezuela	2,207,000
Vietnam	316,325,000
Yugoslavia	734,304,000

Yes, folks, that is the way your money goes—where it goes nobody knows. Supposedly, it is all to stop communism—yet even the Communists are getting billions from our great and grand giveaway. Thank the Lord I never voted for this.

Most State Farmers Give Endorsement to Fixed Price Supports

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. McGOVERN. Mr. Speaker, farmers have been extremely patient and generous with this administration. Since 1952, it has cost them $4.5 billion in net farm income to prove that flexing prices downward neither increases farm income nor decreases farm surpluses. Yet, while Secretary Benson himself has publicly admitted failure of this policy, he has shocked rural America by proposing to completely obliterate the price-support program, which is the only hope of price stability to agriculture. Urban dwellers have been told among other things that farmers do not want firm price supports, though farmers themselves have voted for programs embracing firm supports and effective crop controls, in referendum after referendum across the Nation.

In my great State of South Dakota, the three largest daily newspapers who conduct the South Dakota Poll, asked farmers and ranchers throughout the State what they considered to be the best farm program. These papers are: The Sioux Falls Argus-Leader, the Rapid City Journal, and the Aberdeen American-News.

I offer, as further evidence of farmer attitude, the following report on the South Dakota Poll, as it was printed in the Watertown Public Opinion of June 12, 1957:

MOST STATE FARMERS GIVE ENDORSEMENT TO FIXED PRICE SUPPORTS

Sixty percent of the farmers of South Dakota believe that a rigid price support program of 90 percent of parity is the best of all farm programs yet offered. Asked to choose from among the soil-bank plan, 90 percent of parity, and other plans, only 21 percent selected the soil-bank plan as preferable and only 19 percent thought the best solution lay in some other approach to the problem.

This poll was addressed to farmers only. An explanation for each respondent's attitude was sought.

Generally, those who preferred some other plan expressed a desire for a combination of the features of acreage control with firm price supports. About one-third of this group, or 6 percent of the farm population of the State, called for a return to the free interplay of supply and demand, freed from all Government controls.

Typical comments follow:

"The soil bank helps build the land as well as helps the farmer along."

"Make it (the soil bank) compulsory."

"Some change is needed. A landlord gets practically all of the soil-bank check now, although he doesn't farm."

"High rigid supports is a wartime measure and should have been discontinued long ago."

"Why should one segment of the population work for less than 100 percent of parity?"

"Cut acreage, but guarantee a fair price."

"Support only the family-sized farm."

"The soil bank benefits the big farm only, not the family-sized unit."

"Farmers should have price protection so long as labor, steel, railroads, and public utilities have it."

"Manufactured products have a set price, why not farm products?"

"Ninety percent of parity would provide a certain assured income with which the farmer could plan in order to meet his expenses."

"Don't meddle with the farm business. Let supply and demand operate freely."

"A guaranteed parity at a lower percentage rate would provide support and still drive out the lazy."

"Actual production should be controlled, not simply the acreage. Acreage control is really no control at all over production. Only the poorer land is retired in the soil bank."

"There should be 90 percent of parity and no quotas for the family farm. Marketing quotas should be established for corporation farms."

The second question sought the farmer's opinion as to whether or not young people should be encouraged to remain on the farm; 63 percent of the respondents replied that they should be encouraged to farm.

Typical comments to this question follow:

"There isn't much hope for young couples unless they have parents who will help."

"Children should stay on the farm who are unable to go elsewhere."

"Considering the investment, the taxes, and the work involved, the return is hardly attractive."

"Let them do as they are inclined."

"No profit and many hours of long, hard work."

"Encourage them; we need young farmers."

"The freedom of farm life is worth it."

"The way I look at it, the opportunity is so much better elsewhere * * * that I suppose I would have to advise them to get a good job."

"We need to keep some on the farm."

"Farming is the best way to live."

"Conditions will be better."

"If they can afford to start farming, they don't need to farm."

"A farmer must take what he can get and pay what he is asked."

"The less ambitious will stay. We should encourage the more ambitious to remain, too, in order to offset that influence."

"It is a good place for a broad-minded youngster full of ambition and not afraid to work and gamble."

"Encourage them, provided we can get rid of them price-cutting jackasses in Washington."

The questions and results follow:

Question. Which plan do you consider to be the best of all farm programs offered up to now?

Soil bank, acreage reserve, and conservation.

Ninety percent of parity, firm price supports.

Other.

Results:	Percent
Soil bank	21
90 percent of parity	60
Other	19
Total	100

Question. How do you feel about children remaining on the farm?

Encourage them to be farmers.

Discourage them from being farmers.

Results:	Percent
Encourage them	63
Discourage them	37
Total	100

The Lutheran Missionary in the Middle East

EXTENSION OF REMARKS

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. VAN ZANDT. Mr. Speaker, it was a distinct privilege to address the annual convention of the Eastern District of the American Lutheran Church at Chambersburg, Pa., Tuesday, June 19, 1957, on the subject, "The Lutheran Missionary in the Middle East."

The address follows:

THE LUTHERAN MISSIONARY IN THE MIDDLE EAST

(Address delivered by JAMES E. VAN ZANDT, Member of Congress, 20th District of Pennsylvania, at the convention banquet of the Eastern District, American Lutheran Church, at Chambersburg, Pa., June 19, 1957)

The responsibility of religion in our time is probably without precedent, with the result that the duties of evangelism today are at least as great as they were in the days of Paul of Tarsus.

It happens that as I speak the prime target of the great struggle that engulfs mankind is the Middle East.

Those who speak of the Middle East in the councils of the great powers may emphasize oil or geography or military strategy.

But the key to the issues is a moral one, and its solution in the end will be moral and religious.

The question at the root of the multiplicity of middle eastern troubles, so far as the American Lutheran Church is concerned, is simply this:

How can religion help?

It is my conviction that it is impossible to be a good Evangelical American Lutheran in any area of the world without being at the same time in the best sense an American ambassador of good will.

Yet I wish I could convince myself that the problem is as ordinary as that.

For what is involved are postures and attitudes, tolerance and understanding, in the most delicate of all human relationships, namely, man's dignity, his fiery sense of independence, his pride, and finally his need.

Religion can help today as it did in the days of early Christendom, by fulfilling man's gnawing spiritual aspirations.

But because of the character of the world of our time, the dominance of the economic phases, of modern life everywhere, spiritual aspirations must be promoted without indifference to people's other needs, such as shelter, nourishment, and their medical wants.

One cannot help but be impressed by the splendid record of humanitarian service rendered by American Lutheran missionaries and institutions in the Holy Land, in Ethiopia, in Hong Kong, and New Guinea, and in Indonesia.

It is reported that Lutheran world action, in its world mission, is expending an excess of $1 million a year.

In addition to some 60,000 baptisms annually and the operation of over 1,400 mission schools with an enrollment of some 81,000 students, Lutheran hospitals and clinics treat nearly three-quarters of a million patients.

This impressive record of service to humanity is a tribute to the faith and zeal of Lutheran missionaries all over the world.

As a veteran of two world wars and brief service in the Korean conflict, I have seen countries in time of war and upheaval.

There is of course the stirring and sometimes terrifying situation of a whole nation in a state of convulsion.

Terror may fill the streets and uncertainty seize the governments.

Epidemics may be prevalent or threatening and violence unreasoned and uncontrollable may take hold of entire populations, destroying all semblance of law and order.

In the Middle East, more especially than anywhere at the moment, the potential situation is charged with unlimited possibilities.

It is because of this that I emphasize the important role played by American missionaries as they strive to give a positive answer to the Biblical question, Am I my brother's keeper?

It is my opinion that no American missionary in our time, anywhere in the world, represents himself alone or represents merely the religious denomination that sent him.

We must remember, all of us, that in a very particular and a special sense the American missionary represents the United States.

The missionary in the Middle East today may arrive there with only the Gospels and spiritual dedication to his work.

But whether he realizes it or not, he arrives also as an American and his role unofficially, but most importantly, is that of an ambassador of goodwill.

Forty years ago that might not have been so much the case.

But today every American in Egypt, in Korea, on Formosa, in Africa and Asia, yes, anywhere on the face of the globe, is regarded by the native population as a living image of Uncle Sam.

He is constantly watched with a scrutiny in every nook and corner of the earth that will not miss his every gesture, the smallest comment, or the faintest expression of opinion or criticism.

This is because the world divided is engaged in what is termed "a contest for the minds of men."

In this contest the high point is the spiritual value.

In this contest, too, is also the position of the United States as a Nation before mankind.

What they are asking themselves in the Middle East more hotly at the moment than anywhere else is, Are Americans sincere?

In other words, shall they believe the Kremlin or the Americans?

They know that the Middle East is the most strategic piece of real estate on earth.

It is the heartbeat of Europe, Asia, and Africa.

Napoleon gambled on it and lost to Nelson and the British Navy.

In losing he had to give up his ambitions for Africa, India, and the Far East.

The Middle East is the wall that the Soviet Union is now seeking to climb because on the other side rests two-thirds of the world's oil supply.

If the free world should permit the Middle East to pass under Communist domination it would mean the crippling of NATO and paralysis for the industrial capacity of Western Europe and Great Britain.

It could mean catastrophe for the free world because it would give Russia precisely what she has been seeking since she dreamed of warm-water ports in the days of Peter the Great.

Recently Russia attempted to establish a Communist government in Greece.

She toyed desperately with Turkey in an effort to get control of the Dardenelles.

Elsewhere she sought domination by all manner of modern tricks of infiltration and the manipulation of situations of poverty and need.

Of course, it is not the function of the religious missionary to perform the role of the official or even the unofficial diplomat.

It is not the function of the missionary to come to Egypt or the Holy Land or Iraq or Pakistan or Saudi Arabia or Iran or Syria with the Bible in one hand and the job of winning political battles in the other.

Nevertheless, the Lutheran missionary, his sermons, his teachings, his medical ministrations, his contacts, his schools, his orphanages, and his clinics represent a connecting link between the people of the United States as well as Lutheranism and the people in the area.

He will be judged by these people not only as an exemplary Lutheran but also as a representative of the United States.

Everything he does will operate for or against not only himself, his religious preaching and organizational work, but also for or against his country.

And in this hour of the world's struggle between the spiritual values of the Western World and the materialistic values of Soviet communism, the missionary from the West is certainly charged with a powerful responsibility.

But there is another reason with a downright diabolical background that invests with special significance the role of the missionary in the Middle East.

This has to do with the Soviet weapon of religious infiltration for political ends.

For tragic as the situation is, it is nevertheless one of the most melancholy facts of our time that the Russian Orthodox Church in the Soviet Union is not so much a church as it is a political arm of the Soviet Union.

The Kremlin has taught itself to recognize that a prostituted church manipulated by the Soviet regime as it manipulates all elements in the total state, can become a creature of value for subversive activity.

Thus religion may be used to tie together the slave world everywhere.

During World War II it was announced that a so-called understanding had been reached between the leaders of the Russian Orthodox Church and the Soviet Government.

Since that time and as a result of the much-heralded understanding the Russian Orthodox Church has emerged as a political agent of Soviet intrigue and infiltration.

If I were asked: What are the problems of the Lutheran missionary in the Middle East? I would say that this is one of the most pressing.

But while I can pose the problem before you I cannot provide you with its solution or with advice on how to go about counteracting this insidious type of religious prostitution.

This is a field of endeavor in which, as a Congressman, I find I must place in the capable hands of American missionaries of all religious faiths.

They have the experience abroad and the skill in dealing with anti-Christian religions that strive to halt or cripple their missionary activities.

The Lutheran missionary will know best how to summon the kind of delicacy of approach, the manner of warfare, the perhaps refined form of spiritual combat that a situation fraught with so much evil demands.

I know the Lutheran Church is an old and tested hand and its missionaries will know their way around in any struggle with a religious swindle so obvious as a Kremlin-dominated church trying to make capital out of Middle Eastern unrest.

The Lutheran Church is well equipped to battle the Soviet technique of using the Christian religion as a political pawn.

For example, whenever the Soviet Union launches one of its fraudulent peace movements it compels its church dignitaries to travel to the target countries on presumably peace missions like so many spiritual circus horses.

Frequently these so-called religious missions make great propaganda out of the spectacle of the devil which they invent and that devil is invariably America and her Wall Street warmongers.

I was very much moved recently when reading some of the Lutheran Evangelical literature to find one method of persuasion that is employed by Lutheran missionaries abroad.

Just how this method is implemented interests me very much as I find the idea highly inspiring.

I was particularly impressed with the fact that it was being employed in Egypt's Cairo, which is one of the key spots in the Middle East now calling for the best possible display of American character and influence.

The method this missionary is described as using is simply that he "loved Moslems into the kingdom of God."

This Lutheran missionary went about his task without the unbecoming zeal that may excite hostility more often than it wins converts.

Rather, he went about, according to his own words, "seeking to understand the world of Islam."

There is, of course, nothing so powerful as the understanding heart.

This Lutheran missionary studied the Koran and made not merely contacts, but friends with as many Moslem students as possible.

He was their appreciative companion and he indicated the respect for them that he wished them to display for him.

In such a mutual situation it was not long before the Moslem students were asking the missionary about his religion, about Christianity, and in particular about Lutheranism.

Truly he had sown the seed for the kind of mutual understanding, perhaps the conversion, that makes for a peaceful world and attitudes of international courtesy.

In this connection it is significant that the Lutheran Churches of America have sent as much as 100,000 pounds of clothing to Egyptian victims of the recent war within a month.

This is good and effective work.

The shipments went to refugees in the Port Said area and were authorized by the Lutheran world relief.

This is a concrete example of practical Christianity at its best.

But beside it, let me insist, is the work of the missionary who made it his business to understand the Moslems and their faith.

He had the remarkable grace and restraint to enter into discussion with them concerning his own faith only when in due course they proceeded to make their inevitable inquiries.

This missionary in portraying the role of a modern John the Baptist by preparing the way for our Lord added greatly to the good intentions of American Lutherans in sending material gifts from the United States.

In reviewing Lutheran activities in the field of foreign missions the hundreds of Lutheran missionaries merit our heartfelt gratitude for their remarkable achievements in the holy land, in Egypt, throughout the entire Middle East, and around the world.

It is appropriate at this point to pay a marked tribute of love and respect to those Lutheran missionaries who have suffered persecution by the Communists.

With their brothers in Christ of other religious faiths they have like the early Christian martyrs remained steadfast in their faith preferring to suffer death if necessary in defense of the truths of Christianity.

We owe them not only our expressions of gratitude but our constant and earnest prayers.

May God continue to watch over them and rescue them from the chains that bind them.

It is my firm conviction that the work done by Lutheran missionaries will make its mark on world history.

It is my further conviction that the struggle we are now engaged in for the minds of men and for the survival of the free world will be decided ultimately by moral and religious values.

These are the same moral and religious values which the missionaries firmly implant all over the world in the interests of the true faith and for the betterment of the human race.

Social Security for Disabled Workers

EXTENSION OF REMARKS

OF

HON. AUGUSTINE B. KELLEY

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. KELLEY of Pennsylvania. Mr. Speaker, in less than a fortnight, on July 1, a very important new program of Government goes into effect—one of the most far-reaching changes in social security since the original act was passed in 1935.

It is the program for full social-security benefits for workers age 50 or older who are considered completely and permanently disabled. This program was authorized in the social-security amendments we passed last year. Under the previous law, a disabled worker could obtain a "freeze" of his work record to protect the future size of his benefits from being reduced because of enforced long unemployment, but he still had to wait until age 65 to collect benefits.

I want to make it clear that although I think the law we passed to begin payments of the benefits at age 50 or thereafter for the disabled was a great advance—an outstanding improvement in the social-security concept—nevertheless, I do not believe the program is being administered in a way to assure

benefits to all those for whom they were intended.

Many disabled persons, I am afraid, will find themselves almost strangled to death in red tape in trying to qualify. Others will probably become so discouraged by the runaround and the buck-passing and the delays and the heartbreaking rejections that they will give up and write the whole thing off as a cruel deception.

I have called for a congressional investigation by the House Committee on Ways and Means into the whole administration of the disability features of social security, based primarily on the unhappy experiences of so many disabled persons trying to get a "freeze" of their work records, as allowed by law. My bill, House Resolution 195, states as its premise that the way the program is now being administered "results in a denial of the benefits of this program to virtually all workers except those who are completely paralyzed."

That is because the administration interprets the wording in the law to mean that if a disabled person could do any work at all—whether or not such work would normally be available to him—he is not completely disabled. The fact that he cannot do the work for which he is trained or cannot be trained into doing some other skilled work, does not seem to be taken into account.

DISABLED WORKERS SHOULD APPLY IMMEDIATELY

I have protested such rulings in many cases, and just this week succeeded in having one decision reversed for a man in Westmoreland County. But more than a half year was spent on getting this one decision reversed. Usually the administration turns the applicant down almost automatically on the first step, and the disabled person has to appeal to get any consideration at all. Often, the worker is so discouraged he does not even bother to appeal. My advice to any disabled person who believes himself to be eligible under the disability program is to expect a turndown the first time around, and then appeal immediately.

In any event, it is important for disabled persons covered by social security, whether they are under or over 50, to apply for a "freeze" of their work record. It is important, too, that they do this as soon as possible. Unless they apply by July 1, or unless Congress acts by then to enact a House-passed bill now pending in the Senate, such persons could lose many years of valuable retroactive benefits. The bill referred to would extend the deadline for applying for the "freeze" until July 1, 1958, but anyone who is possibly eligible should not count on that and should apply immediately.

While protesting bitterly the delays and redtape in certifying eligibles for the disability program, I have also called upon the Department of Health, Education, and Welfare to take a more effective course of action in helping disabled persons who do not qualify for full disability certification. I have demanded that they help retain those whose disabilities are not considered sufficiently complete to prevent their doing substantial work.

In this connection, I am now assured by Secretary Marion B. Folsom that they are going to work with the vocational rehabilitation agencies of the States to refer for training individuals too disabled for their regular jobs but still physically able to do substantial work if properly helped and trained.

Fiftieth Anniversary of the United Press

EXTENSION OF REMARKS
OF

HON. LYNDON B. JOHNSON

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Friday, June 21, 1957

Mr. JOHNSON of Texas. Mr. President, I understand that today is officially the 50th birthday of one of the world's great newsgathering organizations—the United Press.

We have heard little about it from our United Press friends in the press gallery. Most of them were guests at the Downhold Club party, 2 nights ago, where they celebrated the event with enthusiasm, and thus are now somewhat fatigued.

All of us wish the United Press a happy birthday and many happy returns. I ask unanimous consent to have printed in the Appendix of the RECORD an article by columnist Fred Othman and the Time magazine story rounding up the history of the United Press for the first 50 years.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Washington News of June 21, 1957]

NOSTALGIC PARTY

(By Fred Othman)

The Downhold Club has been in session here and that involves about 200 ex-employees in a nostalgic love affair with a corporation.

Some of them were fired in a kindly way long ago; the others had resigned reluctantly to take better paying jobs and here they were with their wives in the Grand Ball Room of the National Press Club, paying tribute to the firm from which they'd severed employment. The ladies found this difficult to understand. Perhaps I can explain.

The corporation we're talking about is the United Press and it is a peculiar sort of business outfit. It sells news and its assets consist solely of the men who gather the facts and write them. It owns a few typewriters and some cigaret-burned desks, sure, but they don't count. The gents who bat around the country and the world covering everything from wars to nudist conventions are what makes the United Press.

When a firm has several hundred lively young men on the payroll going places in style on expense accounts, the costs are likely to mount. The United Press had in charge of keeping these expenses within reason L. B. Mickel, the manager of bureaus until he retired a few weeks ago. His favorite method was to bombard the bureau chiefs with messages, ordering downholds. I heard so many tales about Mr. Mickel pinching the pennies that during my own first years with the firm, I came to regard him as an ogre on the other end of a telegraph wire.

Then a certain reporter, who shall be nameless, was transferred from Washington to Hollywood. Mr. Mickel suggested that he take his vacation en route and have some fun before tackling the movie actors. The bureau boss said also that he could fly if he wanted, or take the train, or drive his own car. "Go any way you want," said Mr. Mickel, "and we'll pick up the tab."

The reporter took him at his word and traveled West with bride aboard the *President Hoover*, via the Panama Canal. Had a fine time, too, as per orders. When Mr. Mickel heard about this he did not, as expected by the reporter, have a heart attack. He laughed.

He turned out to be the kindliest of souls when finally I got to know him personally and how he ever kept the firm from bogging down in bankruptcy with those expense accounts still is a wonder to me.

I hope the wives of the Downhold members are beginning to catch on. If not, I can tell them further that the United Press is one of the few corporations in existence where nobody got ahead through pull, or influence, or relatives. He got fired (gently, as I say) if he couldn't write copy in a hurry, but if he could and it sounded lively in print and did no damage to the facts, then he was promoted rapidly.

So it was that the head men, without one single exception, worked their way up from the ranks. They even knew some tricks to confound Mick's Downhold messages. They weren't bosses so much as fellow workers and close friends.

To this day the president of the firm, Frank Bartholomew, can write a piece with the best of them. He's not so good at golf, but he's a whiz bang at pounding out bulletins. Vice President Earl Johnson once was night manager in Chicago. I was his assistant.

When finally I resigned a few years ago, it was with a wrench of the heart. I got all choked up.

So the Downhold Club held its meeting, with plenty of roast beef and drinks that, for once, were not bought unknownst to him by Mick. The meeting went on most of the night, with newspaper editors, magazine writers, bankers, Government officials, press agents, advertising men, auto manufacturers, and many others, recalling some celebrated murders, political rows, and wild-eyed adventures in the old United Press days.

The ladies somehow seemed puzzled by this adulation to a corporation, but I trust now they'll be able to see why.

THE FIRST HALF-CENTURY

In bars and press clubs around the world, United Press staffers gathered this week to celebrate an event that was uniquely of their own making: the United Press Association's 50th anniversary. If the United Press men bragged more and drank more than most newsmen at play, they could be said merely to be obeying the deep competitive urge that has made their hardfisted, bustling wire service second in size only to the 109-year-old Associated Press—and often ahead of it in covering the news.

Unlike the staid Associated Press, a nonprofit cooperative owned by its member newspapers, the United Press for half a century has aggressively sold its product to all comers. Thus, it has never wavered from Founder E. W. (Damned Ol Crank) Scripps' belligerent belief that only a profitable news service can achieve editorial impartiality. The first major United States news service to prosper as a commercial undertaking, the United Press today is the world's most enterprising wire-news merchant, an international giant serving 1,560 United States newspapers and 3,270 other clients in the United States and 71 foreign countries (estimated 1957 gross: $28.8 million.)[1]

Footnotes at end of speech.

MILKMEN AND CANDELABRA

The United Press has almost no physical assets. The giant's muscles are the 4,000 United Press staffers who keep its hundreds of news printers thumping out 60 words a minute, in 45 languages, around the clock. Their copy must be crisply written to escape the editor's spike. It must be simple enough to be understood by the milkman in Omaha,[2] as an old dictum from New York once put it; at the same time, as former United Press President Hugh Baillie once demanded, it is supposed to flame like a candelabra on a dark and muddy battlefield. Between the milkman and the candelabra, and the speed, speed, speed that governs the lives of all wire-service men, United Press duty has called forth a lean and hungry breed of newsmen who swear they are the world's finest. And some of them are.

United Press service also demands a philosophical disposition, for its low pay scale and tightwad expense accounts are legendary. During a national political convention in Chicago, longtime Bureaus Supervisor L. B. (save a nickel) Mickel cut down on expense accounts so sharply that General News Manager Earl Johnson told his men to retaliate by signing all their hotel meal checks with Mickel's name; Mickel was barely able to leave town. A sardonic example of United Press tightfistedness was an exchange one day between Atlanta, the United Press's southern division relay point, and Raleigh, N. C., where a staffer was simultaneously punching copy on two teleprinters. When Atlanta complained that the copy was moving too slowly, Raleigh replied, "He only has two hands." Came Atlanta's message, "Fire the crippled bastard." (The United Press has also a generous side to staffers, but compassion—as most editors and newspaper readers agree—make dull anecdotes.)

Lest it somehow be dimmed by unexpected reform, the United Press' reputation for pinching the penny is affectionately kept alive by an ever-expanding organization of United Press alumni called the Downhold Club—an echo of the constant warnings to downhold expenses that emanate from United Press' headquarters in the New York Daily News building.

FARTHER, FASTER

Though overworked and underpaid, Unipressers respond to duty with drive and misty-eyed devotion. Says United Press and Associated Press Veteran Bob Gibson: "You can work for the AP. But you can only belong to the UP." One reason for United Press' rah-rah esprit de corps is that it is built, as one city-room sage has observed, "on the legs of its young men." The United Press not only prizes youthful, inexpensive energy, but will move an ambitious youngster faster and farther up the ladder than any other news organization. When he was only 26, W. H. Lawrence, now the New York Times' top political reporter, covered Wendell Willkie's presidential campaign singlehanded against a battery of Associated Press men.

"The UP is the greatest farm system in the newspaper business," said one of the United Press's core of old pros last week. "It works on the same principle Branch Rickey used when he developed the Cardinals. You buy up kids for nothing, keep them lean and hungry, and they work like hell to get traded." As a result, the top ranks of United States journalism are thickly populated with ex United Press men.

All United Press executives are onetime newsmen, and most of them seem somehow able to live in the higher atmosphere without becoming brassbound. Genial, San Francisco-born President Frank Bartholomew has handled such top assignments as the Panmunjom truce talks and the A-bomb drop at Bikini, and has been known to trot off briskly on cub's errands when all hands were tied up on a story. United Press men even have the dubious solace of knowing that the mightiest blooper in wire-service history—United Press' World War I report that the Armistice had been signed 4 days ahead of the event—was perpetrated by the then United Press President Roy Howard, now chairman of the Scripps-Howard chain.

The distortion of it has become one of the prime legends of United States journalism. Truth was, Roy Howard had ferreted out the central fact—the war was indeed over except for a small amount of shouting and killing—and in the economy of words he deemed necessary for clarity, Howard was too clear. If pinpricked too often about it, United Press men are quick to point out that in more recent years it was the opposition—the Associated Press—that flashed the wrong verdict in the Hauptmann kidnaping trial (United Press had it first and right) and the Supreme Court's gold decision of 1935, broke an ironclad agreement to observe the official release date for announcing victory in Europe, reported the end of the Japanese War a few days too early, had the United States Marines occupying Seoul 48 hours before the city fell.

SECOND-STRING SKIMPING

Though outmanned and out-budgeted on most big stories, and in many areas, especially the Far East, United Press men learn early in their careers that there are ways of outfoxing Associated Press. For all its eager-beaver ways, United Press coverage of run-of-the-mine news is severely hobbled by its low-budget policies, and by the fact that the Associated Press has the first chance at the news developed by its 1,750 member newspapers and thus, in effect, draws on a vast pool of news that no wire service could produce independently. The United Press has no such reuse agreement with client newspapers in the United States, and as a result often ignores or skimps many solid, second-string stories; in covering State governments, for example, or long-drawn stories such as murder trials, the United Press is often badly outclassed by Associated Press. On most fast-breaking local stories, on the other hand, United Press tends to hunt down the news more aggressively than slower moving Associated Press, and is often ahead on the wire by minutes that are precious to newspapers about to go to press.

SPEED REPLACES DEPTH

Though often short on facts, the United Press historically has compensated with brighter writing; its crisp, concise style has forced the Associated Press in recent years to valiant efforts to refurbish its often stodgy copy. Style has become increasingly important as the technical speedup in communications systems has all but eliminated the old-fashioned beat. At the same time, speed has increasingly displaced depth or even accuracy, as writing and checking time dwindle. The Associated Press, with more manpower, is widely accepted by editors as more accurate than the United Press. Day by day the Associated Press also files more interpretive background stories on world affairs than the United Press, and in some capitals it notoriously outperforms United Press. Today none of the wire services boasts men with the global flair of the United Press' late Webb Miller or the personal following of its late Raymond Clapper, but the United Press has a sizable share of the standout American correspondents abroad and in Washington.

Some newspapermen think that the staid Associated Press is becoming bolder while the brash United Press grows more conservative. Still, the differences in their handling of the major news are sufficiently marked as to demand a story-by-story selection by conscientious editors. The fact that such a choice exists is the best measure of the United Press' contribution to a free press. The Associated Press in 1907 was a well-entrenched monopoly whose foreign news came from cartels, such as Britain's Reuters and France's Agence Havas; subsidized or directly influenced by their Governments, they divided the world into noncompetitive preserves. After the United Press challenged the cartels, the Associated Press eventually followed suit. Testy Titan Scripps thus had some reason for his pride when he said: "I regard my life's greatest service to the people of this country to be the creation of the United Press."

---

[1] The Associated Press has 1,750 member newspapers in the United States and provides news service to subscribers in 74 foreign countries; Hearst's International News Service serves the 15-paper Hearst chain and 617 other United States newspapers, has clients in more than 40 foreign countries.

[2] Buttonholed by a diligent Time correspondent last week, an Omaha milkman named Roger Stiles, 30, was unable to differentiate between the United Press and its competitors. Said he: "Some of their stories, particularly political ones, I just don't understand."

Footnotes at end of speech.

Wildlife and Chemicals

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES

Wednesday, May 29, 1957

Mr. METCALF. Mr. Speaker, in the current issue of Texas Game and Fish, monthly magazine published by the Texas Game and Fish Commission, Dr. Clarence Cottam of Sinton, Tex., discusses the need for research into the effects of pest controls upon wildlife and man.

He says we know almost nothing of even the direct effects of many control agents on plants, animals, soils, and soil organisms, and we know still less of the indirect, accumulative, and long-time effects these controls have upon wildlife, plants, and even upon man.

Dr. Cottam is one of the most distinguished conservationists in this Nation. Former dean of the agriculture department at Brigham Young University, former assistant director of the Fish and Wildlife Service, Dr. Cottam received the Aldo Leopold memorial award medal for distinguished service to wildlife conservation in 1956. He now is director of the Rob and Bessie Welder Wildlife Foundation, a privately endowed organization devoted to further research into matters affecting wildlife.

His article points up the need for enactment of my H. R. 783, directing the Secretary of the Interior to begin continuing studies of the effects of chemical sprays and dusts upon fish and wildlife.

Dr. Cottam's article follows:

WILDLIFE AND CHEMICALS

(By Dr. Clarence Cottam)

The 1955 edition of the Pesticide Handbook lists 6,204 commercial preparations of pres-

ent day poisons for controlling pests. Each year an estimated 400 to 500 million pounds of basic pesticides valued at $200 million are used in this country. Mixed with dusts, solvents, and other carriers, this totals about 3 billion pounds of formulated pesticides for which the consumer pays between $400 million and $500 million annually.

Chemicals useful in controlling pests of man belong in the category of mixed blessings. They clearly manifest potentialties for great good as well as harm, depending upon our skill and wisdom in using them. Pesticides are here to stay, even though more effective, economically successful, and, it is hoped, more selective control agents replace or supplement those now in use.

THE NEED FOR RESEARCH

Plant losses reulting from chemical controls have been largely the result of carelessness or, more commonly, the lack of sufficient knowledge and sound judgment in use of these pesticides.

We know almost nothing of even the direct effects of many countrol agents on plants, animals, soils, and soil organisms, and we know still less of the indirect, accumulative, and long-time effects these controls have upon wildlife, plants, and even upon man.

Funds for the development of new control agents are almost unlimited, but unfortunately there is comparatively little financial support for testing effects of these materials upon wildlife and its habitat. The miracle control compounds are increasing so rapidly that reliable know-how for avoidance of harm to wildlife, and even human life, has not kept pace. The urgent need is for information on formulations, dosages, methods, and time of application most likely to prevent or minimize damage to wildlife. Experience shows that where control workers and wildlife biologists have cooperated, effective control has resulted, with damage held to a minimum.

VALUE OF WILDLIFE RESOURCES

The recent Crossley S–D Surveys, Inc. showed that America has some 25 million sportsmen, 12 years of age or older, who spend approximately $3 billion and 567 million man-days annually for hunting and fishing.

As great as are the economic returns from fishing and hunting, perhaps the greater values cannot be measured by the dollar sign. The more intangible and illusive recreational, esthetic, spiritual, and educational values to be found in observing wildlife are as real as are gilt edged stocks and bonds. They are part and parcel of the American way of life. They must not be needlessly impaired nor destroyed by unwise use of chemical controls.

THE NEW INSECTICIDES

Most new insecticides can be placed in two general categories: (1) chlorinated hydrocarbons including DDT, TDE, or DDD, methoxychlor, heptachlor, chlordane, benzene hexachloride, lindane, toxaphene, aldrin, endrin, and dieldrin; (2) organic phosphates among which are parathion, TEPP, EPN, malathion, chlorthion, diazinon, dipterex, and demeton. Most of them are both internal and external poisons and many, particularly the chlorinated hydrocarbons, have residual properties and remain toxic for long periods. This, together with the fact that they can be adapted for distribution by airplane, makes them effective in controlling insects.

While there is a tendency to develop chemicals to control particular pests, the lethal properties of chemicals now used are by no means restricted to injurious insects. Beneficial animals, including beneficial insects, unfortunately, also are susceptible. As a result, serious and unnecessary damage to wildlife and fishery resources sometimes occurs.

DDT was the first of the newer insecticides to be used widely, and its relation to wildlife has been studied more than that of any of the other chemicals. The effects of DDT upon mammals have generally been found more harmful than those of methoxychlor, TDE, technical BHC, chlorthion, and malathion. It appears that lindane, toxaphene, and chlordane are of intermediate toxicity, while aldrin, dieldrin, endrin, heptachlor, diazinon, EPN, TEPP, and parthion are more toxic than DDT to mammals. It is difficult to generalize, however, since toxicity varies greatly with the different species, the formulation, dosage, period of feeding or exposure, mode of entry into the body, and various environmental and other conditions.

Studies with birds have shown results similar to those obtained with mammals. Mourning doves are about three times as tolerant to a number of insecticides as are bobwhite quail. Ducks and other waterfowl have suffered losses from single sprayings of chlordane at 1 pound per acre, toxaphene at 1½ pounds per acre, dieldrin at one-half pound per acre, and aldrin at the amazingly low amount of 0.125 pound per acre. Parathion was lethal to blackbirds when applied at 0.4 pound per acre.

Effects of insecticides upon birds and mammals are likely to be more obscure if repeated small doses are involved rather than a single exposure to a large quantity. Laboratory studies have shown that sub-lethal amounts of DDT may be stored in body fat and this accummulation can cause poisoning at a later time when fat reserves are utilized. Also, quail and pheasants fed very small amounts of DDT, aldrin, dieldrin, and endrin for several months continued to live, but very few of their young survived. These subtle and indirect effects point up the danger of applications of insecticides having highly residual qualities.

The effect of insecticides upon fish and other cold-blooded vertebrates are often markedly different than upon birds and mammals. It was surprising to find that TEPP and parathion, which are so extremely toxic to warm-blooded vertebrates, are among the least harmful to fish. Toxaphene is one of the insecticides most damaging to fish. Dieldrin and lindane are also highly lethal to fish and complete kills have occurred with dieldrin at one pound per acre. BHC (technical grade) is a much safer insecticide, but often results in an offensive flavor when the fish are cooked.

AGRICULTURAL INSECT CONTROL

Agricultural lands, including orchards, generally receive the heaviest and most repeated insecticide applications, in some instances totaling upwards of 50 pounds per acre per season. The effects of such programs on wildlife are of vital concern, since not less than three-quarters of our annual upland game and fur crop is produced on these lands. Not only may wildlife be killed directly by single heavy dosages, but repeated applications of smaller amounts may deplete food supplies and make the area less attractive or suitable for animal life.

Another hazard of agricultural insecticide programs results from natural washing of chemicals from heavily treated fields into streams and ponds with resulting damage to fish and aquatic life. Such an incident was reported by personnel of the United States Public Health Service during the summer of 1950 in 15 streams tributary to the Tennessee River in the cotton growing region of northern Alabama.

There are many known cases of insecticidal pollution of streams following agricultural spraying, and many of these have involved serious overuse or misuse of the control poison. To kill cattle grubs, a California dairyman sprayed his herd with rotenone, a potent fish poison but relatively safe to warm blooded animals. Drainage from his barn killed trout in a nearby stream. In North Dakota, a potato farmer using toxaphene filled his tanks and sprayers repeatedly at a nearby stream, and as a result dead suckers, northern pike, chubs, minnows, and rock bass littered the banks. Downstream for 3 miles there was no trace of a live fish. We cannot overemphasize the necessity of keeping dosages to the minimum and of meticulously adhering to tested formulations. Too many farmers proceed on the false assumption that if a little of the poison is good more must be better.

MOSQUITO CONTROL AND WILDLIFE

Due to the sensitivity of aquatic life to insecticidal poisoning, the development of safe programs for control of mosquitoes in marshland is still not completely solved. Here chemicals must of necessity be applied directly to mosquito-breeding areas to kill the larvae. The problem is of particular importance in coastal areas where fishes, crabs, and shrimps are involved. Not only do these animals have a high commercial value, but they also serve as food for many kinds of marsh birds. For example, fiddler crabs and their relatives comprise 60 to 90 percent of the summer food of the clapper rail in mid-Atlantic states. A further complication to the control problem is introduced by the development in many areas of mosquitoes resistant to DDT and related insecticides. This has forced control workers to employ heavier doses at more frequent intervals or to turn to more toxic pesticides presenting unknown hazards to wildlife.

In some areas, ditching is again being advocated for mosquito control. This practice has often proved to be extremely detrimental to the wildlife of marshlands by lowering the water level in marshes and ponds and causing undesirable changes in vegetation. An environmental type of control based on impoundment of water rather than drainage and incorporating suggestions for water-level manipulation and vegetation control appears very promising for many situations. Certain other methods of water-level management favor both mosquito control and wildlife management.

FOREST INSECT CONTROL

Most insect pests of forests can be controlled by a 1-pound-per-acre application of DDT applied from an airplane once every several years. Only one-quarter or less of the DDT applied passes through the leafy canopies and reaches the surface ground. Land insects suffer heavy losses, but residual effects of the insecticide last only about a week. Aquatic insects are particularly susceptible, probably by reason of the intimate and continuous contact with the poison provided by pond and stream habitats. Repopulation in streams usually requires a year. Generally, these applications cause the death of only a few fish. Recently, however, severe losses of young salmon occurred in New Brunswick following a treatment of one-half pound of DDT per acre, and the delayed death of many trout, mountain whitefish, and suckers in Montana was blamed on a reduction of food supply caused by an application of 1 pound of DDT per acre. There is also the danger that wind and wave action may cause concentrations several times greater than the dosage applied.

HERBICIDES

The development of new herbicides, including 2, 4–D; 2, 4, 5–T; TCA; and ammonium sulfamate, has been almost as spectacular as that of insecticides. Over 85 million pounds of these chemicals are used annually. Most of these plant poisons appear to present little toxicological hazards to animal life at recommended dosage levels, but their indirect effects on wildlife habitat may be serious in some places. Conversely, when properly utilized, they are an important aid to wildlife management.

In many situations herbicides can be helpful in improving food and cover conditions for wildlife. In thick, brushy growth they may be used to form clearings in which vegetation is set back to the herb and grass stage. Forests, agricultural fields, pastures, or range lands, with a mixture of cover types, usually produce more game or other wildlife than do solid stands of a single type. Through selective spraying, it is possible to eliminate species of brush that are inferior for wildlife so that useful plants such as fruit-bearing shrubs can then spread and take their place. Unproductive marshes likewise can be improved to produce openings for waterfowl by sprayings which kill or greatly retard cattails, giant cutgrass, saw grass, water-hyacinth, lotus, water lilies, and other pest plants. Herbicidal control of excess aquatic plants in ponds and lakes also improves fishing by permitting predation of surplus small fish and increased growth of large ones.

Nevertheless, weedkillers may sometimes harm wildlife by destroying or adversely modifying valuable habitat. The problem is most likely to be acute in highly agricultural areas where cover is at a premium. Whenever possible, shrubby growth should be left along roadsides, fencerows, and ditchbanks. Studies indicate that hedgerows not only serve as windbreaks, but also harbor fewer harmful rodents and pest insects than grassy borders.

Herbicides may also have a repellent effect. Work in Pennsylvania has shown a definite reluctance on the part of cottontails to eat plants sprayed with the ester formulation of 2,4,5-T, and 2,4-D. In aquatic areas, care must be taken to prevent depletion of dissolved oxygen caused by excess accumulation and decay of dead plants resulting from weed control operations.

Concentrations of 2,4-D, generally used for weed control, are relatively nontoxic to most soil micro-organisms. However, TCA has been found to cause significant reduction in their activity, and also acts as a temporary soil sterilant preventing new plant growth. Ammate, on the contrary, is beneficial to the soil as a fertilizer. The full biological effects of some new and powerful herbicides have not yet been determined, and only limited knowledge now exists on most other new plant control agents.

Copper sulfate, a scum killer, while relatively safe in controlling algal bloom when used with skill and understanding, can be highly damaging to aquatic resources if used in excess. Considerable loss of fish has sometimes occurred when dichlorobenzene and trichlorobenzene have been used in aquatic-weed control.

More than 85 million pounds of herbicides are used annually. With proper application, they appear to present few toxicological hazards and are valuable in wildlife management as a means of improving wildlife food and cover conditions. However, when used without care, they can cause destruction of valuable wildlife habitat.

Political Forgetfulness

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Friday, June 21, 1957

Mr. YARBOROUGH. Mr. President, the editorial page of the June 18 Houston (Tex.) Press carries as pointed a comment on the skyrocketing cost of living as I have ever seen. In just 26 words, rhymed, Mr. Oaty Grier of Conroe, Tex., told the whole story of the administration's ignoring of the cost of living increases.

I ask unanimous consent to have printed in the Appendix of the RECORD Mr. Grier's satirical verse.

There being no objection, the poem was ordered to be printed in the RECORD, as follows:

POLITICAL FORGETFULNESS

"The price of peace is high."
(That's what our President said).
But forgot to state the price is high
On a piece of meat or bread!

—OATY GRIER, Conroe.

The Metropolitan Problem

EXTENSION OF REMARKS
OF
HON. HAROLD C. OSTERTAG
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. OSTERTAG. Mr. Speaker, I have presently pending before the Government Operations Committee a bill to establish a Commission on Metropolitan Problems and Urban Development. The so-called metropolitan is the major domestic problem before our country today, and unless we take steps to deal with it in an orderly way, it will overwhelm us. My bill would set up a Hoover-type Commission to study and investigate the problems of metropolitan expansion and recommend guidelines for their solution at the grassroots, where the problems exist.

There is widespread interest in this proposal, Mr. Speaker, and under leave to extend my remarks, I include in the RECORD some recent news and editorial comment on it.

The article and editorial follow:

[From the Flint (Mich.) Journal of June 2, 1957]

UNITED STATES BOARD SOUGHT TO SOLVE URBAN-GROWTH PROBLEMS

(By Homer E. Dowdy)

While the farm problem continues to reverberate through the halls of Congress and capture the headlines, it is not the farms but the urban areas that are the Nation's biggest problem.

This is the opinion of Representative HAROLD C. OSTERTAG, of New York, who intends to do more than lament the fact that cities and suburbs are outgrowing their governments. He has introduced a bill in the House of Representatives that would set up a Commission on Metropolitan Problems and Urban Development.

The commission would be directed to get the problem of metropolitan growth into focus and suggest guidelines for its solution. It would study and investigate the problems of metropolitan expansion, with special reference to the need, in terms of adequate governmental structures, to make suitable provision for land use, planning and zoning and other governmental functions required in populous communities. It also would investigate existing and developing efforts to cope with urban growth through such devices as cooperative planning, consolidated city-county planning, federative structures, and intergovernmental contracts or compacts.

Finally, the Commission would be directed to formulate and submit recommendations to assure sound and orderly metropolitan growth within the framework of traditional patterns of responsibility and control.

OSTERTAG said recently he expects the House Committee on Government Operations to hold hearings on his bill soon.

The measure would set up the Commission with 25 members, 15 of them appointed by the President and 5 each from the Senate and the House. The President's members would represent the executive branch of the Federal Government, the States, local government, and the public. The Commission would have full subpena powers and could require any Federal department called on to assist in the work.

The Commission would submit its findings and recommendations to Congress and the President within 1 year. The Commission would be dissolved 6 months after its final report.

The New York Representative, whose Rochester area gives him a firsthand knowledge of urban growth, says the metropolitan problem is not Federal, although the Federal Government has had a major share in creating it and must assist in solving it. He anticipates a population of 300 million in this country by the end of the century and believes 97 percent of the increase will be concentrated in the metropolitan areas.

"Already dry rot has set in at the center of the core cities, and people are seeking to escape it by moving to the suburbs," he recently told his constituents. "But without adequate planning and control, the problems will only spread and intensify as this outward expansion continues."

Local governments that are supposed to deal with these prodigious problems are faced with impossible tasks, he maintains. Through no fault of their own, they can do little more than pile sandbags along the levees and pray that the waters will recede.

OSTERTAG says the logic for metropolitan areas is larger governmental units with more authority, but the trend is in the exact opposite direction. Local units are increasing, he points out.

For each 1,000 square miles in metropolitan areas, there are slightly more than 75 local governments, more than double the number for nonmetropolitan territory.

Each of them, he says, has some authority—some more and some less—but none has comprehensive authority. He points to pyramiding and overlapping governmental units and at the bottom of the heap, sustaining it all, earnest, anxious, and bewildered, is the man who moved to the country to achieve a greater degree of freedom.

Freedom? He lives in a straitjacket. He cannot even itemize, let alone study the problems which confront him.

In a quote in a letter to constituents, OSTERTAG gives an alternative to forthright action on today's metropolitan problems: "Some paleontologist of the future will dig down to the United States of America layer of civilization and find it one great fossilized traffic jam, 'at the nexus of which is the skeleton of a driver who took a wrong turn on a cloverleaf one Sunday afternoon.'"

A good many people studying the Nation's metropolitan problem believe the Federal Government ought to stay completely out of the picture. They say national voluntary conferences are enough to bring the problem into focus and suggest solutions. Local communities, left to themselves, eventually will find their way out of the confusion of fast growth, they believe. They see in Federal attention to the problem the danger of Federal tampering with local governments.

Others seeking solutions to urban problems believe that since the Federal Government helped get the communities into their present difficulties—through location of war industries, myriad regulations and the like—

it ought to help the communities find their way out.

Some have advocated a White House conference, national in character but without the power of a congressional commission. Still others are seeking the establishment of a Cabinet-level post—a secretary of urbiculture—to handle all Federal relations with local governments.

An Ostertag commission would possess the advantage of marshaling the facts on metropolitan problems for local officials. And perhaps in cases where local officials tend to slough off the considered opinions of hometown citizens, they might take more seriously the word of a congressional body. History shows a strong tie between most city halls and official Washington.

[From the Rochester (N. Y.) Democrat and Chronicle, Sunday, June 9, 1957]

REPRESENTATIVE OSTERTAG WORKS ON TOP PROBLEM—HOW TO PLAN URBAN FUTURE OF NATION

A tip of our Sunday best hat today to Congressman HAROLD C. OSTERTAG for working persistently in one of the most thankless vineyards of all, that of trying to awaken the Nation to the problems of explosive population growth.

Reports from Washington are that there is a good possibility hearings will be held at this session of Congress on OSTERTAG's bill to create a Commission on Metropolitan Problems and Urban Development. The bill is now before the Government Operations Committee where the climate is said to be friendly.

Congressman OSTERTAG's bill would set up a Hoover sort of commission to concentrate attention on the problem and suggest guidelines for its solution within and among States and localities. The Commission would be authorized to study and investigate the problems of metropolitan expansion, with special reference to the need, in terms of adequate governmental structures, to make suitable provision for land use, planning and zoning, industrial and residential development, housing, transportation, water supplies, air and water pollution control, civil defense, recreational, social, and educational services.

Also, the Commission would be authorized in OSTERTAG's legislation to investigate present efforts to cope with urban growth through such devices as consolidated city-county planning, a subject now much in the spotlight in Rochester.

The Congressman's bill clearly sees America's future as an urbanized and industrial one, and it specifies that the Commission should try to make our startling growth a planned and orderly growth.

Enactment of legislation of this sort by Congress is both nonpartisan and imperative.

Less than 2 weeks ago at a conference in Rochester, the Downtown Development Committee of the National Retail Dry Goods Association called for a White House conference on the problems of "urbanitis." That is a sample of the growing awareness that we need correlation and guidance from the Federal level.

Luther Gulick, of the Institute of Public Administration, one of the Nation's most highly regarded experts on planning and municipal growth, has warned that unless all governmental services on all levels are coordinated to deal with growth problems, we shall face progressive destruction of the human habitat.

The language is technical but tough; it sounds just right to us.

Probably it is difficult to stir the public into support of legislation to deal with the issue of overfast growth, because it is both complex and abstract. It isn't like a bill to give us all back a few bucks of our tax money. But its impact on our living for generations to come will be greater by far than the gains or loss of a few dollars in taxes. So again, a tip of our Sunday best hat to Congressman OSTERTAG for pressing this legislation. And we know we speak for an interested—if usually somewhat apathetic public—in hoping that the bill gets the bipartisan push it deserves.

Are We Hoaxed?

EXTENSION OF REMARKS
OF
HON. KATHARINE ST. GEORGE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mrs. ST. GEORGE. Mr. Speaker, the following article by Mr. George Sokolsky appeared in the Washington Post and Times Herald this morning.

I commend this article to the membership because it states very clearly some facts on the Girard case in Japan.

First, we have no status-of-forces treaty with Japan, only with NATO countries. Secondly, we have only preliminary agreements on the subject, entered into by our former Ambassador and his opposite number, and never fully implemented. Thirdly, both governments have admitted that the question is purely political and that this soldier is being turned over to the Japanese court to save face for Japan.

Mr. Speaker, it is a fine idea to save face for Japan, but how about the face of the United States of America?

ARE WE HOAXED?

(By George E. Sokolsky)

There is no Status of Forces Treaty with Japan. There is such a treaty with the countries which are members of NATO, but when that treaty was confirmed by the Senate, two reservations were stipulated: one, that an American soldier's constitutional rights should not be diminished and the other that the Status of Forces Treaty with NATO countries should not serve as a precedent for agreements with other countries.

In the case of William S. Girard, this is an important issue which has to be taken to the courts, as it has been, by his counsel, Earl J. Carroll. Here is an American citizen who is entitled to be tried by an American military court but who is being handed over by our Government to a Japanese criminal court and is being forced to accept a Japanese lawyer, not of his choosing, and it is all being admittedly done by the Department of Defense, for political reasons which are independent of the facts in his law or the laws of the United States or the laws of nations.

The Department of Defense bases its case on article III of the Security Treaty with Japan, signed September 8, 1951. That treaty granted the United States the right to maintain Armed Forces in Japan. Article III reads:

"The conditions which shall govern the disposition of Armed Forces of the United States of America in and about Japan shall be determined by administrative agreement between the two governments."

The word that is the cause of the argument is "disposition." About such a word, diplomats can debate forever, although there are plenty of dictionaries to tell them what it means. Earl Johnson and Dean Rusk on February 28, 1952, signed an administrative agreement with the Japanese which proposes that the United States sign an agreement with Japan similar to the NATO Status of Forces Treaty. It is a proposal, not a fact. Furthermore, such an agreement would have been an evasion of the constitutional authority of the President and the Senate. It was something that the Japanese wanted to give them face, but which our Government at the time dared not submit to the test of public opinion and senatorial ratification.

So a protocol was drawn up, signed by John M. Allison, United States Ambassador to Japan, on September 29, 1953. A protocol is really a work paper, a document used as preliminary to the opening of diplomatic transactions. Allison's protocol relinquishes civilian and certain American military personnel to the Japanese Government. This document has been a hush-hush affair, never submitted to the Senate as a treaty and surely cannot constitutionally be binding upon the United States. As far as the protocol affects Girard, this is the wording:

"(A) The military authorities of the United States shall have the primary right to exercise jurisdiction over members of the United States Armed Forces or the civilian component in relation to * * *.

"(11) offenses arising out of any act or omission done in the performance of official duty."

It has been admitted by the Government of the United States that Girard was engaged in the performance of his duty when he killed Mrs. Sakai.

On September 29, 1953, Ambassador John M. Allison signed another document. This one was entitled "Agreed Official Minutes Regarding Protocol To Amend Article XVII of the Administrative Agreement Between the United States of America and Japan." What the value of "Agreed Official Minutes" is, in international relations, only Allison can know. There is no such technical terminology in law. Undoubtedly this was an attempt to clarify a confusion of diplomatic origin by establishing a two-man commission to decide what all the previous documents mean.

Finally the two-man commission, an American and a Japanese military man, composed a document entitled "Agreed Views," which are only the agreed views of these two men, as they were never included in a treaty, ratified by the Senate, according to the Constitution. Thereby the Constitution is altogether bypassed, and what it all comes to is that the liberty and life of an American soldier in Japan are no longer safeguarded by the Constitution.

In fact, both the Japanese and the American Governments admit that Girard is a victim of a political situation and that justice and law are not at issue. That was the way the American Government case was presented to a Senate committee and to a court in Washington.

Treasurer of Luzerne County, Pa., John B. Rutkowski, Honored

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 11, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader Evening News which comments on the election of John B. Rutkowski, treasurer of Luzerne County, to the presidency of

the Pennsylvania Association of County Treasurers:

COUNTY TREASURER HONORED

Election of John B. Rutkowski, treasurer of Luzerne County, to the presidency of the Pennsylvania Association of County Treasurers and the selection of Wilkes-Barre for the 1958 convention constitute an impressive tribute to the local official, now in the second year of his first term.

Mr. Rutkowski launched his career as a banker just three decades ago at the Forty Fort State Bank, of which he has been president since 1950. He has been active in Kiwanis, the Motor Club and the Pulaski Committee, serving as an officer in each.

It is not often a man of his caliber lands in public office, but Mr. Rutkowski seems to be the exception to the rule in many instances. Now that he is filling this responsible post, it is not surprising to learn he is gaining widespread recognition in the Commonwealth for his talents.

The Signs Were Clear

EXTENSION OF REMARKS
OF
HON. GEORGE W. ANDREWS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ANDREWS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Dothan Eagle of Wednesday, June 19, 1957:

THE SIGNS WERE CLEAR

It was generally predicted in 1954 when the United States Supreme Court abandoned precedent and quoted sociology to overturn school segregation that this broad assumption of power would one day be regretted even by those who applauded it then because it served their purpose of the moment.

The day hasn't been long in coming, and now it is here in full force.

Just the other day the Court, continuing a trend that set in shortly after the 1954 decision, strained at gnats to put an umbrella over Communists and to slap at Congress' right to cite for contempt those balky witnesses who refuse to talk in investigations of communistic activity.

Reviewing the conviction of 14 convicted California Communists, the Court ordered 5 of them freed outright and ordered new trials for the other 9. It was a strangely split 4-to-3 decision. Two of the three dissenters wanted all 14 turned loose promptly, while only the third wanted to affirm the convictions.

This third, Justice Tom Clark, who was very lonesome in his view, declared that the Court should not do any acquitting at all. "In its long history," he said, "I find no case in which an acquittal has been ordered by this Court solely on the facts. It is somewhat late to start in now usurping the function of the jury, especially where new trials are to be held covering the same charges."

In the case slapping at Congress' power to investigate Communist activity, the Court turned loose a labor official who had refused to tell the Un-American Activities Committee about Communists he had known. This decision was 6 to 1 (Clark again dissenting) with Chief Justice Warren sepaking for the Court.

Warren said the question under committee investigation was obscure, that the committee was unfair in its treatment of the witness and, besides, the resolution creating the committee was, in his opinion, "loosely worded."

The Court had already ruled that a State cannot fire an employee for Communist leanings, that States cannot try anyone for sedition (only the Federal Government), and that the Federal Government cannot discharge just anyone as a security risk, only those in "sensitive" jobs.

So, it's no surprise that the free-wheeling Court is continuing to go in the direction it marked when it stepped into the legislative field and took unto itself powers not assumed by its predecessors. As bad as this is, it probably is only the beginning. Men who usurp power use it more, not less, as time goes on.

How Soon the Next Ship Disaster?

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. McCORMACK. Mr. Speaker, the large number of disasters at sea should be a matter of concern to everyone. The protection of life and property on the high seas should be a matter of primary importance. Every step and action taken to protect life and property on the high seas has been done by the Congress over the opposition of the great majority of the shipowners.

As individuals they may be nice persons when we meet them, or when they seek something for themselves, but as shipowners, or officers of shipping corporations, they are cold and calloused in their disregard for measures of protection. The legislative history of the Congress supports this assertion. Profits first, protection last, seems to be their thinking and policy. In this world of today they should change this kind of thinking. They should at least put protection of life on the same level as profits.

In my extension of remarks, I include an interesting article, entitled "How Soon, the Next Ship Disaster?" written by Howard Whitman, and appearing in the June 1957 issue of Reader's Digest.

In connection with the question "How soon, the next ship disaster?" I call attention to news items of June 19, 1957, appearing in our newspapers, of two big oil tankers that collided and burst into flames off the coast of Brittany in which 8 sailors died in the oily sea, and 10 others seriously injured.

New and further devices for protectection are needed. The shipowners are still opposing. Until they change their thinking of blind opposition, it will be necessary for the Congress to again act and compel the installation of the best means possible to protect life and property on the seas, particularly on the high seas.

HOW SOON THE NEXT SHIP DISASTER?

(By Howard Whitman)

On the navigation chart of the Coast Guard cutter *Spar*, as it bucked a reluctant sea off Nantucket Island, I noticed a penciled warning at a spot where the depth is 39 fathoms: *Andrea Doria*. We reached it in a few hours—the graveyard of a great ship.

I had not gone to the *Doria's* grave out of sentiment, though I could have; the memories of a happy voyage with my family on this ship a few months before the sinking were still fresh in my mind. I went to write an epitaph. Below, in the dark deep, lay a sea queen, dead but for a single hope; that out of her disaster might come the inspiration which could save others from a similar tragedy.

The *Spar* hovered for 24 hours near where the *Doria* and the *Stockholm* collided last July. We saw 25 ships go through the "crossroads," this funnel where Atlantic traffic converges off Nantucket. How safe were they? Could it happen again?

The skipper of the Nantucket lightship, George Bannan, who was returning with us to the mainland, remarked: "I watch the ships going all over the compass on foggy nights, and sometimes on the radar I've seen 3 or 4 of them within 5 miles playing ring around the rosy."

Charles Cowing, skipper of the *Spar*, added: "That's how it is. There's no traffic cop out here."

The comments of these Coast Guardsmen express what I had found in months of investigation among captains of luxury liners, merchant mariners, port officials, admiralty lawyers, radar experts, and others of the sea fraternity. In their tight-lipped circle these men know what the public has not yet been told: that the *Doria-Stockholm* collision was not just a freak hard-luck accident. Some such tragedy was almost inevitable. Months before, at the Whitehall Club where skippers meet, a luxury-ship master had said, "We're going to have a big collision that will wake people up. Conditions being what they are, it's got to come."

And more are expected. One captain asserted, "It could happen again and again. We're lucky there haven't been more *Dorias*."

Every day there are 4 or 5 ship collisions, on the average, between vessels of 500 or more tons; 30 collisions per week, some 1500 every year. Less than 48 hours before the *Doria* disaster an almost identical collision occurred between the freighter *Fairisle* and the tanker *San Jose II* in the same vicinity in the same patchy fog. But it took the sharp bow that slashed the *Doria* to shatter public illusions about how ships are sailed in this day and age—illusions of safe slowing down in fog, of definite and well-heeded sea lanes, of monitored traffic, of security by means of radar.

International rules governing navigation, the rules of the road require ships to slow down in fog to moderate speed. In admiralty courts "moderate speed" has been defined as that speed at which a ship can stop within one-half the distance of visibility. This should be safe enough. But do ships obey the rule?

Engineer John Carrothers stated in United States Navay Institute proceedings: "I have made some 200 transatlantic crossings, the majority of them as an officer on America's greatest liners. Never once do I remember the ship slowing down in the open sea because of fog."

Ships in the northern tracks of the Atlantic are requested to radio to the Coast Guard ice-patrol station their position, speed, the sea temperature, and any ice they have sighted. Some of the big passenger liners leave out speed when it's foggy. One captain candidly admitted: "In any information messages I send out during a fog I never include my speed, for the simple reason that I'm probably going full speed."

A Coast Guard officer said, "They don't fool us, though. By plotting their course from point to point we know they're plowing through fog at full speed."

But what can the Coast Guard, or anyone, do? There is no authority that can crack down on fog speeders. After a collision—only after—a shipping company may have

to pay damages if fog speeding is proved. That's the reason why the matter is hushed.

What does the skipper do in fog? "I sound my whistle every 2 minutes, I keep an eye on the radar, I put the engine room on 'stand-by'—and I keep right on going full ahead," the captain of a passenger-cargo vessel declared. He said as an afterthought, "I know it's dangerous."

All captains know it is dangerous to plunge through fog at full speed with these multi-thousand-ton steel behemoths which can slash each other mortally and, even in an emergency, may require 3 miles to stop. And all captains know why it is the custom to race through fog in spite of the danger.

Commodore John Baylis, former captain of the port of New York, epitomized what I heard from dozens of skippers: "The master of a big ship has his schedule. If he docks late the company has had longshoremen waiting for him and tugs engaged, and chances are that the steamship line runs into overtime or has to pay for an extra day. They don't say anything to the master about being late but the look on their faces says, 'You got us involved for thousands of dollars.' The implication is, 'Why didn't you bring her in on time even if you had to take a few chances?'"

Sit tight schedules and economy are the villians. Every extra hour at sea costs money and the pressure on shipmasters to push their vessels to the maximum, fog or no fog, is well known on every waterfront.

Much was said about sealanes when the *Doria* went down. The eastbound *Stockholm* was nearly on the westbound track and some 20 miles north of the recommended track for vessels bound to Europe, stated Congressional investigators. But the Atlantic sealanes, established in 1855 and later incorporated in the North Atlantic Track Agreement, are merely recommended. Though the United States in 1948 made it mandatory for United States passenger ships to stick to the lanes, many nations, including Italy and Sweden, have never subscribed to the North Atlantic Track Agreement.

Capt. Gunnar Nordenson of the *Stockholm*, like every master I met, believes in sealanes but he wants them mandatory and dependable, not merely recommended. Lacking this, many a captain cuts in and out of lanes because if he doesn't take a shortcut some competitor will. A haphazard alinement of traffic on the sea may have sufficed when ships were slower, smaller and fewer. But today, with floating hotels hurtling toward each other, the orderly routing of sea traffic is urgent.

Even my 10-year-old son was surprised when he asked Capt. Piero Calamai of the *Doria* if the ship was obliged to follow a set course and the captain replied, "No; a master is free to take his ship anywhere on the ocean." A child of the air age, my son believed that just as planes file their flight plans before taking off, so a ship would file a plan that set forth the course it expected to follow, and that some central traffic control would be informed if it deviated from course.

I asked the captain of a popular tourist vessel, "Isn't there some place you can query and get information about other ships' positions so you'll know what traffic you're going to encounter?"

He replied, "I always have one of my officers pick up the New York Times on sailing day so I can see what's expected in and out of the harbor."

This in a day when ever taxis are dispatched by radio.

The closest approach to a central information agency is the Search and Rescue setup of the Coast Guard, and this is fragmentary. At its Rescue Coordination Center in New York I examined the 10- by 20-foot Atlantic chart that has markers on it to show ships' positions. There are about 2,000 ships on the Atlantic at any one time, but this chart plotted only 150. Why? Because ships send in their position, course, and speed, along with weather data, every 6 hours if they feel like it—but fewer than 10 percent of them feel like it. One of the world's fastest liners has never reported to the Coast Guard, and another only twice in 5 years.

The need is for a modern system of mandatory reporting of position, course, and speed, and an electronic plotting board that shows at all times where ships are and where they are headed—this information to be available to any captain who needs it.

But isn't radar's all-seeing eye the answer?

Both the *Doria* and the *Stockholm* were equipped with radar. And there is much additional evidence that radar is not the protection it is popularly thought to be.

Actually, overreliance upon it is regarded as a hazard. Admiralty courts have decided 17 major collision cases involving radar, and many times that number have been settled out of court or are awaiting trial. In the Proceedings of the Merchant Marine Council, Admiralty Attorney Nicholas J. Healy, III, stated: "In the hands of an incompetent operator radar sometimes produces a false sense of security which will lead him to continue at high speed in areas of limited visibility."

In one case in which radar gave this false sense of security an admiralty judge remarked, "This collision probably would not have happened if the ships hadn't had radar equipment."

It takes skill to interpret properly the ghostlike pips on a radar screen. And it is an open secret on the waterfront that many who stand radar watch haven't that skill.

The *Doria* hearings told the story. The ship's second officer, who had been on the radar before the collision, was on the stand. What training in radar did he have? No actual training. How did he learn about radar then? He picked it up when he was third officer on the *Comte Grande*. Did he plot the course of the *Stockholm* when its pip appeared on the scope? No. Why not? He thought it wasn't necessary.

In the hearing room during this testimony was the representative of a radar company. During a recess I asked him if most ships' officers were competent at radar. He replied, "If you knew the score you'd shudder. When a shipping line buys radar equipment a sales representative usually goes aboard with the installing technicians and explains to the officers how it works. This is like a television man giving instructions to a housewife when he installs a set: he just shows her which knobs to turn. The officers pick up what they can, read some booklets, and that's about it."

After the *Doria* disaster the British merchant marine added to the requirements for a deck officer's license: "Submission of a certificate of proficiency as a radar observer." Said the United States congressional report on the *Doria*: "Every maritime country should do likewise."

The congressional investigators also advocated a short-range radio-telephone on the ship's bridge so that when another vessel heaves into view one skipper can talk directly to the other. Many people were appalled after the *Doria-Stockholm* crash that the deck officers of these ships hadn't communicated with each other to decide who was going which way. They had no bridge radiophone equipment.

Great Lakes ore boats talk to each other; so do tugs in the harbors. It should not be beyond the means of great shipping lines to equip each bridge with a short-range radiophone.

On United States ships there is another problem. Supreme Court Justice Felix Frankfurter, traveling aboard one of the world's finest liners, remarked to the captain, "You are the lord and master of all you survey."

The captain replied, "You are laboring under an illusion, Mr. Justice. I am just a navigator."

After hearing this story I asked the captain in question what he had meant. He explained, "On American ships the unions are boss and the union delegate is more powerful than the captain."

Another American captain declared: "We wish we could pick our crew and know that every man to whom we entrust the safety of the ship is competent. On one crossing I woke up in my quarters and saw the reflection of the sun making an arc around the cabin. I realized what was happening—I had a quartermaster who didn't know how to steer. I rushed to the bridge, and sure enough he had taken the ship around in a circle. If that quartermaster had hit another ship I'd have been responsible. The captain on a United States ship is supreme, but not supreme enough to reject a crewman when the union delegate says, "Take him."

Other shipmasters told of a helmsman who didn't know the difference between "course zero-two-nine" and "two-nine-zero" (and almost ran a luxury liner into a breakwater); a third officer on watch whose eyesight was so bad he could see only 2 miles in 8-mile visibility; and a radarman who said all was clear just as his ship rammed another vessel in a fog (he hadn't warmed up the radar set and his scope was blank, like a TV set for a few seconds after you turn it on). There are ample competent seamen, but unfortunately there are also exceptions such as these. Yet if the captain refuses to take a crewman whose ability he doubts, his ship may be stranded in port by a walkoff.

That's the story of the high seas, 1957. There is much to be done.

I went to the graveyard of the *Andrea Doria* because I thought she might be immortal still, might save many more than the 50 lives she took. For disasters can pay dividends. The *Titanic* sinking brought the iceberg patrol.

Will humanity now get a dividend from the *Doria*? If not—how soon the next ship disaster?

New Jersey Judicial Reform

EXTENSION OF REMARKS

OF

HON. PETER FRELINGHUYSEN, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. FRELINGHUYSEN. Mr. Speaker, under leave to extend my remarks, I should like to include an article by William J. Brennan, Jr., Associate Justice of the Supreme Court of the United States which appeared in the American Bar Association Journal of June 1957. It is entitled "After 8 Years: New Jersey Judicial Reform":

AFTER 8 YEARS: NEW JERSEY JUDICIAL REFORM

(By William J. Brennan, Jr., Associate Justice of the Supreme Court of the United States)

(EDITOR'S NOTE.—In 1947, after a long campaign for reform, New Jersey scrapped its 103-year-old court structure and replaced it with a new, streamlined judicial system utilizing the principles of business management. Placed at the head of the new Supreme Court was the leader of the battle for reform, Arthur T. Vanderbilt, dean of the New York University Law School and a former president of the American Bar Association. Mr. Justice Brennan, himself a former member of

the New Jersey court, reviews the 8 years of judicial administration in New Jersey since the new system was adopted. He finds that the results prove the soundness of the theories upon which the New Jersey court system was built. The article is taken from an address delivered before the Constitutional Convention Association at Princeton last December.)

New Jersey feels a deep pride in a judicial system usually acknowledged to be America's best. Every feature of its modern court structure is embodied in a single article of 6 short sections and 27 pithy paragraphs of the 1947 constitution. The structure of some of the States have some of those features. Only New Jersey's structure has all of them.

A basic determination underlay the change from our former systems. It was that our modern complex economy and society could no longer tolerate a court system of autonomous courts free from any sort of control from within or without, the judges concerned with their own court only and brooking no interference from judges of other courts, or indeed even from members of their own court. New Jersey borrowed from industry and commerce one of America's great contributions, namely, the principles of business management which have done so much to advance this Nation to the place of the world's greatest productive economy. The framers of the 1947 constitution created a simple unified judicial system, giving the supreme court exclusive authority over its administration under the leadership of a principal executive officer, the chief justice of that court. Flexibility for the system was ordained by vesting in the chief justice the power to assign judges according to experience, ability, and need, and apportion judicial busines among the courts, divisions, and parts acording to the volume and type of cases. The aim was threefold: (1) To abolish jurisdictional controversies which delay justice and waste the time and money of litigants and courts; (2) to assure that judicial resources would be fully utilized and litigation promptly decided; (3) to secure businesslike management of the courts through a single administration for all of them as integral parts of a single whole.

The framers were fully aware that in what they did they were providing for a new kind of judge. They recognized that the judicial department, a major department of government, could not operate efficiently without an administrative head. Someone must run the show on the administrative side. Someone must be boss. A business concern could not be imagined in which everyone is manager and no one can tell anyone what to do. The system under which everyone is chief and there are no Indians—the direct consequence of the supposed sanctity of the autonomous court—was cast into oblivion forever. In New Jersey a prospective judicial nominee's talent and capacity for executive responsibility, as well as his learning capacity for adjudication of important questions of substantive law, have now become significant considerations. That was made preeminently so in the case of the office of chief justice, but I shall later demonstrate that that essential differs only in matter of degree as regards judges of the superior court from among whom the presiding judges of the several counties, called the assignment judges, are selected. In consequence, first among all the States, New Jersey provides a setting in which the administrative judge—the judge with executive capacity to run a business as large or larger than many of our industrial and commercial giants—has come to be respected as much for his accomplishments in bettering justice through administration as he is for his judicial accomplishments in the field of substantive law.

So it is that realization of the goals for the new system depended directly upon the capacity for administration of the first judges into whose hands this great responsibility was entrusted. There was no modern precedent for this job. Procedures for administration had to be worked up from scratch, and were, through an agonizing period of trial and error, before there were forged the smooth running, effective and efficient processes which have accomplished the gratifying results that make New Jersey the envy of the Nation and have spread the fame of its system throughout the world. It was the State's immense good fortune to number among its lawyers one who had spared from successful careers as lawyer, law teacher and political leader time enough in generous measure to think upon judicial administration and to be willing, when offered the opportunity, to take on the arduous task of launching the new system. I take not one whit of the credit due to the convention delegates and to the great number of judges, practicing lawyers and others who contributed so much when I say that the leadership of Arthur T. Vanderbilt sparked the fuse that started the system toward the goal, and kept it on the track with unceasing, singleminded, persistent and undeviating devotion when there was danger of straying. His contributions have made his name known everywhere in and out of America where the effort is to better the doing of justice through improved court administration. Honorary degrees and awards from colleges and bar associations too numerous to name have acknowledged his contributions, and we of New Jersey who have been the direct beneficiaries of his labors are the first to acknowledge that these honors have indeed been richly deserved.

BETTER JUSTICE: THE ADMINISTRATIVE TOOLS

But the real emphasis of my theme today is upon the administrative tools which were devised to capitalize upon the potential for better justice through improved administration which was the great objective of the new system. There are five features I want to talk about. They are not the only ones, of course, but the five I think particularly significant. Two of them, the office of the administrative director of the courts and the assignment power of the chief justice were provided in the judicial article. The remaining three, the adaptation of the Federal Rules of Civil and Criminal Procedure, the broad discovery and mandatory pretrial conference procedures, and the judges' weekly reports, were provided for by the supreme court upon the recommendation of the chief justice. The chief justice will be the first to say that the development of some of these techniques owes as much or more to the actual working out of them by others as it does to him. Literally scores of judges and lawyers joined hearts and hands in the perfection of several of these and other administrative measures. Only the limitations of space prevent my detailing for you the hard work upon the part of so many that went into the fashioning of these tools to their present high state of efficiency. Usually each of these efforts had the guidance of a committee of judges and lawyers under the chairmanship of an associate justice of the supreme court. The committee on revision and amendment of the rules on practice and procedure, for example, a particularly important and arduous assignment, has had the benefit of the leadership of Mr. Justice Burling. Similarly as to the committee on probate chairmanned by Mr. Justice Heher; the committee on court reporters under Mr. Justice Oliphant; the committee on criminal procedures headed by Mr. Justice Wachenfeld, and the committee on evidence under Mr. Justice Jacobs. The great judge whom it was my honor to succeed on the court, Mr. Justice Ackerson, was the first chairman of the committee on pretrial conference and calendar control, followed by me during my tenure, and currently an added duty taken on by the chief justice. And I could add much more if space allowed, but I must discuss the five features which I think did most to bring us to our present success and which, I strongly feel, must continue to highlight our procedures if we are not to risk marring that record.

THE FEDERAL RULES: A WISE ADAPTATION

The first, the adaptation of the Federal Rules of Civil and Criminal Procedure to govern the processing of individual pieces of litigation requires no particular emphasis. It is enough to say that the wise and sensible thing was done in this connection. The Federal rules represented the most comprehensive, the most flexible, the most modern existing set of rules to accomplish the objective of ruling the disposition of particular cases according to the merits and to prevent their disposition for mere procedural reasons. Those rules represented years and years of work of outstanding experts and reflected the thoughtful criticisms of thousands of individual lawyers throughout the country. They were ours for the asking and it was natural that we should have taken advantage of our opportunity. I do not mean that the Federal rules were imposed on our system. Long detailed study of each rule preceded the adoption of any, and numerous revisions were made where needed to meet our State situations. That was an intense effort of the 10 months intervening between the referendum at which the new constitution was adopted and the effective date of the judicial article on September 15, 1948. One of the major revisions was to make pretrial conference procedure mandatory. That procedure is voluntary in the Federal courts, but our success with the mandatory requirement has occasioned strong support for the same change in the Federal system. Chief Justice Vanderbilt summed up our effort as to these rules in his address to the first judicial conference in September 1948, when he said:

"In a very real sense, the new rules are therefore the result of a greater degree of cooperation than are any other rules heretofore adopted in this country. The aim has been directness, simplicity, and flexibility in the highest degree consistent with the full preservation of individual rights. We have aimed to maintain the intellectual environment of sound learning which has characterized the decisions of our courts but at the same time to prune away outmoded technicalities and to set up a businesslike administration for the entire judicial system."

The second of the five features I have in mind is the work of the office of the administrative director of the courts. That work bears directly, of course, upon administration as such, a statement also true of the third, fourth, and fifth features. Obviously one cannot administer something without knowing what his problems are. The primary function of the office of the administrative director is to gather and interpret statistics concerning the stuff of court business, which, of course, is litigation. How many cases are there—where are they pending—how long have they been pending—is the number of new cases on the up- or downgrade—the necessity for such information is apparent. This is not all that the administrative director does. He has important housekeeping tasks, budget responsibilities, and the duty continuously to study operations and develop procedures the better and more efficiently to process court business. But his function of gathering statistics is what touches particularly upon administration because upon the efficiency and thoroughness with which that job is done depend decisions by the chief justice where to assign judges; in what counties temporary measures may be necessary to keep the flow

of cases moving, for example, extending the court day or court week until the list is over the hump; whether to recommend legislative remedies—the legislation for transfer of cases from the superior and county courts to the district court is an example. For these vital decisions the director's statistics must be live, current data, not dead records of past performances and failures. He does, of course, compile historical data—comparative annual records of the business done in each court. These are serviceable to show trends in litigation and to test the quality and effectiveness of court administration from year to year. His quarterly and annual reports also contain tables showing the work done by the individual judges, information which tells the public the number of hours each judge spends on the bench—although that's not the whole story because many, if not most, judges also spend many long hours in judicial work after the court day.

THE WEEKLY REPORT; MINIMIZING COMPLAINTS

The source of the information in these tables has a special important function and constitutes the third of the five features I want to mention. Each of the judges of New Jersey's trial courts file a weekly report of his activities with the administrative director. That report shows his hours on the bench each day, the names of the causes handled during the court day and the time given to each. I suppose one of the complaints most often heard from litigants and the public before the new system became effective was that too often the judge was not to be found on the bench during working hours. The public was not always satisfied with the answer that he was working in chambers. Though the suspicion was not justified, people felt uneasy about the conduct of public business in chambers. Even litigants who remained outside while their lawyers met in chambers with the judge were not completely happy about the practice. It was partly to remove any basis for misunderstanding upon the part of the public and litigants that the chief justice proposed and the supreme court adopted administrative rules which prescribed fixed court hours and court days throughout the State and forbade the conduct of judicial business in chambers, and finally provided for the filing of a weekly report by each judge. Judges too are human. Some judges are more effective in their work than others, some give more satisfaction to the bar and the public than others, some are more diligent, more conscientious, more devoted to their work than others. These individual differences cannot be changed administratively, but there should and can be equality in the number of hours each judge of the same court spends in the courtroom. And it is not enough that matters are in fact decided upon the merits and only upon the merits; it is equally important that the appearance of the fact be evidenced for all to see. Conferences in chambers between judge and lawyers or litigants too often are misunderstood by lay observers and wild rumor and conjecture present the hazard of undermining confidence in the judicial process. This weekly report operates to assure both that inequalities in the burden of judicial work among the judges will be minimized and that what the judges do will be done in the open for all to see.

The weekly report is designed also to minimize another reason for complaint under New Jersey's former system. I refer to delays by judges in decisions upon matters to be decided by them and not by a jury. Delays as much as 8 or 10 years were not unknown. Now each judge must list on his weekly report every reserved decision and list it again on every subsequent weekly report until the matter is decided. If the office of the administrative director notes that the decision is reserved an undue length of time, an inquiry of the judge for a reason usually has the consequence of a prompt disposition thereafter. This device has made a valuable contribution toward the goal of minimizing delays in this large area of judicial determinations.

The fourth of the five features is pretrial discovery and mandatory pretrial conference procedure. This is a feature upon which I freely confess to having what is perhaps an arbitrary prejudice. I am so fully convinced that these tools accomplish better justice, not only in bringing about settlements and avoiding time-wasting trials, but of far more importance, in assuring that right and justice shall have the most favorable opportunity of prevailing in cases that are tried, that I have almost a closed mind to any argument opposing the mandatory requirement. I cannot be far wrong either in the light of the evidence that this will shortly be the requirement in more jurisdictions. I mentioned what is happening in the Federal courts. I note also that California has made the requirement of pretrial mandatory. There is a definite trend in that direction and New Jersey is responsible for it. And the trend was inevitable. If, in the lay mind, the law's delays contribute to unfairness of result, the public has equal reason to complain of the fact that all too often a trial becomes a battle between opposing counsel rather than an orderly, rational search for the truth in the merits of the controversy. It used to be in New Jersey, too, that neither side of a lawsuit ever knew until the actual day of trial what the other side would spring in the way of witnesses or facts. The technique was to play the cards close to the vest and hope by surprise or maneuver at the trial to confound one's adversary or, more important, to confuse the jury sufficiently to carry the day whether or not right and justice lay on the side of one's client. It was and is great sport, but hardly defensible as a system for determining causes according to truth and right. In pretrial procedure, made effective through a precedent broad discovery practice, lies the best answer yet devised for destroying surprise and maneuver as twin allies of the sporting theory of justice.

PRETRIAL PROCEDURES: GETTING THE FACTS

Pretrial discovery and pretrial conference procedures are the means for tearing aside the curtain. They permit each party long before trial to probe virtually without limit into the case of the other side, and so to learn everything about his own and the other side's strengths and weaknesses. Each lawyer obtains the names of the other's witnesses and may examine those witnesses fully at his own office. When each side can see in this manner the whole case exposed to view before the day of decision, each is obviously in the best possible position to evaluate his chances of success, or lack of them. The whole process is concluded at the pretrial conference between the judge and the lawyers, usually without the clients present. It is at that conference that the case is synthesized in a tailormade document suited only for the particular cause to which it relates. In that document, the pretrial order, appear not merely the matters upon which the parties can agree, thus avoiding waste of time in their proof at the trial, and not merely a delineation of the legal issues, simple or complicated, but, far more important, that which gives the case its individuality, that which makes it as unlike any other case as my fingerprints are unlike yours, for in it appears the revelation of the factual controversy and contentions as to the facts on both sides. It is the facts that created the controversy in the first place. There would never have been a lawsuit but for the parties' disagreement on the facts of the incident or event or transaction which gave rise to the action.

Pretrial discovery and pretrial conference procedures can truly be employed as a scalpel to lay bare the true factual controversy, and therein lies the basic worth of these procedures. They help attain the ideal of dispositions according to right and justice. They perform a great service in helping to eliminate or avoid calendar congestion. That service lies in the impetus they produce toward voluntary settlement, a service of such proportions in New Jersey that now only a little more than 1 out of every 4 or 5 cases ever gets to trial. The best we did in the old days was to settle half the cases; the other half were tried. Their contribution is not to be measured by the number of cases settled at the pretrial conference itself. Some are settled then, but New Jersey has stood steadfastly against the perversion of the pretrial procedure into a device for forcing settlements. Lawyers of other States complain with some bitterness that this is the only value that some judges attach to these pretrial devices. But where, as should be the case always, the overriding primary function of the pretrial conference is to further the disposition of the case according to right and justice on the merits, the contribution to a settlement can never be the reason for the conference, but merely an incidental, although, of course, valuable result of it. The reason that the contribution toward settlements has been so great is simply that the procedures of necessity create an atmosphere conducive to voluntary settlements. Each side knows the strengths and weaknesses of his own and his adversary's case, and, given that knowledge, settlement results almost as a matter of course when both sides see that it is to the best interest of each to settle.

I acknowledge that I react with some considerable impatience these days to the suggestion that pretrial conference procedure is a waste of time in automobile accident cases where the factual and legal issues are not often complex or difficult. I cannot understand why that suggestion is still advanced in the face of the overwhelming evidence that it is precisely in the field of automobile accident litigation that New Jersey has realized by far the greatest benefit from the procedure, not alone in the increase in the proportion of cases settled to cases tried, but in the better justice which inevitably flows from the ability of both sides to find out before trial everything they need to know about their own and the other side's case.

The next and last of the five features I would mention is the assignment power vested by the constitution in the chief justice. Probably that is the most delicate and important of the myriad administrative duties which, to my personal knowledge, take from one-third to one-half of Arthur T. Vanderbilt's workday which begins at 8 o'clock every morning and continues until a late hour most evenings. Every county has its ups and downs in volume of litigation, but the larger counties have a chronic condition of large lists where the time of the less busy judges from the smaller counties can usefully and economically be employed. But every assignment out of his county may present a judge with home or personal problems, and the chief justice has always been humanly aware that this is so. He gives an interminable amount of time to this duty, in telephone calls, personal conferences with the judges involved in transfers, and with the assignment judges. In the very nature of things, this responsibility must continue to be a difficult task for any chief justice.

But there is another facet of the assignment power which also has a most important bearing on administration. I refer to the selection of the assignment judges. New Jersey's system operates throughout its 21 counties. The detailed work of administration in each county cannot, of course, be done from Trenton. There has to be an administrative head for each county in the same manner that a business firm breaks

up a large territory in order to gain maximum efficiency in the whole operation. It is exclusively the responsibility of the chief justice to appoint one of the superior court judges as chief judge, called the assignment judge, to be in his county administratively the vice president or branch manager of the system. In addition to his regular judicial duties, the assignment judge keeps close tab on the dockets in all the courts, assigns cases to the other judges from the master list prepared at his direction, and has general administrative authority within the county. His responsibilities are in the field of criminal as well as civil litigation. He must charge the grand juries and may interpose to try criminal cases of particular public importance or interest. His powers of administration are extensive. Flexibility, as opposed to rigidity, must be his watchword. In him then, too, is required a talent and capacity for executive responsibility; it would be a disappointment to a chief judge to find himself without enough superior court judges with the capacity for this vital and important work. This is the reason I suggested earlier that the factor of executive ability is also important in the selection of superior court judges.

CURRENT CALENDARS: AN AMAZING RECORD

That concludes my discussion of these five features. They were the principal techniques developed and applied after the judicial article became operative, and consider what has been accomplished under them. In September 1948, when we started, trial lists were 2 or more years in arrears, and some cases actually were pending up to 8 years. Within 3 years, by 1951, all arrears were cleared up, and current cases were being tried, if not previously settled, at least within 9 months and more often within 6 months after complaint was filed. It was an amazing record—a miraculous achievement still to some metropolitan centers in other States chronically bogged down with lists 3 and 4 or 5 years old. But actually all that was done in New Jersey was that able executive talent devised and applied ordinary business principles to the operation of a simple integrated court system. Given that structure any State can do the same and we are more than happy to let every jurisdiction of the land profit from our example.

I do not mean, however, that the millennium has been reached in New Jersey and that we may sit back sure that all is well. Indeed, there have been times since 1951 when we have feared for our ability to keep abreast of the increase in litigation experienced in New Jersey, as in every other populous industrial State, in the wake of the economic upsurge which our Nation has experienced since the end of the war. But the chief justice saw the danger early and took the leadership in suggesting the legislation which authorizes the transfer to the district courts of any automobile-accident case which at pretrial conference is appraised as not promising the plaintiff a recovery in excess of the $3,000 jurisdictional limit of the district court. Currently, too, he has found it necessary temporarily to add 1 hour to the court day of some counties to catch up with a backlog and to keep abreast of the growing lists. The point of these examples is that the system is now geared to make such expedients possible, and it must always be so if we are to head off trouble before it arrives.

I have the definite conviction that New Jersey can never safely abandon any of the features of administration which I have discussed if we are to hold our gains. And in the case of the mandatory requirement for pretrial conference procedure and the judges' weekly reports, the values we realize from them apart from their contributions to the currency of our calendars would make their discontinuance a lamentable retreat from those things which best serve the public interest. New Jersey is experiencing a tremendous population growth and enormous development which inevitably means more and more litigation. Retention of our proved administrative tools may not alone suffice to handle the load. More and better courthouse facilities in many places will inevitably be required. And in time we may require an increase in the number of judges. But at the very least we will have to continue to rely on the administrative tools which 8 years of unceasing effort on the part of countless judges and lawyers have forged to the degree of proficiency which today allows most of the members of the Constitutional Convention to see in their lifetimes how right they were in what they did, and how great a contribution theirs has become and can remain to the advancement of better justice. It would be tragic indeed if a single one of these fine tools were discarded or blunted. Yet Senate bill 88 of 1948 would have killed pretrial discovery and pretrial conference procedures at birth by limiting inquiry to matters admissible in evidence at the trial. Only Governor Driscoll's veto averted that catastrophe. And at the 1955 State bar meeting in Atlantic City there was a long debate on a resolution, happily defeated, which proposed to make pretrial conference procedure voluntary in automobile accident cases, and where had at all, primarily a conference of judge and counsel around a table to explore settlement. And every county bar association but one or two violently opposed the enactment of the bills for the transfer of cases to the district court. Even Governor Meyner found that his pleas for the bills fell on deaf ears when he spoke personally in support of them to the trustees of the State Bar Association. Only the Governor's leadership and the leadership of equally responsible legislative leaders saved the day on that occasion. The press and public-spirited citizens generally have no doubt that we must not let down our guard lest those prevail whose judgment of what is best in the public interest is seemingly prejudiced by personal or other irrelevant considerations.

On July 7, 1958, Arthur T. Vanderbilt will be 70 years of age and will be required by the constitution to relinquish his office as chief justice. Several centuries ago another great judge was famed for his ability to bring order and efficiency to the courts. He was Sir Thomas More, Lord Chancellor of England in the reign of Henry VIII. When he took office the docket was crowded with cases, some of them 20 years old. He, too, knew how true it was that the spirit if not the letter of justice requires a prompt hearing and settlement of suits; otherwise an injustice is perpetuated and aggravated. So great was his skill in devising processes to bring cases to the point of prompt hearing that the day arrived when not a matter or man was left to be heard. A jingle commemorates his achievement:

"When More some time Chancellor had been,
No more suits did remain.
The like will never more be seen
Till More be there again."

But what we have in New Jersey is not alone the product of Arthur T. Vanderbilt's leadership. It is the work of many hands. It has been solidly built to endure through the terms of many chief justices. His great accomplishment as the first chief justice is that he blazed the trail where there was none and marked it so well for us that the handiwork of his administration must ever challenge succeeding administrations to mark it better. This much is clear. We must not retreat from the high point we have reached. We must go beyond in an increasing effort to attain what in truth is the unattainable summit. Man has striven from the beginning of time for better justice and will continue to strive for generations and generations past our own. Yet New Jersey's contribution is one of the great milestones on that road. The sorrow of any retreat on our part lies not alone in the disservice to our own citizens but as well in the blow it would deliver beyond the borders of our State to the valiants who are struggling in so many places to have our example emulated in their own States. The Attorney General of the United States only recently organized a conference of agencies to make a national frontal attack on the problems, State and Federal, impeding justice through bad judicial administration. The model held up to the conference as to what should be done is what has been done in New Jersey. We must in good conscience go forward. We must never, never retreat.

What the Court Really Ruled

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. MULTER. Mr. Speaker, the following article by Roscoe Drummond is a well reasoned and unemotional answer to all of those critics who disagree with the recent Supreme Court decisions involving the trial of Communists and the right of Congress to investigate.

Mr. Drummond's article appeared in the New York Herald Tribune of June 21, 1957.

WHAT THE COURT REALLY RULED
(By Roscoe Drummond)

WASHINGTON.—There is an erroneous impression that the Supreme Court is undermining the authority of Congress to investigate communism and cutting the foundation from under the Smith Act to prosecute Communist leaders.

It is doing no such thing—or so it seems to me.

There is plenty of room for honest differences of opinion over the Court's latest rulings. The argument is already going on so furiously that one newspaper has remarked with relish how it would like to join a crusade to impeach the offending justices.

Obviously impeachment talk is just rhetoric. Franklin D. Roosevelt's roundly defeated court-packing plan of 1937—to get a bench that would give him the kind of decisions he wanted—was a mild course of action compared to impeachment which would be a court-unpacking plan. Of course, both are wrong and thoughtful critics of the Supreme Court's opinions do not bring impeachment into the discussion.

What I want to bring out is that public controversy, pro and con, over the latest decisions ought to rest on what the Court actually ruled, not on what some headlines say the Court ruled.

Take the Watkins decision. John T. Watkins, whose conviction for contempt of Congress was set aside by the Court, was required to answer and did answer all committee questions concerning his own pro-Communist activities. He was required to answer and did answer all questions concerning people he knew who were presently engaged in pro-Communist activities. He only declined to answer questions about those he knew had broken with the Communist Party several years ago.

It was at this point that the Supreme Court ruled, 6 to 1, that Congress exceeded

its investigatory powers. The court made these points:

That the congressional power to investigate stems from the congressional right to legislate, and thus investigation must clearly serve the legislative function.

That while the congressional power to investigate is very large, it is not unlimited; it must not have the predominant result of invading "the private rights of individuals."

That the congressional power to investigate does not reach to exposure "for the sake of exposure."

This means, it seems to me, a very careful and moderate limitation on congressional committee investigations and a requirement that the congressional committees clearly establish the relevance of their questions at the time of the hearings.

Take the Smith Act decision. Here the Court freed 5 California Communists leaders and ordered a new trial for 9 others—in both instances because of trial errors.

The Court again sustained the constitutionality of the Smith Act which forbids conspiracy to advocate the overthrow of the Government by force and violence.

The Court found the California trial judge in error because he failed to charge the jury, as Judge Medina had in New York, that advocacy of violence is illegal only when it is directed to inciting an act of violence, not just teaching the theory of violence. Judge Medina's charge did not prevent the New York jury from finding the Communist leaders guilty.

It does seem to me that Justice Harlan's majority opinion is overly semantic in defining the word organize as meaning only to bring into being. The legislative history of the Smith Act suggests that Congress was referring to keeping the Communist party in being as well as bringing it into being and this will undoubtedly have to be cleared up.

Congress' primary role is not to investigate; its primary role is to legislate and investigation must be faithfully used to serve that end.

Congress' primary role is not to punish and prosecute, and thus when its investigations reach to that end they must not be allowed, as the Court says, "to abridge protected freedoms." It is the role of the courts, not Congress, to prosecute and punish.

And when the Supreme Court surveys these precious constitutionally protected freedoms, it is not thinking merely of a few Communist leaders, it is thinking of 170 million Americans.

Navy Alumni Show Faith in Admiral Kimmel

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, I am including as part of my remarks an article which appeared in the Washington Post and Times Herald on Thursday, June 20, which reports that the Navy Alumni Association has shown great faith in the integrity and loyalty of Admiral Kimmel:

NAVY ALUMNI SHOW FAITH IN KIMMEL

ANNAPOLIS, June 10.—Rear Adm. Husband E. Kimmel, retired, commander of the Navy's Pacific Fleet at the time of the attack of Pearl Harbor, has been elected alumni president of the Naval Academy class of 1904.

Shipmate magazine in its latest issue hailed the election as "a mark of trust and affirmation of faith by those who have known him well for more than 50 years and who are among those of our country's citizens best qualified to judge the event before, on, and after, that tragic December 7, 1941."

The magazine is the monthly publication of the Naval Academy Alumni Association. It devoted a column and a half to an article by Vice Adm. John J. Shafroth (class of 1906) commenting on the election and reviewing events of Pearl Harbor.

The Human Touch

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. ROBERTS. Mr. Speaker, a very relevant factor in the matter of accidents and deaths on the Nation's highways is the human element. It is the most uncontrollable, most incalculable, and, unfortunately, the most inalterable of the factors that cause traffic mishaps.

The Subcommittee on Traffic Safety realizes this fact and many of us feel that a close scrutiny of the physical and psychological factors in automobile driving needs to be taken.

This realm of traffic safety is discussed in an interesting manner in a recent article written by Col. Bill Lyerly, Director of Public Safety for the State of Alabama. This article appeared as a guest editorial in a recent issue of the Montgomery, Ala., Advertiser.

Under leave to extend my remarks, I submit excerpts from this article for the RECORD.

The other day I was reading an article on physical and psychological factors that make you a safe—or potentially unsafe—driver. This article predicts that some day you may have to take an attitude test to get a driver's license. This might be a good thing as research reveals that unhealthy attitudes are the real culprits behind our highway tragedies.

The average driver knows the law. He can handle his car skillfully. He is in good health and has fast reflexes and yet he invites accidents almost every time he drives. That is because his attitude is wrong.

For him a car is not just a convenient, comfortable way to get from here to there. He uses a car to express himself. When he's mad, he drives furiously. When he's with a friend he shows off. He cuts corners. He weaves in and out of traffic—make no mistakes, he handles a car well. He could pass the toughest road test a driving inspector could give. But with his license in his pocket he forgets all about such things as a sense of responsibility. He's an unsafe driver. He cannot be trusted with his own life or yours.

Perhaps the chief reason for this difficulty lies in the fact that attitudes are tied in with emotions and as everybody knows, most of us keep our emotions to ourselves. This close tieup between emotions and attitude is one we do not have statistics to show for.

I can only advise you to drive carefully, you may meet a fool. Assume the other guy is a motor maniac, consider him as completely incompetent. Be a defensive driver.

Un-American Activities Committee

EXTENSION OF REMARKS
OF
HON. JAMES ROOSEVELT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. ROOSEVELT. Mr. Speaker, as my colleagues know, I have on occasion been critical of certain practices of the House Committee on Un-American Activities, but I think it is essential that I stress the fact that I have never called for its abolition, nor denied the importance of its functions. Rather, I have advocated that its duties be clearly defined and that it function under proper supervision and control, preferably as a subcommittee of a permanent House committee.

I have read carefully the following editorial from the Washington Post which was printed on Thursday, June 20, 1957, regarding the Committee on Un-American Activities. This editorial appears to go directly to the crux of the problem as it relates to investigating committees in general and in particular to the Un-American Activities Committee.

The questions posed by the editorial should most certainly be given serious study by the Members of Congress. I respectfully commend it to the attention of my colleagues.

The editorial follows:

UN-AMERICAN ACTIVITIES

The Supreme Court decision in the Watkins case raises a problem for the House of Representatives in connection with its standing Committee on Un-American Activities. The problem can be met in either of two ways: (1) By reforming the enabling resolution under which the committee was established in such a way as to define its scope and function with the kind of clarity prescribed by the Court; or, (2) by dissolving the committee on the ground that in 20 years of operation it has completed its purpose and is no longer needed.

The first course cannot easily be accomplished. Investigating committees are usually authorized for specific purposes and for a limited period of time; they look into a particular situation, make recommendations and then go out of existence. But the situation to which the Un-American Activities Committee addresses itself is well nigh universal and perhaps eternal. It is authorized to make investigations of:

"(i) The extent, character, and objects of un-American propaganda activities in the United States, (ii) the diffusion within the United States of subversive and un-American propaganda that is instigated from foreign countries or of a domestic origin and attacks the principle of the form of government as guaranteed by our Constitution, and (iii) all other questions in relation thereto that would aid Congress in any necessary remedial legislation."

"Who can define the meaning of 'un-American'?" Chief Justice Warren asked. "What is that single, solitary 'principle of the form of government as guaranteed by our Constitution'?" However un-American is might seem, peaceful advocacy of change to a parliamentary system, or even to a Socialist system is certainly as permissible as, say advocacy of an income tax or suffrage for women or the abolition of slavery. It was because changes in "the form of government as guaranteed by our Constitu-

tion" were foreseen as vital to its perpetuation that the Constitution not only provided a mechanism for change but also categorically forbade Congress to abridge the advocacy of peaceful change, even when such advocacy was stigmatized as propaganda.

How, then, can the charter of the Un-American Activities Committee be revised in order to cure it of the vagueness which the Supreme Court called its vice? How can it be limited so as to keep the committee from trenching upon the area of advocacy protected by the first amendment? Perhaps by confining it strictly to the propaganda activities of the Communist Party. But even then the term Communist has so many different meanings for so many Members of Congress that there is grave danger it would be applied, like the term un-American, to anyone that the committee happened to dislike.

In the course of 20 years, the committee has exhaustively explored the Communist Party and has discovered a great deal about its composition, purposes, and tactics. It has filed many reports, made countless recommendations, and contributed to many laws dealing with the Communist threat. It will always be one of the general duties and burdens of Congress to maintain its guard against enemies foreign and domestic. So far as this particular threat is concerned, however, we think the time has arrived when enforcement of the laws may be left, safely, to the appropriate police agencies of the Government's executive branch, and when resistance to Communist propaganda may be left to the good sense of the American people.

Democrats Versus Civil Rights

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Washington Daily News of June 19, 1957:

DEMOCRATS VERSUS CIVIL RIGHTS
(By Peter Edson)

There is more to the Civil Rights fight now before the Senate than the matter of racial discrimination.

It is a question of political survival for the Democrats who have held control of the Solid South for nearly 90 years. Southern political leaders see this control slipping if even a mild civil-rights bill should pass. Some of them are seen to be pretty desperate about it. It is simple politics.

If and when non-whites are given full voting rights in the Southern States, it is fairly obvious that they won't help elect Democratic politicians who have been preventing them from voting by poll tax laws or intimidation by custom.

This is indicated by a series of tables on 1956 election statistics in the Southern States, inserted in the CONGRESSIONAL RECORD by Senator PAUL DOUGLAS, Democrat, of Illinois.

Only 22 out of every 100 people of voting age cast their ballots in Mississippi. In South Carolina it was 24, Alabama 28, Georgia 30, Virginia 34, Louisiana 37, Texas 38, and Arkansas 39.

Other tables prepared by Southern Regional Council, show that only 3.9 percent of the non-whites were registered in Mississippi for the 1956 elections. In Alabama it was only 10 percent, Virginia 20, Georgia and South Carolina 25, Arkansas 29, Louisiana 31, and Texas 38 percent.

With from 60 to 95 percent of the non-whites not registering and not voting, it is not difficult for any political realist to see what would happen if these majorities were given their full civil rights on election days.

The natural inclination of most of them would be to vote Republican. One prominent northern Democrat sizes up the situation like this:

Senators EASTLAND and STENNIS, of Mississippi wouldn't have a chance for reelection. Senator STROM THURMOND, of South Carolina, who was States Rights Party candidate for President in 1948 and who has been one of the leading opponents of the mild Eisenhower civil-rights program, wouldn't fare any better.

Senators LISTER HILL and JOHN SPARKMAN, of Alabama, might have a chance to stay in office. Though they have had to oppose extreme civil-rights reform to get elected under the existing election laws and practices in their State, they have such good records on welfare legislation they might survive.

Georgia's new Senator, ex-Governor HERMAN EUGENE TALMADGE, probably could not survive a big increase in nonwhite registration and voting in his State. Neither could Senator ALLEN J. ELLENDER, of Louisiana, a States Rights leader.

Even stalwart Senators like HARRY F. BYRD, of Virginia, RICHARD RUSSELL, of Georgia, RUSSELL LONG, of Louisiana, and LYNDON JOHNSON, of Texas, might have trouble in this situation.

The new Republican National Committee campaign to invade the South and build up strength in this area could not be better timed, with this situation coming to a head.

Piney Woods Pete Talks Sense

EXTENSION OF REMARKS
OF
HON. KENNETH A. ROBERTS
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ROBERTS. Mr. Speaker, the very fine afternoon newspaper of the capital city of Georgia, the Atlanta Journal, carries on its front page a short column by one Piney Woods Pete.

Now, Pete writes each day in the form of a breezy, folksy letter to the editor, and he speaks out on a number of subjects. Recently, Pete wrote to the Journal's editor about how he felt on the topic of automobiles, speed, advertising, and fools.

I think all the Members will enjoy reading Pete's remarks on this subject. Pete sounds off with some good, old-fashioned horsesense and it is a pleasure to be able to insert such sound thinking into the RECORD.

Pete's column follows:

DEAR MR. EDITOR: The car manufacturers done a good thing in deciding to quit bragging in their advertisements and sales talks about how much power and speed their cars have got.

Of course, there'll still be plenty of fools that'll find out for themselves how fast the cars will run, if they don't kill theirselves before hitting top speed, but probably not as many as when manufacturers keep reminding 'em of power and speed.

I hope the car manufacturers will also stop showing television pictures of trained and expert drivers stunting with cars to show how good they'll stand up under rough treatment, as this has probably caused some fools to kill or hurt theirselves and others trying to do such stunts. A fool thinks he can do anything the other feller can do, no matter how expert the other fellow may be.

Yours truly,

PINEY WOODS PETE.

Back to Panmunjom

EXTENSION OF REMARKS
OF
HON. EDNA F. KELLY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mrs. KELLY of New York. Mr. Speaker, I want to bring to the attention of Congress, the New York Times editorial of June 21, 1957, entitled, "Back to Panmunjom."

It has long been known that the State Department has resisted the pressure of officials to admit the failure of the Korean Armistice Agreement of 1953. I feel that the United Nations action in officially scrapping this truce has long been overdue. I wonder why the President of the United States did not take this action long ago.

BACK TO PANMUNJOM

Representatives of the United Nations command in Korea and the North Korean and Chinese Communists are meeting again at Panmunjom this morning. This meeting called for by the United Nations force, is presumably to inform the Communists that the provision of the armistice agreement of 1953 banning the reinforcement of troops and weapons can no longer be considered valid because of repeated Communist violations and that the United Nations and the free Koreans are therefore obliged to modernize their armament as a necessary step in their legitimate defense.

The original agreement called for a complete freeze on weapons in the two zones. No new ones were to be brought in and presumably a neutral inspection team would see to it that this provision was observed. This team was never allowed to function in the north and ultimately the Republic of Korea was obliged to insist that its Communist members, or Communist sympathizers, should no longer be free to roam at will throughout the south.

Meanwhile the evidence had continued to mount that there had never been any disposition on the part of the Communists to abide by the terms of the agreement. No more planes were to be brought into either area. It is now known that at least 800, of which 500 are jets, have been brought into the north. No new airfields were to be built or conditioned. The Communists have put 38 into operation in the north, most of them to handle jet aircraft. No new weapons were to be introduced. There is evidence that the Red Chinese and Korean Communists have received large shipments. The Korean Communist Army, meanwhile, has been revitalized and now stands at about 400,000, backed by 650,000 Red Chinese in Northern Korea itself and another million and a half across the Yalu in Manchuria.

During this time the United Nations command and the Republic of Korea have faithfully carried out the armistice terms. The result is a repetition of the situation that obtained in 1950 when the relative weakness

of the South served as the invitation to Communist attack.

We like to think that it is part of our characteristic behavior pattern that we carry out our agreements. We are handicapped and penalized, however, when there is no corresponding good faith on the other side. So we are obliged to go back to Panmunjom and make it plain that our agreement can no longer be binding, to our own permanent detriment and danger.

This does not mean that we are seeking a renewal of hostilities in Korea. It does mean that we cannot afford longer to take the risk of inviting such a renewal from the other side by continuing in a position of self-imposed weakness. It is too much to hope that the Communists will tolerate the idea of Korean unification through free and peaceful means. It is not too much to insist that they can and should be told that they cannot again attempt unification by conquest with any hope of success.

Following are excerpts from the Washington Evening Star of June 20, 1957, on this subject:

The Allied demand could be the prelude to equipping the two United States divisions in South Korea with latest type weapons which could be fitted with atomic warheads in the event of a Communist attack. United States Secretary of Defense Wilson said a month ago such a move was being considered.

The United States does not plan to introduce weapons capable of firing nuclear warheads into Korea at this time, according to State Department officials. More modern weapons are understood to be already underway to the Far East, but Defense Department pressure to include weapons capable of firing nuclear warheads reportedly has been successfully resisted in the State Department.

The Korean armistice provided that the armies in North and South Korea could only replace existing equipment and could not bring in new types of equipment or additional amounts of arms.

United States and South Korean military officials have long accused the Reds of beginning an illegal military buildup in North Korea before the ink was dry on the armistice agreement.

Looking Ahead

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 5, 1957

Mr. DAVIS of Georgia. Mr. Speaker, the Metropolitan Herald, of Atlanta, Ga., carried in its issue of June 19, in its column Looking Ahead an excellent and informative article which points out that citizens have responsibilities as well as rights.

Under unanimous consent previously granted, I insert this article herewith:

LOOKING AHEAD

We still think that one of the salient points as regards the efforts of agitators and would-be integrationists to break down racial barriers and mix the white and colored races is being purposely ignored.

Rights of citizens is a high sounding phrase and one that to us has not yet been fully interpreted.

It is fine to be free, in the literal sense of the word, free to enjoy the privilege to go and come as one wishes; free to participate in the election of government officials and free to partake of a costless education under our form of Government.

Those who have fought for and obtained freedom of a kind did not accomplish this status in life by merely going to court and demanding equal rights. They also readily assumed their share of the responsibility of supporting government, supporting their government by paying their equal share of the cost of operation through their tax money. They also readily assumed their responsibility of defending the rights of their fellow men and of contributing in every possible way, toward the building of a better system of government, an endless job.

There are those who would defend the right of the Negro to become the beneficiaries of not only the financial support as doled out by our governments in the form of health service, welfare service, parks, free schools, highways, police protection and a multitude of other services our various governments furnish. To a certain extent we agree with this philosophy but we violently dispute the fact that the American Negro, as a group, is either ready to or willing to assume the responsibilities which go with equal rights for human beings.

It is no deep, dark secret that in the South the majority of our welfare, health, school, police protection, and other services in which the Negroes participate, are furnished by far and large at little or no expense to the Negro citizen but instead the cost is borne almost entirely by the white taxpayers.

It is also no deep secret that while the majority of the Negro wage earners, just as are the white workers, are required to participate in the popular sport of having part of their salaries drained off through withholding taxes, the majority of them have learned that it is pretty safe to claim enough dependents so the tax effects them very little, and not be checked.

It is a laughing matter among most employers that the average Negro wage earner outsmarts Uncle Sam at every drop of the hat on this withholding matter. No matter how much the rates are raised, as the years pass, the average Negro worker manages to accumulate enough extra dependents to not be effected to any large extent by the tax man, knowing that chances are he will not be checked.

Several years ago we ran a summary of the amount of taxes paid the State of Georgia by our huge Negro population and found that its entire total would amount to less than enough to actually pay the salaries of the Negro teachers employed to teach their pupils.

Naturally, this deficit spending to support the large Negro population in the South is contributed, through heavier taxes than would be necessary if the load was equalized between the whites and colored, and is contributed by the self same people that the would-be integrationists constantly lambast, the white southern taxpayers.

And, during all this argument over integrating the races, we have yet to read where a single leader in the move, white or colored, has come out with a statement to the effect that the Negro was ready and willing to assume his rightful share of the tax payments necessary to provide all the services the agitators are demanding for the Negro.

Several years ago after large numbers of Negroes registered to vote in our local elections there was a great hue and cry raised in the colored sections when some local officials decided that they would take the voting lists and check personal property in order to determine if they were paying ad valorem taxes of their holdings.

Yes, everyone wants something for nothing but until the time comes when the Negro is ready to assume his proportionate share of the tax load necessary to support our Government functions we can only catalogue this integrationist move as an effort to get more of a free ride at the expense of the white taxpayers than is already being enjoyed by our happy, almost tax-free Negro citizens.

Idaho's Late Senator Borah Cognizant of South's Tremendous Race Problem

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an article appearing in the Mobile (Ala.) Press Register, under date of February 3, 1957, written by one of Alabama's outstanding reporters, Mr. Ted Pearson, in which article Mr. Pearson quotes from the remarks of the late Senator William E. Borah, of Idaho, in a speech delivered in the United States Senate in 1937. It is quite appropriate that Senator Borah's remarks be called to the attention of the Members of both the United States Senate and the United States House of Representatives at a time when the so-called civil-rights bill is being considered. In each generation our Nation is fortunately blessed with a few men of Senator Borah's caliber, and I feel confident that in the presently constituted United States Senate there will be others of Senator Borah's caliber from outside our dearly beloved Southland who will have the vision and the foresight, the courage and the principle to safeguard the sovereign rights of our States and to prevent further encroachment on those rights by the Federal Government, in defeating this so-called civil-rights bill.

IDAHO'S LATE SENATOR BORAH COGNIZANT OF SOUTH'S TREMENDOUS RACE PROBLEM

(By Ted Pearson)

Mark these words closely:

"I * * * contend that the southern people have met the race problem and dealt with it with greater patience, greater tolerance, greater intelligence, and greater success than any people in recorded history dealing with a problem of similar nature."

Are these the remarks of a southern conservative, uttered in the halls of some State legislature or beneath the Capitol dome at Washington? They could be. Were they the words of Jefferson Davis or Alexander Stephens?

They could be but they weren't. Strangely enough that tribute to the South's adroit handling of its own racial affairs was voiced by none other than a confirmed and great northern liberal, one of the most liberal statesmen of them all, the late Senator William E. Borah of Idaho.

It was by sheer happenstance the other day that we came across a speech delivered in the Senate back in 1937 by Senator Borah. That was at a time when the late President Roosevelt's ultraliberal New Deal program was rolling along at high speed, when as part of this program, the Roosevelt administration was pushing a civil-rights effort in Congress with an antilynching bill.

Up rose the liberal Senator Borah as debate moved into high gear. When he had returned to his seat a few minutes later, he

had put on the permanent record for all to see one of the most outstanding espousals of the South's handling of its own affairs ever made.

"At the close of the Civil War," said Mr. Borah, "there were a little over 5 million white people in the South. There were 3,500,000 Negroes. In Mississippi there were 100,000 more colored people than white people. There were the two races living upon the same soil, now equally free under the Constitution, one of them untrained and unschooled in the affairs of state and untrained in citizenship.

"The problem had to be met. Was it easy of solution? Can one conceive of a more difficult problem placed before a people? I wish we could place ourselves in their position. It would help us to be sympathetic, sane, and just. * * *"

Borah, the northern liberal, gazed intently at his fellow Senators and continued, "If we knew as much about the South and what they have done and are doing as we pretend to know, we would not be so free to criticize."

Then Mr. Borah wound up his speech with a summation of the situation that applies as well today as it did 20 years ago. Said the Senator, "The progress, the development, and the advancement of the South, including the last 70 arduous years, her history from Washington and Jefferson down, rich with the names of leaders, orators, and statesmen; her soil, her sunshine, her brave, and hospitable people, her patient and successful wrestling with the most difficult of all problems, are all a part of the achievements of our common country and constitute no ignoble portion of the strength and glory of the American democracy.

"I will cast no vote in this Chamber which reflects upon her fidelity to our institutions or upon her ability and purpose to maintain the principles upon which they rest."

Contrast this expression by a northern liberal of 20 years ago with the record of the northern liberal today, and the wide disparity resulting from the comparison is sufficient to produce nausea among those who continue to uphold the freedoms and the rights of the individual States. One finds the broadminded reasoning and understanding embodied in Borah's great pronouncement replaced by the rabble-rousing, antisouthern, antidemocratic vocal ramblings of the Humphreys and the Douglases and their kind.

It is too bad that the northern liberal has permitted capitulation of true reasoning to this cheap political expedient of wooing the Negro vote. We can't help but wonder if the words of the northern liberal Borah do not come back often to haunt the consciences of the modern brand of northern liberals.

After all, the late Senator Borah's words on the South's handling of its racial problems are hard to forget, and they are indisputable.

Which Party Is Best Able To Reduce Taxes?

EXTENSION OF REMARKS
OF
HON. LESLIE C. ARENDS
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ARENDS. Mr. Speaker, the most recent Gallup survey of public opinion, published a few days ago, raised the question as to which party—Democrat or Republican—is best able to reduce taxes?

According to this survey, 25 percent of the voters said there was no difference between the two parties in that respect; 24 percent believed the Republicans were best able; and, 35 percent believed the Democrats to be.

But what does the actual record show? The true test is not in words of promise but in acts of accomplishment. The measure of ability is not in what one promises to do but in what one actually does.

The record shows that it was the Democrat Party which, in 1913, enacted the first Federal income tax. Since that time there have been 15 increases in individual income taxes. The Democrat Party is responsible for 14 of them and the Republicans for only 1.

The record also shows that during this same period since the adoption of the 16th amendment to allow income taxation, there have been 12 reductions. We Republicans brought about 9 of them, and the Democrats only 3.

The record further shows that it was the Democrat Party which placed people of low income under the Federal tax law by reducing the exemption for the married from $2,500 to $1,000 and for the single from $1,000 to $500. During the 2 years of Democrat rule approximately 45 million people were added to the tax rolls.

That is the actual record. It speaks for itself. The people need only to be reminded of it. With deeds, not mere words, as the measure they will have conclusive proof that the Democrat Party is traditionally the party of taxing and spending, and the Republican traditionally the party of economy and less taxes.

What the Giveaway Means

EXTENSION OF REMARKS
OF
HON. ALVIN E. O'KONSKI
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. O'KONSKI. Mr. Speaker, on April 28, 1957, speaking on the Farm Day program at Ashland, Wis., I said:

This country is mortgaged to the hilt at this moment. The $275 billion Federal debt—that you and I owe—equals the full assessed value of all the land, all the buildings, all the mines, all the machinery, all the factories, all the livestock—everything of tangible value—in the United States of America.

The total of American gifts to foreign nations from July 1, 1940 through June 30, 1957, is $130,350,032,000. That is 48½ percent of the $275 billion national debt Senator BYRD mentions.

In 27 years, the American Government has taken away from the American people, by force of tax laws, 48½ percent of their total wealth for gifts to foreign nations. The American Government has given away to foreign governments 48½ percent of America.

The human mind cannot comprehend such a sum as $130,350,032,000.

But break it down a bit.

The estimated population of the United States at present is 170 million. Let us say that this 170 million averages out to about 43 million American families.

One hundred and thirty billion three hundred and fifty million thirty-two thousand dollars represents more than $3,000 for every family in America.

What do you suppose 43 million American families, each with $3,000 to spend, would buy and build in America? There are those who say:

"A Government spending program of $80 billion a year represents that much buying of goods and services from American business. Think how many jobs that creates and how it stimulates the economy. If you suddenly cut off the $80 billion a year that Government is pumping into the economy, you'd create a terrible depression."

Where does the Government get the $80 billion that it pumps into the economy? The Government does not create the money, it takes it away from the people.

If you keep the money from going to the Government, you don't take it out of our economy. You merely change pumpers, so to speak. You leave $80 billion a year in the hands of the people who earned it, the 170 million Americans who will do their own pumping into the economy.

I'd rather pump my own money into the economy, for things I want, than to have Washington politicians take my money away from me and spend it on things I consider harmful to me and my country.

If the $130,350,032,000 which has been taken away from the American people for foreign gifts had been spent by the American people for things they wanted, we would not have inflation today.

Government foreign aid is the primary cause of inflation. The Government pours vast sums of money into the economy, but takes goods out of the economy and sends them abroad. This means that there is more money in circulation than there are goods to buy; hence, the price of all goods and services goes up.

This is the main reason why the purchasing power of the American dollar is now about half what it was in 1940 when the great foreign giveaway began.

Nemzetor

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BENTLEY. Mr. Speaker, during the Hungarian uprising last fall, a Hungarian publication entitled "Nemzetor" was about to make its appearance when the Soviet Army return prevented this. It has, however, started publication in Munich, Germany, being edited and pub-

lished by a group of refugee students, workers, and intellectuals. It is of particular interest that this paper was originally founded by the great Hungarian patriot, Louis Kossuth, during the 1848 uprising against the Austrian Empire. The Hungarian title was originally translated as National Guardsman and now signifies the Freedom Fighter.

Under unanimous consent, I include in my remarks three articles from the first issue of this new monthly entitled respectively "Nemzetor, 109 Years Ago and Now," Open Letter to the Peoples of Asia," and "To the Youth of the Free World":

NEMZETOR, 109 YEARS AGO AND NOW

It was with considerable emotion that we turned over the pages of the Nemzetor (national guardsman) of 109 years ago—a periodical that had been one of the leading lights of the Hungarian fight for freedom, in 1848. We succeeded in tracing it in the Austrian National Library and it is owing to the assistance that institution has lent us that we are able to present a photostatic copy of this national relic of ours to our readers.

This, we feel, is the most worthy way of celebrating semianniversary of last October's revolution. It was on the pages of that periodical that Kossuth, the legendary figure of the last century, disseminated his ideas. At that time we had to fight our battle for freedom against our western neighbor; today we invoke Kossuth's spirit against imperialism from the East.

No matter how bitter our disillusionment may be, it is our duty—the duty of the writers of the figh for freedom—to alert the world's public opinion while our people at home are being muzzled once more. Let no one forget that Hungary fought for the free world on the barricades: the world, if it supported us, would fight for its own good, not that of Hungary's.

A small people of barely 10 million took up arms against a barbarian colossus of 200 million, simply because we could stand no longer the way of life which Bolshevism imposed upon us, the horrors of which cannot be properly sensed from a distance. Only the small nations of Eastern and Central Europe, languishing under a cruel foreign yoke, are able to recognize clearly the danger of that way of life threatening the free world, too, should it not wake up from its hypnotic sleep.

Our cause was defeated 109 years ago, admittedly, but the longing for freedom never became extinct in the hearts of our grandfathers and our fathers who handed it down to us as their legacy. This is why, after 109 years, the Nemzetor was reborn. Like its predecessor, it aims at keeping alive the spirit of our fight for freedom—the spirit both of 1848 and 1956—and to help bring about, over and above the unity of all Hungarians—the free world's united front against bolsheviam. We regard it as our duty also to hold up to public view the treason committed against our nation and to cry out to an indifferent world that to remain silent is a sin in itself for the mute among the criminals becomes their accomplice.

We want to vigilantly watch over the interests of our people, the pure spirit of our revolution which could open up such incalculable visitas before all decent men, and we strive to protect our country against all powers that may wish to trample our independence underfoot. For we do no want to hear ever again of dictatorships of any kind; we aspire to live as free and independent Hungarians.

What we are now doing—to continue the battle with the weapons of the mind—is a hard, uphill job. But to us it is a sacred duty in which we are equally bound by the spirit of October, the Nemzetor of 109 years ago and the legacy of our 70,000 comrades in arms killed in action against the oppressor.

Our work is being done on the foundations laid down by Hungary's underground literature—the volumes of the Herb Garden, books handwritten in the prisons and forced-labor mines which for 12 years running had kept the hope of a better future alive.

On November 3, 1956, there assembled in Budapest a group of young writers, most of them students, in order to resume the work done by the old Nemzetor. Alas, Soviet armor prevented us from issuing our periodical at home. Some of us were killed, some have stayed behind, but some of us succeeded in escaping and those are now editing the new Nemzetor in the various capital cities of free Europe. Neither of us has been a journalist nor do we even now write for a living. While pursuing university we gather articles, written by our friends and ourselves, so that we may continue radiating the spirit which had in all truth actuated our fight for freedom. Our roots are still in the homeland; thence we draw mental food and strength.

We did not want to unleash a shooting war. It was only in last despair, at the sight of the mass murdering of our womenfolk and children, that we took up arms. Our demands, similarly to the 12 points of Hungary's previous fight for freedom, contained only reference to the most elementary human rights. Yet, once more, fire was opened on us in reply.

You who read our writings will be able to satisfy yourselves that all we have striven for was freedom, neutrality, and democracy. We did not wish to belong to any military bloc; we wanted to live in peace with all our neighbors. We desired to labar in order to make Kossuth's dream a reality—the friendship and brotherhood of the Danubian peoples—so that a bridge may be built between east and west to link up Europe with Asia. Who could have been better cut out for that role than we, Hungarians, who are equally alien to the Germanic and Slavonic peoples and who have been disappointed ad nauseum by both capitalism and communism.

We are pregnant with the world of tomorrow, and although we may not yet be able to boil down our thoughts to clear these we feel that we have something to say to mankind groping for a new order. On the dawn of a new renaissance, we announce to all human beings, equally disappointed by eastern and western materialism and the power of arms and money, the gospel of love recovered.

It is our principal desire that if, in another hundred's years time, our grandchildren lay their hands on our periodical yellow with age, they may be filled with the same sense of emotion and respectful affection with which we were reading the pages of our historic predecessor.

OPEN LETTER TO THE PEOPLES OF ASIA

From the borderland where East and West meet and where the Danube is taking a southward course, a son of a small nation is addressing himself to you. He is neither a politician nor a scholar; he is a simple worker, one of the millions who witnessed our women of Budapest peacefully singing and carrying flowers, and desirous only of freedom. He was one of the millions who witnessed our womenfolk being crushed by Soviet tanks, and yet he is not hating the Russian people, because he has seen Russian soldiers cry, throw their arms away and join our ranks. His glance has pierced below the surface, down to the heart of the people, which is suffering, like our people do, on the steppes, in the Ural mines or the Leningrad plants, similarly to the Hungarian, Polish or Bulgarian workers under the Kremlin's fearful yoke.

Here I am, one of the millions, who, with a rifle or a petrol flask in hand, dared to oppose the colossal power of which the world is so senselessly horrified. Can you not see the internal chasms that separate the Soviet regime from the people? The West has turned soft in its comfortable prosperity, and you—you are too remote to sense the deadly embrace from which there is no escaping.

Peoples of Asia, let our example be a lesson to you.

You, who have conquered freedom not so long ago, be twice mindful of the new colonizer who, under the guise of socialism, is paving the way of a new imperial conquest, more terrible than anything history has so far known. After what happened in Hungary, the Kremlin is no longer concerned with ideology, only with power. Its ideology has grown old, sooner than humans would in a lifetime, and those who turned against it were the young, precisely the ones on whom it counted most.

And our youth was by no means the only one to react that way. Look at Poland and the Ukraine, at the ruins of Kiev; listen to the complaints voiced by the students of Leningrad or Moscow University, and will understand the true nature of that process of disintegration which can no longer be held up by force of arms.

Try to understand the upheaval in the soul of that young Soviet officer who pulled the brakes of his armored car when our student boys and girls lay down before it as a living roadblock. He alighted from his car and you could see that, without understanding a word of our language, he understood what it was all about. He realized that the people he had to deal with were no Fascists and no imperialists either, as his leaders had told him, and that the Suez Canal was very much farther still. He suddenly knew that the big waterway he saw gleaming in the distance was the Danube and that the people he had to open fire on were the Hungarians, a people sorely oppressed. And then, that young Soviet officer turned the muzzle of his revolver against himself. The writer capable of describing the struggle that went on in that Soviet officer's mind would surely be the author of the greatest drama of our time.

Our people always had much in common with those countries that contrived to remain neutral and independent of the great power blocs. That had been our ambition, too. Yet, no matter how neutral you may be in the political sphere, morally you cannot remain neutral. For you are confronted with a police state which is talking peace and socialism while trampling underfoot even the most elementary human rights. Raise your voice in protest against the systematic extermination of a people through deportation, imprisonment, and hanging.

Raise your voice in protest against the impotence of the international agencies which put up with this unparalleled lawlessness.

Demand that our people be granted their sole desire—neutrality.

While the world is daydreaming about peaceful coexistence, Mr. Khrushchev has made it clear, in addressing Yugoslavia, that there can be no question of it. Soviet diplomacy reverting to Stalinism is threatening the smaller countries of Europe one after the other. Are they a danger, we wonder, to the existence of the Soviet Union? Such threats we heard 15 years ago from another dictator. It is up to the free world to unite and put a stop to these threats, too.

There has been no instance yet, in the history of communism, of any one country having slipped under its dictatorship by virtue of a coup de'etat, the force of arms, or the misuse of the parliamentary system, to have been able to free itself. We have tried the impossible and failed for East and West abandoned us alike. History alone will be

able to put in its true perspective the unexploited opportunity that could have saved the entire world.

What do we want of Asia?

Solidarity. Even the Bolsheviks' obstinacy must break to pieces if it came into collision with the obstinate will of thousand million human beings.

And why is it precisely you to whom we are addressing ourselves?

Similarly as, 800 years ago, our Friar Julian, and then again, in the last century, our great linguist, Sandor Korosi Csoma, set out to find the Magyar's geographical cradle and relatives in Asia, so do we stretch our hands towards you, across mountains and boundaries, in quest of the home of our souls. Help us, for we believe that the new world must be born out of you and ourselves, to bring forth brotherhood from suffering.

TO THE YOUTH OF THE FREE WORLD

Undergraduates, students in Europe and overseas, our greetings go out to you. These are the words of Hungary's freedom fighters and young intellectuals whom the news has reached that in your great cities you had sided with us. You, having understood the call of our times, had organized street processions for us and demonstrated against the oppressor.

You, whom the war and, thereafter, moral and material depravation had struck in the face, could not find your path in this world torn asunder. You had been searching for truth and ideals that you could look up to, but neither statesmen, nor leading socialites, nor movie stars and other celebrities were able to quench your thirst. You had been looking for the source of the flame that kept flaring in the depth of your souls and that neither hot jives nor sexual excesses could ever put out. You were in search of something still when, suddenly, on the fringes of Europe, the students and schoolchildren of a small nation lit a bonfire the gleam of which has reached you across mountain and frontier barrier.

How strong must she have been, that girl of 14, who from her dead brother's hand picked up the petrol flask in order to do her duty and die for us and for you. How strong must they have been who, while clad in rags and tatters, passed with equanimity by those shop windows in which, behind the shattered panes, there remained displayed costly garments, footwear, watches and jewelry, for no one found brazen enough to besmirch that pure revolution. How bright must have been the flame that despite all the false rumors it was able to kindle a fire in your hearts.

This flame is casting its light on the daybreak of a new Renaissance, not for Europe alone but for the whole world. Unlike the old one of the 13th century it does not herald wordly joy nor does it have recourse to classical antiquity for its ideals: our new Renaissance looked to the simplicity of the early Christian catacombs for a model so that, cutting out all foolish frills, it may build a new country on the banks of the old Danube between a West submerged in materialism and the East choking with tyranny.

The building of a new country does not depend on the right form of government alone; it is but a framework and if, within it, the human element remains unchanged there can be no salvation. We have to save ourselves first and thereby create that new man who will be born out of sufferings, destitution, and disillusionment to bring forth the best out of himself. With the pure love of the gospels let us turn to the great communities of mankind—help us.

The fact that you understood even our first outcry was our greatest encouragement; you, the youth of the world, were the first to volunteer as blooddonors, regardless of race or party, for our wounded. You were the ones to march in the streets of your towns and cities and break the ice of indifference. We call on you.

Do not allow the fire to go out.

Raise your voice for Soviet colonialism that is strangling our people to be withdrawn. Raise your voice in protest against executions, deportation and imprisonment.

HELP

Use your influence so that if your leaders are unable through their indifference or weakness to make their will respected by the force of arms, they should at least sever economic and cultural relations with the Soviets and boycott our puppet Government supported by alien bayonets alone.

The Soviets are armed to the teeth and yet you think that kind words could suffice. On the contrary, the aggressor's appetite will grow and it may be your turn after us: your womenfolk, freedom, prosperity and comfort, everything that makes life worth living is in peril.

Why still this fear of the multitude? It is the spirit, not numbers, that decides the outcome of a struggle; to this truth witness was borne by our teen-ager boys and girls who, armed with makeshift petrol flasks alone destroyed upwards from 800 Soviet tanks. Something has become shaken even in the Soviet soldiers minds. We saw it with our own eyes when, at Miskolc, 50 schoolboys and girls lay down of their own accord in the middle of the road to let themselves be crunched by the Soviet tanks. And the Russians, stopped dead in the street, alighted from their armored vehicles and joined our people. Disunity reigns at the higher echelons of their leadership. That is your luck. Therefore be you united for the freedom of peoples of the world is in deadly peril.

Youth of the free world, help us and do not let the flame go out.

HUNGARIAN STUDENTS.

The Crime Against Hungary

EXTENSION OF REMARKS

OF

HON. ABRAHAM J. MULTER

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. MULTER. Mr. Speaker, the following editorial which appeared in the New York Herald Tribune of June 21, 1957, is worthy of the attention of our colleagues:

THE CRIME AGAINST HUNGARY

When the cruel suppression of the Hungarian revolt against communism was shocking the world last year, the pro-Soviet regime of Budapest steadfastly refused all pleas to admit a United Nations inspection team into the strife-torn country. The Western World, and large sections of the Eastern World, too, wanted to get a clear and honest picture of what was happening in Hungary, but officials in Budapest and Moscow, fearing the truth, blocked all attempts to send U. N. observers to the scene.

But a special investigatory committee was set up by the General Assembly. Unable to do its work in Hungary, it held hearings in Geneva, Rome, Vienna, London, and New York. It conducted its operations by interviewing refugees from Hungary—more than 100 of them gave testimony—and by delving into recent Hungarian history and firsthand reports of the events of last October and November.

Now the report to the General Assembly is ready—a 301-page document that constitutes probably the most biting and bitter denunciation that any U. N. member has ever undergone at the hands of its peers. The report represents the unanimous finding of five nations which range from prowestern to neutralist—Australia, Denmark, Uruguay, Tunisia, and Ceylon. By no stretch of the imagination can it be called a partisan or biased document. Rather does it represent the finding of the world's conscience in the wake of one of the most vicious crimes of modern times.

What does the committee find? It finds that the revolt of the Hungarian people was a popular uprising instigated not from the outside, as the Communists allege, but by the people's effort to redress longstanding grievances. It finds that the revolt was supressed not by the legitimate Hungarian authorities but by the armed intervention of Russian troops. It estimates the strength of Soviet forces rushed into Hungary at from 75,000 to 200,000 men with 1,600 to 4,000 tanks. Many of these soldiers were Mongol and Tartar forces from central Asia who had been told they were being sent to Egypt to do battle against Anglo-French imperialists. Brutality, ruthlessness, and torture were the weapons of these foreign forces, and the shackles of Communist control removed briefly by the insurrectionists are now being reimposed step by step.

The Commission points out, in the clearest and strongest possible language: "It is incontrovertible that the Nagy government, whose legality under the Hungarian constitution, until it was deposed, cannot be contested, protested against the entry and the use of Soviet forces on Hungarian territory. * * * It is no less incontrovertible that the Nagy government was overthrown by force. Its successor assumed power as the result of military aid by a foreign state." That is to say, the Soviet Union, by the use of naked force, imposed a puppet regime upon a people desperately battling for independence, in order that it could maintain its grip over Hungary, and keep its garrisons on Hungarian soil.

These are the methods by which the Communists succeeded in reestablishing a satellite regime which the overwhelming majority of the Hungarian people had acted to cast off at the risk of their lives and possessions. Few documents of our time are more moving in their depiction of human suffering or more convincing in establishing the guilt of the responsible parties. If the Kadar regime or its Kremlin masters have any human feelings left, surely they must flinch before the accusing fingers pointed at them in this devastating and damning report.

But the question remains, what can the free world or the United Nations do about it? The U. N. Commission plainly asserts the right of the world organization to take countermeasures. "A massive armed intervention by one power on the territory of another," concludes the report, "with the avowed intention of interfering with the internal affairs of the country must, by the Soviet's own definition of aggression, be a matter of international concern."

To translate that concern into action now becomes the business of the U. N. The Kadar regime, the report finds, has little support within Hungary; free elections would make short work of it. Ambassador Lodge has called a meeting of the 24 nations which sponsored the Hungarian resolution to plan for action at next September's General Assembly session, when the foreign ministers of the leading powers will be present. The U. N. must make it clear that it does not intend to let the Hungarian matter rest, that it will not accept the Kremlin's orders as the final word on this brave nation's fate.

A Distinguished Member of the American Bar Looks at the Civil Rights Bill

EXTENSION OF REMARKS
OF
HON. FRANK W. BOYKIN
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BOYKIN. Mr. Speaker, one of the greatest and most noble men I have ever had the pleasure of knowing is Hon. S. P. Gaillard, of Mobile, Ala. On March 26 of this year he celebrated his 101st birthday. He is probably the oldest living active member of the American Bar. Mr. Gaillard well remembers the day his father went off to serve the South in its battle for principle, and when the retreating southern army, tattered, shoeless, and starving, passed before his home in Monroe County, Ala. Mr. Gaillard well remembers the infamous Reconstruction Days when an army of carpetbaggers descended on the South—the poverty and humiliation which he and his family suffered during that period. Mr. Gaillard is a deeply religious man and lives an ideal Christian life. He has been an elder in the Presbyterian Church for over 50 years and even in his 102d year attends Sunday school regularly. I am giving you the background of this great man in order that you may know of his sense of fairness and justice. I recently received a letter from him written in longhand, in which he expressed deep alarm concerning the effect on the people of the South should this civil-rights bill become law. He pictures a hostile Special Assistant Attorney General in charge of the enforcement of the act with a horde of NAACP sponsored investigators invading the South with a condition resulting which would be even worse than the Reconstruction Era. I have the highest regard and respect for my esteemed friend's opinion especially so since he speaks with the voice of experience.

Under leave to extend my remarks in the RECORD, I include the letter from Mr. Gaillard.

Hon. FRANK W. BOYKIN,
Washington, D. C.

DEAR FRANK: Somehow or other, the Republican administration and other Negro vote-seeking politicians do not seem to agree with you that everything is made for love, and you will be present soon, where they will seek to give our Nation an all but fatal blow by destroying it as a Democracy, and if they should finally succeed, the humiliation to the white race may be greater than in reconstruction, Negro carpetbagger days. We will be handicapped by unconstitutional Supreme Court laws made by a once exalted Court having the honor and respect of the world, while a hostile Attorney General and a Commission dominated by the NAACP invade and break down our private, social and family lives, and also resulting in the lowering of the national standard of civilization. But you may force a horse to the watering trough, but if he is not thirsty you cannot make him drink.

I have lived a life of friendship, courtesy, justice, as a lawyer, public official because I naturally want to do so to my fellow citizens, but there's a sphere in one's life that no one has a right of entry, and I for one will protect that sphere with all the ability I possess. It is not self-pride, but pride of race like pride of our Nation. And I am proud of my race and Nation and both are justified ever since the Almighty created (1) nations (Genesis 10–25) and races and racial differences, and then scattering (separating and segregating) them some five or six thousand years ago, (Genesis 11). They were once one race—verse 1—but divided. Read and consider what was done and has been zealously maintained until some modernists seem to think a mistake was then made that they should correct.

As ever, your friend,
S. P. GAILLARD.

Washington State Grange Leads in Resource Development Plans

EXTENSION OF REMARKS
OF
HON. DON MAGNUSON
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 3, 1957

Mr. MAGNUSON. Mr. Speaker, under leaye to extend my remarks in the RECORD, I include the following editorial column of Wilfred Woods, publisher of the Wenatchee, Wash., World, of June 17, 1957, describing the leadership of the Washington State Grange in the development of the water and power resources of the State:

This week the State Grange is holding its annual convention in Spokane. The Grange has long been the dominant farm organization in the State. It has had leaders of national stature, men like the late Albert Goss, Henry Carstensen, and A. Lars Nelson, the present State master.

The State and region owe much to that leadership. Our resource development program was almost solely dependent upon this group during many of the early years.

Without the Grange, it is doubtful whether the Columbia Basin project and Grand Coulee Dam would ever have been started.

Without the Grange, this county would not be building Rocky Reach Dam, nor would it have the Alcoa plant, nor Rock Island and Chelan Dams.

For it was Grangers who initiated the public utility district law that passed the legislature in the early 1930's.

We all know what the impact of the public utility districts has been in this State. Farms now have electricity that were not served, counties are now developing their own hydroelectric resources, low-cost power is a reality under the control of the people of every county that has a PUD.

Across the State the program is growing. Grant County and Chelan County have the largest projects under construction. Snohomish County has just announced a $40 million project for the Sultan Basin. Cowlitz County PUD has issued a $20 million bond issue to build a project on the Lewis River. Pend Oreille County has built a dam.

This is a sign of healthy economic growth.

These projects are putting the control of water resources in the various counties where they belong—in the hands of the people.

They are proving to our State that county control of power can be just as beneficial to the public as the great city light systems that have long operated in Seattle and Tacoma.

Private business never had a better break in this county than when the Alcoa plant was built here.

Private business will continue to expand here as we see the development of Rocky Reach Dam come into full swing.

We salute the Grange this week as the best friend free enterprise ever had in our State.

Increase in REA Interest Rates

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BREEDING. Mr. Speaker, I have been studying with great concern the President's proposal to increase interest rates on REA and other Government loans.

New legislation which has recently been sent from the Bureau of the Budget to the House Committee on Ways and Means calls for the rate of interest to be set on the average yield on marketable Government securities which, in my mind, is worse than setting it on the average interest rates. President Eisenhower's plans for raising interest rates in the form of a recommended bill which was sent to the Congress recently would wipe out all legal ceilings and let the administration set interest rates on all Government loans as high as they want.

The proposed bill, sent from the Bureau of the Budget, provides that the interest rate shall be fixed by the Secretary of the Treasury, and takes into consideration the current average market yields of outstanding marketable obligations of the United States having maturities comparable to the loans made to the Department or Agency. The interest rate on any loans hereafter made by any department or agency shall not be less than the interest rate paid by the Treasury on its borrowings, if borrowed from the Treasury at the time the interest rate on the loan is fixed.

For example, a 3-percent interest rate maturing bond issued by the Federal Government now, for maturity in 40 years, sold for 88 cents on the dollar recently. Thus the market yield is about 3½ percent on the $88 for which such a bond can now be bought. So in order to figure the market yield you ignore the 3-percent rate printed on the bond and look at what the market is paying on the bond. The lower the price goes the higher the rate of interest.

There is added to the above increased interest rate an additional amount deemed adequate to cover administrative expenses and probable losses to the extent consistent with the purposes of the loan program. The Secretary of the Treasury will set the interest rate insofar as it will be consistent with the loan program. This is a very flexible arrangement. In the case of REA they have estimated that this would be one-half of 1 percent on the loan at the present time. From all indications it is reasonable to expect that this new interest rate would double the interest cost on REA loans. In fact it could go higher if inflation continues. The financial page of the New

York Times recently carried an article from the financial lenders working for even higher interest rates.

The money markets fixed interest rates at the highest point since the 1933 bank holiday.

The Rural Electrification Administration of the Department of Agriculture today furnished me the following figures by telephone:

REA applications for loans pending as of June 20, 1957

United States total electric loans, 106	$177,000,000
United States telephone loans, 160	64,000,000
Kansas total electric loans, 2	1,400,000
Kansas total telephone loans, 13	2,700,000

Just consider the added interest cost on these pending REA applications if this bill is passed. With this proposed increase in interest rates think what it would mean to my great State of Kansas and the Nation as well.

I am deeply concerned about the far-reaching implications of this proposed legislation. In fact, it prompted me to wire the President and make a plea for consideration to protect Mr. and Mrs. Rural America.

JUNE 19, 1957.

THE PRESIDENT,
The White House,
Washington, D. C.:

Legislation has recently been introduced in Congress to increase interest rates on future loans for REA and similar projects. Hundreds of rural and urban families of my district and America would not have rural electrification or telephone communications today if it had not been for this law. Cheap interest rates have made these necessities available to many of us. This is only a means of starting a program to increase interest rates for many Americans. I am opposed to any increase in interest rates on these loans or any similar future loans. I hope that you see fit to protect Mr. and Mrs. Rural America.

High Court's Freeing of Reds Gives Americans New Shock

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. LOSER. Mr. Speaker, under leave to extend my remarks, I am including an editorial which appeared in the Nashville Banner, Nashville, Tenn., on June 18, 1957.

This editorial, concerning the Supreme Court's recent decision ordering freedom for 5 and new trials for 9 Communist leaders convicted under the Smith Act, reflects the views of many loyal Americans, and I commend it to your attention. The editorial follows:

WHERE DO WE GO FROM HERE?—HIGH COURT'S FREEING OF REDS GIVES AMERICANS NEW SHOCK

The Nation, already confused, to say the least, by successive precedent-shattering Supreme Court decisions, received another shock Monday when the High Tribunal ordered outright freedom for 5 and new trials for 9 second-string Communist leaders convicted under the Smith Act.

The Smith Act, which makes a felony of advocating and teaching the forcible overthrow of the Government, was upheld by the Court in 1950 when it sustained the conviction of 11 topflight Communists in New York on, what experts agree, was much the same evidence as convinced a jury of the guilt of the 14 now given a new lease on subversive life.

Under these circumstances, if the American layman is confused it cannot be blithely attributed to his ignorance of technical law.

The tribunal's decision technically was 4 to 3 (with Justices Brennan and Whittaker abstaining), but Justices Black and Douglas dissented only to the extent that they would have freed all 14 defendants. The majority of six based their opinions in the main on two points:

1. That the trial judge in instructing the jury failed to "distinguish between advocacy of forcible overthrow as an abstract doctrine and advocacy of action to that end" and

2. That the evidence against the five ordered freed was so "clearly insufficient that their acquittal should be ordered."

These may be said to be procedural and technical points that set this decision apart from the earlier case of the 11 New York Communists.

In the first instance, however, it was obviously the intent of Congress (a point which seems to concern the present Supreme Court little, if any) in adopting the Smith Act to preclude subversive action. If a bomb must be tossed to prove violent intent then the Smith Act is a hollow mockery.

Consider the serious nature of the comment of Representative HOWARD W. SMITH (Democrat, Virginia), the bill's author: "I do not recall any case decided by the present court that the Communists have lost."

On the second point, Justice Tom Clark, Attorney General under President Harry S. Truman and the only all-out dissenter in this case, maintained the evidence was virtually the same as in the earlier 1950 Communist conviction. Involved, of course, is opinion which may differ between any group of men, on any subject. But far beyond mere opinion, Justice Clark's dissent cites a precedent created by the decision which should cause any American once again to question the course the Court has charted.

"In any event," Clark wrote, "this Court should not acquit anyone here. In its long history I find no case in which an acquittal has been ordered by this Court solely on the facts. It is somewhat late to start in now usurping the function of the jury, especially when new trials are to be held covering the same charges."

It has not been too often that The Banner has found itself in agreement with Justice Tom Clark. However, the wisdom of his dissenting observation in the California Communists' case should be clear to all, whatever their political proclivities.

Justice Clark also was the lone dissenter in a confluent decision of the Court, which acquitted labor leader John T. Watkins of contempt of Congress. Watkins had been convicted of refusing to reveal names of former Red associates in testimony before a House Subcommittee on Un-American Activities. Another blow to Congress' efforts to crack down on Communist infiltration.

Is Justice Clark less liberal than his constituents had reason to believe when he was appointed by Harry Truman to the Nation's highest bench? Or have his fellow jurists veered so sharply as to leave him stranded at the left turn?

If, as charged by Senator S. J. ERVIN, of North Carolina, the Court has "substituted personal notions for the law of the land," Americans deeply concerned over the concept of the three divisions in constitutional Government may well wonder:

"Where do we go from here?"

Status of Forces Agreements

EXTENSION OF REMARKS
OF
HON. PAUL F. SCHENCK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. SCHENCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very thought-provoking letter from a former GI, Mr. Vernon A. Lawson, of Dayton, Ohio, who protests the decision to surrender Army Specialist William Girard to Japanese court jurisdiction.

The letter follows:

DAYTON, OHIO, *June 6, 1957.*

HON. PAUL F. SCHENCK,
United States House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN SCHENCK: I am writing this letter to express my sentiments about the case of Army Sp3c. William S. Girard.

First, I do not believe that an American serviceman should be subject to the judicial power of a foreign government. Considering the uproar in Japan over the current H-bomb tests, etc., how can this man be guaranteed a fair trial? How do we as American citizens know what constitutes a fair Japanese trial?

From my own military experience I know just what guard duty is and the responsibility that accompanies this duty. Apparently from newspaper reports GI Girard was on guard duty on an American gunnery range, protecting a piece of military equipment from vandalism, etc. Having some knowledge of Army procedure in matters of this sort, I would say that if equipment charged to you disappeared, so would your meager military pay. It completely escapes me as to why these people are allowed to enter a gunnery range to salvage expended cartridges. The Army says GI Girard was not authorized to discharge his weapon. Why in the name of God was an American soldier on a gunnery range guarding American Army equipment with a rifle not authorized to discharge his weapon to carry out his assigned task? I cannot believe that an American soldier could be armed and in the "field" and yet not be on "duty," can you?

Because of our current foreign policy our Government may be losing prestige in the Far East. I am no foreign policy expert but I hope I am an expert on individual rights guaranteed an American citizen under the Constitution of the United States of America. These rights extend from birth to death. Certain rights are altered slightly when an American assumes his 6-year military obligation. However, his right to a fair trial can never be compromised if our country is to maintain respect in the eyes of foreign powers. What right do we have to force our young manhood into service, ship them thousands of miles from home, and then leave them alone and unprotected to the judicial power of countries where they are strangers and where resentment and communistic propaganda run high against them. No; we can never compromise 1 single American citizen's right to appease any foreign power, and especially that of a former enemy who may be very tired of the antics of young Americans 6,000 miles from home. No; we can never do that. It will only succeed in shaking the confidence of the American people in the wisdom of its executive powers and alienating the affections of the American people for the Japanese.

Undoubtedly, GI Girard deserves an Army court-martial, guaranteed him by our Government.

If this man is given a sentence in a Japanese court to be served in a Japanese prison, or even brought to trial by a Japanese court, the crime of this inhuman violation of constitutional rights lies with you and I feel we are not doing our duty as citizens.

Since you know as well as I the fundamental rights of American servicemen, I wish you would completely reexamine the status-of-forces agreements which pose a threat to these rights.

I hope you will try to do everything in the power granted to you by the people you represent to see that American justice is brought to an American serviceman serving his country in a foreign land. If necessary, I will pledge you a petition signed by many, many more citizens who share my feelings on the subject of the status-of-forces agreements and how it will affect GI Girard.

Respectfully yours,

VERNON A. LAWSON.

The American Merchant Marine Program

EXTENSION OF REMARKS

OF

HON. FRANK W. BOYKIN

OF ALABAMA

IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. BOYKIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herewith an address delivered by my good friend, Mr. William H. Trauth, manager of the Washington office of the Alcoa Steamship Co., before the 44th convention of the National Rivers and Harbors Congress in Washington on May 18, 1957.

Bill Trauth opened the Alcoa Steamship Co.'s first steamship office in the Middle West at Chicago in 1934 and in 1936 was appointed traffic manager, gulf services, Aluminum Line, with headquarters in New Orleans; in 1945 he was promoted to gulf manager, Alcoa Steamship Co., Inc., at New Orleans; in 1947 he was promoted to southern division manager of Alcoa Steamship Co. at New Orleans, from which position in 1954 he was appointed to his present position as manager of the Washington office of Alcoa.

Prior to his association with the steamship business, Bill Trauth was employed by the Louisville & Nashville Railroad at New Orleans. From 1921 to 1932 he was employed in various departments of the New Orleans and South American Steamship Co.—Grace Line—and was promoted to assistant traffic manager in charge of the St. Louis office in 1928. In 1929 he was transferred back to New Orleans and promoted to traffic manager in charge of solicitation for NOSA which company also acted as general agent for the Aluminum Line from 1922 through 1928. In 1931 he was promoted to assistant to general traffic manager of the Grace Steamship Line in New York. In 1934 he joined Alcoa at New York.

One can readily see with this background that Bill Trauth knows the steamship business and the problems of operation, traffic, sales, and so forth.

He has taken an active part in civic affairs in every city in which he has been stationed. He is a life member of the executive committee, International House in New Orleans and a life member of the Propellor Club in the port of New Orleans, a member of the Propellor Club in the port of Washington, and a life member of Oecan Freight Agents Association of Chicago. He is also a member of the Traffic Club of Washington and New Orleans; the Rotary Club of Washington; the Washington Board of Trade, the National Defense Transportation Association of Washington and various social organizations.

I consider Bill Trauth an outstanding American who is unusually well versed in our Nation's maritime affairs. His address follows:

THE AMERICAN MERCHANT MARINE PROGRAM

(Address by William H. Trauth, manager, Washington office, Alcoa Steamship Co., before the 44th convention of the National Rivers and Harbors Congress, Washington, D. C., May 18, 1957)

The subject assigned me today is the American Merchant Marine Program. This calls for some preliminary account of the merchant marine and its present status before we reach the question of program at all.

By American merchant marine we mean, as a rule, oceangoing ships of 1,000 gross tons or more, in either coastal or foreign trade, and, in the later case, under United States registry only. Employing this definition, our merchant marine, on March 1, numbered 1,052 vessels, with an aggregate deadweight capacity of 13.4 million tons. These included 339 tankers of 5.8 million deadweight and 713 dry cargo and passenger ships of 7.6 million. The passenger fleet, as such, decimated by war and never adequately replaced, hardly deserves separate statistical consideration. Even though it has several outstanding liners, including the record-holding *United States*, it is only 41 ships strong at this moment, with 5 others under construction.

It must be admitted at the outset that this is not an adequate merchant marine, whether it be viewed in the light of history, of present national economic needs or of future security requirements. Only a little over 5 years ago we had 250 more merchantmen—or, put another way, 2 million more tons of shipping—under our flag. Although we are the world's largest trading country, we are far from having the largest carrying facilities. We have only about two-fifths as many ships as the United Kingdom, and only about three-fifths as much tonnage. Even Norway is now running us a close race in number of hulls, if not yet in tonnage.

But the problem is not one only of the floating facility itself. We must also deal with equipment and harbor navigation modernization. Today, major tanker-ore ship operators have almost $2 billion invested in new combination supertankers and ore carriers now afloat or under construction. The full value of this new ship tonnage to the national economy is not now being realized under the loading handicaps imposed by those channels of inadequate depth and width. It seems to us in the shipping industry imperative that direct and immediate action should be taken to complete these major loading and unloading port projects within the earliest practicable time.

The benefits from the use of the larger bulk carriers in the completed deep water ports would be far-reaching since their employment at full capacity would result in corresponding savings in transportation costs. There is no type of harbor improvement from which the benefits are more promptly realized and none in which the benefits are as great as that involving the movement of crude oil, ore, and other bulk commodities from foreign sources.

We also face the very relevant problem of the necessity for improved terminals to handle roll-on roll-off type tonnage, and especially much consideration and thought must be given to improved terminal facilities to handle the increased truck and trailer import-export traffic.

The merchant shipping industry is always one of the first to be called upon by the Government for vessels and men in time of war or emergency. It is probably the sole industry of major importance which, under 20th century military concepts, is fully integrated into the national striking forces in time of conflict. Prominent national leaders have testified to its importance in this role. Adm. D. V. Gallery has said that "the backbone of seapower is not the battleship or aircraft carrier but the lowly, peaceful merchant ship." President Eisenhower is credited with giving the merchant marine one of its proudest titles: "Fourth Arm of National Defense." All this being so, it is significant that virtually every recent evaluation by defense authorities has shown our merchant fleet to be seriously substandard, from a defense viewpoint.

Why do such conditions exist in a time of general prosperity and worldwide shipping activity? Partly for historical reasons stemming, to a considerable extent, from the war which ended more than a decade ago. Partly for economic reasons, of much longer standing, which operate in some degree against most modern American industry, but with crushing weight against ocean shipping. As I have said, the war wiped out much of our passenger fleet, and because of high construction and labor costs, as well as shifting travel patterns, we have never replaced it. The war virtually destroyed our domestic steamship trades as well, trades which were an essential balance wheel of the national transportation system and the first segment of the merchant marine to be drawn upon in every war. Yet there has been a singular public and governmental apathy toward any attempt to revive these vital services.

American operators in foreign trade are and have long been confronted with a different but no less severe handicap, the differential between their costs and those of their foreign competitors. Conservatively estimated, American ships cost twice as much to build and three times as much to operate as ships of the next-lower flag in the cost scale. A reliable survey made less than 3 years ago found that American seagoing wages were 3 to 8 times as high as foreign. There is, of course, some element of this same differential concealed in the cost structure of any American industry. But not often is a shoreside industry brought into direct commercial collision with foreign competitors. When it is it can take at least partial refuge behind protective tariffs, tax writeoffs, or domestic trade patterns. The ship operator has little or none of this protection. In the absence of Government assistance he must survive or fail strictly on the basis of his ability to absorb enormous disadvantages.

In any discussion of the merchant marine program, it is necessary to understand first of all the national policy which has been adopted and frequently reaffirmed by Congress, a policy which is embodied in the Merchant Marine Act of 1936 and its numerous amendments. Basically and most importantly, this act sets up two types of so-called subsidies—or, more properly, parity-payment plans—to encourage shipbuilding and operation under the American flag and to insure to the Nation the benefits of an active and adequate merchant marine.

Both construction and operating subsidies are designed to permit the builders and owners of American ships to compete on something like level terms with their opposite

numbers abroad, despite the inherent cost advantages enjoyed by the latter. To receive either type of assistance, a citizen must bind himself to contractual obligations beneficial to the United States. In the case of construction, he must build to specifications approved by both the Commerce and the Defense Departments, and may not sell or transfer his ship without Government permission. In the case of operation, he must commit himself to a specified number of voyages annually on a specified essential foreign trade route and, if he makes more than a stated profit, to a proportionate refund of his subsidy, conceivably up to the entire amount he had received.

Congress has recently granted two other essential forms of assistance, of particular benefit to shipowners who do not qualify for subsidies. These are the law which reserves to American-registered ships 50 percent of all Government-sponsored cargoes, and the amendment authorizing the Maritime Administrator to insure ship-construction mortgages for their full value.

The current program of the private shipping industry has two goals: To replace and upgrade our merchant fleet and to persuade American industry and the American people to make fuller use of its facilities than they are now doing. As to the first, a large ship-construction program is now underway. On May 1, the Nation's shipyards had 100 ships of 3,636,501 deadweight tons under construction or on order—roughly 10 times as much tonnage as was building at the depth of the postwar depression 2 years ago. As yet, however, much remains to be done in the way of diversification. More than 96 percent of this new tonnage represents tankers. While Suez proved that new and improved ships of this type were needed, there is an even more urgent demand for dry-cargo ships, not one of which has been privately constructed for American-flag operation since the close of the wartime building program.

Many of our principal cargo lines have recently entered into large-scale fleet-replacement agreements with the Maritime Administration. It is hoped that these can be speedily implemented, as more than 90 percent of our oceangoing freighter fleet is already within 8 years of obsolescence and, consequently, at a serious disadvantage in meeting the competition of newly constructed foreign tonnage. Some delay is inevitable as a result of the recent congressional decision to eliminate virtually all shipbuilding funds from the new budget, since the funds recommended included the Government's contribution to the cost of several new dry-cargo ships as well as the already-overdue replacement for the passenger liner *America*. No one would disagree that governmental economy is of crucial importance at this time; but it should be remembered that the obstacles to unassisted private construction of American ships are just as great as they ever were, and that the Nation's need for such ships is increasing, not diminishing.

The second objective of our program is even more important than the first. Unless Americans use their ships, there is little point in making them the best in the world. American exporters and importers today are doing the greatest business in history. But how much of this huge volume of cargo is moving across the sea in American bottoms?

Let's look at it over a 10-year period. In 1946, under abnormal postwar conditions, 70 percent of exports and imports, totaling 5,400,000 long tons per month, were being shipped under the United States flag. Three years later our total foreign trade stood at the same level, but our ships were carrying only 40 percent of it. Three years later still, in 1952, our export-import volume had risen to 7,700,000 tons per month, of which we are carrying only 35 percent. In 1955 we carried less than one-fourth of a monthly volume of 9,300,000 tons. I have not yet seen full figures for 1956, but up to the last month for which the reports are in American-flag ships transported just 22 percent of our combined exports and imports.

This shrinkage is not a new disease. It happened between the Civil War and the First World War, when our American-flag carryings got down to 9 percent in the 1910–12 period. It happened again between the World Wars. Now, apparently, we are on our way down to the cellar again.

We of the shipping industry are striving to get at the causes of this recurrent disease and eradicate them. It is a matter of life and death to us—and of very serious implications for the long-term health of American commerce as a whole. In more ways than one, we ourselves may have been at fault; and we are determined to correct those deficiencies, at least.

But there is more to it. Historically, we Americans have never shown the interest that any other maritime nation does in the flag under which its commerce moves. Considering only those cases in which routing-control is possible, we have never been prone to exercise such control as a German or Norwegian or Japanese wuld be. Why?

Partly, perhaps, because of a misconception, especially prevalent in inland areas, that, because American costs are higher than foreign, so are American rates. On the contrary, they are in most cases identical. Marked interflag discrepancies occur only in the tramp services—and even there the advantage is by no means always with the user of foreign ships. Witness the behavior of tramp rates in the North Atlantic coal trade during a part of the past year. In 8 out of 18 instances where direct comparison was possible, the American was below or on a par with the foreign rate, suggesting that it was the presence of American tramps in the trade which was holding foreign rates down.

Secondly, too few Americans realize the high level of service they assure themselves by employing their own ships. Our standards of construction and safety are recognized as the world's highest. Many lines afford shippers special consultant service on market conditions abroad, export packaging, and handling. American steamship agents abroad appreciate American standards and are naturally more inclined to consult the interests of American shippers than are other nationals.

A third advantage of supporting our own steamship services, too rarely considered when business is good and times are normal, is that such support is an insurance premium to guarantee regular and frequent service at all times in the future. The old saw that we don't need American ships because foreign vessels will always be available has been exploded time and again. When the outbreak of World War I immobilized our entire export machinery, when the general strike swept British tonnage from the seas, when the Suez Canal was slammed shut, we discovered to our sorrow what it was to need American ships. Yet we never seem to learn that if we don't want them to be missing in time of need, we must use them at other times.

Finally, too many of us forget too often that by not employing American merchant ships in peacetime, we encourage dry rot in what I have already shown to be an indispensable branch of our Defense Establishment. If self-preservation is as important a law as it is said to be, then one of its principal clauses dictates the use of our merchant fleet in order to have a merchant fleet.

Clarifications of these misconceptions, reminders to the business community of these too-often-forgotten facts, stirring ourselves out of our own lethargy and our fellow citizens out of their apathy toward American shipping—these are, to me, the cardinal objectives of our merchant marine program. If we can attain them, National Maritime Day, which we celebrate next Wednesday, will be doubly significant. For it will then symbolize not only the memorable achievements of our merchant marine in the past, but the even greater and more creative contribution which it can make in the future.

I would be quite remiss if I did not take this opportunity to pay tribute to the members of the Rivers and Harbors Congress, and especially those connected with its Washington office who are working so closely with our American Merchant Marine Institute officials here in Washington on behalf of our improved rivers and harbors in this great Nation of ours.

Hon. Aime J. Forand, of Rhode Island

SPEECH

OF

HON. GORDON CANFIELD

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 17, 1957

Mr. CANFIELD. Mr. Speaker, it was good to note the standing ovation accorded the distinguished gentleman from Rhode Island [Mr. FORAND] when he yielded the gavel to Speaker RAYBURN last Tuesday after presiding for 10 days over the Committee of the Whole House on the State of the Union during debate on the civil-rights bill. It was generally agreed that he had performed with ability, finesse, and impartiality.

It was my good fortune first to become acquainted with Mr. FORAND when he was named to Capitol Hill as a congressional secretary in 1929. He had been a successful newspaperman in his native State, had served in his State's legislature, and had been with our troops in France during World War I. Later he was first elected to Congress in November 1946, and he has gained valuable seniority in his assignment on the House Ways and Means Committee. He is a real gentleman and worthy Congressman.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRICE OF THE CONGRESSIONAL RECORD

The Public Printer is authorized to furnish to subscribers the daily RECORD at $1.50 per month, payable in advance.

Remit by money order payable to Superintendent of Documents, Government Printing Office, Washington 25, D. C.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Appendix

Address by Hon. Ralph W. Yarborough, of Texas, Before Democracy Club of Galveston County, Tex.

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of an address I delivered in my home State at the annual banquet of the Democracy Club of Galveston County, Texas City, Tex., on Saturday, June 15, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

SPEECH BY SENATOR RALPH W. YARBOROUGH AT DINNER MEETING OF DEMOCRACY CLUB OF GALVESTON COUNTY AT TEXAS CITY, TEX., JUNE 15, 1957

Mr. President, friends, fellow Democrats, fellow Americans, we are overwhelmed by the generosity of your greeting; your advance reservations were beyond aything we ever experienced in Galveston County before.

Mrs. Yarborough and I are very grateful for this privilege of visting with you, because it is both encouragement and an inspiration to see such a strong Democratic organization as yours—one with a continuing existence, not dependent upon whether the party is in power or out of power. Your Democracy Club, organized in 1951, was not organized for any one candidate or for any one year or any one campaign. It was organized to serve the cause of democracy and it has done a noble job of it.

We are personally grateful to you, because you have supported us in several hard campaigns; you gave us a 4,000-vote majority in Galveston County in the close governor's race in 1956, the largest lead we had in any single Texas county, and you gave us a long lead in the Senate race. God bless you all for it.

It is good to be back in Texas, and to celebrate with you the growing resurgence of the Democratic Party as the party of the people. We in Texas have a right to be proud of that resurgence, because it largely originated here, and, from the plains and valleys of Texas, this resurgence is spreading over the Nation. This resurgence should be sparked by an all-out war of righteous indignation against the studied financial injustices and inequities at home, and the fumbling foreign policy abroad, of this administration.

You here in Galveston County have had and are having a major role in this Democratic resurgence. For a quarter of a century Walter Hall has been demanding a more vigorous democracy for all the people; he has been an outspoken champion of the people's rights in precinct, county, State, and National conventions and in primary and general elections. You know I made my services available to the people for governor several times, in a quiet sort of a way, not loud enough for people to hear the offer, but here in Walter Hall, a business statesman of the first rank, you have a man who ought to be governor of Texas.

You will note from your program that I am right between Walter Hall and Rev. Harry Burch. That's where I came in, 5 years ago. When I announced for governor the first time May 1, 1952, they both came to my aid, the first two people in Galveston County to aid and encourage me in that race and they have aided me ever since, not just in Galveston County, but statewide.

Here I want to pay tribute to one of the outstanding Democratic Congressmen of the Nation, CLARK THOMPSON of Galveston. He and his gracious wife, Libby, gave a dinner in Washington in our honor; and showed us innumerable other courtesies. We shall never forget their kindnesses. And CLARK THOMPSON is a stanch oak in the Congress, a credit not only to this district, but to Texas and the Nation.

It is good to be in a Congress with Democratic majorities, with the Democratic leadership in both Houses in the hands of capable Texans. Speaker SAM RAYBURN is my friend; he has supported me in 4 campaigns in 5 years. His counsel is sought by all Democrats in Washington and is respected by all Republicans.

The distinguished Senate majority leader, LYNDON JOHNSON, and Mrs. Johnson gave a lunch in our honor in Washington and Senator Johnson led the Democratic Steering Committee in placing me on three important senatorial committees. Our relationship was never more cordial.

Turning from these pleasant thoughts to the tasks before us, we realize that we need a speeded-up Democratic drive over the Nation, for the benefit of the people of Texas, of America, and of the world.

With the dollar worshipers at present at an alltime high point of power in our Government, similar to the days of Harding and Coolidge, it is going to take resolute men and women to turn this Nation back to the idealism of Woodrow Wilson and Franklin D. Roosevelt. We need a modern Jeremiah in every State and in every city in the Nation. More than that, we need at least another hundred Democracy Clubs in Texas, like this Galveston County Democracy Club. You have the leadership and the dedication here.

What has this cult of the dollar worshipers who furnish all the high priests of this Republican administration done to the American people in the last 4 years?

This Republican administration has given public utility power companies a large share of the 778 millions of dollars in tax write-offs awarded—which is more than $10 a person from every wage earner in America, taken out of the pocekts of American wage earners by the United States Government, and given as an unearned increment to big public utility power companies.

The administration's high-interest rate and hard-money policy is lifting between 10 billion and 15 billion more dollars each year out of the pockets of Americans in increased interest rates on public and private debts, than were charged as interest on the same debts in 1952, the last year of Democratic rule. It takes that extra sum out of consumer pockets and lays it on the altar of the big money in increased interest. Such a policy long continued, eats up purchasing power and will inevitably slow down consumption of consumer goods.

There may be a few here tonight old enough to remember 1929. If you will travel away from the big cities and this golden Gulf Coast area, you will find that stagnation of trade is already here in the little cities and the county seat towns of Texas.

The most vicious dollar cult practice of this administration is found in the so-called discount practice in the home-building industry. The discount rate varies in homebuilding from 5 percent to 10 percent out over the country. Last spring in Texas, it ran about 7 percent. Here is the way it works: A homebuilder goes to a mortgage company to borrow $10,000 to build a home. He signs notes for $10,000. With a discount date of 7 percent, he only gets in cash $9,300. The notes are paid off, all $10,000, usually over a period of 25 years at a rate of 5 percent interest on $10,000. When the interest rate is computed, it will be found that it averages out over 15 percent per year on the money actually advanced by the money lenders, and those loans are guaranteed by the United States Government. Just this week we are advised that the discount rate in San Antonio is running as high as 13 percent. I read here a telegram dated June 12, 1957, from Mr. Bennett, president of the Bennett Lumber Co. of San Antonio, saying the discount rate in San Antonio is now 13 percent on VA ad FHA loans and that this ruinous discount rate has stagnated trade and ended homebuilding in San Antonio.

That usurious interest collected does not usually go to the local mortgage company that lend the money; the local company gets only about 1 percent brokerage fee; the excess take, the discount, goes into the prime money markets of the country as a part of the unearned increment the big financial interests are collecting. It's part of their reward for being clever enough to let the American people have the kind of government the Madison Avenue hucksters sell for the Republican Party and its allies.

Last week we voted in the Senate to reduce the down payment requirement on FHA-insured loans to 3 percent on the first $9,000, and 10 percent on the next $7,000. I advocated that reduction in my campaign, and voted for it in the Senate. If the House of Representatives agrees with the Senate, this will end the depression in home building if, and only if, we end the ruinous discount rate. I voted for the Gore amendment to the housing bill which would have outlawed these ruinous discounts. Unfortunately, the Gore amendment lost.

The Republicans tried to increase the interest rates on loans for student dormitories at colleges, thus raising room rent and making it more expensive for students to go to college. We Democrats beat it down. That too, was in the housing bill. With Russia training two engineers and scientists to every one in an American school, it is shortsighted to increase the burden on college students as the Republicans tried to do in Washington by increased rentals for college students, and as the present State administration unfortunately did in Austin. The path to America's future is not paved with impediments to the education of our youth. Any government imposed burden on the education of our youth is a ball and chain on America's destiny.

In addition to the education of the youth, we are working for soil and water conservation projects for the benefit of this and future generations. I have testified for seven such projects before congressional committees since I have been in Washington. I have testfied for the extension of the Galveston seawall before the Senate committee. And,

under date of May 31, 1957, we have a favorable report from the Army engineers for a $7 million Texas City seawall with about 16 percent of the cost to be borne by local interests.

On Texas river projects, we have been working actively for McGee Bend Dam on the Angelina River, and many other projects.

On other projects not yet to far advanced as McGee Bend Dam, my policy will be as follows:

Texas must push ahead vigorously in the development of its rivers. Where this can best be done by local and State means, it should follow that course. Where Federal aid is needed in order to develop our water resources we should obtain it. If the best solution is at odds with Federal policy then we should sit down together and work out a solution to fit the needs of each particular watershed. Federal aid for dams, in any event, should be sought only when desired by the people who need it.

Texas cannot reach its full destiny without the proper development of our water resources. Our towns and cities have had to ration water even for purely domestic use, our irrigated farms have suffered from lack of water, and our industries have suffered both from short supply and poor quality of available water. Industries are passing up Texas and locating elsewhere. This is particularly true with respect to location in the Baton Rouge, La., area.

Our State has vast water resources awaiting development. These resources, harnessed and utilized, will give us needed water and prevent floods which create great damage to lives and property. Texas has suffered over a hundred million dollars in property damage in recent floods and tornadoes. We need both flood dams and supply dams, small retaining ponds on the farms and ranches, small dams on the tributary streams, and big dams on the main streams. Not only is this essential for flood control and water supply, but without it our land will continue to wash into the sea. We should proceed with these developments on a basis consistent with the uses of water with priority for domestic and municipal use for human consumption; then for use in industrial, irrigation, mining, hydroelectric, navigation, recreational, and other uses.

This development must protect the rights of municipalities, and other owners whose water projects entailing vast investments have played vital roles in the great irrigation and industrial development of Texas, especially in the gulf coast and valley. This development shocld also produce the best possible quality of water, otherwise little use can be made of it.

All people living within a river valley, indeed all the people of Texas, must have full and fair consideration in this vital program. These problems vary from watershed to watershed and the solution should be worked in each watershed which best serves the people in that watershed. I shall support with all my energy such an undertaking until the rivers of Texas are harnessed and producing vast benefits for all the people of Texas, both now and in the future.

The farm decline is a story in itself, with a million farm families leaving the land never to return—their places taken by a corporate-type farm, more like a Soviet collectivist farm than anything else. Brooks Adams has pointed out, in "The Law of Civilization and Decay," how the yeomenry of England became extinct in 80 years.

This must not happen in America. The Democratic Party is the only party really trying to prevent it. The Democratic Party is the only party trying to save the family-type farm. We have lost 300,000 farm families, gone from the land forever, under this Republican administration, and 40,000 of those families were in Texas alone. When questioned about it by a Senate committee, Benson answered: "It's cheaper to keep them on relief in a city than to keep them on the farm." I'd prescribe for the Secretary of Agriculture a little reading in Roman history.

In the field of taxation, the people are neglected by this administration, while things are in the saddle and ride mankind. The vaunted $7 billion tax cut by Republicans was a corporation tax cut. Seventy-three percent of the cut went to corporations; 13 percent to individuals in the large income groups and only 9 percent to the 80 percent of the people in the lower and middle income groups. I propose a tax cut now for the people.

An equitable cut could be had by increasing all personal exemptions from $600 to $800 per person per year. Let's let the Madison Avenue boys and their friends share these windfalls with us regular folks by giving the big rich that $200 a head deduction also. It will mean more dollars to them than it does to us, for they are in the high tax brackets and that will save them about $150 each, while it will only save most of us $25 or a little more for each dependent.

These are some of the reasons why I've said modern Jeremiahs are needed. The facts need to be driven home to the American people every day in every possible form and forum. Of course, when we continue to press for reforms, the Republican press will probably call it obstinate pig-headedness, while the determined effort by Republicans for higher and higher interest would be cited as an example of firm determination. We must not be intimidated by semantics, nor cowed by contumacious words.

I'm here tonight partly to make a report to you of my first 45 days on Capitol Hill. In my race this spring, I promised to work for a pay raise for our postal employees and Federal employees. The Democratic leadership placed me on a subcommittee to hear testimony on the pay-raise bills and we have already reported on a pay-raise bill to the full committees; too small, but a beginning step.

I promised to try to help cut the fat out of the Eisenhower budget and out of foreign aid. We are making progress. I've voted for some reductions in the budget that carried, and some that lost. Yesterday we lost by a vote of 49 to 40 in an effort to cut some more fat out of foreign aid, on the Long amendment. It is my hope that we can cut enough fat out of excesses in the budget to raise postal pay and have a tax cut, too. And if I could persuade enough of my colleagues to go along with me, we would get the job done. I'm encouraged at the progress made.

But we are not cutting everything. The Democratic Party is the party with a heart. In our campaign last March, I promised to support larger appropriations for cancer research, heart-disease research, mental-hygiene research, arthritis research, and allergy research. And this week we voted them in the Senate. In the Senate we voted to raise those appropriations, as follows:

[Dollars in millions]

	Appropriation		Percent increase 1958 over last year
	1957	1958	
Cancer research	$48	$58	20
Heart disease research	33	38	15
Mental health	35	39	11⅓
Arthritis research	15	22	50
Allergy, and all allied research	13	17	30
Neurology and blindness studies	18	24	33⅓

And in the fields of dental research, public health, research in tuberculosis and other communicable diseases, we have voted substantial higher appropriations than for last year. In the enforcement of the pure food and drug law, we voted this week an increase of 37 percent in funds for enforcement, over the 1957 funds; this will allow the employment of 162 additional personnel, 115 of them as field inspectors to stop the adulteration and pollution of the food that flows from the far-away factory to your table. This is a realistic step of the utmost practicality.

These health appropriations are to ease the pains of today and bring mankind into a new era of health and happiness. This promotes the general welfare in the most beneficial of all governmental fields; the health of the human race.

In the field of foreign affairs, the Democratic opportunity for service is similarly unlimited. The dreadful deepening concern over the perils of the hydrogen age have struck deeper into the Democratic conscience than in the Republican understanding. When Adlai Stevenson and Estes Kefauver braved the storms of Republican big money wrath to call for reason last October and a stop to dangerous nuclear explosions, they were derided and even their patriotism questioned.

Today, every newspaper, every TV and radio-broadcasting station, are replete with details of the horrors of the fallout effects. Whether the effect be bone cancer, infertility, malformed babies, stunted children, or any of the other equally dreadful effects on the human race described by the scientists, the answer is the same. The human race is waiting for leadership intelligent enough to put a stop to the nuclear explosions before our children and our children's children are doomed by a polluted earth and air.

And now, I want to close on a more cheerful note:

It is the Democratic Party that best realizes its responsibility to the people of our own land and to the world. Let us all hope and expect, as I do, that the Democratic Party will show us the way out of the night that now shrouds us. Through the years, the people of America have turned to the Democratic Pary in time of crises. They will do so again.

The time of crises is at hand, both on the domestic front and in foreign affairs. And the Democratic Party has led the way in pointing out the dangers to the human race from nuclear fallouts. First, Adlai Stevenson and Estes Kefauver last fall, and now Senator Clinton Anderson's committee is giving the facts to all the world.

Last Saturday night in New York, the Democratic majority leader, Senator LYNDON JOHNSON, called for reason and action before the human race is annihilated. Senator JOHNSON called for an "open curtain" to let the truth of democracy lighten up the darkness behind the Iron Curtain. Senator JOHNSON'S forthright leadership for an open curtain has been praised from the Atlantic to the Pacific.

When the Democratic Party quits tiptoeing down timidity street and, boldly as Roosevelt, proclaims its faith and belief in men over money and machines, then will America again place her faith in the party of Jefferson and Jackson and of Wilson, of Roosevelt and of Truman. I fervently pray for that day.

That day is nearer at hand now than for some years. The Anderson committee investigation and the Johnson declaration show it.

I want my children and their children to live in the same pure air that was on this earth in the days of man's first creation.

Address by Hon. J. Glenn Beall, of Maryland, at Dedication of Ner Israel Rabbinical College New Dormitory Building

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. BEALL. Mr. President, yesterday I had the great honor of participating in dedicating ceremonies for the new dormitory of the Ner Israel Rabbinical College, in Baltimore. It was a privilege and a pleasure for me to deliver a brief address at this important occasion. I should like to mention that the ceremonies, which were arranged by Rabbi Herman N. Neuberger, executive director of the Rabbinical College, and others, were as impressive as any I have ever attended. I ask unanimous consent that the address delivered by me be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS OF UNITED STATES SENATOR J. GLENN BEALL, DELIVERED AT DEDICATION CEREMONIES FOR THE NEW DORMITORY BUILDING OF THE NER ISRAEL RABBINICAL COLLEGE, BALTIMORE, JUNE 23, 1957

I esteem the high honor you pay me by your invitation to participate in these dedication ceremonies and to be the spokesman of the community sentiments.

You are dedicating this new dormitory building on the campus of your Yeshiva. The structure will provide an added facility to this college which emphasizes the study of the Talmud, that great repository of Jewish learning.

This occasion suggests some interesting thoughts. The very location of this structure is suggestive. It is in Maryland, which prides itself on its tradition of religious freedom; and it is in a nation which makes it a cardinal principle that belief or disbelief is personal, and is not to be commanded or forbidden or punished by Government. This is a religious Nation. It cherishes the ethics of religion and the spirit of reverence, but it leaves to each individual's determination for himself questions of doctrine and the notions of man's relation to his God.

It is a satisfaction to know that your college is located in close proximity to houses of worship and other religious and educational institutions of other denominations in this city. Protestant, Catholic, and Jewish institutions exist side by side, and none is molested, but all are treated with respect. It is a happy circumstance that in this land of freedom, religion is unfettered by Government, and Government is not dominated by sectarian influence. We are likely to take this for granted, because we are so accustomed to it in America; but it is well to remember that there are not many lands that enjoy such freedom. While I would be the last to claim for this country that it has always lived up to its lofty traditions, nevertheless, unlike the totalitarian lands, which abandoned freedom, we have never repudiated our ideals. When we have strayed, we have acknowledged our faults and always returned to fundamental principles. America loves freedom as the totalitarians hate and fear it.

It has often been pointed out that there is a harmony between our religious ideals and those of democracy, for the foundation of democracy is moral, even as its structure is political. When Jefferson wrote into the Declaration of Independence the phrase about the unalienable rights of man, he meant exactly what the religionist means when he speaks of the dignity of human personality.

Democracy accepts as fundamental the religious doctrine that righteousness exalteth a nation.

While rabbinic and talmudic studies have been the guides to Jewish living, they have also contributed greatly to the spiritual well-being of mankind. Throughout the ages, there have been notable Jewish contributions to the arts and sciences, to medicine, to law, and in other fields; but the great glory of the Jewish people is that they have provided the ethical foundation upon which western civilization rests. We Christians recognize and acknowledge that debt.

Would it not be a great pity, and a tragedy for the whole human family, if this noble creativity of the Jewish people which has so enriched mankind should be discontinued in our day? The spiritual values that Judaism has taught, and which we Christians hold in common with you, need to be nurtured.

This Ner Israel Rabbinical College is dedicated to the great task of advancing the study of the Talmud. Not only the Jewish people, but the whole community, treasures this institution as a valuable spiritual and cultural asset. May it prosper in its work of spreading higher Jewish education, and may it help to bring about on these shores a new flowering of the religious spirit and learning.

What distinguishes American nationalism from that of the totalitarians is that while we all willingly meet the demands of political loyalty, we do not stifle diversities in religion, ancestral traditions, group living, culture, or education. Those who understand and love America truly know that it is a thing of many components, and there are many elements that enrich it in distinctive ways.

May your institution continue to play a noble role.

Address by the Prime Minister of Japan and Introductory Remarks by the Honorable Francis B. Sayre at the Japan-America Society Luncheon

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. WILEY. Mr. President, on June 22, it was my pleasure and privilege to attend a luncheon given by Francis B. Sayre, president of the Japan-America Society of Washington, D. C. I have before me the introductory remarks by Mr. Sayre, and the address delivered on that occasion by the Prime Minister of Japan. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the introductory remarks and address were ordered to be printed in the RECORD, as follows:

INTRODUCTION OF HIS EXCELLENCY NOBUSUKE KISHI, PRIME MINISTER OF JAPAN, BY HON. FRANCIS B. SAYRE, PRESIDENT, JAPAN-AMERICA SOCIETY OF WASHINGTON, AT THE LUNCHEON GIVEN IN HONOR OF HIS EXCELLENCY IN WASHINGTON, D. C., ON JUNE 22, 1957

It was my privilege a few years after the war to spend a year in Japan, working intimately with the Japanese people. Never in any country have I met with such an unvarying friendly welcome on every side. And never have I felt a more eager response among the rank and file of people to such ideals as democracy and the sacredness of individual human rights.

The old war party had been overthrown. New leaders had come into power. Out of the disaster and the chaos of war was emerging a new spirit and transcendent hope, built upon an entirely different conception of life.

Just as in 1776 Americans were reaching out to build their lives and their Government upon new ideals and conceptions—upon individual freedom and basic human rights in place of colonial tyrannies and outlived 18th century conceptions—so today Japan is emerging from a regime of war lords and totalitarian government into a new nation built upon people's rights and popular government. To me the very striking fact of present-day Japan is that these new ideals toward which the Japanese people are today reaching are in substance the same as those which inspired the American people in 1776 and upon which the American Constitution was framed—principles which, I might add, during the past few days have been significantly confirmed once again by our own Supreme Court.

In Japan today one begins to feel the possibilities of a new restoration—one which may have more significant and far-reaching results than Japan's famous Meiji restoration of 1868, which broke the back of Japan's feudalistic past.

I like to think in the days ahead of Japan on the western side of the great Pacific Ocean and the United States on the eastern side, each building shoulder to shoulder, powerfully together for a new world based upon these life-giving concepts of individual freedom and basic human rights. If our two peoples stand together true to such a faith it could mean in the days ahead a shining new chapter in international history.

And who is better equipped to lead Japan along these new pathways of hope than Nobusuke Kishi? In his early years a student of the western steel industry, drawn into the service of his Government in various capacities, including that of Vice Minister and then Minister of Commerce and Industry, later elected to the Japanese House of Representatives, after the war back in the business world, returned to the political field in 1952 and the next year joining the newly formed Democratic Party, since the war he has led organized groups and won outstanding support for liberal and democratic conceptions among the people of the new Japan. On February 25, 1957, this brave and outstanding leader, seeking to give reality to the new ideals emerging out of the disaster of war, was appointed Prime Minister. One of his first ventures along this new pathway is his visit to the people of America, seeking to build mutual understanding and friendship between these two great peoples.

I like to think of the words of our friend sitting here. His Excellency Koichiro Asakai, recently arriving in Washington as Ambassador from Japan. "The interests and aims of our two countries," he said, "are basically identical. We stand together for peace, for justice and for freedom, not only for ourselves but for all countries."

Here in the person of Japan's Prime Minister comes a friend. We of America are proud to welcome him. May I introduce to you His Excellency Nobusuke Kishi, Prime Minister of Japan.

PRIME MINISTER'S SPEECH AT LUNCHEON OF JAPAN-AMERICA SOCIETY OF WASHINGTON, D. C., JUNE 22, 1957

Mr. Sayre, members and friends of the Japan-America Society of Washington, I am very much honored by your cordial welcome. I am grateful for your kindness and for the opportunity of meeting you.

Having completed the official aspect of my mission to this country—the government-to-government, aspect—I can now turn to the people-to-people aspect of my visit. And this is the first such opportunity.

You will agree with me that government-to-government relations are only one side of the picture. Equally, if not more important, in tying our countries closely together are the relations at private levels in the economic, cultural, and other fields.

I was delighted when I heard that a Japan-America Society was organized in Washington a short time ago. Organizations like yours are one of the most effective agencies for expanding people-to-people contact, for making friendships and for promoting true understanding between nations.

In this airplane age, you can go to Tokyo from Washington, D. C., in 36 actual flying hours. The time will be cut to 20 hours in the coming jet age few years from now. Japan is no longer a country in the far distant corner of the Far East but a very close neighbor of the United States. Under this revolutionary progress of air transport, the exchange of visits between American and Japanese is growing fast. I am happy to think of the immeasurable contributions that this personal contact on the people-to-people basis is making to the deepening of the mutual understanding and friendship of our two nations. A great number of Japanese, Government officials and private citizens, who come to America make friends with Americans.

Your Government invites many Japanese industrialists and technicians to the United States under the productivity expansion program. This contributes not only to Japan's industrial advancement but also to the strengthening of personal bonds between Americans and Japanese. Again, thanks to the various educational and personnel exchange programs sponsored by your Government and private organizations, thousands of our scholars and students are studying in your colleges and schools. This serves to forge personal links among the scholars and students of the two countries.

I wish to mention especially the supplementary agricultural labor program, which was inaugurated last year, under which Japan sends out to your country her young farmers to help on American farms on the basis of a 3-year contract. This unique program is of immense significance in that it fosters Japanese-American friendship at the grass-roots level. These young men are picked from the various prefectures of Japan after careful screening. They represent the flower of our rural youth, healthy, hard-working, and ambitious. They are here not simply for profitable employment, but they are eagerly learning American farming methods and the American way of life. While here, they are ambassadors of good will from Japanese farms to American farms. And when they go home, they will be leaders of their respective communities on the remote countryside of Japan; and there they will remain America's best friends.

I cannot overstress the importance of such personal contacts for the furtherance of international relations. I am glad to believe that the personal contact I have been able to establish with President Eisenhower and other leaders of your Government will bear good fruit.

I am delighted to be received by the Japan-America Society of Washington in this warm and intimate atmosphere and make personal acquaintance with you, ladies and gentlemen. I hope some of you—yes; all of you—will someday come to Tokyo and let me reciprocate your hospitality of this afternoon.

Thank you.

A Basis for the Total Development of Waters in the Northwest

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a speech presented by Mr. LaSelle Coles, of Prineville, Oreg., before Northwest organizations concerned with the wise and fullest use of our water resources.

Mr. Coles is a second vice president of the National Reclamation Association. In this capacity, he has become favorably known throughout the West as an able and articulate proponent of water-conservation practices designed to meet the needs of future generations. In his address, entitled "A Basis for the Total Development of Waters in the Northwest," he examines the policies and body of law which have attempted to deal with the human demand on water resources over the years. He then spells out a policy and a program of priorities for water use which will meet the manifold needs of a complex society with a high degree of probable success.

There being no objection, the speech was ordered to be printed in the RECORD, as follows:

A BASIS FOR THE TOTAL DEVELOPMENT OF WATERS IN THE NORTHWEST

(Address by L. E. Coles)

The people of America are becoming conscious of the importance of our available water supply. Twenty years ago water was no problem to the Northwest. We had the false idea that we need never worry about our overall water supply, except in periods of drought, which were ordinarily of short duration. The water in some of our smaller streams was becoming short, but we could always point to the Columbia River, and its great tributaries, and reassure ourselves. Today this picture has completely changed. We have been rudely awakened to the fact that our total water supply in the Northwest is limited. We know that our future growth and development will depend upon how we use the unclaimed water which is left.

In order to better understand our present situation, I would like to review what has happened in the field of water law. Our laws in the States and yours in Canada were based on the English common law. This law as it relates to water was known as the doctrine of riparian rights. Under the riparian law an owner of real property bordering a stream had a proprietory right to have the water in the stream flow to him in its natural state in flow, quantity and quality, neither increased or diminished, whether he had made use of it or not. The riparian owner could use the water under certain restrictions as set forth in the law. How under such a law could the early placer mines be developed? How in the arid and semi-arid lands of the West could farms away from the streams be watered? If they were not watered they had in most instances very little value. The inadequacy of the riparian law was very apparent to our early settlers, consequently the concept of "first in time, first in right" was applied. This was the accepted doctrine, but we had few statutes for these early users of our water to follow. Most disputes had to be settled in the courts. These early court decisions were used as a body of laws which could be referred to. Those disputes which were not settled in the courts were often settled out on the ditch bank with fists or guns. It has been said that more of our early timers died in fights over water than any other way. It has been my observation through the years that a man will fight over water when he won't fight over anything else—not even his wife.

This chaotic situation continued until the States adopted water codes, and adjudicated the streams. Oregon's code was adopted in 1909, and I believe the other Northwest States adopted codes around the turn of the century. The water act in British Columbia is founded on legislation enacted in 1859, and is known as the Gold Field Act. Water became property, which is as it should be. How could a man build costly diversion structures and miles of ditch without a guaranty from the State or Crown that he could use this water forever, as long as he complied with the law and put it to beneficial use?

The riparian law was a good law under the conditions for which it was intended. The doctrine of appropriation based on beneficial consumptive use has been a good law for the Northwest. It has made our present state of water development possible, but I am wondering if it is not time for us to take a new look. On the one hand our total unappropriated supply of water is decreasing each year, and on the other hand our demand is increasing. Can we continue to allow an individual or groups of individuals to appropriate this remaining water, merely by making an application without any consideration of the entire development pattern of the Northwest? I doubt it very much.

I would like to present to you the picture of the situation in Oregon. I am doing this because waterwise we have reached a point in our water development which the rest of the Northwest is rapidly approaching. In 1954 and 1955 I was a member of a Water Resources Committee created by the State legislature for the purpose of making a critical analysis of the water resources of our State and the extent to which such resources are presently being utilized and developed. This committee found the following conditions: Permits had been issued for more water than minimum flows would provide; the only water left in the State for future development were new waters or flood waters; our population had increased nearly 40 percent during the 1940 to 1950 decade; and, that this ratio of population increase is continuing and demands for water are keeping pace. The same thing is happening in the other States and in British Columbia. The only difference is that most of you have a greater available supply of water than we have in Oregon. You cannot wait too long. I say to each of you that it is time for you to take a look at the overall development of our water resources.

If the Northwest is to continue the rate of growth and development which it is now enjoying, we must provide water for those uses which are most important to its growth. I would like to list the uses of our water for you: (1) Recreation and scenic attraction; (2) municipal and domestic uses; (3) irrigation and agricultural lands; (4) fish and wild life propagation; (5) power development; (6)

industry; (7) navigation. Pollution is not a use of water, but it is as important as any of the uses. Most of our users depend upon a pure supply of water. These users are divided into consumptive and nonconsumptive, which are in direct conflict in most situations. If all the water is taken out of a stream for domestic or irrigation purposes, none is left for power, industry, etc., and yet if the power or industry is upstream then the downstream consumptive uses do not interfere.

It is my firm belief that a priority of use must be set up so that the water upon which mankind is most dependent will be reserved for that particular purpose. May I present the following priority for your consideration: (1) Municipal and domestic use. All life depends upon water. Without it we soon perish. The growth of our urban and rural areas depend upon adequate suplies of water which are pure in quality. This is no small item in itself. Prior to the development of municipal water systems, per capita requirements were less than 10 gallons of water per day. During the maximum demand months for the 11 largest cities in Oregon, during the fiscal year 1951–52 average per capita daily consumption was nearly 340 gallons. I am sure this would be a reasonable figure of the increase in use in most of our cities and towns in the Northwest. Oregon law recognizes the importance of municipal use in that a municipality is the only entity which can file on water for future use and hold its filing indefinitely. I believe this to be a good and just law. (2) Irrigation of our arid and semiarid lands. Our population in the United States is growing at the rate of 4 million per year and these people must have food and fiber. At the same time we are losing 1,800,000 acres of good agricultural land each year to municipal expansion, suburban development, airports, highways, soil erosion, etc. We are reclaiming about 1 percent more land than we are losing, but this cannot continue for long. Some people point to our agricultural surpluses, which represent only 5 percent of the total crops produced, and say we need not worry. These same people object to the interest-free money, and the subsidy from net power revenues, which are used to aid reclamation development. I firmly believe that within the not too distant future, the Federal Government will build our irrigation projects without any cost to the farmer. The farmers will be placed on the land and be told to raise food so that the people can have a proper diet. I would like to have these individuals who oppose all reclamation development read the history of early China, or study the standards of living in most of Europe. Dr. B. T. Shaw, administrator, Agriculture Research Service, made the statement before the Agricultural Appropriations Committee that our agricultural production and the consumption of agricultural crops in the United States will reach a balance by 1962 and probably by 1960. Dr. Shaw may be wrong, but supposing he is wrong by 10 or 15 years. We know this day is inevitable. What then will happen to our standard of living? We will become an importer of food and fiber. Canada, and especially British Columbia with her vast resources and available agricultural land will be in a very favorable position. In the not too distant future we will look to our sister nation for more and more of our agricultural commodities. I say to you in British Columbia that you should guard this water for your future agricultural growth with your life. Make sure there is water reserved to irrigate every acre of land upon which you can put water. It will mean prosperity for future generations of Canadians, and a sustained standard of living for us in the United States. (3) I would place industry in this position, as nearly all industries need water to process their products, and man is dependent upon these products for the standard of living which he now enjoys. In most instances, industrial use is not a consumptive use, therefore water can be used for other purposes. This use has created a pollution problem, but this is being solved. Thanks to our pollution laws.

Here I would recommend that the priorities end, as the importance of the rest of the uses depends upon the area of the Northwest in which the water is located. What might be considered an important use in one place may be unimportant in another.

You no doubt thinks it peculiar that I have not given power a priority of use, as a great deal of our emphasis on water development today is on cheap power. We need this power to light our homes and to turn the wheels of industry. Power can be generated by thermal installations. There is no substitute for water. Within 50 years our hydroelectric plants may be as out of date as a model T Ford is today. I know the nuclear scientists do not agree with this theory, but we are only on the threshold of nuclear scientific development. When I read accounts, such as I am about to relate, it makes me wonder. A twin engine to the one in the *Nautilus* has been operated 1,600 continuous hours. If the *Nautilus* left the east coast, went around South America to Asia, through the Indian Ocean to the Mediterranean, then into the Atlantic and back home, and then took a cruise of several weeks to the Arctic, it would not take 1,600 hours of continuous operation. It would take 160,000 railroad tank cars to furnish fuel for a conventional-type engine. With the atomic engine this can be done on atomic fuel the size of an apple, and fuel would be left at the end of the journey. The catch is that we do not know the cost of this fuel, but sooner or later it will be within reason. In the Northwest we have the greatest hydroelectric power potential of any area in the United States. The peculiar thing is, that with proper planning most of this power can be developed, and the other uses need not suffer.

Inland navigation is a cheap means of transfortation, and yet if we had to make a choice between food and cheap transportation, I do not believe there would be any doubt in our minds which would come first. Here again we will always have enough water to float boats on the Columbia and Willamette Rivers when the other uses have been taken care of. You can't generate power at the downstream dams without water going by.

Commercial fishing provides a cheap protein food, and is important to the economy of this area. Every effort should be made to preserve this resource. We are fortunate to have part of our rivers so located that they can be reserved for the purpose of the propagation of commercial fish, and still not hinder other development. We have practically solved the problem of the upstream migration of the salmon. Continued effort should be made to solve the problem of the downstream migration of the fingerlings, so that they can return to the ocean to complete their life cycle.

Recreation, sport fishing, and scenic attraction are one of the most important industries in the Pacific Northwest. Oregon estimates that the sports fisherman spends around $92 million each year; the tourist about $130 million. Add the income from other types of recreation to these two figures, and you have a sizable amount of money. I know a similar amount is spent in each of the other Northwest States, and as much or more must be spent in British Columbia. I am one who believes we can have the development of our water resources, and still have recreation and sport fishing. Actually all of our development will destroy only a few miles of our larger rivers. We may have to stock some of our storage reservoirs with warmwater fish instead of trout, but what is the difference; it is all sport. Some of these man-made lakes have provided some of our greatest fishing and without a doubt have been our greatest tourist attraction. Look at the number of people who visit Grand Coulee Dam each year.

We have other fields of conflict besides the uses of our water, which are apparent when we look at the overall development picture. There is the conflict between States on interstate streams, and the conflict between nations on streams which cross international borders. It all resolves itself into the question: What are the rights of the downstream users against the rights of the upstream users? It is easy to answer this question as long as the stream does not cross State or national borders. Here the State water code applies and the law of "first in time, first in right" is followed. A stream which crosses these boundaries is something different. Is there anything to stop the upstream State from taking all the water in a stream? What are the rights of the downstream users? They certainly do have a proprietary right to a certain percent of the water.

I have presented to you an overall picture of our Northwest water problems. They are complex, but not as complex as you might think. The upstream States and British Columbia will use only a small percent of their water, even with full development. Our remaining arable land in the Northwest is limited. The bringing of this land under irrigation need not affect the lands now watered or the other uses of the water. They are an advantage to the downstream States, in that they tend to make a more even flow, and to reduce our devastating floods.

If we are to plan for the total development of our water resources, we must settle those questions between the upstream and downstream users. This can be done in the States by means of a compact. The Columbia Interstate Compact Commission has worked a good many years on a compact which would be the vehicle to solve these problems. The members of this commission have tried to write a compact which will be acceptable to the States. I believe with some minor changes that they have worked out a document which is good, and should be accepted. We must also come to an agreement with British Columbia on the rights each has in the waters of the Columbia and other international rivers. This is a complex matter and actually resolves itself around the power question, as there is plenty of water for all other uses. Here are some of the questions which must be answered: Will interests in the United States build the dams, or will British Columbia build them? What are the power benefits downstream from upstream storage? How much of the increased power shall go to British Columbia? These are complicated questions. The Joint International Commission has had men working on these problems for a good many years. These men are experts in their field, and they have not solved the questions, therefore, I have no desire to stick my neck out. It is a matter for the State Departments of our respective countries to solve. I would like to say this. The matter will be solved. It will take a lot of good commonsense and fair play on both sides. It will be a matter of give and take.

Total development must be on a basinwide basis, which will take into account the interests of the individual, the State, and the Nation. Each entity must assume its proportionate responsibility in such a plan. This cannot be accomplished until we have a basin compact and a treaty with British Columbia. I believe the consumptive uses should have priority over all other uses. I also believe that with proper management of our water resources, all uses can be, at least partially, satisfied for generations to come, and that we have a prosperous future to look forward to.

McGee Bend Dam Developments—Report of W. F. Weed

EXTENSION OF REMARKS

OF

HON. RALPH. W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a report by Mr. W. F. Weed, of Beaumont, Tex., president of the Lower Neches Valley Authority, to the directors of the McGee Bend Dam Development Association, dated June 14, 1957. In the report, Mr. Weed, in a masterful way, relates how a great multiple-purpose dam can be built by the combined efforts of men of vision.

I have long advocated the completion of McGee Bend Dam as one of the nine greatest projects now pending in America. I earnestly hope the needed appropriations may be obtained.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

REPORT OF W. F. WEED, PRESIDENT OF LOWER NECHES VALLEY AUTHORITY, TO THE DIRECTORS OF THE MCGEE BEND DAM DEVELOPMENT ASSOCIATION AT THEIR ANNUAL MEETING, HELD JUNE 14, 1957, AT SAM AUGUSTINE, TEX., ON MCGEE BEND DAM DEVELOPMENT

HISTORY

McGee Bend Dam was authorized by the Congress of the United States in March of 1945 as one unit in the development of a series of four dams on the Neches and Angelina Rivers to develop those rivers to their maximum beneficial use.

The authorization provided that the project be built in accordance with recommendations contained in Senate Document No. 98, 76th Congress, but that no work on the project should begin until some local agency agreed to contribute $5 million toward the cost of the project, such contribution to be made when all four dams in the project were completed.

Senate Document No. 98 is a report to the Public Works Committee by the Corps of Army Engineers, which was made as a result of the application of the Sabine-Neches Conservation District to the Public Works Committee requesting that a survey be made of the Neches River and its tributaries and a plan of proper development be presented. The plan in Senate Document No. 98 calls for multipurpose dams with hydroelectric power on the Neches River at Rockland and on the Angelina River at McGee Bend with regulating dams A and B on the Neches River.

The present McGee Bend Dam is the very same dam described in Senate Document No. 98.

In 1946 the Army engineers in a public hearing at Jasper, Tex., announced that they had adopted a plan of procedure to build McGee Bend Dam and dam B immediately and as a single operating unit and to postpone the building of Rockland Dam and dam A indefinitely.

Sabine-Neches Conservation District and Lower Neches Valley Authority supported the plan, as stated at the Jasper hearing, and LNVA made written assurance of payment of $5 million to the Federal Government. Because of the shortage of labor and material in the civilian economy immediately following World War II and because of the dire needs of conservation water in the LNVA area, the engineers decided to build dam B first and follow with McGee Bend Dam immediately thereafter. LNVA changed its $5-million assurance to a $2-million contribution to build dam B and a $3-million contribution on the completion of McGee Bend Dam.

Dam B is a power regulating dam and should never have been built unless McGee Bend Dam was to be built as a multipurpose dam with hydro electric power. The great value of hydro electric power is that it can be turned on by the pull of a lever and turned off by a push of a lever, and used only at demand periods. This means that water accumulated over a period of a day or days is released in a matter of an hour or hours and would cause dangerous changes in river levels if allowed to flow unimpeded from McGee Bend Dam to the mouth of the Neches. Dam B was designed to catch this flow and release it in an orderly manner, and dam B itself would remain as a permanent lake with a daily fluctuating level of less than 2 feet because of hydro electric water releases at McGee Bend.

In 1952, dam B was completed and immediately thereafter Sabine-Neches Conservation District and LNVA sent representatives to Washington to ask for funds to build McGee Bend Dam. Due to the Korean war a policy of "no beginnings on new dams" had been instituted, but Congress did appropriate planning funds for McGee Bend Dam so that when the emergency was over, construction could begin immediately. Up to 1954 $707,000 was appropriated for planning McGee Bend Dam.

In 1954 the administration directed a change in the criteria heretofore used and the engineers were requested to review all public works projects to answer two questions: (1) "Is the local contribution sufficient"? and (2) "Is there a market for and what is the value of the power"?

As a result of this change in criteria, LNVA amended its assurance of a payment of $3 million on completion of McGee Bend Dam to add an additional payment of $200,000 per year for 50 years after completion, or a total of $13 million. This was in addition to the $2 million already paid for dam B.

Gulf States Utilities, a private electric utility, bid $800,000 per year for the electric power output of McGee Bend Dam, and a combination of area electric co-ops bid $804,000. The Southwestern Power Administration has the responsibility of making a contract for the sale of hydro electric power from federally operated dams and will make the award at the proper time. Under the law REA co-ops have first preference for purchase of this power.

Col. Harry Fischer, Chief of the Fort Worth District, United States Army Engineers, in a letter to the president of LNVA which was reproduced in advertisements in many papers in southeast Texas, stated that the bids quoted above were sufficient to pay the actual cost, including amortization, interest, maintenance, and operation of the hydro electric power feature of the project. In other words, that the sale of the power would pay the entire additional cost of installing and operating it.

As a result of LNVA's changed assurance and the firm bids for the sale of power, Congress appropriated $1,500,000 in 1955 to begin construction of McGee Bend Dam in accordance with and as outlined in Senate Document No. 98; and appropriated an additional $4 million in 1956 for the same purpose, making the total appropriation to date $6,207,000.

Prior to the end of the Federal fiscal year 1956—June 30, 1956—Army engineers had spent, or contracted to spend, $1,070,000. Between July 1, 1956, and June 30, 1957, the engineers estimate that $2,379,220 will be spent or contracted. A telegram from Colonel Fischer dated June 13, 1957, stated that bids for beginning the first actual construction of McGee Bend Dam, to wit: the eastern earthen embankment, were opened in the Army engineer's office that day and a contract would shortly be awarded with the low bid being $167,770. Colonel Fischer has advised LNVA that the remainder of the $2,379,220 would probably be committed before June 30, 1957, as a result of invitations to bid for bridge construction in connection with the relocation of State highway 147.

Colonel Fischer has advised LNVA that the proposed program for the fiscal year from July 1, 1957, to June 30, 1958, contemplates spending, or committing, a total of $2,757,400 by June 30, 1958, making a total spending and committing on the project of $6,206,660 against total appropriations of $6,207,000.

PRESENT POSITION

Congress considers appropriations bill for the coming fiscal year in the early part of the calendar year. Requests for appropriations are presented to it in the President's budget in the President's first address to Congress in January. Items in the budget have been placed there by the Bureau of the Budget after consultation with the agencies involved. In our case, this agency is the Army engineers. Estimates of the amount that can be wisely spent on any project in the next fiscal year are made by the engineers in the late summer of the preceding year, or almost a year before the budget period.

The Bureau of the Budget and the President did not submit to the Congress any requests for McGee Bend funds in January of 1957. This was due to the fact that, as outlined above, very little of the $6,207,000 already appropriated had been committed. The delay in committing these funds was occasioned principally due to the fact that the final contract between the Government and Lower Neches Valley Authority for the payment of the pledged funds was not completely negotiated and signed by both parties until January 1957. As stated above, work will continue and more contracts let during the fiscal year 1957–58 with the funds now available. There is no question that if more funds were available during this fiscal year they could be wisely spent. Our present position is that a contract by LNVA to pay $3 million on completion of McGee Bend Dam, plus $200,000 per year for 50 years after completion has been accepted by the Secretary of the Army and signed by both parties, and actual construction of McGee Bend Dam has started.

Another favorable development is that two lawsuits to prevent building McGee Bend Dam, as authorized, have been decided against the plaintiffs. In the first suit Neches River Conservation District pleaded that the building of a dam in Texas by the Federal Government independently of the State of Texas was illegal. Neches River Conservation District is a part of the same organization that requested the study of the Neches River that resulted in Senate Document No. 98; is a part of the same organization that approved the building of a multipurpose dam at McGee Bend and the regulating dam B at the Jasper hearing in 1946; and a part of the same organization which sent a representative to Washington after completion of dam B, to urge appropriation of construction funds for the multipurpose authorized McGee Bend Dam. Changes in directors occurred in recent years. Ralph McAlister who had served as president of the district for some 10 years was replaced as president and in 1956 the district announced its opposition to the authorized McGee Bend Dam which it had supported since 1946. Mr. McAlister, who is still on the board of Neches River Conservation District, has vigorously opposed this action and

wholeheartedly supports the authorized McGee Bend Dam.

Federal Judge William Atwell ruled that the Neches River Conservation District had no basis for their suit and dismissed their case.

A number of individuals and corporations filed suit with two allegations, the first being the same as that decided in the first suit, and the second being that the hydroelectric power pool in McGee Bend Dam takes land and this taking is not economically justified by the criteria and was therefore illegal. Judge Atwell dismissed this case on the grounds that the first issue had been settled and that the second issue was irrelevant in that the criteria was established by agencies other than Congress and Congress has the paramount right to decide the issues involved and that Congress had decided the issue in favor of building the dam as authorized by making appropriations for it. In other words, it is the authority of Congress and not the courts to determine the manner, necessity, and feasibility of developing our navigable rivers.

A third favorable aspect of the situation is that an aggressive publicity campaign has revived enthusiasm for the authorized McGee Bend Dam because:

1. It demonstrated that a dam without power cannot be built by a local district. The article by Mr. Lee Feagin, treasurer of the association, which appeared in most of the papers of east Texas in January of this year, has pointed out the reasons that this cannot be done, so much better than I could do, that I refer you to that article. If any of you have not read it, or wish a copy, it will be sent to you if you will write LNVA at Beaumont, requesting it.

2. It demonstrated that a dam without hydroelectric power cannot give recreation benefits at all comparable with recreation benefits of a dam with a permanent power pool. The article by Alan Plummer, sportswriter for the Beaumont Enterprise, which was reproduced as an ad in many east Texas papers, pointed this out clearly. Other articles and ads were run showing that the permanent hydroelectric powerhead pool would always be available for recreation, whereas, a conservation and flood-control pool must necessarily be greatly depleted every year and entirely used up in a year of maximum use and minimum rainfall.

3. It demonstrates the tremendous popular appeal of the authorized project because every major candidate in the recent election of a United States Senator, endorsed the authorized dam. After his election, on his first public appearance in Texas after his return from Washington, Senator Ralph Yarborough spoke at a meeting sponsored by the McGee Bend Dam Development Association at Jasper, fully endorsing and supporting the authorized McGee Bend Dam.

4. It demonstrated that a dam will be of great economic benefit to all east Texas and that the only way to get any dams is to concentrate on the authorized multipurpose dam.

FUTURE

The McGee Bend Dam Development Association must take aggressive action to secure funds for construction in fiscal year 1959 (beginning July 1, 1958). Delegations should be sent to the Army engineers; to the Bureau of the Budget; to our Senators and Representatives, and to Appropriations Committees of both branches of Congress, urging appropriation of at least $10 million for that year.

McGee Bend Dam is a Federal project and it is important that our Senators and Representatives know of the great support behind this project in east Texas. Senator LYNDON JOHNSON has long been a stanch advocate of the authorized project. Senator Yarborough has unqualifiedly endorsed and supported it. Representative JACK BROOKS has been, probably, the most active supporter of this project and, in a large measure, is responsible for its progress to date. Representative JOHN DOWDY has been an ardent and faithful supporter of the project. Gov. PRICE DANIEL, as United States Senator, gave full support to the authorized project. We should commend these gentlemen for their efforts in our behalf and keep them informed of our interest in the project.

Aggressive action by McGee Bend Dam Development Association can assure that the authorized McGee Bend Dam project will be completed and storing water for the benefit of all east Texas by late 1961 or early 1962.

Status-of-Forces Agreements

EXTENSION OF REMARKS
OF
HON. A. L. MILLER
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. MILLER of Nebraska. Mr. Speaker, as you know, a great wave of indignation is sweeping the Nation as a result of the gross and inexcusable handling of the William Girard case in Japan. This wave of resentment will grow and grow unless the judgment of a patriotic and courageous United States judge is upheld and the jurisdiction of Japan is denied.

Mr. Speaker, the Vice President of the United States yesterday inserted in the CONGRESSIONAL RECORD the text of a resolution recently passed the Legislature of Nebraska. I appreciate the action of the Vice President in this important matter.

I am informed that several other State legislatures have taken similar action with more to follow. This is a healthy sign. I want to call your particular attention to these two paragraphs from the Nebraska resolution as follows:

Now, therefore, be it

Resolved by the Legislature of the State of Nebraska, That the members of this body deplore the arrangements now existing which make service in our Armed Forces abroad a hazard by depriving our servicemen, their civilian components, and dependents of each, of the rights aid guaranties of our Constitution when they are stationed in foreign lands; and be it further

Resolved, That we respectfully urge the Congress of the United States to immediately enact legislation now pending or similar legislation which will secure a modification or denunciation of the provisions of the NATO Status-of-Forces Treaty and all other agreements which surrender to foreign nations criminal jurisdiction over our servicemen.

In addition to the resolution from the Nebraska Legislature, Mr. Speaker, I have received many letters from individuals and from civic and patriotic organizations concerning the Girard case.

Individuals and organizations alike have expressed in no uncertain words their amazement and their abhorrence of the fact such a series of circumstances could exist under the Constitution and the flag of the United States of America. "How?" they ask, and "Why?"

Mr. Speaker, I have received from my distinguished colleague, the gentleman from Ohio [Mr. BOW], some statistics which have surprised, disturbed, and horrified me.

These statistics point up the fact that reports from the military show a great lag in time. The last figures are for November 30 of last year.

Figures from January 1 to November 30 of 1954 indicate that during 11 months 7,416 charges against American servicemen were filed in courts of foreign nations in the following year ending November 30 the figure was 10,249 and last year 14,394.

Of the more than 32,000 cases, the number brought to trial was 9,054. In 7,691 cases the defendant was fined or reprimanded. In 425 cases the defendant was sentenced to confinement but the sentence suspended. In 305 cases the defendant was jailed.

The report showed 88 persons confined as of last November 30, 50 of them in Japan.

Mr. Speaker, of the letters and resolutions I received, few commented on the guilt or innocence of young Girard. That matter is entirely beside the point. If he is innocent, he should be cleared of all charges. If he is guilty of a crime, he should be punished accordingly.

However, I feel, and all my Nebraska correspondents feel, that he should be tried under the laws of the United States and not by the courts of Japan.

This young man was on duty in Japan, not of his own volition but because he was assigned there by the Department of Defense. To my mind, it is absolutely unthinkable that there should be any question of jurisdiction.

This boy—innocent or guilty—is an American. The Constitution and the flag must follow him around the world, wherever he is assigned. To do otherwise, is to sell him down the river.

It is argued that he will get a fair trial in a Japanese court. That may or may not be true. In this particular case, able to save face, it might be the Japanese court would lean over backward to be lenient. That, again, is beside the point.

Americans have grown up under a certain set of rules. We have our own way of life. Foreign nations have their ways of life. The precepts upon which our various nations were founded are different. What is the common custom of one is abhorrent to another. What may be a major crime in one nation is a misdemeanor in another.

Some nations chop off a man's right hand on conviction of petty theft. Some nations have no right to trial by jury. Some nations presume that the charged defendant is guilty until he proves himself innocent. Some nations hold a cow to be holy and sentence to death a man who kills a cow.

It is inconceivable to me that we have bartered away some of the rights on which this Nation was built.

I maintain with all my strength it is wrong to delegate any of the power of the United States of America to any nation on earth. I will do all in my power to protect not only the rights of William Girard but of every American boy who, as a member of the Armed Forces, is an official representative of our country.

The Status of Forces Agreements must be modified for the protection of our servicemen. They should be modified now.

Capt. Novo Babb Kiergan, Jr.

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter of appreciation sent by the Employees' Council of the Overhaul and Repair Department, Naval Air Station, Quonset Point, R. I., to Capt. Novo Babb Kiergan, Jr.

Captain Kiergan has served as overhaul and repair officer for the past 3 years and has recently been assigned to a new post as commanding officer of the United States naval avionics facility at Indianapolis, Ind.

The chairman of the Employees' Council, Mr. Vincent J. DuBreuil, has advised me of the splendid record of service accomplished by Captain Kiergan, and I am gald to call this to the attention of the Members of the United States Senate.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

JUNE 20, 1957.

From: Employees' council, overhaul and repair department.
To N. B. Kiergan Jr. captain United States Navy overhaul and repair officer, Naval Air Station, Quonset Point, R. I.
Subject: Appreciation of relationships; expression of.

1. Prior to your forthcoming detachment from your current assignment as Overhaul and Repair Officer, Overhaul and Repair Department, United States Naval Air Station, Quonset Point, R. I. I wish, as chairman of the Employees' Council, to express the deep appreciation of the council as a whole for the excellent relationships which you established and maintained during your tenure of duty in the department.

2. Your kindliness, courtesy, and willingness to assist the council in the performance of its functions have enabled the council to discharge its responsibilities to the maximum degree possible, and the council wishes to extend its best wishes to you and your family at this time for your continued success in your new assignment as commanding officer, United States Naval Avionics Facility, Indianapolis, Ind.

3. The employees in the overhaul and repair department will not forget you for all your time and effort you spent in making this overhaul and repair department at Quonset Point, R. I., one of the leading overhaul and repair departments in the United States Navy. Our motto is "Through these doors pass the finest overhaul aircraft." I hope that we will be able to see you again and show you how we will continue to carry on with the excellent record you have made for this overhaul and repair department.

Sincerely yours,

VINCENT J. DUBREUIL,
Chairman, Employees' Council, Overhaul and Repair Department, Quonset Point, R. I.

Retirement of Maj. Gen. Albert H. Stackpole

EXTENSION OF REMARKS
OF
HON. EDWARD MARTIN
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. MARTIN of Pennsylvania. Mr. President, last Saturday, on the historic and beautiful Indiantown Gap Military Reservation, the 79th Infantry Division passed in review in honor of their retiring commanding general, Maj. Gen. Albert H. Stackpole.

General Stackpole has had a very distinguished career of service in both World War I and II and also in the National Guard of Pennsylvania.

Many distinguished soldiers were present at the impressive military ceremony to honor the retiring commander of the 79th Division. Among them were Gen. William G. Wyman, commanding general of the Continental Army Command; Lt. Gen. Charles E. Hart, commanding general of the Second Army; Maj. Gen. Robert W. Wilson, a former commander of the 79th; Maj. Gen. A. J. Drexel Biddle, adjutant general of Pennsylvania; Maj. Gen. Max S. Johnson, commandant, United States Army War College, Carlisle Barracks; and Lt. Gen. Edward J. Stackpole, former commander of the 28th Division, Pennsylvania National Guard.

A feature of the review was the presentation of a special certificate of achievement to General Stackpole by General Hart.

The 79th Division is a very historic outfit. Senator David A. Reed, of Pennsylvania, a former distinguished Member of this body, served in the 79th and was an outstanding officer in World War I. Col. Le Roy V. Greene, an able member of my staff, commands the 313th Infantry of the division.

The officers and men enthused everyone present by their perfect marching to the old tune of The Caissons Go Rolling Along, which is now the new Army march.

Mr. President, I ask unanimous consent that the text of the certificate presented to General Stackpole and a brief history of the 79th Division be printed in the Appendix of the RECORD.

There being no objection, the certificate and history were ordered to be printed in the RECORD, as follows:

CERTIFICATE

Throughout his military career of more than 40 years active and reserve duty, Maj. Gen. Albert H. Stackpole has displayed outstanding leadership and devotion to country and duty.

His superior performance of duty in various important positions contributed immeasurably to the successful accomplishment of the mission of the Army.

HISTORY OF THE 79TH INFANTRY DIVISION
CROSS OF LORRAINE DIVISION

SHOULDER PATCH

The shoulder patch consists of the shield with a blue background on which is superimposed a Cross of Lorraine, in white, within a white border. The Cross of Lorraine has been a symbol of triumph since the 15th century.

WORLD WAR I

The division was organized in August 1917 at Camp (now Fort) Meade, Md. It went overseas in July 1918 and in September took part in the Meuse-Argonne operation until relieved the latter part of that month. It returned to participate in the same operation again the following month. The division came back to the United States in May and June 1919, and became a United States Reserve division.

WORLD WAR II

The division was ordered to active duty on June 15, 1942. In May and June 1943, the 79th Infantry Division took part in the Second Army maneuvers in Tennessee and following maneuvers went to Camp Forrest, Tenn. In August 1943 the unit was transferred to the California-Arizona maneuver area where it went through intensive maneuvers in the desert. In December 1943, the division moved to Camp Phillips, Kans. And in April 1944 sailed for the European theater of operations. In England the division received final training prior to going to France.

COMBAT HIGHLIGHTS

Liberation of Cherbourg, throwing back of the Germans during the Von Rundstedt winter offensive and capture of the important industrial city of Essen in Germany are among highlights of the 79th's combat history. The division first went into action on June 19, 1944, and against heavy opposition took the high ground west and northwest of Valognes, thus closing the enemy's Valognes-Cherbourg supply road. The Cross of Lorraine men fought on into Cherbourg and helped take that city on June 26, capturing more than 6,000 prisoners. By July they had cleared La Haye-du-units and its surrounding areas which the enemy had heavily fortified and the start of the Coutance-Avranches breakthrough and the race across France was underway. On August 28, the 79th was ordered to advance into Belgium and in 72 hours the division covered a total of 180 miles, crossing the Somme River and numerous smaller streams and closing in perfect order on its objectives in Belgium.

During September the 79th smashed on in its new assignment, taking the French city of Charmes. One regiment stormed the city of Neufchateau and took that enemy-held bastion. The 79th went on to fight at the Meurthe River, in the Foret de Parroy and the city of Luneville in September. Late in the year the division had driven the enemy out of his position in the Saverne Gap and near Strasbourg. In January 1945, the 79th made a gallant stand in the Vosges Mountains when powerful German armored and reinforced infantry elements attempted to smash back through Allied lines east of Bitche. Against furious and persistent attacks, often surrounded and badly mauled, the sheer heroism of the men of the 79th stopped the enemy cold. After extensive preparations had been completed, with the Ninth Army the division crossed the Rhine late in March and then struck for Duisberg. Later it went to a position south of Gladbeck for the jumpoff into the Ruhr Pocket, taking Gerlsenkirchen and Essen.

Following V–E day the division occupied the Dortmund area as well as the area northwest of Pilsen, Czechoslovakia. The division was one of the few to fight as part of all four American armies on the Western front and probably is the most widely traveled American division of that theater with the exception of outfits which also fought in the Mediterranean.

In its journey of 2,300 fighting miles back and forth across France and Germany, it lost 20,000—2,000 of them killed. The German

Army intelligence reports rated the 79th, "one of the best attack divisions in the United States Army."

Upon returning to the United States in early December 1945, the division was inactivated and set up as a Reserve unit under the Organized Reserve Corps on November 14, 1946, redesignated United States Army Reserve, 1952.

Proposed Improvement of Government Budget Procedures

EXTENSION OF REMARKS
OF

HON. JOHN F. KENNEDY

OF MASSACHUSETTS

IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD several pertinent editorials which have appeared in various newspapers recently in connection with Senate bill 434, which has recently passed the Senate unanimously and is now before the House.

This bill, which would implement a basic reform recommended by the Hoover Commission, would bring about important improvements in our budgeting and accounting procedures. It was originally sponsored by more than half the membership of the Senate, including the Senator from Virginia [Mr. BYRD] and the Senator from Maine [Mr. PAYNE].

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Chicago Daily Sun-Times of June 18, 1957]

FOR BETTER CONTROL OF UNITED STATES SPENDING

A bill which would save at least a half billion dollars and possibly more in Federal funds has been approved by the Senate and by a House Government Operations Subcommittee. It would put the United States budget on a better business basis and give Congress a greater control and review of Government expenditures.

The principal sponsor of the measure, Senate bill 434, is Senator JOHN F. KENNEDY, Democrat, of Massachusetts. He is joined by many other Democrats and by Republicans. His proposal has long been advocated by the Hoover Commission. It is supported by President Eisenhower and his administration.

With such formidable support it would seem unlikely that the Kennedy bill could fail of passage. However, a similar bill was killed by the House last year after being passed by the Senate. Senator KENNEDY and the other sponsors are fearful that this year's effort might also fail in the House.

In a Congress that has been so concerned about saving taxpayers' dollars, it is unthinkable that any sensible effort to economize merely by the introduction of better controls and cost-accounting procedures could fail.

Congressmen who have hacked away at vital Government functions can hardly justify saving money that otherwise would simply go down the drain through inefficiency.

The Kennedy proposal, technically speaking, would put budget estimates on an annual accrued expenditure basis. That is how the accountants describe it. For us ordinary mortals it is necessary to spell out by example how it would work in order to understand it. William A. Korns, of Editorial Research Reports, uses this illustration:

"The Navy requests authority to build a ship over a 4-year period at a cost of $150 million. At present, Congress appropriates the entire $150 million at the outset in terms of obligational authority. But on an accrued expenditures basis, Congress might appropriate only $20 million in the first year and, in addition, grant contract authority to cover so-called long-lead-time items. In the second year, Congress would have opportunity to review progress on the ship in the light of actual cost experience. A new appraisal might lead to a decision to stretch out the time of building, thus limiting the appropriation immediately required. In any event, Congress would be in a position to exercise a control it now lacks over the rate of construction and expenditure."

Adoption of the accrued expenditures budget would entail rescission of the present outstanding balances of $50 billion in funds authorized but not yet spent. A close scrutiny of those funds would probably result in a minimum reduction of 1 percent. That would be $500 million a year. Clarence Francis, national chairman of the Citizens Committee for the Hoover Report, believes the savings would be even more substantial.

The objections cited last year in the House were technical in nature, and Senator KENNEDY has made certain amendments this year that should resolve any doubts in the House. The preponderance of expert opinion is on his side, and in the name of commonsense and economy the House this year should pass his bill.

[From the Lewiston (Maine) Sun of June 11, 1957]

SOUND PATH TO FEDERAL ECONOMY

In the midst of the budget controversy, it has almost escaped notice that the United States Senate has just passed the Payne-Kennedy bill placing Federal budget requests and congressional appropriations on what accountants call an annual accrued expenditure basis.

The measure, which contains some of the most important recommendations of the second Hoover Commission, has had an interesting history. It was drawn and sponsored last year by Senator FREDERICK G. PAYNE and his Massachusetts colleague as a part of a more comprehensive bill, also based on Hoover Commission recommendations, to modernize Federal accounting and budget practices. And the entire package was passed by the Senate. But when it reached the House, the sections just reenacted by the upper Chamber were eliminated and the remainder of the measure voted into law.

There was a reason for that, and it is to be found in the reluctance of many Congressmen to change the present loose budgeting and appropriative practices which pile up obligated but unspent funds and lave Congress virtually unable to control the rate of Federal spending.

We are seeing it exhibited at this session of Congress, and it is going to be difficult for people to reconcile claims of cuts of several billion dollars, and forecasts that by June 30, 1958, the Government will have spent at least a couple of billions more than the President estimated.

This system is contrary to the practice of the various State governments, which appropriate on an annual or biennial basis, and within the estimates of revenues made by State government financial authorities. The result is that the State practically comes out even, or it accumulates a surplus because of conservative predictions of State income.

But on the Federal level, the executive branch can request, and Congress can appropriate, sums that cannot all be spent in the 12 months ahead. Moreover, it can authorize supplemental appropriations if programs legislated into law cost more than anticipated.

The Payne-Kennedy bill, if the House can be persuaded to agree, will force Congress to appropriate for each fiscal year upon estimates of expenditures that will actually be made during that year. Gradually the carryovers will be cut down, and, of course, it puts more responsibility on the various departments and bureaus to tighten their budget making. At least half the Members of the Senate support the bill, together with the Treasury Secretary, the Comptroller General, and the Budget Bureau. And also President Eisenhower. Senator KENNEDY says it represents one of the most important reforms in this field in the past 35 years, and we agree with him.

[From the Waterbury (Conn.) Republican of June 10, 1957]

THE KENNEDY BILL

One of the key recommendations of the second Hoover Commission report is at least halfway to being achieved. The Senate on June 5 passed the Kennedy bill (S. 434) and we hope the House will act similarly.

One of the most fundamental reforms in governmental budget practices in more than 30 years is embodied in the Kennedy budgeting and accounting bill. Its intent, based on the second Hoover report, is to place the Federal Government's budgeting and accounting procedures on an accrued expenditure basis.

The measure requires that all agency budgets be determined on a cost basis, that agency accounts be kept on an accrual basis and that appropriations be made on an annual accrued expenditures basis.

Under the plan, converting appropriations on an annual expenditures basis, Congress would actually appropriate for each fiscal year on estimates of expenditures actually to be made during that year.

In simpler language, Congress presently appropriates funds for various agencies, many of which wind up the fiscal year with unexpended balances. In sum total, these unexpended moneys amount to billions of dollars each year and are simply carried over by the agencies. Congress has virtually no control over such practices, once the appropriations are made.

The Kennedy bill had strong support in the Senate. It was cosponsored by Senator BYRD, of Virginia, and Senator PAYNE, of Maine, and had the unqualified backing of 48 other Senators. Lauding the Hoover Commission for its work in highlighting this particular problem in governmental economy, Senator KENNEDY said recently:

"The benefits which will result from the enactment of this bill, in terms of financial savings and more complete understanding of the operations of the various governmental departments, will be most significant."

Affirmative House action on so important a bill, in this session of Congress, is imperative. The only possible result of such legislative action will be more economical and more efficient government, sorely needed.

[From the Springfield (Mass.) Union of June 15, 1957]

BUDGETING PROCEDURES

The Senate this week reaffirmed the stand it took last year when it passed the Kennedy budgeting and accounting bill, which is designed to place the Government's budgeting and accounting procedures on an accrued-expenditures basis. In plainer English, that means appropriating only enough money to cover what you expect to spend in the succeeding fiscal year.

The Bay State's Senator JOHN F. KENNEDY, its sponsor, has called the legislation "one of the most fundamental reforms in governmental budget practices since enactment of

the Budget and Accounting Act of 1921," asserting that it "would result in much more careful and effective control of expenditures by Congress." The proposal is based on one of the principal recommendations of the Hoover Commission and has the backing of, among others, the Secretary of the Treasury, the Comptroller of the Budget, the Director of the Bureau of the Budget, and 48 other Senators, including its cosponsors, Senators BYRD, of Virginia, and PAYNE, of Maine.

Under the bill, appropriations would be converted on the basis of annual expenditures and Congress would make them for each fiscal year on the estimates by the various agencies and departments of the expenditures they actually would make. Under the present system—that is, outside the forecasts for a single year only—there are carryovers of the unexpended balances of appropriations that run into billions of dollars annually. The chief flaw in the current system is that Congress has little or no control over the expenditure of these balances, for its responsibility ends, to all intents and purposes, with the job of appropriating. Hence, we have the picture of a Government department presenting new, heavy demands for its budgetary requirements in spite of a huge carryover of funds which it enjoys from previous appropriations.

Senator KENNEDY expressed the hope, following passage, that the House also would act favorably on the bill during this session. A similar bill lost out in the House last year following the Senate's approval of the measure, and the same fate may await the proposal if the House does get around to action on it before adjournment. The bill deserves enactment as a logical change in present practice that almost undoubtedly would result in important savings and a solution of budget and appropriations problems in line with the actual and immediate need for money to operate the vast enterprise of the Federal Government.

[From the Washington Evening Star of June 22, 1957]

FOR ORDERLY BUDGETING

In passing the Kennedy budget reform bill, the Senate has given its support to what has been regarded as the most important Hoover Commission recommendation still requiring legislation. The bill would put the Government on an accrual system of budgeting and accounting that would give Congress firmer control of Federal spending, and that, it is estimated, could save up to $4 billion a year in nonessential expenditures.

Federal budgeting and accounting procedures not only baffle the ordinary citizens, they baffled a competent task force which studied them for the Hoover group. The study revealed that it was virtually impossible to list what the Government owned and how much it owed. The Kennedy bill, among other changes, would substantially reduce the carryovers of unexpended appropriations from year to year, thereby putting the Government on an annual expenditures basis. The appropriation carryovers run into billions of dollars a year, with Congress confused as to the amounts involved and without control of the leftover funds, once the money has been voted.

The Commission pointed out that obligational authority relating to long lead-time programs may be exercised over several years, with resulting expenditures continually removed from the particular fiscal year under consideration by the budget makers. The Budget Bureau, for example, reported that in 1953 $81 billion of unfinanced appropriations existed as a claim against current and future income or borrowing. The contracts and commitments made as a result of these appropriations became, in effect, c. o. d. obligations of the Government.

The reforms suggested by the Hoover Commission and embodied in the bill sponsored by Senator KENNEDY, of Massachusetts, have the approval of the Secretary of the Treasury, the Budget Director, and the Comptroller General. We hope the House will follow the Senate's example and thus assure budgetary and accounting firmly established in private industry.

The Supreme Court of the United States

EXTENSION OF REMARKS

OF

HON. SAM J. ERVIN, JR.

OF NORTH CAROLINA

IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. ERVIN. Mr. President, the people and the press of the country are becoming rightly aroused by the repeated actions of the Supreme Court of the United States in encroaching upon the powers of the executive and legislative departments of the Federal Government and the rights of the States, and in substituting the personal notions of its members for the law of the land.

On June 19, 1957, the Greensboro Daily News, of Greensboro, N. C., and on June 20, 1957, the Greensboro Record, of Greensboro, N. C., published profound editorials upon this subject.

I ask unanimous consent that these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Greensboro (N. C.) Daily News of June 19, 1957]

A COURT OF MEN OR LAWS?

In a series of judicial blockbusters the United States Supreme Court has plunged the Justice Department into "chaos," sharply curtailed congressional investigative procedures, torpedoed the Smith Act by freeing convicted Communists, and shaken the very foundation of multiple industrial empires.

The Court has done all these things in an obviously high-minded crusade for individual freedom under the United States Constitution; but in the process it has run roughshod over the body of the law. And this substitution of legal idealism for legal realism—and of personal moral convictions for interpretations of strictly legal questions—has left the legal profession in a state of shock. It is not so much that the decisions themselves—that is, their ethical content—are unwise; it is more the lack of property reasoned support for them, consistency of purpose and respect for the rule of law above the rule of men.

The Daily News has little regard for the doctrine of stare decisis. Since the time of Chief Justice John Marshall the United States Constitution has proved its flexibility, and the utilization of that flexibility by judicial interpretations through the years has assured ts durability. But the present Court, it seems to us, has stretched the concept of constitutional flexibility beyond the breaking point. Beginning with Chief Justice Earl Warren's appointment, it has often substituted personal notions (fortunately most of them high-minded and idealistic) for sound legal argument. The school segregation decision, perhaps, for sound reasons, set forth little if any legal substantiation for its reversal of the 80-year-old doctrine of "separate but equal." Instead it relied on sociological opinion and personal ethical beliefs. Now many think the Court's decision could have been strongly defended on excellent legal grounds but the Court did not bother to do that because, as we understand, it might have split a unanimous Court into too many fragments.

By the same token in the Slochower fifth-amendment case only Justice Harlan, speaking for the majority, confined his decision to the legal justification for a citizen "taking the fifth." That body's liberal wing (Warren, Black, Douglas and Brennan) wandered far afield to affirm that no moral or legal blame is involved. This may well be the case although wise and good men differ. (Our vote goes to the faction which contends that while a man should not be forced to testify against himself in court and should be protected against legal recriminations, still "there are many posts in which we may legitimately require standards of conduct higher than those sufficient to keep out of jail.")

But passing judgment beyond the purely legal aspects of the fifth-amendment question, it seems to us (and we agree with Justice Harlan), is not the business of the United States Supreme Court. What Warren, Douglas, Black & Co. think of Harvard University's right to fire a faculty member who takes the fifth is not the business of the high Court.

Justice Warren himself, a man with no judicial training, set forth the credo which has governed much of the court's philosophy since he took over command: "The beginning of justice is the capacity to generalize and make objective one's private sense of wrong." This has a proper place in judicial philosophy, but it must have some relationship to the continuing body of the law and must be applied in strictly legal manner if the law is to have any meaning. What would be the end of such philosophy if unprincipled men, or even men of grossly reactionary views, took over the Court?

By the same token the court has taken moderate legal arguments and carried them far beyond the issues before it. Consider the Du Pont-General Motors case. The Government's argument barely mentioned section 7 of the Clayton Antitrust Act; its goal was not wrecking the whole concept of business mergers over the last 40 years; it was rather to prove that Du Pont had fenced off the General Motors market from Du Pont's competitors by acquiring 23 percent of General Motor's stock. Yet the Court handed down a decision which rocks the foundation of all "vertical" business mergers of the last 40 years.

Likewise in the Jencks case, the defendant sought authority for the Federal judge to "screen" FBI files and release any portion of charges which bore on the equity of the case. Yet the Court went far beyond this request and ordered all the FBI's raw files turned over to defendants charged by secret accusers. There may be much justice in this, as Senator ERVIN notes, but even he believes only that portion of the files which apply to the defendant ought to be made available to him.

In the latest Court decisions, those involving release of 14 Communists convicted under the Smith Act of conspiring to teach and advocate violent overthrow of the United States Government, the Court has made a sharp distinction between teaching an abstract doctrine and actually advocating action of forcible overthrow. This seems a valid distinction, but an exceedingly difficult one to make. The decision itself has thrown Congress into an unroar and may have harmful repercusions on the separation of powers of the United States Government.

Chief Justice Warren's opinion, which actually limits congressional power to order

investigations, is so radical in concept that it will certainly bring retaliation.

These decisions are disturbing mainly because they add fuel to the arguments already made by many ultraconservatives against the Court's growing tendency to make and administer, as well as interpret, the law. In truth, it seems to the Daily News that the Court has gone a long way toward ultimately weakening its own prestige by failing to respect the continuing body of the law. The Court should heed the advice of its newest member, Justice Whittaker, who when asked about his legal philosophy, replied with wisdom:

"I read the law only for an understanding of its meaning, and apply and enforce it in accordance with my understanding of its meaning."

[From the Greensboro (N. C.) Record of June 20, 1957]

WHITHER, HIGH COURT?

This may well go down in history as the era of assumptive powers so far as the United States Supreme Court is concerned.

As James Marlow, Associated Press news analyst in Washington, has written, the Court "has become for all practical purposes the American lawmaking body in the field of civil rights and civil liberties." Members of Congress have reacted violently to what they have termed "boundless assumption of power" by the Court.

The Court's drastic rulings have left the American public wondering what to expect next, and they have probably caused a measure of perturbation among constitutional lawyers. Its decrees on civil liberties involving communism are bound to give comfort to the Reds. In fact, 1 of the 7 top Communists freed by the Court's ruling was quoted as saying the decision was "the greatest victory the Communist Party in America has received."

Civil rights and liberties are constitutionally prescribed and guaranteed by our form of Government. That is certainly as it should be. It is equally true and pertinent that ours is a Government based on the proposition, among others, that its powers are divided between the executive, legislative, and judicial branches. The strength of our Government depends greatly upon the separation of these powers.

In its interpretation of the law involved in civil rights and liberties issues brought before it the Court seemingly has been strongly influenced by sociological considerations. Under the leadership of Chief Justice Warren, the Court has made far-reaching decisions which strike at the heart of our way of life. The Court, in its apparent zeal for the protection of individual rights, has made it more difficult for constituted authorities to protect the security of the Nation.

The responsibility of thhe judiciary, as we understand it, is to interpret the law and not to engage in social experiments. Effect of Court rulings can be to nullify the rights of the people to be represented in the lawmaking bodies whom they have elected. It appears that this sort of situation has about come to pass.

We find it hard not to be alarmed by the trend of the high Court's decisions. We are disturbed about the possible lengths to which its rulings may reach. Congress, as the elected representatives of the people, is justified in being concerned about the Court's assumption of its lawmaking authority.

Report of the Commission on Government Security

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials from the New York Times and the New York Herald Tribune regarding the report of the Commission on Government Security. This report is a most important one, and the comments of these two distinguished publications point up some of the major considerations.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the New York Times of June 24, 1957]

SECURITY IN A DEMOCRACY

The long awaited report of the Commission on Government Security turns out to be a monumental document, helpful in some important respects and disappointing in others. It is the product of some 18 months' work to study violations of civil liberties and individual rights in the Federal Government's internal security system.

No one can pretend that the problem of reconciling the basic freedoms of American citizens with the requirements of internal defense against the Communist threat is an easy one. But we think no objective observer could deny that during the past decade a drastic imbalance occurred in which individual liberty grievously suffered in the hopeless quest for an absolute security. Only within the last couple of years has the commonsense of the American people tended to reassert itself in favor of the Constitution and the Bill of Rights. This trend has been greatly stimulated and fortified by a succession of notable decisions on the part of the Supreme Court.

It is because the tone and some of the recommendations of the Commission report tend to revert toward the old stress on ultrasecurity that we say it is disappointing. In striking contrast to last year's fine report on the same subject by the Association of the Bar of the City of New York, the Commission would extend the Federal employee security system instead of curtailing it.

The Commission urges the legislative and judicial branches of Government to establish loyalty and security programs of their own. It would formalize the Attorney General's list of subversive organizations, which has been notoriously misused and misinterpreted, after making certain changes to minimize possible abuses.

The Commission would extend the security program into the civil air transport industry, and would broaden the scope of its application to United States citizens in international organizations. In some respects the Commission would tighten present passport procedures. Its general approach to the immigration laws partially reflects the security mania of Representative WALTER, 1 of its 12 members. Another indication of the Commission's point of view lies in its proposals to legalize evidence obtained by wiretapping in certain cases and to extend the penalties for disclosure of classified information.

Without a detailed examination and discussion of each of these various proposals it would be premature to say that they are all wrong; but we are bothered by the apparent tendency toward tightening and extending the program disproportionately to the size and immediacy of the threat. Our confidence in the objectivity of the report has not been heightened by the concluding statement issued last week by the Commission's Chairman, Loyd Wright, a former president of the American Bar Association, who delivered himself of a sharply critical and ill-considered comment on the Supreme Court's ruling in one of the important recent civil liberties cases.

Nevertheless, there is much in the Commission's voluminous report that is of great value, and many recommendations that would immensely improve the present Federal security process. Establishment of greater uniformity in security procedures—whether or not through the specific device of a central security office, as the Commission recommends—is a vital need. Separation of the loyalty problem from that of security is of course desirable. Training of security personnel, as recommended, could do much to improve the whole picture. Reforms of hearing and screening procedure are in the right direction. Emphasis on the right to confrontation—though it is not deemed an absolute right—is all to the good. Important reforms in the security program for military personnel are proposed. A more sensible approach to classification of documents is urged. Abolition of the present confusion between State and Justice Departments in immigration matters would be highly desirable.

There are plenty of good suggestions in the report, which we hope will be considered on their merits, and with due regard for the various other studies that have been made of these problems. As the Supreme Court has so tellingly reminded us in recent days, there are issues here that go to the heart of the democratic process.

[From the New York Herald Tribune of June 24, 1957]

REPORT ON SECURITY

The first thing to be said about the report of the Commission on Government Security is that it is the most comprehensive and authoritative study of this vexed question that has yet been made. The group, set up by Congress and headed by Mr. Loyd Wright, has worked hard and well for a year and a half on the statutory and regulatory bases of the various security programs initiated by the Federal Government; it has delved deeply into the effects of what was done in the past and has produced thoughtful recommendations for the future.

It is not a soft report. It accepts, without cavil, the necessity for a broad governmental system of protection against espionage, subversion, and penetration by forces seeking the overthrow or detriment of the national interest. At the same time it seeks to protect individuals against unjust charges, undue delays in obtaining a hearing, unfair treatment, and the general atmosphere of uneasiness and suspicion that arises from fuzzy standards of proper and improper conduct for Federal employees and others, and conflicting methods of dealing with offenders.

The first major contention of the Commission is that the present blanket security pro-

gram for Government employees should be split in two. There should, the report contends, be a loyalty program, handled under special procedures and dealing with cases in which there is reasonable doubt as to the loyalty of the individual to the United States. Then there should be an extension of the present civil-service procedures covering all nonsuitability cases, to cope with what are now termed "security risks," in which no question of loyalty is involved but in which immoral conduct or other aberrations or connections may present the risk of pressures that would lead to disloyal, indiscreet, or damaging acts. The report's standards and criteria for judging both of these classifications are numerous enough and precise enough to make the complementary procedures of the loyalty and suitability programs cover the cases now considered under security, without the confusions that arise from what the Commission calls an unnatural blend of suitability, loyalty, and security programs. If this recommendation alone of the Commission were adopted, it would mark a great advance.

To cope with the loyalty program, the Commission recommends a new agency, a Central Security Office, comprising "full-time governmental employees adequate in number to hear civilian employee loyalty cases throughout the country," with a sound training program and providing a Central Review Board.

The Commission makes out a strong case for the need of such an agency—the lack of training on the part of present hearing boards, made up of volunteers who have other responsibilities; the delays which ensue; the contradictory actions taken by various departments and agencies on the same state of facts. But it should be borne in mind that if such an agency is to be created, it must be staffed with the best possible personnel and prevented from either empire building or extending its activities into operational fields.

The procedure suggested by the Commission calls for mandatory personal interviews within the department affected when there is doubt of an employee's loyalty; for detailed and specific charges when it is deemed necessary to bring them, and for closed hearings before an examiner from the Central Security Office. In such hearings, the person charged could be represented by counsel, and would have the right to confront witnesses unless the latter were "regularly established confidential informants engaged in obtaining intelligence and internal security information for the Government" if such confrontation "will prejudice the national security." No other confidential information could be used by the hearing examiner over the objections of the individual involved.

This sweeping proposal could be a real handicap in removing potentially dangerous employees from public office. The Commission regards it as a compromise between a demand for full confrontation under all circumstances and "permitting ex parte dismissals with no hearings or privilege to refute charges." In this newspaper's view, there should be greater leeway for the use of confidential information; that it is possible and necessary to employ it fairly, but without limiting it as strictly as the report recommends.

The hearing examiner could only recommend a course of action to the agency head; the latter makes the actual determination. If an appeal is taken to the Central Review Board, its recommendations are also advisory. In every case, the final decision, as now, rests with the head of the department or agency concerned.

Those are the main outlines of loyalty procedures recommended by the report. There is much more, to be sure. The Commission proposes that similar procedures be followed in the case of applicants for employment. It has recommendations covering security provisions in industry, at airports, and on the seas and waterways, as well as for United Nations personnel.

In many cases, it would extend or stiffen present requirements. For example, it would have applicants for passports fingerprinted, which seems wise. It would also make it "unlawful for any citizen of the United States to travel to any country in which his passport is declared invalid." The argument here is that such a law "should go a long way toward preventing Communists and those with sympathetic association from traveling to Iron Curtain countries." By the same token, unless special exceptions were made, it would prevent newspapermen from doing the same on their lawful occasions, and write into statute the present attempt by the State Department to use the Nation's press as an instrument of national policy.

But while there may be many qualifications in respect to specific features of the report, the general effect is of a sane, objective approach to a complex and difficult problem. Congress is to be applauded for setting up the Commission, and the Commission for the painstaking and thoughtful way in which it has completed its work. The report will stand as a model for this kind of effort, a definite challenge to the executive and legislative branches to work in the same spirit for the revision of a vital aspect of Government operations.

Joint Committee on the District of Columbia

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. MULTER. Mr. Speaker, will the gentleman yield?

Mr. HILL. I yield to the gentleman from New York.

Mr. MULTER. Mr. Speaker, I am pleased to associate myself with the remarks of the gentleman from Colorado, the ranking minority member of the Select Committee on Small Business, and at the same time to pay my compliments to the chairman of the committee, the gentleman from Texas [Mr. PATMAN]. They have done a fine job in setting up these hearings, and the results speak for themselves.

I wish also to pay my compliments to the distinguished majority leader, the gentleman from Massachusetts, [Mr. MCCORMACK] for having given impetus to this study and also to say a word of appreciation to the gentleman from Pennsylvania [Mr. GREEN] the gentleman from New Jersey [Mr. RODINO] for having submitted much material to us that was helpful in this work. The majority leader, Mr. MCCORMACK, has been as interested in this work as the most diligent committee member. We are grateful to him for his aid. The small businessman of this industry owes him a vote of thanks.

As a result of this study the foreign cartels which have been, certainly, if nothing else, hurting small business in this country, will, we hope, adhere to their agreements to permit free competition in their markets. This should give an opportunity to small-business men, some 4,000 of them throughout the country, who are engaged in the scrap metal industry, to participate freely and competitively in exporting their scrap to Japan, the United Kingdom, and the European Continent.

Eager Young Readers

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from the New York Times of June 11, 1957, entitled "Eager Young Readers."

This editorial emphasizes the importance to our young people of outstanding literature and books of worth and value. From my own experience, I think I can endorse every word in the editorial, because the reading of notable literature is one of the truly great privileges of childhood.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

EAGER YOUNG READERS

In a country that continually grows in people it is not surprising that the word "more" is used each year to describe the number of workers employed, or houses built, or cars bought, but it seems contrary to what one might expect when the same word is used to describe the number of books being read by young Americans today. At the recent annual convention of the International Reading Association this fact was acknowledged, although followed by a disconsolate remark that the proportion of those who read books to enjoy their full meaning is sadly small. "The emphasis is largely on speed reading, skipping or reading in order to learn vocational skill or get a higher salary," said Dean Lester Asheim, of the University of Chicago's Graduate Library School.

It is true that the mass media contending for the young reader's attention do not require the same concentration that is required by a book; television and motion pictures are easy on the mind's eye. Dean Asheim says that "If the death of the book is actually hastened in the years ahead, it could well be because we—and by we I mean the educators, the writers, the publishers, the librarians—have accepted the mass medium premise that the audience cannot be expected to attend any message which requires some effort to understand." Dean Asheim might also have included parents in this group.

Perhaps not every young student will be like Lewis Carroll, who willingly occupied his spare time by setting himself problems in symbolic logic, "a most interesting mental recreation" as he put it, but the student who finds a wide variety of books in his home and whose parents encourage him to find out about the world through reading will not succumb to the temptation of looking instead of thinking. And surely no parent would really be satisfied if his children never once bothered to ask that irritating "Why?"

Still Time To Help Hungary

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to include the following editorial from the last issue of Life magazine, entitled "Still Time To Help Hungary":

STILL TIME TO HELP HUNGARY

"To all U. N. members and delegates. Delegates of the peoples. While your sons are at peace, we sons of the Hungarian Nation are falling under the cruel fire of Soviet tanks. Our country has been attacked from abroad. We turn to you. You are our last citadel of hope." (Free Radio Csokonay, November 4, 1956.)

Seven months have gone by since the Russian tanks, in defiance of all principles of international law and morality, and in betrayal of the Soviet Union's own promise to withdraw, crushed the last cries of the heroes of Hungary and drowned the nation's freedom in their blood. What has the U. N., their "last citadel of hope," the organized conscience of the world, done in answer?

As is well known, the U. N. has made 10 separate demands about Hungary, calling on the Soviet Union to get out of Hungary, to provide free elections, and allow U. N. observers; it has condemned the Soviet invasion as violating the U. N. Charter. All the resolutions have been ignored, the violation continues and instead of holding free elections the Kadar puppet regime is executing patriots in a reign of Stalinist terror.

The U. N has done something more. For 5 months the events in Hungary have been studied in minute detail by a special committee composed of delegates from small nations (Australia, Ceylon, Denmark, Tunisia, Uruguay). Unable to enter Hungary, the five have gone everywhere else that eyewitnesses could be found. They have interviewed all free members of the short-lived freedom regime and more than 100 witnesses of the revolt and suppression. This week they are issuing their report. Important findings:

The report gives the lie for all time to Soviet claims that the Hungarian revolt was the inspired act of Fascists. It proves beyond question that the uprising was the spontaneous revolt of a whole people, aimed not at overthrowing socialism but rather at achieving freedom.

It proves the Red army was not invited to intervene, as the Soviet claims, but did so though Hungarian leaders refused, at gunpoint, to request such intervention.

It confirms that thousands of men, women, and children have been deported. Countless others have been tortured.

The puppet regime, contrary to Khrushchev's recent claim on United States television, has not support from the Hungarian people.

All these facts, of course, are well known to the free world. They are even known in the Soviet Union, where increasing questions are being asked about the murder of Hungary. But the confirmation of these facts by a judicial body made up of impartial small nations now provides an unassailable legal basis for the U. N. to take new action upon Hungary, and to take it quickly.

Cynical and weary men—some of our State Department spokesmen among them—are asking feebly, "What can the U. N. really do?"

The answer is: It can do plenty.

It can reconvene, now and urgently, the General Assembly which suspended its session in March pending this investigation. If the Assembly is not called it will not meet until September.

The reconvened Assembly can demand that the Soviet Union show cause why, if it continues to violate the resolutions of the General Assembly, it should not be expelled.

It can expel the Kadar puppet delegates.

Secretary General Hammarskjold, who was long denied access to Budapest but was told recently he can now come anytime, ought to go there immediately to present this indictment on his arrival and demand answers. His mere physical presence in Hungary would go far toward halting the execution of patriots. Some 2,000 of them have already been sentenced to death.

Economic sanctions against the Soviet should be considered by the 59-nation majority which voted for this investigation. It will be argued these would not be very effective but the taking of them—as a display of moral opprobrium—is all important.

A permanent UNEF military force, ready to act in future Hungarys, should be created.

Not only action by the United Nations is needed. A vigorous worldwide protest by individuals and organizations should be made to the Soviet Union. In Warsaw the Polish writers' union, even under communism's eye, has just had the courage to protest it. United States and other writers and journalists can demand, specifically, the release of these Hungarian writers now known to be imprisoned: Zoltan Molnar, Gyula Fekete, Aneras Sandor, Joseph Gali, Miklos Obersovsky, Julius Hay, Zoltan Zetzk, Tibor Tardos, Balasz Lengyel, Domokos Varka, Sandor Novobacaky, and the world-renowned Gyorgy Lukacs. Let the eight Nobel Prize winners who cabled their outrage last year cable it again, to prominent opposite numbers in Soviet professions. Let British Laborites send a new and sterner protest. Let Pandit Nehru recall his sorrow of December and give it voice anew. Let the United States Congress solemnly memorialize the Supreme Soviet on the crime of Hungary.

The Kadar regime, after promising amnesty to the freedom fighters, has begun exterminating the survivors. It proclaims: "We have two paths ahead of us, a merciless government or a state of chaos." The United Nations clearly has two alternatives: A somnolent summer undisturbed by the death cries of forsaken patriots, or the path of duty to keep a merciless spotlight upon the murderers so that their guilt will stand clear in the glare of condemnation from the world.

David A. Morse and the ILO

EXTENSION OF REMARKS
OF
HON. THEODORE FRANCIS GREEN
OF RHODE ISLAND
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. GREEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an editorial entitled "Mr. Morse and the ILO," which appeared in the New York Times of Wednesday, June 5, 1957.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. MORSE AND THE ILO

The reappointment of David A. Morse as Director General of the International Labor Organization for at least 5 more years is notable in many ways. To make it possible the governing body had to change the rules of succession from a single 3-year term, after 10 years of service, to 5 years with no limitation on reappointment. Mr. Morse was nominated by a Government representative of India and seconded by the Government delegates of the United States and Soviet Russia. His election was the unanimous act of the entire governing body, including Government, employer, and workers' spokesmen of the great powers, of some of the Latin-American nations and of Arab-oriented Egypt. At the end of his 15-year term Mr. Morse will have been the head of a major international agency longer than anyone else in history.

To have won, and kept, the confidence of the West and East, of the North and South, including the devotees of conflicting ideologies, is remarkable enough. It is, much more so for a forceful person with deep democratic convictions. We congratulate Mr. Morse on his dedicated service on behalf of better human living the world around. And we congratulate the ILO on the opportunity it has given him for still greater achievement as Director General—for 5 years more at least.

Milestones in Progress of Deseret News

EXTENSION OF REMARKS
OF
HON. ARTHUR V. WATKINS
OF UTAH
IN THE SENATE OF THE UNITED STATES
Monday, June 24, 1957

Mr. WATKINS. Mr. President, newspapers in America have done us all a fine service not only in presenting the news of the day but in providing a record of community events that in times becomes one of the most excellent tools of the historian of American life.

Quite often too such newspapers in their own particular growth give us another insight into the greatness of America. From hand press to multicylindered behemoths, from tiny offices to mammoth plants, from few-page editions to hundred-plus issues, their growth is manifest.

This week in Salt Lake City, one of our finest Utah newspapers, the Deseret News, began its 108th year of service to our Intermountain area. A story in the issue of Saturday, June 15, summarizes some milestones of Deseret News progress. The changes reflected in those years are remarkable.

I ask unanimous consent that the article referred to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

VAST CHANGES NOTED SINCE PAPER BEGAN—DESERET NEWS COMPLETES 107TH YEAR

The Deseret News begins its 108th year of publication Saturday.

On June 15, 1850, the Mountain West's first newspaper came off a small hand press brought across the plains by ox team. The first 8-page edition was printed on 7½- by 10-inch paper at the rate of 2 copies a minute.

The 80-page weekday paper published last October 10 required 45½ tons of newsprint, measured 227.5 miles in length, and rolled off giant presses at the rate of more than 400 per minute.

Throughout the 107 years of its publication, the News has been an active participant in Utah history.

The first Deseret News extra was issued in 1852. It was a 48-page pamphlet containing full minutes of a special conference of the Church of Jesus Christ of Latter-day Saints.

In May of 1858, because of the threat of Johnson's Army to Salt Lake City, publication was transferred to Fillmore and Parowan until September.

NEWS SPEEDED UP

With the advent of the Pony Express in 1860, news reached the Deseret News in only 6 days from Missouri. Formerly it had taken 30 days by stagecoach and 4 months by ox team.

The transcontinental telegraph, linked in Utah in 1861, brought news from abroad to Salt Lake City in ticker time.

Publication jumped to semiweekly and then to daily in 1866. Weekly editions remained until 1898 and the semiweekly until 1922.

In 1892 the Deseret News came under private management. It was returned to church operation in 1899.

SPORTS PAGE IN 1898

The sports page first appeared in 1898, and in 1916 the comic strips.

Radio station KZN, which later became KSL, was licensed to the Deseret News in 1922. This was the first commercial broadcasting station between Missouri and the Pacific coast.

The Church News began as a weekly supplement in 1931. Pictures transmitted by wire were first used in 1935, and full color printing came in 1936.

A Sunday edition was published from May 1948 until September 1952.

This past year, as from its beginning, the Deseret News has striven to give its readers the public service firsts which have brought the paper the prestige and respect of an ever-expanding circulation.

EXTRA ACTIVITIES

Complete coverage of the general elections last November required more than 500 manhours by a special staff in order to get the results to readers rapidly.

The Deseret News-sponsored Ski School at Alta and Brighton was attended by 1,600 in December. More than 68,000 in individual tests were given to 5,300 junior high school students in the Quizette program.

Bonus features presented in serial form included such best sellers as Stay Alive All Your Life, Help Your Husband Stay Alive, Lights Out in Budapest, The Day Lincoln Was Shot, The Resurrection, and The Fatboys' Downfall.

DESIRES REALIZED

Several saw their Suppressed Desires realized, and the Knothole Gang got into games free.

Each year has brought additional changes and developments which helped the Deseret News to be of service to its readers and continued to make it the Mountain West's first newspaper.

Treason's Biggest Victory

EXTENSION OF REMARKS

OF

HON. CHARLES B. HOEVEN

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. HOEVEN. Mr. Speaker, under leave to extend my remarks in the RECORD, I submit the following editorial which was written by David Lawrence and appeared in the June 28, 1957, edition of U. S. News & World Report:

TREASON'S BIGGEST VICTORY

(By David Lawrence)

The right of an individual to be protected against prosecution, even if he advocates publicly the forcible overthrow of our Government, has just been upheld by the Supreme Court of the United States.

Punishment can come only if it can be proved that, as a result of this preachment, a specific step was taken to carry out a treasonable purpose.

Nor can such an advocate be convicted by any court in any of the 48 States of the Union For treason as an abstract doctrine has now been legalized by the Supreme Court and given the protection of the first amendment to the Constitution.

Not only are the courts put in a straitjacket of impotence, but the Congress of the United States has been notified that it no longer can carry on penetrating investigations designed to expose any wrongdoing, even if it seeks information for use in writing future laws that could prevent a recurrence of such wrongdoing.

In many respects, the series of decisions rendered at the present term of the Supreme Court of the United States are more devastating and more destructive of the rights of Congress to function as a coordinate branch of the Government than any decisions ever rendered by our highest Court in its entire history.

The rights of the individual now are ruled as superseding those of the Government itself and of all other citizens in the Republic who may be imperiled thereby.

The rights of the individual, moreover, now are held to be more sacred than the right of the people, through their Government, to be made secure against foreign enemies whose agents operate inside our borders.

Overnight a historic function of Congress has been curtailed and weakened—the right to investigate and inform itself on matters that may require legislation.

No longer can Congress compel a witness to tell what he knows, for instance, about other individuals engaged in Communist activity, even though he himself may not be a Communist or a traitor. The citizen, of course, can volunteer such information, but the witness now is to decide for himself whether a question asked by the interrogating member of a congressional committee is or is not pertinent to a legislative purpose.

The Supreme Court says Congress has not hitherto explained fully, and maybe doesn't itself know, the legislative purpose for which it seeks information through its investigations, and hence doubts must be resolved in favor of the recalcitrant witness.

Presumably committees of Congress hereafter will not be able to compel answers to their questions unless each query appears to be specifically authorized under the wording of a resolution adopted by either the House or the Senate. Even then, the Supreme Court intimates that it can rule later that the resolution was loosely drawn or too broadly drafted. As a practical matter, this sabotages the effectiveness of investigations based on the subpena power.

It means that crooks who operate shady businesses, crooks who dominate certain labor unions, and traitors who do the bidding of foreign agents and institutions cannot be exposed by Congress. The Supreme Court says that to do so might damage the reputation of these individuals and that to preserve this is more important than the safety or the integrity of the State.

PATH OF TRAITORS MADE EASIER

Last week's decisions rendered by the Supreme Court of the United States are epoch making. They are so sweeping that for a long time to come the path of the traitor in our midst will be made easier—unless the appellate jurisdiction of the Court is limited, as the Constitution says it can be, "under such regulations as the Congress shall make."

A new concept of the citizen's duty now is brought forward by the Supreme Court when it says, in effect, that a witness need not answer even though he knows just where the time bombs are hidden which may blow up thousands of his fellow citizens.

It seems that the first amendment now includes a right of "association" and that the relations between citizens and traitors are protected by the Constitution.

This is legalism run riot. This a technicality glorified. This is caprice that defies realism. It ignores the very existence of Soviet infiltration, Soviet espionage, and the Soviet conspiracy to render the American military establishment someday too weak to resist attack.

The Supreme Court, in its latest opinion, examines the phrasing of the resolution—first adopted by the House of Representatives in 1938 and readopted seven times since—which authorizes its committee to investigate un-American activities. The Court now finds this resolution defective. The majority of the Justices belittle the name of the committee by asking if anybody knows what "un-American" means.

Is it possible that in this day and age the Congress of the United States is being instructed that it must define "un-Americanism" to the satisfaction of every witness who may be called by an investigating committee before he can be compelled to answer questions? Didn't the House committee itself set out to learn what sort of activities hostile to American interests were being carried on?

In one instance, on the other hand, wherein the chairman of the House committee did outline in detail at a certain hearing that Congress wanted to know specifically whether labor unions were dominated by Communists, the Supreme Court now insists that even this is too vague a statement of the legislative purpose because it is noted that 6 of the 9 witnesses examined apparently had no connection with labor unions.

But Justice Clark, in his dissenting opinion, inquired in substance as follows: Who is to say that the supposed nonlabor witnesses were not stooges, instruments of communication or contact between the Communist traitors and the misguided, gullible members of the union? Wouldn't the Communists use drops or cover-up agents to do their work? Did the Supreme Court majority ever hear that secret agents have accomplices among persons not necessarily members of a union?

The Supreme Court seems to imply that the menace of Communist infiltration has vanished. It says witnesses now are asked by Congress to talk about past associations and to be judged by current standards rather than those contemporary with the ones exposed. When was treason ever judged by any standard provided by the chronology of the calendar? At what time in a man's life does the concealment of the traitorous behavior of persons other than himself become righteous through obsolescence? When does it become permissible in retrospect to have accepted the discipline of a foreign government's agents or stooges who seek to overthrow one's own Government?

Many of our citizens who were duped by the Communist line have since denounced it in public. They have been forgiven. They have been applauded for their courage and renewed allegiance. But today it is the coward who is extolled. It is the traitor who is advised that not only will his own secrets

be protected, but that he can continue to protect the agents of foreign governments and others who listen to their propaganda or become a part of their apparatus.

The Supreme Court, in its opinion, repeatedly proclaims that a congressional committee should not have the right to explore details of the background of a witness because this might hurt his reputation or that of his friends and associates. Why should such solicitude be shown for the reputation of shady characters or for those who have in one way or another made the mistake of coming under Communist influence?

The Supreme Court seems obsessed with the idea that public stigma is too harsh for a man who is called to testify before a congressional committee and refuses to tell what he knows. The Court argues that the safety of the state is too abstract an objective to justify the requirement that a witness tell all he knows about Communist infiltration. If there is to be an error, the Court feels it should be on the side of the traitors and that this is a small price to pay. But what about the price that the loyal citizens must pay with their lives when the acts of treason eventually are consummated and the enemy is given a military advantage?

The clumsy barriers erected by the Supreme Court will kill, for all practical purposes, the searching type of inquiry which Congress has found so useful in the past in exposing corruption and crime long after the statute of limitations has run in particular cases.

YESTERYEAR LIBERALS

Woodrow Wilson, in his book on congressional government, wrote: "The informing functions of Congress should be preferred even to its legislative function."

Felix Frankfurter, as a professor of law at Harvard Law School, used that very quotation approvingly in a magazine article he wrote when a Senate committee was investigating the Teapot Dome scandals in the 1920's. The article appeared in the New Republic for May 21, 1924, and was entitled, "Hands Off the Investigations." Justice Clark cited this article in his dissenting opinion last week.

Excerpts from Mr. Frankfurter's article are as follows:

"If these aren't 'leads' properly to be pursued, then we had better frankly admit that the power of congressional investigation is a sham and not an effective instrument for ventilating issues for the information of Congress and of the public. * * *

"The real issue is whether the danger of abuses and the actual harm done are so clear and substantial that the grave risks of fettering free congressional inquiry are to be incurred by artificial and technical limitations upon inquiry. * * *

"For the same reason congressional inquiry ought not to be fettered by advance rigidities, because in the light of experience there can be no reasonable doubt that such curtailment would make effective investigation almost impossible."

Hugo Black, as United States Senator from Alabama, when he headed an investigating committee exposing the misbehavior of utility magnates, wrote an article in the February 1936 issue of Harper's magazine. Justice Clark last week also cited this article. It is just as persuasive today as the day it was written.

Senator Black wrote:

"There is no power on earth that can tear away the veil behind which powerful and audacious and unscrupulous groups operate save the sovereign legislative power armed with the right of subpena and search. * * *

"This controversy has brought forth many legal arguments, filled many pages of parliamentary records, evoked multitudinous editorial protests, and sent many recalcitrants to prison. Notwithstanding this continuous opposition, the House and Senate have uniformly sustained the right of their committees to obtain such evidence since the first congressional investigation was ordered by the House in 1792. The courts have upheld them. * * *

"Witnesses have declined to answer questions from time to time. The chief reason advanced has been that the testimony related to purely private affairs. In each instance with which I am familiar, the House and Senate have steadfastly adhered to their right to compel reply, and the witness has either answered or been imprisoned."

Earl Warren, as attorney general of the State of California, issued a statement on November 28, 1941, denouncing the California Prison Board of Terms and Paroles for the release of three murderers sentenced to a 20-year term who had just been set free after serving a little more than 4 years. Mr. Warren wrote:

"Human life has indeed been cheapened. The murderers are free today not because they are rehabilitated criminals but because they are politically powerful communistic radicals. Their parole is a culmination of a sinister program of subversive politics, attempted bribery, terrorism, and intimidation which has evidenced itself in so many ways during the past 3 years."

These three liberals of yesteryear—Messrs. Frankfurter, Black, and Warren—were then living in a world of reality. But today Justices Frankfurter and Black and Chief Justice Warren live in the vacuum of an equivocal liberalism. They are 3 of the 6 Justices who made possible the sweeping decision of last Monday destroying the future effectiveness of congressional investigations in all fields of inquiry, including Communist activities in the United States.

True enough, Chief Justice Warren holds out hope that in the future a measure of added care may make it possible for Congress to exercise its investigating powers. But, as Justice Clark points out in his dissent, the phrase "added care" isn't spelled out, nor is there any intimidation of what these words mean today or may mean in the future. This is confusion worse confounded.

Not content to strike down the investigative powers of Congress, the Supreme Court also demolished on the same day, in another case, the investigating authority of State legislatures throughout the Nation.

HAMSTRINGING LAW ENFORCEMENT

Nor is all the damage confined to investigative powers of Congress or the States. Much worse is the blow struck at the law-enforcement work of police agencies in city and county governments as well.

Thus, the Federal Bureau of Investigation and every police department throughout the country must now be ready to make public in court the copies of all confidential reports made by detectives concerning all witnesses who are called to testify by the prosecution. Even state secrets covered in such reports must be divulged, or else the prosecutor will have to give up the right to use the witness. Undercover agents have to be revealed, and, of course, their future usefulness is impaired when they are identified publicly.

Who now will telephone a tip to the FBI or the police department of any city or county if his name is to appear in a detective's report made public in court? The informant will know that he can be subjected to reprisals from the members of the family of an accused person or his partners in a crime ring. What a blow to law enforcement.

So the net result of the recent decisions of the Supreme Court of the United States has been to do the following things:

1. To make easier the escape of criminals and traitors from prosecution or exposure, and to make harder the process of detection.

2. To cripple the investigating power of State legislatures and city and county governments in studying corrupt operations not yet covered by any laws.

3. To hamstring the Congress and deprive it of the best way to get the information about the operations of criminals and traitors needed to write the necessary laws to fight such criminals and traitors.

4. To make it easier for foreign governments hostile to us to operate on American territory through parties and groups and fronts that can destroy not only the Bill of Rights but the lives and property of our citizens when the time comes to complete the conspiracy by infiltration or war.

Treason has won its biggest victory.

More Yankee Trade, Less Foreign Aid

EXTENSION OF REMARKS
OF
HON. ALVIN M. BENTLEY
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. BENTLEY. Mr. Speaker, under leave to revise and extend my remarks in the Appendix of the RECORD, I wish to insert the following address made by Eugene W. Castle before the Export Managers Club of New York, Inc., on June 18, 1957, entitled "More Yankee Trade—Less Foreign Aid":

MORE YANKEE TRADE, LESS FOREIGN AID

(Address of Eugene W. Castle, New York City, author, The Great Giveaway, The Realities of Foreign Aid, Henry Regnery Co., Chicago, founder and former president, Castle Films, the Export Managers Club of New York, Inc., June 18, 1957, Hotel Statler, New York City)

Early in the century when the then President Theodore Roosevelt urged that our Nation "speak softly but carry a big stick," the United States established a policy which came to be known as "dollar diplomacy." It meant the use of American diplomatic power to promote our financial interests abroad so that Americans could invest in overseas enterprises with a minimum of risk.

However, dollar diplomacy did not set well with the liberals of that day. They decried the use of diplomatic and military pressure to insure investments, and dollar diplomacy was roundly denounced as a wicked form of meddling in the affairs of foreign countries.

Today we are confronted—and often confounded—with a new kind of dollar diplomacy. It, too, involves the use of American money abroad, but today we are dealing in billions instead of millions. And since the billions are public funds provided solely by the American taxpayers, there is an amazing and ever-growing nonchalance in the way of our bureaucrats in Washington ladle out the money overseas. When mistakes, waste, and unwarranted extravagances result from our giveaways, no apologies for the errors in public spending are ever made. Instead, the demands for foreign spending are increased, as year after year, particularly at appropriation time, "new crises" and dangers are brought forth until the aid budgets are rammed through the Congress. As soon as this is accomplished the "crisis" and urgency to spend promptly disappears until the next year rolls around.

Of course, profit is no longer our motive. Instead the requesters yell to Congress and to high heaven that if they can't obtain all of the money they demand—every billion of it, the world will come to an end. But the world does not come to an end.

The Marshall plan was originally offered to a skeptical Congress as a means of rehabilitating the war-ravaged countries of Europe. We were told that $17 billion and 4 years would do the job.

But it did not stop there. Since the world began, the Marshall plan has had no parallel in the resultant spending of the resources of one nation for foreign aid.

We sent our dollars marching $60 billion strong over the far reaches of the earth in quest of mutual security. The prize, like a will o' the wisp, eluded us. The world is still in turmoil and danger. There is no security, mutual or otherwise.

Before I express my views further, let me make it perfectly clear that even if Congress did not appropriate one single dollar of new money for foreign aid, there will be spent not less than $3.3 billion during the fiscal year that begins next July 1. Additionally, there are $7½ billion already appropriated and in the Washington pipeline to continue foreign aid for more than 2 years.

What I am going to discuss briefly is the matter of getting a better and more honest deal for the American taxpayer and, at the same time, continue to support those countries whose friendship we can rely on—countries who are determined to help themselves and are therefore worthy of our support.

In the light of recent events, surely the time has arrived for all Americans, both in and out of Government, to reappraise critically our foreign-aid spending as a matter of our own self-interest.

From the year 1792 to 1950, our Government collected $406 billion in taxes.

From 1950 through 1956, our Government collected $433 billion in taxes.

For $406 billion in 158 years, we fought and won 6 wars.

For $433 billion in 7 years we fought one war in Korea without victory; we fought and are still fighting a cold war that we seem to be losing even in Formosa and, more recently, with our allies in Great Britain.

We cannot continue to support those who, if the chips were down, would not support us. We cannot buy allies and friends, but we could spend ourselves into bankruptcy and war.

President Eisenhower once realized this when he publicly stated: "The United States cannot be an Atlas; it cannot, by its financial sacrifices, carry all other nations of the world on its shoulders and we should stop giveaway programs."

Our foreign-aid careerists are gripped in the spirit of a "crusade"—emotional, intolerant of criticism or investigation. Those who dare question their activities are looked upon as isolationists, short-sighted "penny-pinchers", who are lacking in vision.

Neither individuals or nations are made friendly or even grateful by handouts. Those who are given money soon think it is owed to them. The assumption that the more money we give away the more good we accomplish is wrong—very wrong. For the emotions which really influence people—pride, custom, race, religion, and national enthusiasm are completely ignored. It is also wrong because it leads to frantic efforts on the part of our foreign-aid representatives to stir up projects in other countries which have not been requested and, in many cases, not wanted.

Let us consider a few of these projects:

It was recently announced that the United States has given $1 million to Pakistan to bolster that country's fishing industry.

In Formosa, we have set up a pension program for overaged Chinese soldiers.

In the Philippines we have provided costly electronic microscopes and technical equipment for a section of that country where no power is available.

In Afghanistan we have provided expensive airfields in a country where most travel is still done on the backs of camels.

In Thailand we started to build a highway for $6.5 million that has already cost us $18 million for half of the originally planned stretch and in a country which has fewer than 9,000 automobiles.

In India we provided $1,500,000 to build hundreds of prefabricated grain silos. The material, still uncrated, rests in warehouses in Calcutta and we are probably paying the storage bill.

In India, too, we have 400 people to administer our giveaway program. They can't spend the money as fast as it is piped to them. They have a backlog of $135,000,000 and International Cooperation Administration is trying desperately to obtain $80 million or more a year on top of what we are already giving India.

To Tito we are still exporting military jets and treasure despite the fact that the Yugoslav dictator repeatedly reminds us that his relations with Moscow are improving. His Defense Minister is now en route to the Kremlin. Tito is now playing coy about receiving our free airplanes, while he again makes goo-goo eyes at the Soviets.

Every year, at appropriation time, the giveaway mania has become a nonpartisan path to the headlines for our legislators in Washington. For instance:

Senator KENNEDY, a Democrat is anxious to give away $100 million to the Government of Communist Poland. This will not help the people of Poland. It will only help to relieve Moscow of some of its satellite overhead that it is so anxious to get rid of. Half of this gift is already on the way. The other half will soon be sent. We should have sent it all direct to Moscow. This would have saved the carrying and transfer charges. Gomulka, the Polish Communist Party chief, has already complained that this $100 million handout is very small considering their needs, and the Moscow errand boy adds that President Eisenhower's statement last October offering aid to Poland proved to be a sheer illusion.

Under Secretary of State Dillon, a Republican, has become an eager-beaver sponsor for the new $2 billion handout, without strings, to the underdeveloped nations of the world. Dillion very properly and politely calls it a loan. I hope you will never have to conduct an export transaction on a similar basis. If you do, the sheriff may be looking for you.

Congressman ROOSEVELT, a Democrat, seriously suggests that we should internationalize our Panama Canal to please Egypt's Nasser who has shown no desire to please us. We built the Panama Canal. We paid for it. We own it. If we should ever internationalize it, heaven forbid, some Russian commissar could decree that ships flying the Stars and Stripes could not enter the canal. In time of war our fleet would be bottled up. The memories of most of us are short. Too many of us forget that our Armed Forces fought, bled and died by the tens of thousands to win the war in Europe. After victory was accomplished and the enemy lands were reduced to piles of rubble, our politicians and the Military Commander of that day forget to get a road out of Berlin for Americans. The costly Berlin airlift in half free, half slave Germany resulted. This fatal error is largely responsible for the precarious position we find ourselves in today. This tragic mistake became immediately apparent to Stalin. He detected our weakness and determined that we could be pushed around. The cold war that has cost us tens of billions of dollars resulted. We are still being shoved around and humiliated before friends and foe alike by Stalin's successors.

Senator KNOWLAND, Republican minority leader, recently propelled himself into the headlines when he suggested on a TV program that we barter Norway, for Communist-dominated Hungary. The Senator, in all seriousness, offered the idea that we trade the membership of Norway in the North Atlantic Alliance in return for Soviet withdrawal from Hungary. Norway, unlike Hungary, is not a satellite. It is our firm friend and an independent nation, which determines its own destiny. Those of us with long memories will recall that the German war loads invaded Norway first, in their attempt to bottle up all Scandinavia.

These are but a few examples of why perhaps we fail to hold the respect and support of allies or neutrals. Our foreign-aid extravagances will never prove a substitute for firm foreign polities and sound pronouncements.

One month ago, Senator LYNDON JOHNSON, majority leader of the United States Senate and a respected legislator, stated publicly that Congress would not write any blank checks for foreign aid and will not surrender the right to annual checkup on the program. That's what the Senate majority leader said a month ago.

But only a few days ago the powerful Senate Foreign Relations Committee after reducing the White House multi-billion-dollar aid request by less than 6 percent, endorsed, by an almost overwhelming majority, an aid program for the new fiscal year which Senator Johnson now both supports and sponsors.

If the four items contained in this overall aid authorization, which I am about to detail briefly to you, were adopted by the responsible officials of any publicly held United States corporation, these officials would, very likely, face Federal prosecution.

Here are the items:

No. 1. The budget of the Department of Agriculture includes $750 million of foreign aid for the next 3 years, which certainly should be added to the total foreign aid bill. This item should not be concealed from the American people as at present.

Moreover, foreign currency received from these food sales spells trouble for us because it means interference in the internal banking affairs of other countries through lending and relending large sums of money within their country. Only 10 percent of the soft currencies received from food aid sales is used for the maintenance of our own overly populated government establishments within a given country. The balance of 90 percent puts us in the foreign banking business with foreign currency, obviously a threat to the normal conduct of the fiscal affairs of any country.

Furthermore, it dumps a large volume of government held food supplies, at less than cost, on foreign countries receiving them, thereby restricting the normal procedures of foreign trade. This has led to an every growing number of complaints from United States exporters and others affected.

2. Nearly a billion dollars of defense support largely duplicates economic aid. The sum of $900 million now demanded for defense support is another scheme to attempt to justify the expenditure of this vast sum in countries where we already have military aid programs. This, to a large degree, constitutes a duplication of aid funds, regardless of any reason given for it.

Year after year, the President, the State Department and the highest officials and lobbyists for the executive departments plead for larger foreign aid appropriations.

Year after year, the principal argument is that we are spending three quarters of all aid funds for military purposes and only one quarter for economic aid. However, in the case of this latest plan, the defense support funds are to be reallocated to the Inter-

national Cooperation Administration, so that it ends up as before in the economic aid pipeline and not in the percentages that are given to stimulate the superspending.

3. Now it is planned to hide foreign military aid from the Congress by incorporating it in our defense budget where it will forever repose in the spending stream that runs through the catacombs of the Pentagon.

If Congress allows this to happen it means that the so-called military aid funds will be separated from the economic aid funds in the overall budget. Actually, $2 billion will be hidden from congressional supervision, so that it will be almost impossible for our legally constituted legislators to know how much is being spent for military aid and whether or not it is being used exclusively for military hardware and training.

The purpose of this is, of course, to reduce the overall foreign-aid budget in the eyes of the public—to conceal $2 billion annually from both the Congress and from the American people. In the end, it will cost the American taxpayers more billions because the visible part of the aid budget will go up and the defense budget already plagued by inflation, will become a military secret, and a more costly one. This is a dishonest technique. It should be condemned and rejected.

4. A new $2 billion blank check with no strings. The new blank-check proposal calls for an outright authorization of $2 billion to be spent at the rate of $500 million for the first year and $750 million for each of 2 succeeding years. No strings are to be attached to the spending. This vast sum will be given away at the discretion of the Department of State and the International Cooperation Administration and no geographical spread has been defined. It is important to recognize the inescapable fact that the first year's half billion dollars will become the incentive, the urge, and the itch to get rid of the additional $1,500,000,000 over the 2 succeeding years. The only problem will be to see that the money is fully spent and never mind how.

It should be recalled that the last Congress flatly refused to give the President a blank check for $100 million per year for 10 years. Now under a new authorization the same President boldly demands another blank check for his appointed, not elected, global spenders to ladle out $2 billion over a 3-year interval. And to toss out these billions where they please, when they please, and as they please. If Congress permits this new foreign-aid folly the American taxpayers are stuck not only for 3 years and $2 billion but very possibly forever and for many times $2 billion. Secretary of State Dulles, pleading for bigger foreign spending and as little congressional supervision of the spending as is possible, told a committee of Congress that foreign aid must go on for at least 10 years more. This means fifty to sixty billion dollars more.

Our aim should be to reduce the annual appropriation for all foreign aid, both economic and military, to $1 billion. This would stop the present waste and extravagance in our global giving venture. It would end the bureaucratic superstructure that the American people must now support to keep the giving in high gear. It would stop our policymaking politicians from creating their annual cry of crisis, which immediately disappears as soon as the appropriation is made. And most important of all, it would stop the threat to our overall economy and the further spread of creeping inflation.

There are many more effective and less costly ways of assisting other countries in their economic development than direct handouts from the Federal Treasury.

We need more Yankee traders and less foreign aiders to stimulate the flow of American capital into needy and underdeveloped nations through the incentive of fast tax writeoffs, such as are now granted to industries engaged in defense production.

Another way would be to expand the capacity of the World Bank to make long-term, low-interest loans to worthy nations upon the security of such collateral as natural resources or industrial potential.

In so doing, the United States would be able to achieve its goal without insulting the beneficiaries of its assistance, and without bankrupting the American people. One thing is certain, we cannot save the world by destroying ourselves.

We are told repeatedly that it is folly if we do not continue and expand our giveaway program. I can assure you it is the height of folly if we do continue such spending.

The present policy of weakening this Nation's economy and defenses by giving ourselves away makes it inevitable that we will be forced again to send our sons to fight and die in a third world war.

To me, one of the most alarming aspects of our foreign aid program is that so many well-meaning people have been persuaded that this vast array of money we are spending will buy us future security.

The record shows and will continue to show that we have not bought one iota of protection in case of necessity in spite of the great sacrifices we have been called upon to make. Recent news dispatches from Japan, Formosa, and other countries report numerous manifestations of anti-American sentiment. Even Western Europe, according to the United Press, is extending a cool reception to American tourists. This has been shown in country after country that have been the recipients of our bounty.

Not being satisfied with giving aid to our friends and allies, we have given billions to the so-called neutralist nations, together with vast quantities of military supplies. No thought has been given to the stark peril that in some future time these very arms might be hurled against our own sons.

We have already seen Tito, Nehru, Nasser, and others visit and play host to the Communists in wild orgies of friendship and anti-western demonstration.

Now it is solemnly proposed that we begin a program of aid to the Communist satellite countries of Eastern Europe.

What is the reason for our policy of panic?

Why must our policies be governed by crude Russian propaganda rather than the application of our own reasoning and logic?

One wonders why this country, with its reputation for ingenuity, organization, and production, cannot secure favorable agreements in carrying out its foreign policy and programs of foreign aid.

Perhaps the answer lies in the fact that Congress has abdicated much of its constitutional responsibility over appropriations. When larger amounts than can possibly be spent in a single year are appropriated for economic aid, Congress loses control of the purse strings.

Congress has been handing to the ICA, and its predecessor agencies, billions of dollars of the people's money without any previous determination of how the money is to be spent, and without audit or accurate check to determine whether the money was spent for the purposes intended.

Lack of specific information, general vagueness, and absence of coordination is a true index to the nature and character of the foreign aid program that the Congress is being asked to continue.

With the world's problems so difficult and varied and the solution so hard to find, it is wonderful to be able to hit upon so simple and easy a way out—give away more money. But is it good, or is it harmful?

Foreign aid has become more than a continuous drain upon the American taxpayer. It has become an opiate which blinds us to the appalling fact that we are doing little more than drift in our foreign policy course. It has given us a comfortable and deceptive belief that money is a substitute for strength and firmness in a cold war. Behind our Maginot Line of foreign-aid billions, we have hoaxed ourselves with the conviction that we have purchased security.

And these are added reasons why we need more Yankee traders. The ability to trade commands respect, wins friends and prevents wars. The foreign-aid program is today supplanting the private investor and in a large measure competing with the sound expansion of foreign trade. The dead hand of the Government bureaucrat cannot take the place of American initiative—it can only dry it up.

The sterile hand of state is now interposed between human wants and demands and the private initiative which can supply them.

This is happending more and more in both our domestic and our foreign dealings.

Never before, at a time when the guns are not booming, have the American people been subjected to more "brainwashing" from Washington than at present. Never before has the will of the Executive been more forcefully imposed upon both the Congress and the American people. Never before have we been confronted with a more bloated Federal budget—$71,800,000,000—the greatest danger to inflation that has ever been forced upon the American people.

These are factors that compel reappraisal. Several months ago our Congressmen got the surprise of their lives. The people rebelled against the excesses of the superspenders in Washington and their protests descended upon the legislators in an avalanche, the like of which they had never seen before. For a time, Congress took notice and took out the economy knife. Then the people stopped protesting and the spending went into high gear again, spurred by the powerful propaganda from the President, his assistants, and lobbyists. Unless the people reassert their concern and maintain their protests we may soon be confronted with an inflation that not only will curl our hair but may result in the tragedy of our losing it, as well as our shirts. If that happens we will be unable to aid ourselves or anyone else in the world. Then Moscow would win without firing a shot and our own politicians would blame us for their fiscal madness.

Americans both at home and abroad can surmount any problem when, as a nation, we put our minds and hearts to the problem at hand.

One problem now before us is to get politicians and their appointed global givers out of foreign aid and substitute the safer, surer, and sounder methods of our own Yankee traders.

EXTENSION OF REMARKS

OF

HON. ARTHUR V. WATKINS

OF UTAH

IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. WATKINS. Mr. President, in the naming of America's cities and counties, rivers and lakes, mountains and prominent landmarks lie many fascinating stories. Many of these our historians and other writers have published; others still are being brought to light. As our national heritage gains depth and perspective, it is well that these accounts be preserved. Future generations no less will treasure this understanding.

Recently there appeared in rural newspapers in Bedford, Va., and Afton, Wyo., accounts of how a native of Virginia in his new homeland remembered the old in placenames he suggested for the intermountain area. The author is a staff member of the former, the Bedford (Va.) Democrat, who contributed the article that appeared in the Star Valley Independent, Afton, Wyo.

For the information of Members of the Congress and those particularly interested in this phase of historical development I ask unanimous consent that the two articles be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

[From the Bedford (Va.) Democrat of April 18, 1957]

BEDFORD-BORN MORMON BISHOP GAVE NAMES TO IDAHO TOWNS

How a Bedford County native who went west and became a Mormon bishop left his imprint and the influence of his native county on place names in his adopted home is shown in a recent report of the Idaho State Historical Department.

This contains a lengthy feature titled "Idaho Town Names," written by Fritz L. Kramer as a thesis for a degree at the University of California at Berkeley, where he was then a student. It shows that some Idaho place names stem directly from the Bedford-born bishop while others probably came from the same sources.

Two names, Dayton and Preston, have definite associations with Bedford County and two others, Liberty and Virginia, may have Bedford associations.

All are associated with Bedford County through one of its most distinguished native sons, William Bowker Preston, who was born near Moneta November 24, 1830, a son of Christopher and Martha Mitchell Clayton Preston.

JOINED THE MORMONS

Mr. Preston migrated westward, settling in Yolo County, Calif., in 1852 and in February, 1857, was baptized into the Church of Jesus Christ of Latter-day Saints (Mormons). He colonized the Cache Valley and was among the principal founders of Logan, Utah. November 14, 1859, he was ordained Bishop of Logan.

In 1871 Bishop Preston was named vice president and assistant superintendent of the Utah and Northern Railroad. At the general conference of the Mormon Church April 6, 1884, he was named the fourth presiding bishop of the Church of Jesus Christ of Latter-day Saints. He retained that position until December, 1907, when he was released because of ill health. He died August 3, 1908.

He was married February 24, 1958, to Miss Harriett Annice Thatcher of California. He represented Cache Valley in the Utah Territorial Legislature in 1862–1864, 1872, 1876, 1878, 1880, and 1882. From 1865 to 1868, Bishop Preston was on a mission in England for the Mormon church conference and from 1901 to 1907 he was vice president of the State Bank of Utah.

ON THE IDAHO BORDER

About 1877 the Salt River Valley, on the Idaho-Wyoming border, was used as a herd ground for cattle of the Mormon Church. Bishop Preston advised the young men herding cattle to take up land in the locality and with his son, W. B. Preston, Jr., and three other men, he was the first to take up land there.

When it came to naming the new Wyoming town, Bishop Preston suggested that it be named for his old home in Virginia, Bedford. Mrs. Frane Wilkes, a granddaughter of Bishop Preston, and her husband live on the Preston farm at Bedford, Wyo.

In his ventures into northwestern Wyoming, Bishop Preston left marks of his journeys in southeastern Idaho, where the towns associated with him are located.

The first permanent settlement in Idaho was at Franklin, in the southeastern section of the State on the Utah border, the Mormons settling there in 1860, thinking it a part of Utah.

NAMED FOR BISHOP

The town of Preston, county seat of Franklin County, in southeast Idaho, was settled by the Mormons in 1879 and was named "Worm Creek" after the stream on which it is situated. By 1883 the name had been changed to Preston, in honor of the Mormon bishop.

Also located in Franklin County, west of Preston and north of the town of Franklin, is the town of Dayton. This site was originally called Franklin Meadows, for a while Five Mile Fork, then Chadwick and, finally, Dayton. Bishop Preston gave it the later name because he always visited the little settlement in the daytime and never had the occasion to stop overnight.

In Bear Lake County in the southeast on the Wyoming border is the town of Liberty, founded and named in 1877. The feature stated "no further information could be obtained on the origin of the name." It is possible that this town, which was in the area visited by Bishop Preston, took its name also from his home county, Bedford County, whose county seat was known as Liberty from 1782 to 1890.

TOWN OF VIRGINIA

North of Dayton in Bannock County is the town named Virginia, which for two reasons could be named for the State of Preston's birth. The town is shown in 1895 as being named Thatcher (a settlement in Franklin County also bore that name); a Mormon ward was organized there in 1912 under the name of North Cambridge, the name being later changed to Virginia. The similarity in the names Virginia and Thatcher show relationship to Preston's birthplace and his wife's maiden name of Thatcher.

The only newspaper in Franklin County is the Preston Citizen, a weekly paper in Preston.

[From the Star Valley Independent, Afton, Wyo., of March 22, 1957]

SETTLEMENT OF BEDFORD 80 YEARS AGO TOLD IN BICENTENNIAL FEATURE

(By Kenneth E. Crouch)

(EDITOR'S NOTE.—The following feature story concerning the settlement of the town of Bedford in our own Star Valley 80 years ago was prepared by Mr. Crouch as a feature on Bedford, Va., and its namesakes, published in connection with the bicentennial observance of that community in 1954. The feature won second place in the Virginia Press Association awards for 1954 for feature writing for nondaily papers. The information aboue Bedford, Wyo., was obtained, mostly, from Mr. and Mrs. Frane Wilkes. Mrs. Wilkes is a granddaughter of the Bishop Preston who named Bedford.)

"Go west, young man, go west," led a son of the Blue Ridge Mountains of Virginia to Utah and Wyoming where he became a prominent leader in the Church of Jesus Christ of Latter-day Saints (Mormons) and founded a settlement in the Rocky Mountains of Wyoming which he named in honor of his native Bedford County, Va., because of the similarities in scenic mountains and farming interests.

William Bowker Preston was born November 24, 1830, in Bedford County, Va., a son of Christopher and Martha Mitchell Clayton Preston who were married in Bedford County, Va., December 20, 1824.

His birthplace was the village of Moneta. Strange as it seems, located northeast of Bedford, Wyo., in Fremont County, is a community named Moneta.

In 1852 he settled as a farmer in Yolo County, Calif., and in February 1857 was baptized into the Church of Jesus Christ of Latter-day Saints.

Settling in Yayson, Utah, he colonized the Cache Valley and was among the principal founders of Logan, Utah. On November 14, 1859, he was ordained bishop of Logan.

Bishop Preston, in 1871, was named vice president and assistant superintendent of the Utah & Northern Railroad. At the general conference April 6, 1884, he was named the fourth presiding bishop of the Church of Jesus Christ of Latter-day Saints and retained that position until December 1907, when he was released because of ill health. He died August 3, 1908.

On February 24, 1858, he was married to Miss Harriet A. Thatcher, of California. He represented Cache Valley in the General Assembly of the Utah Territorial Legislature in 1862–64, 1872, 1876, 1878, 1880, and 1882.

From 1865 to 1868, Bishop Preston was on a mission in England for the Mormon Church conference. From 1901 to 1907 he was vice president of the State Bank of Utah.

About 1877 part of the Salt River Valley on the Idaho-Wyoming border, now in the Bedford area, was used as a herd ground for cattle of the Church of Jesus Christ of Latter-day Saints. Bishop Preston advised the young men herding the cattle to take up land in the locality and with his son, W. B. Preston, Jr., and three other men he was the first to take up land there.

The main industry in the Salt River Range is dairying and sheep raising with forests being abundant. North of Bedford, Wyo., in the Wyoming Range is 10,143-foot Virginia Peak.

When it came to naming the new Wyoming town, Bishop Preston suggested that it be named for his old home in Virginia. Mrs. Frane Wilkes, a granddaughter of Bishop Preston, and her husband live on the Preston estate at Bedford, Wyo.

Bedford County, Va., was formed in 1754 from Lunenburg County with New London as the county seat. When Campbell County was formed the village of New London was included in that area and Liberty in 1782 was established as the county seat of Bedford. Liberty was incorporated in 1839, the named changed to Bedford City in 1890 and to Bedford in 1912.

It is famous for the location near "Poplar Forest", the summer home of Thomas Jefferson. The scenic Blue Ridge Mountains form the northern boundary of the county and in this range is included the famous Twin Peaks of Otter, 4,001-foot Flat Top and 3,875-foot Sharp Top.

Bedford County, Va., was named for John Russell, the fourth Duke of Bedford. He was Secretary of State of England for the Southern Department (which was responsible for the British Colonies) from February 13, 1747–48, to June 1751.

Bedford, Wyo., according to 1950 census figures, is the smallest of the 18 places bearing that name in the United States. The places so named are as follows:

Location	Population	Founded	For whom named
Bedford:			
Indiana	12,565	1825	Bedford County, Tenn.
New York	10,888	1681	Bedford, England.
Michigan	9,213	1837	Man named Bedford.
Ohio	9,105	1813	Bedford, N. Y.
Virginia	4,061	1782	John Russell, Duke of Bedford.
Pennsylvania	3,521	1751	Do.
New Hampshire	2,400	1750	Do.
Iowa	2,000	1853	Bedford, England, or a surveyor.
Massachusetts	1,407	1647	Probably Bedford, England.
Kentucky	533	1816	Gunning Bedford, Jr.
Texas	450	1876	Bedford County, Tenn.
Wyoming	374	1899	Bedford County, Va.
Bedford Hills:			
New York	11,000	1680	Probably Bedford, England.
New Bedford:			
Massachusetts	109,189	1652	John Russell, Duke of Bedford.
Pennsylvania	650	1818	Dr. Nathaniel Bedford.
Illinois	200	1834	Ford across the river.
Ohio	125	1825	Bedford County, Pa.
West Bedford:			
Ohio	40	1817	Bedford County, Pa.
There are 3 counties in the United States named Bedford. They are as follows:			
Pennsylvania	40,775	1771	Unknown.
Virginia	29,627	1754	John Russell, Duke of Bedford.
Tennessee	23,627	1807	Capt. Thomas Bedford, Jr.

Bedfordshire, England, has a population of 307,350, was founded 1011, but the origin of its name is unsettled. The town of Bedford, England, has a population of 54,000 and its date of founding and naming is not known.

There are Bedfords in Canada, Africa, and Australia, varying from towns to creeks, rivers, bays, etc.

Three ships of the United States Navy have borne the name Bedford, the cargo ship U. S. S. *Bedford Victory* (AK–231), named for Bedford, Ind., the U. S. S. *Perseverance* (PYC–44), formerly known as the *Bedford* and *Condor;* and the U. S. S. *YP–435,* formerly known as the *Bedford.*

The Export-Import Trade From Milwaukee

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. WILEY. Mr. President, as the coauthor of the Wiley-Dondero Great Lake-St. Lawrence seaway law, it has naturally been my pleasure on many occasions to point up the important role played by Wisconsin ports in the St. Lawrence seaway trade. I have been happy, in particular, to stress the outstanding advantages and facilities available through the great port of Milwaukee.

It is with ample reason that Wisconsin's largest city is regarded as the most progressive port on the Great Lakes—the best gateway to the Middle West. Its modern outer harbor facilities for bulk, heavy lift, and general cargo have been particularly praised by shipping experts throughout the world.

People outside the Great Lakes area may not realize that America already possesses a fourth great ocean coast. They may not realize that already there is a tremendous trade with the ports of the world from Milwaukee and other cities. This fact was confirmed again, however, when I received the 1957 directory of Great Lakes-overseas shipping services via the port of Milwaukee. This directory shows all of the many international shipping lines which now serve this great port community.

The present directory will expand manifold once the seaway is completed. In that connection, Congress must, of course, finish action on pending legislation to increase the financial authority of the Seaway Development Corporation.

In order that those outside the Great Lakes area may realize that already a huge overseas trade exists, I ask unanimous consent that this directory be printed in the Appendix of the RECORD.

There being no objection, the directory was ordered to be printed in the RECORD, as follows:

DIRECTORY OF GREAT LAKES-OVERSEAS SHIPPING SERVICES VIA PORT OF MILWAUKEE, WIS., UNITED STATES OF AMERICA, 1957

CONTINENTAL SERVICE

Fjell-Oranje Line: Regular service, refrigerator and dry cargo. Twice a week, Port of Milwaukee direct to Antwerp, Rotterdam, LeHarve, Hamburg, Bremen. By transshipment to Switzerland and Austria. Other ports as cargo offers. General Steamship Agencies, Inc., 110 East Wisconsin Avenue, Milwaukee, Wis.; telephone: Broadway 6–8464; cable: Steamship, Milwaukee.

Swedish American Line: Regular service, refrigerator and dry cargo. Weekly service (alternating with French Line) from the Port of Milwaukee direct to: LeHavre, Rouen, Antwerp, Rotterdam, Amsterdam, Bremen, and Hamburg. Furness, Withy & Co., Ltd., 757 North Broadway, Milwaukee, Wis.; telephone: Broadway 2–2111; cable: Furness, Milwaukee.

Hapag Lloyd-A&B-Hamburg Chicago Line (joint service): Deep, tank space, refrigerator and dry cargo. Weekly sailings, Port of Milwaukee direct to Antwerp, Rotterdam, Bremen, Hamburg, and LeHarve. Midwest Steamship Agency, Inc., 208 East Wisconsin Avenue, Milwaukee, Wis.; telephone: Broadway 2–2920; cable: Midship, Milwaukee.

French Line: Regular service, refrigerator and dry cargo. Weekly service (alternating with Swedish American Line) from the Port of Milwaukee direct to LeHarve, Rouen, Bordeaux, Antwerp, Rotterdam, Amsterdam, Bremen, and Hamburg. Furness, Withy & Co., Ltd., 757 North Broadway, Milwaukee, Wis.; telephone: Broadway 2–2111; cable: Furness, Milwaukee.

Wallenius Lines: Dry, cargo, deep tank space. Monthly service, Port of Milwaukee direct to Hamburg, Rotterdam. Kerr Steamship, Inc., 208 South LaSalle Street, Chicago, Ill.; telephone: Central 6–4592; cable Kerrline, Chicago.

Poseidon Lines (fortnightly service): Regular service, dry cargo, port of Milwaukee, direct to Antwerp, Rotterdam, Hamburg, and Bremen. General agents, James W. Elwell & Co., Inc., 647 West Virginia Street, Milwaukee, Wis.; telephone: Broadway 2–0570; cable: Elwell, Milwaukee.

SCANDINAVIAN SERVICE

Fjell Line: Regular service, refrigerator and dry cargo. Weekly service, port of Milwaukee direct to Copenhagen, Oslo, Bergen, and Stavanger. General Steamship Agencies, Inc., 110 East Wisconsin Avenue, Milwaukee, Wis.; telephone: Broadway 6–8464; cable, Steamship, Milwaukee.

Swedish American Line: Regular service, refrigerator and dry cargo. Fortnightly service, port of Milwaukee direct to Oslo, Gothenburg, Malmo, Copenhagen, Stockholm, and Helsingfors. Furness, Withy & Co., Ltd., 757 North Broadway, Milwaukee, Wis.; telephone: Broadway 2–2111; cable: Furness, Milwaukee.

Swedish-Chicago Line: Refrigerator cargo, dry cargo. Forthnightly sailings, port of Milwaukee direct to Gothenburg, Malmo, Copenhagen, Stockholm, and Helsingfors. General Steamship Agencies, Inc., 110 East Wisconsin Avenue, Milwaukee, Wis.: telephone: Broadway 6–8464; cable: Steamship, Milwaukee.

Finlake Line: Monthly sailings, port of Milwaukee direct to Gothenburg, Copenhagen, Stockholm, Truku (Abo), Helsingfors, and Kotka. Other Scandinavian ports as cargo offers. James W. Elwell & Co., Inc., 647 West Virginia Street, Milwaukee, Wis.; Telephone: Broadway 2–0570; cable: Elwell, Milwaukee.

Wallenius Lines: Monthly service, port of Milwaukee, direct to Gothenburg, and Stockholm. Kerr Steamship, Inc., 208 South La Salle Street, Chicago, Ill.; telephone: Central 6–4592; cable: Kerrline, Chicago.

UNITED KINGDOM SERVICE

Fjell-Oranje Line: Regular service, refrigerator and dry cargo. Weekly service, port of Milwaukee direct to London and Glasgow. General Steamship Agencies, Inc., 110 East Wisconsin Avenue, Milwaukee, Wis.; telephone: Broadway 6–8464; cable: Steamship, Milwaukee.

Swedish-Chicago Line: Refrigerator cargo, dry cargo. Fortnightly sailings, port of Milwaukee direct to Liverpool/Manchester. General Steamship Agencies, Inc., 110 East Wisconsin Avenue, Milwaukee, Wis.; telephone: Broadway 6–8463; cable: Steamship, Milwaukee.

Manchester Lines Ltd.: Refrigerator cargo, dry cargo. Regular sailings from the port of Milwaukee direct to Liverpool and Manchester, England. Furness, Withy & Co., Ltd., 757 North Broadway, Milwaukee, Wis.; telephone: Broadway 2–2111; cable: Furness, Milwaukee.

Furness Great Lakes Line: Regular service, dry cargo. Monthly service, port of Milwaukee direct to London, England. Furness, Withy & Co., Ltd., 757 North Broadway, Milwaukee, Wis.; telephone: Broadway 2–2111; cable: Furness, Milwaukee.

Head Line: Regular service, dry cargo. Monthly service, port of Milwaukee direct to Liverpool, Belfast, and Dublin. James W. Elwell & Co., Inc., 647 West Virginia Street, Milwaukee, Wis.; telephone: Broadway 2–0570; cable: Elwell, Milwaukee.

MEDITERRANEAN SERVICE

Fabre Line (joint service with Ellerman Great Lakes Line): Regular service, refrigerator, and dry cargo. Regular service, port of Milwaukee direct to Lisbon, Cadiz, Casablanca, Tangier, Oran, Algiers, Barcelona, Naples, Leghorn, Genoa, and Marseille; other Mediterranean ports as cargo offers. James W. Elwell & Co., Inc., 647 West Virginia

Street, Milwaukee, Wis.; telephone: Broadway 2-0570; cable: Elwell, Milwaukee.

Ellerman Great Lakes Line (joint service with Fabre Line): Regular service, refrigerator, and dry cargo. Regular service, port of Milwaukee direct to Lisbon, Cadiz, Casablanca, Tangier, Oran, Algiers, Barcelona, Naples, Leghorn, Genoa, and Marseille; other Mediterranean ports as cargo offers. M. E. Dey & Co., Inc., 759 North Milwaukee Street, Milwaukee, Wis.; telephone: Broadway 1-7461; cabel: Deyco, Milwaukee.

Niagara Line: Fortnightly sailings to Mediterranenan ports from port of Milwaukee direct to Lisbon, Casablanca, Algiers, Naples, Leghorn, Genoa, Marseille, Valencia, and Seville; other Mediterranean and North African ports as cargo offers. General Steamship Agencies, Inc., 110 East Wisconsin Avenue, Milwaukee, Wis.; telephone: Broadway 6-8464; cabel: Steamship, Milwaukee.

Montship-Capo Line: Deep tank space, refregerator, and dry cargo. Every 3 weeks, port of Milwaukee direct to Lisbon, Casablanca, Genoa, and Naples; other Spanish, Mediterranean, and North African ports as cargo offers. M. E. Dey & Co., 759 North Milwaukee Street, Milwaukee, Wis.; telephone: Broadway 1-7461; cable: Deyco, Milwaukee.

Zim-Israel-America Lines (Great Lakes Service): Regular sailings from Port of Milwaukee direct to Tel Aviv, Haifa, and other Mediterranean ports as cargo offers. Midwest Steamship Agency, Inc., 208 East Wisconsin Avenue, Milwaukee, Wis.; telephone: Broadway 2-2920; cable: Midship, Milwaukee.

CARIBBEAN SERVICE

Ahlmann Transcaribbean Line: Regular service, dry cargo. Every 21 days, Port of Milwaukee direct to La Guaira, Puerto Cabello, Maracaibo, Curacao (Barranquilla subject to confirmation). Midwest Steamship Agency, Inc., 208 East Wisconsin Avenue, Milwaukee, Wis.; Telephone: Broadway 2-2920; Cable: Midship, Milwaukee.

Saguenay Terminals, Ltd.: Port of Milwaukee direct to La Guaira, Puerto Cabello, Port of Spain, Ciudad Trujillo, Santiago de Cuba, Port au Prince, and Kingston. James W. Elwell & Co., Inc., 647 West Virginia Street, Wilwaukee, Wis.; telephone: Broadway 2-0570; Cable: Elwell, Milwaukee.

Grace Line, Inc.: Regular American-flag service, dry cargo. Every 2 weeks, Port of Milwaukee direct to LaGuaira, Puerto Cabello, Maracaibo, Barranquilla. Other Caribbean ports as cargo offers. Grace Lines, Inc., 735 North Water Street, Milwaukee, Wis.; telephone: Broadway 2-4722; Cable: Graceline, Milwaukee.

For information on steamship schedules, railroad and truck services, heavy lift facilities, bulk cargo facilities, municipal port tariff, port booklets, general cargo handling, address: Board of Harbor Commissioners, 710 City Hall, Milwaukee, Wis.; telephone Broadway 6-3711; cable: Milharco, Milwaukee.

One Man Pressure Group

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. ALGER. Mr. Speaker, perhaps the answer to problems in Government today can be found in this article by Duke Burgess, a constituent of the Fifth District of Texas, the district I have the honor to represent.

I am fortunate to have constituents like Mr. Burgess. He is not alone in his views. What he must recognize is that our Government will indeed do something about correcting its faults only when the people themselves demand it. I hope other Members enjoy this article as have I.

The article follows:

[From the Freeman for April 1957]

ONE-MAN PRESSURE GROUP

(By Duke Burgess)

Who am I? Just an ordinary American who deeply resents the way our major polital parties seem to be working night and day to plunge us into the depths of slavery. If I have any political leanings, they are to the right—the right of the individual against the might of the group.

Rabble rousers for the left have convinced many that freedom isn't very important. They've sold a sugar-coated dose of poison by advertising a utopia, the purchase price of which is hate, strife, and revolution—only they don't mention the price; they let us believe it's all for free. And the customers are persons who want to believe that they can have something for nothing.

There aren't very many who genuinely believe in individual rights and freedom. Of course, most people will swear by all that's holy that they are pure believers in freedom. Yet when they are pinned down, they believe in freedom for themselves but not for the fellow across the street.

A number of years ago when I first became concerned about individual freedom, I heard of a man who said he would probably die of shock if he ever met a businessman who didn't believe in free enterprise. Another fellow said he'd drop dead if he ever encountered one who actually did believe in it. That amazed me at the time, but now I am convinced he was tragically right.

Too often in recent years I have heard one businessman or another say there ought to be a law to control his competitors, while his competitors were probably busy dreaming up laws to control him. So, what happens? They all end up promoting socialism and dictatorship by running to Government to solve something that could have been solved more quickly and cheaply by a friendly chat across the back fence.

I know a man who owns more than 100 stores, yet he hates Safeway and thinks there should be some drastic law to prevent any company from having as many stores as Safeway has. It doesn't seem to occur to him that to the man with one store—or even 5 or 10—his 100 stores are unreasonable competition. I know another man whose main livelihood is derived from one of the General Motors cars, yet he frequently expresses verbal hatred toward the "big fat greasy capitalists" who ride around in Cadillacs. Obviously, it doesn't occur to him that he and the other folks who ride around in his brand of car would also be classed as fat capitalists by millions of people. To go a step further, anybody who owns a 1925 Maxwell might also be considered a "big fat greasy capitalist" by countless other millions throughout the world.

IS SIZE A SIN?

The idea that size of a business in itself can be sinful is so widely accepted that hearings go on almost continuously in Washington to determine at what point a company becomes a "monopoly." Legislation is always pending which would limit the percentage of business any company could do in its industry.

I think it is one of the most dangerous pieces of legislation ever to be considered by Congress. I spoke of it to a man I know who is legal counsel for a manufacturing concern. His company does more than half of the business in its field, and it does more than half for one reason only—that more than half of the people buying that item prefer that brand. It has lots of competition. To limit the company to 50 percent of the market would not only deprive its owners and employees of a place honestly gained in a free market, but, just as important, it would keep some persons from buying the product they like.

Now you would think that the company's legal counsel would be especially alert to the dangers in such a law. But what do you think he said? He said, "I think that might be a good law. You know it's criminal for a company such as United States Steel to get as big and powerful as it is." When I suggested that to his competitors his own company looked big enough to be outlawed, he failed to see the connection. He thinks of his own company as "small" business, yet its sales run into several million dollars a year—big enough so that many of his smaller competitors think it is a monster and there ought to be a law.

I know a man who used to be in the margarine business and thought it was a crime that butter makers could color their product when he couldn't. Now he owns a dairy and he thinks it's a crime that the margarine makers are now allowed to color it. Not long ago on a train, I was talking with a farmer who was loud in his condemnation of Government spending. When I suggested that a good stopping place might be to withdraw subsidies on wheat, he couldn't see it. Another man I know is a strong advocate of Government price control. He thinks it's wrong for the merchant to make a profit, or for landlords to get enough rent to keep up their properties. But he buys and sells oil leases, and thinks it's just good business to buy a lease for a dollar and sell it for a thousand. Any suggestion to control his margin sends him into a frenzy.

THE FAULT IS OURS

Is it any wonder that the Government reflects such thinking, and tries to break up the A. & P. mainly for the crime of having sold too many groceries to too many people too cheaply? Before we start wondering why we have a government like that, however, maybe we ought to ask ourselves why we are like that.

Let's place the blame for our unholy position today right where it belongs—right in the laps of the people and their myriad pressure groups. Just to name a few of them, there are the business groups, the veterans groups all the way back to the Revolutionary War, the school groups, the labor groups, the social-welfare groups, the political-spoils groups, the church groups, and on and on ad infinitum. One can't put too much blame on the politician—after all, he's just human—and with every kind of a pressure group imaginable under the sun pushing and pulling at him, what can you expect?

The answer? Well, let's start right close to home. What kind of a pressure group do you belong to? What kind of a subsidy, or special privilege, or law to regulate somebody else, are you working for? Be honest with yourself first, and then you can go full steam ahead.

Shortage of School Facilities

EXTENSION OF REMARKS

OF

HON. CLIFFORD P. CASE

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. CASE of New Jersey. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article which appeared in the publication Justice, the monthly magazine

of the International Ladies' Garment Workers Union. It points up very dramatically how severe the shortage of school facilities is, even in my own State of New Jersey. I do hope that the Senate will have an opportunity to vote on a program for Federal aid for public schools this year.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

INTERNATIONAL LADIES' GARMENT WORKERS UNION, AFL–CIO,
New York, N. Y., May 27, 1957.

MEMORANDUM FROM THE OFFICE OF LOUIS STULBERG, EXECUTIVE VICE PRESIDENT

In view of the current interest in the Federal school construction bill, we are enclosing a report from Justice, publication of the International Ladies' Garment Workers' Union, for your information.

LOUIS STULBERG.

UNION HALL TO SCHOOL ROOM—SOUTH RIVER ILGWU GIVES UNION HALL FOR DAYTIME USE BY OVERCROWDED SCHOOL

(By Leon Stein)

Any weekday, in South River, N. J., you can walk into the headquarters of the International Ladies Garment Workers Union at the corner of Main and Thomas and find the place filled not with garment workers, but with studious teen-agers. Some of these youngsters have parents who are members of the ILGWU. But the students are in union headquarters because there's no room for them in their crowded-to-bursting high school.

With a registration of 840, the South River High School has about 200 students more than it can accommodate. It is two small blocks from ILGWU headquarters. For the past school year, ILGWU headquarters has been integrated with the school; every ringing of the bell marking the end of a class period starts one line of students down the block toward Main and Thomas while another marches informally back to the school building.

We visited South River the other day. We saw the young people come down the street, open the door marked ILGWU, climb the flight of stairs over which hangs an ILGWU banner, sit at the same table where later that night ILGWU members sat for a shop meeting. We saw these young people studying and working in a union hall, draped with banners of locals 150 and 157.

We asked one how it felt to study and work in a union hall. "It's clean and comfortable," he said, "and plenty of room." "I've been here before," said another, "before we began to hold classes. My mother's a member." One young lady replied, "What better place could you find for taking social studies and American history?"

South River is not an industrialized community. It lacks big plants with heavy equipment such as may be found in other parts of New Jersey. Its largest single industry, according to Simon Baumrind, local ILGWU representative, is the soft-goods garment industry.

We talked with high school principal Fred Williams, backed into a cubby-hole office in his overcrowded school. What did he expect to do now that the school budget had just been turned down at a special township meeting, we asked?

"We included no request for capital outlay," he said. "The per-pupil cost of running this high school," he continued with the patient weariness of one doing a heroic job, "is $923—the lowest in the county. We will need more teachers next year to meet the rise in our enrollment. My present teachers are bound to the school not by wages but by their fine sense of loyalty and community responsibility. But how will I be able to get additional teachers when any other community in the area will be offering newcomers more than I do?"

We asked Charles A. Eberwein, a member of the local Board of Education, how come. He explained that because the area had little heavy industry, the added tax burden of a higher budget would fall almost entirely on the small-property owners making up the community. "It's not easy to ask people to raise their own bills," he concluded.

Joseph G. Mark, president of South River's leading bank, told how flat rate of State aid fails to solve problem of communities with low income from local taxes. We drew the parallel with Federal educational aid to the States, Mr. Mark is against it.

The ILGWU has lent a helping hand by giving the high school the use of its headquarters, rent free. Vice president Israel Horowitz, general manager of the ILGWU eastern out-of-town department with which locals 150 and 157 are affiliated, says, "This isn't the first time workers have had to take measures to insure proper educational opportunities for their children."

More than a century ago, organized labor led in the fight to establish free schools for the Nation's children. Democracy means equal opportunities for all, and the slogan of free schools was raised with the same vigor as that for higher pay and a shorter work day.

Today, when scientific advances have made education essential for national survival, teachers are underpaid, schools are overcrowded and Congressional leaders, loose on a phone economy binge, are slashing at the Federal school construction program.

Both political parties here pledged themselves to support the concept of Federal aid. H. R. 1, the bill introduced in the House of Representatives by AUGUSTINE KELLEY of Pennsylvania, would authorize $3.6 billion in Federal grants to the States for school construction over a 6-year period. But early this month, the House Committee on Education and Labor cut this figure by more than half, and proposed a Federal school construction outlay of only $1.5 billion. There is still time to act with the wisdom that economy-blinded Congressmen seem to lack. There is still time to try to restore the cuts made on the Kelley proposals. Write to your Congressman at once, and tell him to stop cutting into the future of this Nation.

WHY THE CLASSROOM SHORTAGE GROWS

Enrollment keeps going up

In last 5 years, public school enrollment, number of pupils up to 5½ million.

In the next 5 years, estimated rise, number of pupils up 6 million.

More classrooms a must

Right now: To eliminate overcrowding and substandard schools, 159,000 new classrooms needed.

In the next 5 years, to meet the enrollment rise, 225,000 new classrooms needed. In the next 5 years, to meet current obsolescence and destruction due to fire, flood, etc., 110,000 new classrooms needed.

We must build, in the next 5 years, 494,000 new classrooms.

But the school deficit is growing

Last year, new classrooms totaled 63,000.

At that rate, the 5-year total would be 315,000 .

And the deficit, without Federal aid, would rise to 179,000.

Wilderness Preservation Bill

EXTENSION OF REMARKS
OF
HON. WALLACE F. BENNETT
OF UTAH
IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. BENNETT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a portion of an article by Richard W. Smith, entitled "Why I Am Opposed to the Wilderness Preservation Bill."

It is the West which is primarily affected by this bill, and those of us in the West are deeply concerned about the drive to prevent orderly development of our resources and continued multiple use of our lands, under the guise of protection of the wilderness. We are very much aware of the need for protection of our natural attractions, and that is why we support the fine work being done by the National Park Service, the Forest Service, and the Fish and Wildlife Service. But we resist attempts such as this one to stifle future development of our water resources, our mining resources, our livestock industry, and our lumber industry, through a rigid program which will not serve the best interests of the general public.

There being no objection, the portion of the article was ordered to be printed in the RECORD, as follows:

WHY I AM OPPOSED TO THE WILDERNESS PRESERVATION BILL

(By Richard W. Smith)

I believe in the preservation of carefully selected examples of wilderness areas in as near their primeval conditions as is possible in these days and times. I have for many years been a member of The Wilderness Society; in fact, I believe that I am a charter member, having joined during the first call for members at the invitation of my personal friend, Benton MacKaye, one of the founders.

Yet in spite of this belief, I am opposed to the wilderness preservation bill (S. 1176, H. R. 361, 500, 540, 906, 1960, and 2162 of the 85th Cong.). I believe it would represent a serious step backward from the established principle of management of Federal lands on a multiple-use basis when such uses do not conflict with the major purpose for which the area was established. It would serve to perpetuate a single-purpose use for the areas named in the bill and others to be added, regardless of whether or not they have been wisely chosen and regardless of possible later changes in circumstances. Furthermore, it would place in the hands of Congress and a special council administrative jurisdiction which, under our system of Government, should remain with the executive departments. Certain provisions of the bill would make more difficult the administration of these areas by the Government agencies now charged with their management.

* * * * *

EFFECT OF THE BILL

Let us consider what effect the bill, if passed, would have on the various types of areas to be included in the wilderness preservation system. The national parks

and the scenic national monuments are, or should be, the most superlative examples of our national scenery, essentially in their primeval natural condition and in scenic quality and beauty so outstandingly superior to average examples of their several types as to make them of national importance and to make imperative the preservation of their wilderness character as far as is possible and still have them reasonably accessible for the enjoyment, education, and inspiration of all the people.

The National Park Service is doing a good job in making the inevitable compromises between keeping the parks a complete wilderness by excluding all visitors and throwing them open to commercial development of all types. The Service builds sufficient roads so that the vast majority of people who are not hikers can see and enjoy examples of the scenery, and the necessary accommodations for taking care of them. It builds trails and shelters for the hikers and riders, and it leave large areas untouched for those who want to get away from all signs of human activity.

No mining, oil or gas leasing, or timber cutting is allowed, except for salvage of blown-down and diseased timber. Grazing is allowed to a limited extent, but the Service tries to terminate grazing permits as rapidly as can be done with equity.

The principal effect of the bill, therefore, on the national park system would be to make it more difficult for the Service to administer the areas. Within 10 years the national park officials must decide where roads and accommodations for visitors for present and future needs are to be located, and thereafter they can be built only at these locations. They will certainly have to be clairvoyant as to future needs, which may be as different from today's needs as today's are from those of before the advent of the automobile. Furthermore, although additions of parks and monuments to the wilderness preservation system can be made by either the Congress or the President, only an act of Congress can remove them.

The wilderness and wild areas of the national forests have no roads or other provisions for motorized transportation. Commercial timber cutting and occupancy under special-use permits are not allowed. Location and patent of mining claims and grazing are permitted. Oil and gas mineral leasing are discretionary with the Secretary of Agriculture. Primitive areas, while managed under slightly less restrictive regulations, are much the same and are gradually being reclassified as wilderness and wild areas. The three roadless areas in Minnesota are a compromise between wilderness and commercial values and are managed for maximum protection of wilderness values while permitting necessary utilization of the resources.

The effect of the bill on these areas would be to stop the location and patent of mining claims, the leasing of oil and gas and leasable minerals, and the grazing of livestock. Special provision (2) in section 3 (c) permits the gradual extinction of present grazing permits. Additions to the list of wilderness and wild areas in the national forests may be made by the Secretary of Agriculture, but he cannot, as now, delete any or change their boundaries after due public hearings. Thus, the bill would stop all multiple use of the national forest wilderness and wild areas in the system and make them as inviolate as the national parks, or even more so.

At the present time the Secretary of the Interior, in administering the wildlife refuges and game ranges under the jurisdiction of the Fish and Wildlife Service, may allow under regulations the building of roads, timber cutting, grazing, mining, and oil and gas leasing, when they will not unduly interfere with the purposes for which the area was reserved. Under the bill, all such multiple-purpose uses will stop. Within 10 years the Secretary must designate the areas in which will be built roads, buildings, and other installations for administration and protection of the area, but these areas will not be excluded from the units (as in the national parks). This provision will prevent any future roads or buildings not planned for in the 10-year period.

The Indian reservations are not Federal lands, although in the past they have often been administered as if they were. They are owned by the Indians but held in trust for them by the Federal Government. Contrary to law, most of the roadless and wild areas on Indian reservations were set up by the Indian Service without the consent of the Indian tribes involved. Their legal status, therefore, is very doubtful. As administered in the past, oil and gas leasing and mining, grazing, and timber cutting have been allowed under special permits. All of these uses would be stopped by the bill.

The Naitonal Wilderness Preservation Council which would be set up by the bill would cut across the regularly established methods of government. Composed of the heads of executive agencies and citizens, its duties would be principally to ride herd on the agencies administering the wilderness areas to see that they enforce the provisions of the bill, to promote the addition of new areas to the System, and to act as a lobby before Congress in getting such additions approved. I doubt if such a diverse group could work in harmony to produce the desired results.

WHY I OPPOSE THE BILL

Senator HUMPHREY, in introducing the Wilderness Bill in the 84th Congress, stated that "this proposal is not one for any 'special use' or 'special privilege' legislation." He went on to say: "Existing uses and privileges are respected in this bill, and private rights are protected. It is true that no mining or prospecting will be permitted except where it is already in existence and represents a private right. Otherwise, or perhaps I should say, even so, this is not essentially a reform measure but rather a measure to insure the preservation of a status quo which fortunately includes a great resource of wilderness."

I challenge that statement. A careful reading of the bill will show that its purpose is to prevent all, or almost all, of the multiple uses of these areas, to freeze them in their present condition for a single purpose—their enjoyment by the limited few hardy hikers and campers who can get into them—legislation for the few instead of the multitude. Yet it has been drafted by the same people who called the grazing bills "single-purpose" and "special privilege" legislation.

Indeed, if I were advocating special-privilege legislation for some other purpose—increased grazing privileges, laxer mining laws, or timber cutting in the national parks—I am not sure but that it would be good strategy to support the wilderness preservation bill and then cite it as a precedent for the legislation I were advocating.

Multiple use means various things to various people. To some it means allowing all possible uses of all areas regardless of the conflicts. To others, and I am one, it means administering an area primarily for its highest use and allowing other uses as long as they do not conflict unduly with that highest use. To my mind, that is the way our wilderness areas are now being administred, and the way they should be.

What is wrong with the present administration of our wilderness areas? The best of them are in the National Park System where they are protected from all commercial development of their natural resources. The conservationists' victory in the Echo Park Dam case has shown that it is impossible to get legislation through Congress to build dams that will flood national parks and monuments. Their only threat is that the National Park Service might build roads into some of them to take care of the needs of the increasing hoards of visitors. Each case of this type should be judged on its individual merits, on the basis of the greatest good for the greatest number, and I am not fearful of the outcome.

The administration of the wilderness areas in the national forests and wildlife refuges is based on recognition that their primeval character is their highest use. Other uses are allowed only when they do not unduly interfere with their wilderness character. If any of them have such high wilderness values that this protection is not enough, they can, by special legislation, be transferred to the National Park System.

Conditions change from time to time. What today may be the highest use may not be tomorrow. The administration of Federal lands should be sufficiently flexible to allow for such changing conditions, and we should not freeze the administration so that desirable changes would be difficult if not impossible.

In the face of the growing need for the natural resources of our Federal lands, let us not hastily build up a huge system of millions of acres devoted in perpetuity to preservation of its primeval character for the benefit of the few who can get into it. That is what the wilderness preservation bill would do. Not only would it freeze in perpetuity the areas listed in the bill, but it would make it easy to add other areas and difficult to subtract or change the boundaries of any of them. And it would make it extremely difficult for the agencies to administer them. That is why I am opposed to the wilderness bill.

Statement of Hon. Robert C. Byrd to House Committee on Post Office and Civil Service

EXTENSION OF REMARKS
OF

HON. ROBERT C. BYRD

OF WEST VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 19, 1957

Mr. BYRD. Mr. Speaker, I wish to direct to the attention of our colleagues the statement which I presented to the House Committee on Post Office and Civil Service in connection with the pending hearings to increase the rates of basic compensation of officers and employees in the field service of the Post Office Department.

The statement follows:

STATEMENT OF HON. ROBERT C. BYRD PRESENTED TO THE HOUSE COMMITTEE ON POST OFFICE AND CIVIL SERVICE, JUNE 21, 1957

Mr. Chairman and members of the House Committee on Post Office and Civil Service, I appreciate this opportunity to present my views on the bill, H. R. 3605, which I introduced, "to increase the rates of basic compensation of officers and employees in the field service of the Post Office Department."

This bill is identical with the bill, H. R. 2474, that has been introduced by the distinguished chairman of your Subcommittee on Civil Service. I join with the gentleman from Louisiana [Mr. MORRISON] and other sponsors of this legislation in hope that this legislation can be speedily enacted. I sincerely hope that the time element will not operate to defeat this worthy legislation, and I suggest to the committee that it need not do so. If, as I hope and expect,

the committee proceeds promptly, I am confident that this legislation can and will be enacted. In an effort to make sure that action is taken at this session, I am one of those who signed the discharge petition presented by the gentleman from Louisiana [Mr. THOMPSON]. I hope the action of this committee will obviate the necessity for bringing the matter up under clause 4, rule XXVII.

It was not until just 2 years ago, 1955, that the first step was made by the Congress toward righting the antequated system of wage determination for postal employees. Prior to that, there were many instances in which the pay of postal workers was entirely unrelated to the requirements of their jobs. The 1955 legislation corrected some of those inequities. The 1955 law, however, did not provide postal workers with adequate pay so as to put them on an equal basis with comparable workers in industry.

Since 1939 the postal workers have steadily lost buying power, and that loss has never really been compensated. Postal workers from 1926 to 1945 had no pay increases, and the average postal salary during that period was $2,100. But the postal worker was much better off than he is today.

The National Federation of Post Office Clerks has assembled some extremely interesting figures from the reports of the Bureau of Labor Statistics of the Department of Labor. I am attaching these figures in the form of a table as a part of my remarks. The table showing the average weekly earnings of production workers in manufacturing industries by selected dates indicates that post-office clerks since 1939 have received wage increases amounting to 103.8 percent (barely matching the increase in the consumers price index) while the average increase received by a cross section of all industry amounted to 230 percent. The lowest third of private industry groups has received increases amounting to 188 percent from 1939 to date compared to increases of 103.8 percent for post-office clerks. Under the circumstances, it is not difficult to understand why the postal service is no longer able to attract and retain a sufficient number of efficient people. It could hardly be otherwise. If the Post Office Department is to be in a position to compete for the best available personnel, it must pay a going industrial wage rate, and, in my judgment, that can only be done by providing substantial salary increases at this time. I believe my bill, H. R. 3605, would accomplish that purpose.

The Congress had the pitiable plight of postal workers plainly laid before it in 1954 in the report of the Senate Committee on Post Office and Civil Service, which was made pursuant to Senate Resolution 46. That resolution provided for the appointment of an Advisory Council to explore the various fields of postal operations to see if certain specific conclusions might be reached which would be of help to the Post Office Department. The Committee's report, which embodies the Council's study, offered 28 recommendations for consideration by the Congress as a possible means of eliminating the continuing deficit. One third of these recommendations concerned poor personnel standards—and, mind you, that report was made in 1954. The report points up, among other things, the lack of qualifications standards for each category of positions, the lack of orientation and training courses, poor working conditions, so many substitute and temporary employees, and, above all, an out-of-date classification and pay structure.

In 1955 the postal workers asked for a pay increase of $800; however, the average obtained through Public Law 68 was about $340—less than half of the requested amount. The adjustment to that new salary schedule, if I recall correctly, resulted in a salary increase of about 2 percent.

In the past the Post Office Department enjoyed the pick of the crop in recruiting new employees. Today, however, with postal wages anywhere from 20 percent to 30 percent below the starting wage for unskilled labor in industry, the Post Office Department cannot recruit the most desirable people. Recently, my attention was called to a circular put out by a regional civil service examiner on the hiring of substitute clerks and city letter carriers. The circular lowers the age limit to 18 and 17 and permits recruiting from outside the territory served.

Considering the postal pay facts, it is easy to understand why it is becoming increasingly difficult—in many cases, impossible—for the postal service to attract and retain the necessary skilled, experienced workers to move the steadily growing flood of mail. Inability to compete with private industry for capable workers, the steadily deteriorating employee morale, and the inability to retain trained workers have already made widely felt inroads on good postal service. The situation grows steadily worse as prices climb and postal wages fall further and further behind. A pay increase for postal workers would benefit the public in that it would bring about an even better and more efficient postal service, secure savings in the Post Office Department because trained employees will stay in the postal service; prevent the heavy cost of continuously training new people, and serve as an incentive for able and intelligent people to enter and remain in the postal service.

During the Senate hearings on postal salary legislation, the General Counsel for the Post Office Department, in his testimony voicing the Department's objection to the proposed legislation, did not at any time express the opinion that postal salary increases were not justified. He was careful to avoid saying they were not needed and certainly did not even imply that they had not been earned. The entire burden of his statement had to do with the cost of the legislation rather than the need and justification. He referred to the report of the Director of the Bureau of the Budget which stated that legislation increasing generally the salaries of Federal employees was not within the program of the President. In testifying before the same Senate committee, the representative of the Bureau of the Budget and the new Chairman of the United States Civil Service Commission were likewise careful to avoid stating that increases were not justified or had not been earned. The Chairman of the Commission offered as a solution further study of the question. It seems to me that a continuing body, such as the Civil Service Commission, should be able, at almost a moment's notice, to provide a thorough analysis of the Federal pay structure. With only a single salary increase having been provided in the past 6 years, it it plain to me, and should be to any reasonable person, that the Federal pay structure is out of line. The Civil Service Commission should be among the first to realize that fact. Postal and Federal employees have been patient long enough. To ask them to wait longer while the Civil Service Commission, or someone appointed for that purpose, makes a study of their present unfortunate situation would only serve to compound an injustice. If the Civil Service Commission and the Post Office Department are unable at this late date to demonstrate that the wages currently being paid are equitable, if they are unable to demonstrate that immediate increases are not warranted, if they are unable to demonstrate at this time that salary increases are not necessary, then your committee certainly would be amply justified in assuming that they have no basis for their objection and should proceed promptly to report a salary bill.

In his budget message President Eisenhower stated:

"If our economy is to remain healthy, increases in wages and other labor benefits, negotiated by labor and management, must be reasonably related to improvements in productivity. Such increases are beneficial, for they provide wage earners with greater purchasing power."

In that same message, he made this further statement:

"In the Post Office Department, despite an 11-percent rise in the volume of mail in the 4 fiscal years, 1954 through 1957, the average employment will have increased only a little more than 3 percent."

Thus, by the President's own words, we can quickly determine that there has been a marked increase in productivity and that this increased productivity warrants a wage increase.

To oppose salary increases solely on the grounds of cost, after having granted increases in interest rates, puts the administration in the position of saying that money rather than man is worthy of its hire. I fail to notice any reluctance or hesitancy on the part of the administration to increase interest rates on the grounds of cost, and to me it comes as a shock to find that cost is the only objection to this legislation. I hope the committee will proceed promptly to report out the legislation here under consideration.

Average weekly earnings of production workers in manufacturing industries by selected dates, August 1939 to December 1956

Occupation group	August 1939	July 1951	March 1955	December 1955	December 1956	Percent above August 1939 average
Post-office clerks	$40.38	$78.27	$82.30	$80.77	$82.30	103.80
Agricultural machinery (except tractors)	25.49	71.58	81.19	83.64	84.93	233.18

THEN AND NOW: PERCENTAGE OF WAGE INCREASES, 1939–56

The facts

A comparison of the average weekly wage of post office clerks with the average weekly wage paid in 32 representative private industries as of August 1939 and December 1956.

In 1939 the average weekly wage of a post office clerk was above that of all employees in private industry. By 1956 the average wage of a post office clerk was almost $6 per week below the median wage in priavte industry and almost $21 per week below the wage of half of the representative group.

Atomic Power Development Slowed by Cheaper Sources of Electricity

SPEECH

OF

HON. JAMES E. VAN ZANDT

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. VAN ZANDT. Mr. Speaker, occasionally a newspaper headline, such as the recent report on a United Nations study, will charge the public imagination with ideas about a magic process for the generation of electricity. So much has been done in the past decade toward harnessing the power of the atom and applying this energy to the job of creating electric current that occasionally the public might generally assume that scientists and engineers have perfected a reactor that will provide electricity at practically no cost, and therefore oil and gas and coal will no longer be needed for this purpose.

It is true that we are making great strides in the use of the atom for purposes of construction as well as destruction. The Atomic Energy Commission and those private research organizations and companies working in cooperation with it have made sensational progress in their work, including developments in the reactor field. Unless anyone gets the idea, however, that within a few years a compact atomic energy power kit will be available for every home, I believe that from time to time we should stop and explain what scientists feel are the limitations—at least so far as is foreseeable—in the field of nuclear fission and electricity.

The reactors now under construction and on the planning boards are designed to produce the same type of electricity that we are getting today through the use of conventional fuels. Using the atom instead of coal, oil, or gas, water will be heated to become steam. The steam will turn turbine blades and in turn the generator will spin and electricity will be sent out along the wires—in the same way it is being transmitted today. We will still have transmission lines to substations and eventually to the home. We will still have the maintenance crews who so efficiently see to it that service is maintained even under the most adverse conditions. We will still have our fine electric utility buildings which provide employment for so many technicians, clerks, and other office people.

These are the conditions which will continue to exist even if the dreams of the most optimistic enthusiasts of atomic nuclear power are fulfilled.

What we must not lose sight of now is that, regardless of the pace at which our reactor development program proceeds, we will still be using conventional fuel for the production of electricity for long in the future. Our great utility industry is planning outlays of billions of dollars for the enlargement of present steam generation facilities and the construction of new ones, particularly in areas where there is an abundance of coal. An electric company has already joined with a leading coal producer to construct a pipeline that will carry more than a million tons of coal a year into a generating plant near one of our metropolitan areas. Our railroads look to the transport of coal into electric utility plants as a primary source of revenue for as far into the future as a long-range business program can be planned. Waterways are busy with barge traffic between coal mines and powerplants. Given a fair chance with competitive fuels, the coal industry will more than hold its own against whatever scientific developments are enjoyed in the years ahead.

One of the factors overlooked is the record of the coal and utility industries in increasing coal's efficiency as a boiler fuel. An average of less than 1 pound of coal is now required for the generation of 1 kilowatt-hour of electricity, whereas just 10 years ago an average of 1.31 pounds per kilowatt-hour was required. this figure is constantly being reduced. In addition, important advances in the preparation of coal are making possible the utilization of grades which were previously not considered usable. What this continuous progress in coal preparation and utilization amounts to is that, regardless of how fast we can bring down the cost of producing electricity via the atom, coal's advantage will be continually more difficult to overcome so far as cost is concerned. In emphasis of this situation, I should like to insert in the RECORD an article which appeared in the financial and business section of the New York Herald Tribune on May 12, 1957. I believe that it will help to bring down to earth some of the atomic fantasies that have been painted in the sky by overenthusiastic reporters and the more credulous nontechnical observers. True, we must hope for achievement of the maximum potential in the peacetime use of nuclear fission, yet to permit imagination to run rampant can be detrimental to the position of other fuels on which we and our succeeding generations must depend.

For anyone who questions that coal will continue to be the most inexpensive source of electric energy, even though the cost of atomic power is reduced to the extent anticipated by the Atomic Energy Commission, the Herald Tribune article will be of particular interest.

ATOMIC POWER DEVELOPMENT SLOWED BY CHEAPER SOURCES OF ELECTRICITY—UNITED STATES UTILITIES PROBE USE OF H-BOMB

(By Charles Carroll)

Continuing success in producing cheaper electricity by conventional methods is tending to delay atomic power in most sections of the Nation.

Against the backdrop of private industry's newly announced program to attempt to harness the hyrogen bomb for production of electric power, American Gas & Electric Co. last week displayed what it billed as the world's most efficient power plant.

A group of 11 utilities has joined with General Dynamics Corp. to sponsor a $10 million program to probe the peaceful uses of the H-bomb. But results for the consumer of that undertaking are thought to be a long way off.

NEW APPROACH

The American Gas plant at Philo, Ohio, is a reality. That station, nestled in the rolling hills of central Ohio, represents a new approach in conventional power output, according to Philip Sporn, American Gas president.

The plant turns out power at a supercritical pressure of 4,500 pounds a square inch, almost double the previous high point. It also uses a double reheat of steam, another milestone.

The effect of such developments as Philo is that the day of atomic power, on an economical basis, is many years away, according to best industry guesses.

Experience gained from design and building the Philo plant has led American Gas to start 2 new units—the world's largest power producers, at 450,000 kilowatts each. These giant units will be built in Indiana and West Virginia.

Some critics have contended that the United States is dragging its feet on exploitation of the atom. Industry spokesmen reply: "We need knowledge, not kilowatts."

EUROPE'S SITUATION DIFFERENT

They point to America's plentiful supply of coal, gas, and water power. Europe, with its dwindling supply of conventional fuels, faces quite a different situation.

Nations abroad have been forced to rush into atomic-power generation with the technology now available.

United States utilities feel they can turn their attention to developing efficient atomic plants for the future.

By 1965, coal-hungry Britain will have 6 million kilowatts of nuclear capacity. Its utility industry grows at an annual rate of about 2 million kilowatts.

United States industry traditionally doubles capacity every 10 years, which means that by 1965, between 135 million and 140 million kilowatts will have been added to capacity.

Supporting the go-slow school of thought in the United States circles, Mr. Sporn had this to say about the Philo project:

"There has been some indication of an effort to interpret this challenging development in the economics of power generation as an answer on the part of some members of the power industry to the challenge of atomic power.

"This, obviously, is not only wholly without foundation but, as a matter of fact, does not make very much sense. The electric-power industry not long ago indicated its awareness of the potentialities and its determination to explore and develop atomic energy whenever or just as soon as it can be done with benefit to its consumers.

"But while waiting and helping to bring this about, it would be an act of folly to neglect opportunities for further development of technologies that have done so much to bring the industry to its present flourishing state," Mr. Sporn said.

No one disputes the advantages of atomic power. The availability of uranium promises to make the atom a greater potential source of power for the world than hydraulic and fossil fuels. The United States has coal reserves for many decades, but these reserves obviously will run out some day.

Another big gain offered by atomic power is the lower cost of transportation. A big item in any power bill is the expense of shipping fossil fuels from the source to the place where energy is needed.

Atomic power will be of particular advantage in areas remote from fossil-fuel sources and lacking in potential hydraulic power sites.

No plant on the drawing boards today, industry experts contend, can compete with the cost of producing power in the Ohio Valley, which is about 4 mills a kilowatt-hour. However, they add, there is some promise of nuclear plants competing in the 8-mill areas of the Nation.

Based on the 1957 price levels, the industry looks for atomic plants from 1960 to 1964 that will turn out power in the range of 10 to 13 mills a kilowatt-hour. Present costs of electricity in the most modern coal-fired plants are as low as 4 mills and range up to 9 mills in other areas.

Nuclear plants going into operation between 1965 and 1967 are projected to achieve costs in the range of 9 to 11 mills. Further cuts, from 6 to 7 mills, are seen by 1980.

Postal Worker's Budget Problems

EXTENSION OF REMARKS

OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 3, 1957

Mr. DWYER. Mr. Speaker, one of the major problems still facing this session of Congress is the question of pay increases for our postal workers.

I am sure all of us have received many letters on this question; and I am sure all of us are aware of the dedicated service of our postal workers.

Of all the letters I have received, one stands out. It is from the wife of one of the postal workers in my district—the Sixth Congressional District of New Jersey. This housewife presents the budget problems of her family in a remarkably clear and striking manner; she even itemizes her family's annual budget to show the tight economic squeeze with which they are confronted.

I would like to insert this letter, and the itemized family budget, in the CONGRESSIONAL RECORD. I believe it will provide a valuable grassroots guide for all of us as we prepare to take up the question of pay increase for our postal workers.

The letter follows:

MY DEAR MRS. DWYER: Being the wife of a postal employee, I am writing this letter to you, hoping to convince you of the necessity of giving the postal workers a raise. It is my idea that if you and your colleagues in Washington knew just where and how far the salary of a mailman goes, there would be no hesitation in voting him a substantial increase in pay. Therefore, I am enclosing a copy of our budget upon which our household operates.

In explanation of our background, I would like to say that my husband is a letter carrier in the Westfield Post Office. After 6 years of service his gross salary is $4035 per year plus Christmas overtime pay which has always been less than $150 gross. We have no other income besides this. We have our own home, the down payment for which we saved before our marriage, and on which we have a 30-year GI mortgage. Our first child will be born about the beginning of May.

As you will notice, we have no savings fund, and how we will pay the extra expenses we know we must face, for which there is no provision made in our budget, is a startling concern and worry to us. The only solutions outside of getting a raise are to have my husband hold two jobs, or give up his seniority and seek another job.

In brief, my husband's present salary is not a decent living wage for a family living in this metropolitan area. A sincere evaluation of the budget, with consideration of the many things (and most of them true necessities) that have to be done without, shows this. You and the other Members of Congress control the postal workers' salaries; and it is up to you people whether or not they get a raise; whether or not they take home an adequate pay. I hope you will understand their situation and give them and the pay raise all the support you can.

Yours truly,

MRS. JOHN LAURENT.

SCOTCH PLAINS, N. J.

The Laurent family's annual budget

Item	Allowance		
	Weekly	Monthly	Yearly
Gross pay	$77.60	$336.27	$4,035.20
Federal taxes	9.30	40.30	483.60
Retirement	5.05	21.88	262.60
Life insurance (Mr. Laurent only)	.50	2.17	26.00
Net pay	62.75	271.92	3,263.00
Expenses:			
1. Mortgage (principal, interest, taxes)	19.85	86.02	1,032.20
2. Food:			
Meat and groceries	14.00	60.67	728.00
Breadman	1.00	4.33	52.00
Milkman	1.50	6.50	78.00
3. Car (gas, oil, repairs, license; rely on Christmas overtime for insurance cost)	6.00	26.00	312.00
4. Heat	2.55	11.05	132.60
5. Recreation (including cost of refreshments when entertaining)	2.50	10.83	130.00
6. Clothing (cleaning expenses as well as new clothing)	1.50	6.50	78.00
7. Gifts (Christmas, birthdays, etc.)	1.50	6.50	78.00
8. House maintenance and repairs	1.50	6.50	78.00
9. Medical expenses (doctor, dentist, medicine and costs exceeding hospitalization allowances)	1.50	6.50	78.00
10. Miscellaneous (haircuts, toiletries, etc.)	1.50	6.50	78.00
11. Telephone	1.50	6.50	78.00
12. Gas (for stove and hot water)	1.37	5.95	71.24
13. Hospitalization (letter carrier plan)	1.20	5.20	62.40
14. Church	1.00	4.33	52.00
15. Electricity	1.00	4.33	52.00
16. Newspapers (1 daily, 2 Sunday, 1 weekly)	.60	2.60	31.20
17. Garbage collection	.50	2.17	26.00
18. Water	.43	1.86	22.36
19. Mr. Laurent's spending money (does not smoke or drink)	.25	1.08	13.00
Total (items 1 through 19)	62.75	271.92	3,263.00

NOTE.—On item 3, our car is a 1951 Ford sedan, purchased secondhand in 1954.

Washington Report by Congressman Bruce Alger

EXTENSION OF REMARKS

OF

HON. BRUCE ALGER

OF TEXAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, May 16, 1957

Mr. ALGER. Mr. Speaker, each week I report to my constituents as space allows, a 1-page presentation of the legislative week. The report of June 15 follows:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

The civil rights bill and 10 days' debate will be remembered as a classic struggle between North and South; the latter were outnumbered. With rare exceptions, it was a sectional matter to the Members, regardless of political party. The southerners were dead serious, presenting articulate and carefully documented arguments. Generally, rancor and bitterness were missing, though neither side pulled any punches. Every parliamentary trick was used. Sincerity of be-

lief was evident on both sides. Yet, all were conscious of the heavy political implication. Each party desired credit for championing civil rights, thus appealing to the Negro and racial votes. For a while, southerners felt they could secure the right of jury trial, which traditionally accompanies Federal criminal contempt (except when the Federal Government is a party to the case) but this vote was lost 199 to 167.

The bill provides for a Civil Rights Commission to investigate allegations of loss of voting rights by reason of color, race, religion or national origin; a new Assistant Attorney General and staff; and new court procedure, permitting the bypassing of the State courts and going directly to the Federal courts. Opponents of the bill felt the securing of the jury trial would be a necessary protection while proponents of the bill felt that such an amendment would defeat the intent of the bill since the southern juries might be too lenient.

As my contribution, I addressed the House, analyzing the bill, section by section. Later, I offered an amendment to protect the individual's right to work without union membership, which is our Texas "right to work" law. The chairman ruled the amendment "out of order, not germane to the bill" because the bill dealt with "political rights and not labor rights." As I pondered this, after contesting the ruling, I recalled the amendment to eliminate "religion" from the bill was voted down. Yet, it is a "civil rights" bill. Are not freedom of worship, speech, press, assembly—the amendments to the Constitution—all civil rights? Is not a laboring man's freedom to work, to join a union or not, a civil right to be protected? Are not the laborer and all of us to be privileged to have the right of trial by jury if accused of criminal contempt, which labor already has in Federal contempt cases? Otherwise, the Federal judge, in the name of the Government, is plaintiff, prosecutor and judge who decides guilt and penalty. Any man can go to jail without jury trial. Is this civil liberty? The bill reads "Civil rights, including the right to vote." What are these civil rights, exclusive of the right to vote? We haven't been told. Shouldn't we know, and limit the law's jurisdiction, if we don't define it clearly, what freedom have we left from big Federal Government? All our civil rights are violated until and unless the bill's jurisdiction is clearly defined.

Other criticisms which trouble me, and I so explained to the Members, include these: (1) Help from voluntary and uncompensated personnel may be accepted by the Commission (NAACP or Communist volunteers?). (2) State jurisdiction over voting rights is destroyed, leaving State at mercy of Federal Government. (3) Citizens can be subpenaed to appear at Commission's pleasure, largely at individual's expense, then citizens, taxpayers can be sued by the Federal Government with their own money, and no repayment of cost and inconvenience if innocent—civil rights? Guilty until proven innocent? (4) Religion should not be in bill, thus becoming subject to Federal Government. I am disheartened more than I can say by this prejudiced, emotional, political bill violating States' rights and our civil liberties with both parties at fault.

The Public Works Committee granted a full-dress hearing of Dallas' interest in Garza–Little Elm (Lake Dallas) and Grapevine Lakes, Thursday. City Attorney Henry Kucera, Jim Cotten of Forrest & Cotten, Dallas' consulting engineers, and Hugh Steger of Lakefront Property Owners, each testified and helped to write the language which the committee will include in the final bill. Dallas' concern is that acreage just above the present shoreline not be reconveyed to former owners of the property since it may yet be needed, and Dallas has a financial and contractual interest in this land. The lakefront property owners do not want to be cut off from the water, so they'll have a chance to buy land between them and the water if it is to be sold. The Dallas witnesses did a fine job. The committee chairman (DAVIS, Tennessee) graciously permitted me to lead the proceedings. The rain and floods have shown again the need for conservation (drinking water) and flood protection, so we tried to tell the Dallas and Texas story to the committee.

A healthy exchange of viewpoints occurred during a White House breakfast this week, which I enjoyed. The President is looking the picture of health.

Managing the Nation's Monetary Affairs

EXTENSION OF REMARKS
OF
HON. ELIZABETH KEE
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mrs. KEE. Mr. Speaker, under leave to extend my remarks, I include in the RECORD quotes from a letter to the Washington Post from Prof. Seymour E. Harris and other references to the administration's management of the Nation's money matters:

MANAGING THE NATION'S MONETARY AFFAIRS

Prof. Seymour E. Harris, chairman of the department of economics at Harvard University, is one of the country's leading economists whose opinions command the respectful attention of financiers, bankers, investors and Members of Congress. In a recent letter to the Washington Post, Professor Harris has made a critical appraisal of the management of our monetary and debt problems over the past 5 years. In these 5 years, he states, "Federal expenditures are way above those of any peacetime year. The rate of interest has gone sharply upward.

"In the last year," he points out, "inflation has exceeded that of any peacetime year in the last 25 years and average several times that of nonwar years (exclusive of immediate postwar years) under the Democrats."

Most damaging is his statement: "In no area are the failures (of the Secretary of the Treasury) more evident than in the management of the national debt. The redistribution and the lengthening of maturities were 'musts' for the Treasury. Yet despite the meteoric rise of rates, not since the latter part of the 19th century has the Government security market been in such bad shape as at present. It requires some genius to accomplish this, not when debt is rising as in World War II or in the 1930's, but when debt is falling."

Protest letters reaching my desk from the Fifth District of West Virginia give full support to Professor Harris' views. In one such letter, the writer, who is personally known to me and whose opinions I respect, declares: "The present administration is certainly doing everything that will tend to promote inflation. Prior to 1953, the interest payments on the Federal debt amounted to roughly $3.5 billion and I know that today the interest on practically the same amount of Federal debt is roughly $8 billion. Why? So that the big corporations holding bonds can make the money, while the taxpayers have to pay the bill."

Then this writer goes on to point out: "Ninety-day Treasury bills that used to be bought on the open market, and there was always a good market for them, carried an interest rate of less than 1 percent. Today these same bills are carrying an interest rate of over 3 percent. The high point, I believe, was 3.35 percent. Is there any sound reason why the Government should pay such a rate of interest for short time maturities?"

Knowing only too well how dearly all this is costing the average businessman, the average consumer and the average taxpayer, I most earnestly hope that the present investigation of the Nation's monetary management which has just got under way in the Senate will provide the means to correct a situation which, in the Secretary of the Treasury's own words, if unchecked "could lead to a hair-curling depression."

President Awakens to Supreme Court's Threat

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LOSER. Mr. Speaker, leave having been obtained, I desire to place in the CONGRESSIONAL RECORD an editorial of great interest to me, and one which directs itself to the Congress of the United States.

It indicates that the President has at long last awakened to the fact that the Court has been invading the legislative domain, thereby making a shambles of the separation-of-powers provision of the Constitution.

To open the files of any law-enforcement agency to the defendant in a criminal case, State or Federal, is preposterous. It places the prosecution at the mercy of the accused. To require Mr. J. Edgar Hoover's FBI to open its files to accused subversives is a mockery.

I commend the reading of this fine editorial, appearing in the Nashville (Tenn.) Banner, of June 22, 1957, to my colleagues in the House. It follows:

PRESIDENT AWAKENS TO SUPREME COURT'S THREAT

According to a consistently reliable and highly respected reporter, President Eisenhower has waked up to the fact that the Supreme Court is playing hob with the morale of the American people and their respect for the Federal courts.

Ruth Montgomery, of the International News Service, one of the Nation's top Washington correspondents, reports the President has told close friends that he has "never been as mad in my life" as he is at the recent Supreme Court decision opening secret FBI files to accused subversive and other defendants.

It is the conviction of this newspaper that the Presidential anger should have exploded a long time ago.

Friends said they had "never seen Ike so worked up over anything."

This newspaper regrets that the President didn't "get worked up" before he appointed 3 of the 7 Justices, including Chief Justice Earl Warren, who concurred in the shattering decision of last Monday.

Apparently the Chief Executive of the United States is now aware that the Supreme Court, for whose membership he is so far responsible in part, is—

Invading the legislative domain of the Congress, beyond the intent of that independent branch of the Government.

Wrecking the confidence of the people in the Federal courts.

Destroying recognized constitutional processes.

Undermining the national security by killing the effectiveness of the investigative powers of the world's greatest police agency, the Federal Bureau of Investigation.

And frustrating that greater segment of the American bar whose integrity is unquestioned and whose leaders repeatedly have sounded the warning which Mr. Eisenhower seems at long last to have heard.

What is he going to do about it? He is quoted as saying that the recent decision opening secret files of the FBI made a shambles of law enforcement and gave Moscow the greatest break it has had in years.

If that be so, then let him proceed immediately with his reported plan to have the Justice Department seek new legislation to nullify the Court's ruling and ask the Justices themselves to reargue the question when they reconvene this fall.

The Banner entertains little or no hope for the latter, but the Members of Congress should not allow that ruling to stand. They have the legislative power at hand. It should be exercised immediately to correct not only this abominable decision, but to make certain that the Supreme Court is removed from the legislative field which it has so arrogantly usurped.

Thank God, it is from the South that the ever-growing chorus of warnings has come against the creeping tyranny of the High Tribunal.

Southerners may be grateful too that it was a southerner, Justice Tom Clark of Texas, who spoke out firmly and bravely in a dissenting opinion on the majority's disastrous rule. The Banner has never been an extravagant admirer of Mr. Justice Clark, but it commends his forthright position as eminently sound.

The Congress of the United States should stop its fruitless bickering and jockeying today and redefine the function of the Supreme Court gone wild with powers it was never meant to have under the United States Constitution.

Every Representative, every Senator should pledge his utmost energies and talent to welding a legislative ring of steel about the sacred areas of State and individual liberties subject to ruthless invasion by a headstrong band of zealous men.

Support for Bow

EXTENSION OF REMARKS
OF
HON. J. EDGAR CHENOWETH
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. CHENOWETH. Mr. Speaker, the efforts of my colleague from Ohio, FRANK T. BOW, for the past several years to restore their constitutional rights to our servicemen abroad have become known throughout our land. In recognition of his efforts I ask under unanimous consent that there be printed in the Appendix to the RECORD an editorial taken from the Colorado Springs Gazette Telegraph of Thursday, June 13, 1957.

The editorial is an excellent analysis of the whole subject of status of forces agreements and is as follows:

SUPPORT FOR BOW

Congressman Frank T. Bow of Ohio has taken positive steps to remove a current evil from our sprawling globalocracy. He has introduced House Joint Resolution 16 which, if approved, would spell an end to the Status of Forces Treaty, as presently enforced.

Remember the case of Sergeant Girard, who was turned over to a Japanese Court for trial? This American soldier, in an act performed while on duty, inadvertently caused the fatal wounding of a Japanese woman who was trespassing on an American firing range in Japan. There was clear and certain evidence that the soldier was on duty. There was additional evidence that the woman was in the wrong.

The incident is regrettable in the extreme. No one wishes for any unnecessary killing. Yet, the sergeant, instead of being tried in a military court as the Articles of War provide, has been turned over to Japanese legal authorities and will be compelled to suffer punishment according to their lights.

This surrendering of an American national to a foreign tribunal occurs under the Status of Forces Treaty. It is a most heinous offense to American conscience and is deserving of stout criticism from all good Americans. Yet, it will occur again and again so long as America is a party to this same treaty.

How there can be any opposition to the elimination of such parts of the treaty which compel this action, is hard to understand. Yet, it is apparent that from the President and his advisers comes a steady stream of support for surrenders of this type.

The situation as it presently pertains points to a whole series of fallacies in our current foreign policy.

To begin with, we find ourselves as a Nation, operating in total disregard for American convictions as spelled out by our Founding Fathers. They had it that Americans of right ought to mind their own business and stay out of foreign entanglements. Now, we find this Nation with troops of varying strengths stationed in 79 countries of the world, aside from the United States. The beginning of the evil is at this point.

And we have it on good authority that many of the top military men decry this policy, that they are dedicated to a defense of our Nation, rather than to a defense of the whole world. These military men confide that any extension of our troops beyond the point where they are protecting our own geographical boundaries, is actually an extension which is dangerous to our ability to defend ourselves. We have spread ourselves thin where it matters a great deal that we are not spread thin, and we are thickly stationed where it matters a great deal that we let the native population govern themselves and protect themselves.

Having committed this first and original departure from sound doctrine, the Status of Forces Treaty is a natural extension of the basic error. Under this treaty, the rights of Americans stationed in foreign places are completely abrogated. This second step was created as a sop to foreign potentates on the assumption that they would love troops quartered among them if only we permitted them to sit in judgment on crimes committed by these troops.

This assumption is false and is proving false every day. In point of fact, no nation can maintain its pride and self-respect if foreign troops, whatever their purpose, are stationed in their midst. This was one of the grievances enumerated in the Declaration of Independence as providing a cause célèbre for the separation of the United States from Britain.

In colonial times, we resented the quartering of British troops among us, even though we were ostensibly British colonies. How much more the native populations of other places must resent American occupation forces. The Status of Forces Treaty, while aimed at pacification, does nothing more than to make Americans less proud of being Americans, less certain of their own rights, less convinced that their own Nation, to which they have given their loyalty, will in fact be loyal to them.

A third point also comes into sight for review. Many of these troops where they are by virtue of a draft law which has compelled a type of involuntary servitude in a foreign place, irrespective of the wishes of the individual. When this fact is added to the basic error of foreign occupation, combined with the Status of Forces Treaty itself, then we see a whole archipelago of error mounting to an apex of evil.

It is certainly time for the Status of Forces Treaty to be abandoned or at least amended so that American boys are not placed in legal jeopardy by virtue of their involuntary servitude in strange places where they would never go of their own volition.

We congratulate Congressman Bow and hope that he receives the support for his resolution which is so richly deserved.

The Taft-Hartley Act

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AYRES
OF OHIO
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. AYRES. Mr. Speaker, I wish to commend to the reading of my colleagues the following article on the Taft-Hartley law by Robert Hoyt, of the Akron Beacon Journal:

WHAT T–H DIDN'T—IN 10 YEARS TAFT-HARTLEY NEITHER WRECKED UNIONS NOR CURED ALL

(By Robert E. Hoyt)

WASHINGTON.—Like many another legal brainchild, the Taft-Hartley Act turned out to be less a prodigy and less a fiend than either the parents or the neighbors predicted.

It become law 10 years ago today when Republicans and Southern Democrats in the Senate voted 68 to 25 to override the veto of President Truman. That was six votes more than the necessary two-thirds.

The vote came after filibusters by Senator MORSE, then a Republican, and Democratic Senator Glen Taylor which kept the Senate in session for more than 30 hours straight.

If Taft-Hartley has been, as labor and its supporters predicted, a "slave labor law," the manacles have been mink-lined.

Some labor spokesmen, in fact, credit T–H with some unintended assistance in strengthening the backbone of the rank and file and in bringing the old AFL to the conviction that political action was necessary.

On the other hand, the law has fallen flat on its face in many ways, among them key provisions aimed at ending the closed shop, featherbedding and political activity.

People concerned about the growing power of unions 10 years ago saw Taft-Hartley as a cure-all pill.

But even after 10 years there are large areas in which no one quite knows what the act allows or forbids. Many issues are still being batted around in the courts.

The late Senator Taft thought he had "settled" political activity. But the Supreme Court just this year sent back for trial in a lower court the question of whether the United Auto Workers "educational" expenses violated the law's section on campaign contributions.

The law says that unions may not use dues money for political contributions or expenditures. The UAW and other unions have spent considerable sums in the name of voter education. The courts will decide whether or not it's legal.

This ban on campaign contributions is cited as one reason the AFL abandoned its hands-off attitude toward politics and founded the Labor League for Political Education.

Another T-H prohibition was the closed shop, which requires that a man belong to the union before he is considered for the job. The law allowed the "union shop" which requires that a man join the union after he is hired.

The provision on closed shop has been totally ignored by both unions and management in many sections of the economy where the so-called hiring hall is traditional. This is especially true in the construction industry.

One reason for either the closed or union shop is to guarantee the future existence of the union. Many Taft-Hartley backers saw this union device as something foisted on the members by "power-hungry labor leaders."

The law said the National Labor Relations Board had to hold an election before a union shop could be granted.

It was generally assumed that the secret ballot would give union members the chance they'd been waiting for to reject union shop.

In 4 years of elections, the unions won 97 percent of all union-shop decisions.

The desire of members for union security was so obvious that the Taft-Hartley Act was changed—the only change, incidentally—in October 1951.

Here again Taft-Hartley may have given labor an inadvertent assist. There was a spurt in union-shop agreements after the law went into effect.

Unions and their members felt it necessary to prove to management that they really wanted union security. And many were merely digging in, expecting that Taft-Hartley would bring a rash of union-busting attempts.

Featherbedding was another of the things Taft-Hartley was to end. This was known as the (James Caesar) Petrillo provision, designed to end the American Federation of Musicians insistence on hiring nonplaying union standbys.

But in test cases the law has failed to bar the practice.

There was the "Lewis provision" too—the 80-day injunction to provide a cooling-off period before a strike considered a national emergency.

Labor claims the clause has had little effect except as an irritant. It cites, among other things, the comment of Cyrus Ching, former Director of the Federal Conciliation and Mediation Service: The 80-day clause "tends to delay rather than facilitate settlement of a dispute."

Whether or not the provision curbed the Mine Workers' John L. Lewis is a problem that can't be considered without taking into account the losses of coal to gas in the home-heating market.

Proponents of Taft-Hartley had fond hopes too for ending secondary boycotts and jurisdictional disputes. The secondary boycott provision in the law satisfies neither management nor labor, but that doesn't make it good.

Boycotts have been used by one union in retaliation against another, holding an innocent company in a vise. Neither the AFL-CIO nor the chamber of commerce condones such practice, but T-H hasn't stopped it.

The "hot cargo" clause—a part of the secondary boycott picture—still is in the courts. The teamsters' union has used it to whip into line nonunion trucking outfits and to support other striking unions. It is a contract clause which says teamsters do not have to handle "hot cargo"—goods in any way contaminated by a union dispute. The issue probably will be in the Supreme Court within the year.

One other T-H provision demands notice—the non-Communist affidavit. The law provides that labor leaders must sign a statement saying they are not Communists if their union is to be allowed to use the machinery of the NLRB.

Labor itself says that known Communists have signed the affidavits. Courts have held that the union is entitled to use the NLRB whether or not the affidavit was false.

Labor says Taft-Hartley in 10 years has arrested the development of unionism in the country by penalizing not the big unions but the smaller ones operating in new industries or new areas.

Chief complaint of labor is against the free-speech provision which gives an employer a chance to try to sell nonunionism to his workers. The section allowing State right-to-work laws is a strong second objection.

Management, through the chamber of commerce and other groups, says Taft-Hartley in many ways did not go far enough, especially on outlawing compulsory unionism, secondary boycotts, and featherbedding.

Neither side is willing to grant the other an inch.

That's one of the reasons Congress has not had the intestinal fortitude to open up the Pandora's box and try to amend Taft-Hartley. Even Senator Taft proposed a number of revisions.

At the time of the historic debate on the veto 10 years ago, critics of Taft-Hartley complained that the law would upset almost every aspect of labor-management relations.

In one of the closing speeches, Senator GEORGE of Georgia as much as admitted this was so, but he cited the fact that every attempt to change the old Wagner Act over a dozen years had been frustrated.

This, he said, is what happens when the hands of the legislative body are tied.

History is repeating itself in this respect. The inflexibility of Congress has subjected Taft-Hartley to the same fate for 10 years.

Statement by Local Union 1245, IBEW, AFL-CIO, Endorsing Trinity River Partnership Plan

---

EXTENSION OF REMARKS
OF
HON. HUBERT B. SCUDDER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. SCUDDER. Mr. Speaker, under leave to extend my own remarks I desire to include a letter dated June 17, 1957, from Local Union 1245, International Brotherhood of Electrical Workers, AFL–CIO, transmitting a statement endorsing the Trinity River partnership plan.

This is an outstanding statement in behalf of some 14,500 electrical workers in northern California, who want no part of Federal control over the development of hydroelectric power resources—especially when private industry is capable of doing the job.

I commend this statement to the attention of my colleagues. It is important as an expression of opinion by a group of American workers. It is also a strong public viewpoint by people directly affected by the Trinity River project.

The letter and statement from IBEW Local Union 1245, endorsing H. R. 6997 which would provide for joint development of the Trinity River project, are as follows:

INTERNATIONAL BROTHERHOOD OF ELECTRICAL WORKERS, AFL–CIO,
LOCAL UNION 1245,
Oakland, Calif., June 17, 1957.

Hon. HUBERT B. SCUDDER,
House Office Building,
Washington, D. C.

MY DEAR CONGRESSMAN: I have been instructed by my organization, Local 1245 of the International Brotherhood of Electrical Workers, AFL–CIO, to communicate with you in order to present the views of our membership with respect to the partnership plan as proposed in connection with the Trinity River project.

A prepared statement is enclosed herewith. We would be most happy to hear from you regarding your views in this matter.

Very truly yours,

RONALD T. WEAKLEY,
Business Manager.

TRINITY RIVER PROJECT

Our union, Local 1245 of the International Brotherhood of Electrical Workers, AFL–CIO, represents some 14,500 employees of the Pacific Gas & Electric Co.

We wish to bring to your attention our views on the "partnership plan" as recommended by Interior Secretary Seaton for consideration by the Congress in the matter of the Trinity River project.

Our members, who make their living by serving the public, work for the P. G. & E. which is a regulated private industrial enterprise. The employees work under collective bargaining agreements covering wages, working conditions and other employee benefits.

This union was chosen by the employees to represent them as a result of procedures afforded by Federal law and a peaceful and harmonious relationship has been developed over a number of years.

The employee, the employer, and the general public have benefited by a legal and responsible application of the principles of sound industrial relations.

We are seriously concerned over the possibility of the Federal Government building and operating the power facilities involved in the Trinity River project. Should the Government build the generating plants, transmit and market the power developed on the Trinity, our members will be adversely affected.

Public power advocates seem to ignore the fact that the economic welfare of thousands of utility workers is affected each time governmental agencies invade the private power industry.

Public agencies generally do not allow and usually prohibit the right of free organization for collective bargaining and the right of contract. We have seen group after group of utility workers shunted into publicly operated power districts without any consideration given to decent wages, working conditions, and safety regulations.

Private development of the power facilities of the Trinity project will provide additional employment for our members and will serve to maintain adequate wages and conditions through collective bargaining. Federal development and power marketing will, our experience shows, lead to expansion of the unfair treatment of utility workers through loss of rights enjoyed by the rest of labor.

One example is the State of Nebraska where the private power industry has been practically run out of business and with it,

legal collective bargaining between utility workers and management.

Should the Government extend its invasion into the power business, some 250,000 kilowatts would be made available to so-called preference customers and the distribution thereof would favor a comparatively few California power customers at the expense of the United States taxpayers, of which we are a definite part.

As to our union, we find that few people take time to consider the welfare of utility workers and their families when the issue of public power is debated.

The policy of our local union in the Trinity controversy is set forth in the preamble of our agreements with the Pacific Gas & Electric Co., and we quote:

"TITLE 1. PREAMBLE

"1.1 The parties recognize that the free private enterprise system in the United States has produced the highest standard of living anywhere in the world, and they hereby confirm their adherence to, and belief in, that system. In accordance with such belief the parties support the principle of private ownership of public utilities under enlightened regulation by public authority. Further, the parties support the principles of collective bargaining and self-organization."

The policy of our fellow workers in the IBEW in northern California, representing construction, manufacturing, and utility workers from Salinas to Eureka was set forth in a resolution adopted by the northern joint executive conference of the IBEW on May 11, 1957.

It called for the adoption of the partnership plan through passage of H. R. 6997 regarding the Trinity project.

Our parent body, the International Brotherhood of Electrical Workers, AFL–CIO, at its 1950 convention issued a policy statement on the matter of public versus private power, and we quote:

"The IBEW does not raise its voice on the subject of public power in behalf of private companies or their management. We have met the abuses of power by these companies in the past and have achieved substantial correction. Today 90 percent of the workers in the privately owned electric light and power industry are covered by union contracts and the IBEW itself represent more than 75 percent of the organized employees in this industry.

"The IBEW raises its voice on the subject of public power at this time in the interest of organized labor in the electric light and power industry. The subtle transformation of the Government program from the proper purposes of providing power as a byproduct of the initial program and of furnishing a yardstick for private utilities has reached the state where it threatens free enterprise in this industry. We support free enterprise not only in our capacity as citizens of the United States but also in our capacity as representatives of organized labor. The increase in the area of Government and quasi-Government ownership operation in utilities necessarily carries with it a decrease in the area of freedom for labor as well as other groups.

"Labor cherishes its right to bargain collectively for wages, hours, and working conditions. It fights the abrogation of such rights whether in the form of antilabor laws or in the more complicated form of transferring their status to employee of the Government without any rights to bargain collectively or otherwise exercise their economic strength."

The foregoing policy statement has not been revised or rescinded since 1950.

The charge of giveaway or lumping the partnership principle as applied to the Trinity project with such controversies as Dixon-Yates and Hells Canyon is without foundation when the factual details of Pacific's project, as referred to in H. R. 6997 (Trinity Joint Development Act of 1957) are closely examined.

We share in the desire to safeguard the welfare of the general public through flood control, wildlife protection, irrigation water, reasonable power rates, and reasonable taxation. We also believe that these safeguards are present in the partnership proposal as recommended to Congress.

We respectfully urge that you give consideration to our views and that you may act favorably on the partnership recommendation as contained in H. R. 6997 entitled "Trinity Joint Development Act of 1957."

RONALD T. WEAKLEY,
Business Manager, Local Union 1245, IBEW, AFL–CIO, Oakland, Calif.

Practices in the Automotive Field

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. MULTER. Mr. Speaker, since the House Interstate and Foreign Commerce Committee is again considering legislation on this subject, I wish to call to the attention of our colleagues my statement made to that committee on May 2, 1956, as follows:

STATEMENT OF HON. ABRAHAM J. MULTER, A REPRESENTATIVE IN CONGRESS FROM THE STATE OF NEW YORK

Mr. MULTER. Mr. Chairman, gentlemen, it is always a privilege for me to appear before your committee. I want to take a moment to thank you for the opportunity you have allowed me of coming here.

Mr. KLEIN. Do you propose to read this entire statement?

Mr. MULTER. I suggest that we put the statement in the record, Mr. Chairman, if it is agreeable to the committee, and then I can in much less time summarize it, and in that way avoid much repetition of evidence that you have already received.

Mr. KLEIN. Very good.

(The information referred to follows:)

"STATEMENT OF HON. ABRAHAM J. MULTER, REPRESENTATIVE IN CONGRESS FROM THE 13TH DISTRICT OF NEW YORK

"Mr. Chairman and distinguished members of the committee, I appreciate the opportunity of appearing before your committee to present my views concerning proposed legislation to eliminate certain unfair practices in the automotive industry. I am aware of the long, untiring efforts of the committee to protect the public interest and to stave off the serious consequences threatening our economy because of certain unfair marketing practices in the industry.

"The public interest

"In commenting on some of the existing unfair practices in the automobile industry, I should like to specificate one underlying fact, namely, that in the automobile market both the consumer and the dealer have little choice in the selection of the manufacturer. As you well know, the year 1955 saw the disappearance of one more private automobile manufacturer—Kaiser-Willys. Today only 5 sources remain—General Motors, Ford, Chrysler, American Motors, and Studebaker-Packard. It is an anomalism that as the market has grown, the number of companies in the market has lessened. The public was only amused upon reading in the press that the General Motors Corp., the biggest manufacturer in this country, which at the same time is the country's largest automobile manufacturer, in testifying before the Senate Antitrust and Monopoly Subcommittee in December 1955, said that it 'is the servant of the dealer.' It is public knowledge that dealers have been forced into serflike submission to the manufacturer. The dealer's plight is manifest from the figures, such as those submitted by the General Motors Corp. last December, showing that the 1953 return on net worth for dealers averaged 14.40 percent, and was reduced in 1954 to 9.4 percent. Comparable figures show that the corporation earned 20 percent in 1953 after taxes and bonuses, and almost 24 percent in 1954.

"Manufacturer-dealer relations

"Although the committee in the current hearings has directed its study to the subjects of territorial security for automobile dealers, bootlegging, and so-called phantom-freight, there are also other unfair marketing practices in the industry that must be appraised in evaluating the position of the industry in our economy. With the committee's permission, I should like to comment on some of these practices.

"A substantial part of the problems which beset the industry stem from the dealer agreement which is so drawn that manufacturers may grant or withdraw the franchise at will. I am in favor of the principle in the Steed bill, H. R. 6544, which would validate manufacturer-dealer contracts establishing exclusive representation by dealers for fixed periods of time. Heretofore, such contracts have been at the will of the manufacturer. In my opinion, manufacturers have wielded their whip of economic power too long, and if we are to avoid repetition of the picture of the thirties, and if we are to meet our obligation to the public, legislation must be enacted now to protect our economic structure.

"As long as manufacturers want to have dealers under contract to handle only particular makes of cars, the manufacturers should be required to sell only to such dealers and to prohibit bootlegging. Manufacturers should be required to cancel the franchise of bootleggers. I wholeheartedly agree in this proposal which is covered in the Williams bill, H. R. 2688. I have incorporated similar views in H. R. 10314, which I introduced on March 29, 1956.

"As a result of the recent congressional investigations, we have observed newspaper reports that the manufacturer's cancellation privilege will be superseded by a provision requiring the cancellation to be for cause. But will the manufacturer be compelled to define the term "cause"? There is no uniformity among the court decisions construing automobile franchise agreements.

"Incidentally, some State legislatures are making strides in revoking the manufacturer's arbitrary cancellation privilege. Just a few days ago in my own State of New York, Governor Harriman on April 20, 1956, signed a bill amending the New York general business law, for the purpose of prohibiting automobile manufacturers from arbitrarily revoking the franchises of dealers in New York State. Under the law effective October 1, 1956, auto manufacturers are required to register with the secretary of state and are prohibited from terminating a dealer contract except for cause. A maximum penalty of $1,000 fine is imposed for each violation. We should not be surprised to learn that automobile manufacturers opposed the legislation, claiming that "the public interest is not sufficiently affected." In his statement upon signing the bill, Governor Harriman announced it was his firm conviction that "it is very much in the interest of the people that small- and medium-sized business should be protected against unfair exercise of economic power."

"In view of the peculiar nature of the automotive industry, coupled with the clear

proof that previous congressional admonishments have been flouted, it is the duty of the Congress to enunciate a public policy that will protect the consumer interests in their relations with the several economic giants who not only produce this article of necessity, but also control its distribution, as well as the price thereof.

"Advertising abuses

"The dealers must pay for advertising literature they do not want and would not order. It is sent in to the dealer in such quantities as the manufacturer thinks he should distribute, and the dealer is billed and must pay for that literature even though he throws most of it into the wastebasket. The dealers must pay a fixed sum per car to the manufacturers toward the cost of advertising. The dealer's name and address is never part of that advertising, only the product is mentioned. This policy would cease if the responsibility for exaggerated and fraudulent advertising were laid at the door of the manufacturer and if the manufacturer were prohibited from requiring dealer contributions toward the cost of such advertising.

"Only recently, as a result of testimony adduced at congressional hearings, the Federal Trade Commission filed charges against the General Motors Corp. for false and deceptive advertising. Independent manufacturers have reported that General Motors' use of the words 'genuine Chevrolet' to describe parts used in making repairs is diverting business from the independent manufacturers and small repair shops. The parts manufacturers contend that the items, distributed and warranted by General Motors, actually are bought by General Motors from the independent manufacturers. The implication is that the 'genuine Chevrolet' parts are superior to the same parts sold by competitors without such label.

"Deliveries without orders

"Manufacturers require dealers to file each month several reports showing sales and inventory volumes. The manufacturer bases his deliveries to the dealer upon these figures. Whether or not the dealer considers this quota salable is immaterial.

"Moreover, the dealer has no control over the various built-in accessories that are billed as extras. For instance, the automobile is listed as equipped with vacuum windshield wipers, but is later shipped in with an electric wiper billed as an 'extra.' Every car comes with a hole in the dashboard for a cigarette lighter, but the lighter is an extra.

"It is the manufacturer, also, who determines the stock of parts and accessories that the dealer must purchase from the automobile manufacturer. The dealer could purchase these same parts and accessories directly from the parts manufacturer and much cheaper, too.

"The only way to abolish this practice is to prohibit lump-sum bills and to require of the manufacturer and of the dealer a complete itemization of all charges. No amount should be collectible by either for extras unless ordered in writing by the buyer.

"Old cars sold as new

"The need to eliminate the unfair practice on the part of some dealers in selling as new automobiles those which have been towed or driven from the factory or used as demonstrators has long been recognized but completely ignored. Under legislation I have introduced, it would be a violation for any manufacturer or dealer to replace or disconnect the speedometer on an automobile or to change its reading in a manner to mislead the public as to the mileage, condition, or usage of the automobile.

"The foregoing, as well as the other unfair automobile marketing practices commented upon throughout this statement, are dealt with in the omnibus bill, H. R. 10310, which I introduced on March 29, 1956, to provide for the enactment of a general motor vehicle law.

"Automobile financing

"Not to be overlooked in any compilation of unfair automobile marketing practices are the reports of substantial overcharges under the 'package' finance deals. Dealers complain, too, they are forced to grant 'wild credit' to consumers in order to satisfy quotas in the manufacturer's race for sales.

"Insofar as General Motors' installment sales are concerned, it should be noted that if the purchaser defaults, the manufacturer has recourse against the dealer. Contemplate, if you will, the situation of the small-business man—the average dealer with an investment of his lifesavings in showroom, service station, autos, and parts. Should the market fall, upon whom would the loss rest? Upon the dealers themselves, because the manufacturers have so directed. If my memory serves me, the total amount of installment paper on all consumer items last year was $26 billion—of which $14 billion represented the automobile business. Thus far in 1956 auto installment loans extended in January and February totaled $2.5 billion—an increase of 14 percent from last year. Yet, on the other hand, production and sales are running about 26 percent below a year ago.

"Within the past several days three large finance companies have announced increases in auto-loan costs which will be passed on to the dealers. Dealers, in turn, must either absorb the costs or pass the increase on to their consumers. The consequences is that the squeeze is continually put on the dealers. General Motors defies the country to compel it to accept any shrinkage in its predetermined profits. Incidentally, GMAC has not yet made any statement on its installment costs. It, of course, is the largest auto finance company. As a group, the finance companies account for 55 percent of the auto installment credit volume. The other 36 percent is handled by the banks which have also recently raised rates. Is it not fair to assume that General Motors will also make such an additional charge?

"Cheating our soldiers

"At this point I should like to touch on a matter that involves the now well-known adage: 'What is good for General Motors is good for the country.' You will see in a moment that we can now change that to 'What is wrong for the insurance companies is not wrong for the automobile companies.'

"On September 8, 1955, I wrote to Secretary of Defense Wilson, calling his attention to a scheme by which armed service personnel returning to this country are being duped and mulcted of thousands of dollars on connection with the sale to them of new automobiles. I indicated that the matter had been called to the attention of the automobile manufacturers who have failed to do anything to prevent these practices. I further stated that the Secretary of Defense need not make any determination of whether these practices are fraudulent or merely unethical, but urged him to direct all commanding officers to alert their men to these practices to afford them an opportunity to protect themselves accordingly. My letter of September 8, 1955, is exhibit A, annexed. I received an answer, dated September 23, 1955, a copy of which is annexed as exhibit B, in which the Department of Defense refused to take any action. I replied by letter of September 28, 1955, a copy of which is annexed as exhibit C, again indicating the need for departmental action. No answer has been received to my last letter.

"Now let us see what happened when the Department's attention was called to similar fraudulent practices by insurance salesmen. No General Motors was involved. An investigation was instituted which confirmed the charges. A complete set of regulations was promulgated by the Defense Department including a directive to commanders of all bases, making them responsible for protection of the men against such frauds. Another reason for different treatment of the phony automobile salesmen is that the fraudulent business is so profitable that the automobile manufacturers have sent their own "direct" representatives overseas to grab this business.

"Manufacturing warranties

"What is the situation today? The consumer may need a new automobile, but he dreads the purchase. Breaking in the car means running back and forth to the dealer to correct inherent mechanical failures that are uncovered long after the guaranty period has expired. The attitude of the consumer is aptly defined in two unsolicited letters I received, which were printed in the CONGRESSIONAL RECORD—one appearing in the January 31, 1956, issue (pp. A993–A995); the other in the February 9, 1956, issue (p. A1331). The dealer, on the other hand, is called upon as a regular procedure to comply with, not his warranty, but a warranty the company requires him to make. What has been the dealer's redress? The answer the dealer receives from the manufacturer is to step up or maintain his sales volume—even if that means come-on advertising, bootlegging, price packing, and any other unfair-trade practice. Even outright fraud is countenanced by the manufacturer.

"Many an inexplicable accident is caused by defective vehicles. The manufacturer upon whom the blame should rest passes the responsibility on to the dealers who cannot assume nor begin to fulfill the obligation. The automobile manufacturer today makes only a spot check of 1 out of every 10 or 20 automobiles that leave the assembly line. The company's warranties are plainly worthless, and the dealer upon whom the responsibility falls gives a minimum of service until the guaranty period expires; after which, he charges the consumer for 'repairs.'

"In testifying last December before a Senate committee a spokesman on behalf of [illegible] of the 6 manufacturers in the country stated: 'The manufacturer assumes the greater risks and bears the ultimate responsibility to the customer.' Should we not make certain, then, that this responsibility is firmly fixed? My bill, H. R. 10309, prohibits the interstate sale, transportation, or use of a new automobile unless accompanied by a certificate of fitness from the manufacturer or assembler, showing that the automobile has been inspected and found in good working order and, further, that it has been road-tested and found in good operating condition.

"Manufacturer reaction to these hearings

"On the heels of the disclosure of so many unfair practices in the industry, we now see by the papers that the manufacturer pretends he is reforming. General Motors Corp. has predicted 'the beginning of a new era—an era of good will in relations with its dealers. The Ford Motor Co. announced dealer-management talks to show dealers how they will gain by joining the fight against bootlegging. In so doing Ford said this was the first time dealers have been called to discuss the bootlegging problem with top management. I say to you, gentlemen of the committee, that such overtures are too late.

"The public confidence can only be restored by the affirmative action of this committee. Let us recall that a similar false contrition permeated the atmosphere in 1938 after the Congress enacted House Joint Resolution 594, which directed the Federal Trade Commission to investigate the policies of motor-vehicle manufacturers and dealers in their relation to the public in-

terest. The Commission, 1 year later, made public its findings, which were not at all unlike the unfair practices that are now paraded before congressional committees. Unfortunately, the Congress took no action at that time, for the reason, among others, that the industry itself rejected any type of Federal legislation.

"The manufacturers' way of eliminating an unfair trade practice

"The elimination of acknowledged unfair practices in the automobile industry cannot be left to the discretion of the industry itself. Let me illustrate. The "phantom" freight charge has long been prevalent in the automobile industry. A similar practice among steep producers, "Pittsburgh plus," was eliminated in the thirties. Under this practice the manufacturers ships the automobiles to dealers from nearby assembly plants and requires the dealer to pay for the transportation in an amount equivalent to, or even greater than, the rail freight rates from the factory to the dealer's delivery points.

"Let us examine the 1954 shipment record for motor vehicles as reported in the 35th edition of Automobile Facts and Figures, 1955. Of the 6,601,071 motor vehicles shipped, 80.5 percent or 5,314,842, left the factory by highway—on a big truck that hauls several other cars, or towed behind another new car. Shipment by boat accounted for 5.6 percent, or 370,044; while rail shipments accounted for only 13.9 percent. In other words, only 916,185 out of a total of 6,601,071 motor vehicles shipped went by rail. You have seen reports stating that the 'phantom' freight charges have annually amounted to over $250 million. And what has the manufacturer to say? Ford has admitted that in 1954 it gained $50 to $60 million on its total distribution charges. General Motors testified before a Senate committee that its excess of actual freight for last year would be about $152 million. We may rest assured those were conservative estimates and do not forget that the excess profit per unit in previous years was much greater, because it would not be based on the lower rates announced at various times by the industry.

"I urge that the public announcements now being flaunted in our faces by the manufacturers as to their "amended ways" is merely an attempt to becloud the issue.

"As of February 29, 1956, Chrysler Corp., General Motors Corp., and the Ford Motor Co. eliminated 'phantom' freight charges. Those three manufacturers at the same time increased the wholesale price of their cars to their dealers. This in the face of the Chrysler testimony that they paid out more for freight charges than they collected. The manufacturers contend they should be permitted to deal with the so-called phantom freight on an industrywide basis. Their testimony and their actions, in my opinion, indicate they cannot be trusted to solve these problems.

"As long as the industry practice is to collect a separate charge from the public, which is represented as the cost in making delivery of the automobile from the factory to the consumer, then the industry should not be permitted to collect any more than such actual cost. For this purpose I have introduced H. R. 7935, which would amend the Internal Revenue Code of 1954 to require every seller of property, who collects from the purchaser any amount as a charge for the transportation of such property, to furnish such purchaser a statement showing the amount of transportation charges, if any, taxable under section 4271 (a) of such code, and the amount of tax imposed.

"I have heretofore referred to the report filed by the Federal Trade Commission in 1939, pursuant to its study of the automotive industry. It should be noted that irrespective of whether or not legislative action was necessary, the Government controls of World War II, limiting production, obviated the need for positive action by the Congress at that time. Nevertheless, we find the same unfair practices prevalent in the industry today, and what is worse, on a larger scale. In these circumstances, our duty to the public is not discharged by a formal disclosure of their nature.

"In conclusion I should like to make this observation. The manufacturers representing the automotive industry can best be described as giant octopuses whose tentacles of economic power extend over every phase of the industry, as well as over many unrelated products. On the other side of the picture are the 42,340 dealers—90 percent of whom are small-business men, the very backbone of our free-enterprise system. In most cases they are the civic and philanthropic leaders in their communities. In the past their position has been one of dignity among their fellow citizens. They are fast becoming the most despised members of their communities. There were 219 dealer bankruptcies in 1953, the highest number since 1938. Two hundreds and forty-one dealer mortalities occurred in 1954. The April 30, 1956, issue of Automotive News gives some interesting figures on General Motors' dealer terminations. The figures are based on the first 10 months of 1955 as against 1954. In 1955 there were 178 nonrenewals against 150 for 1954; 214 involuntary terminations in 1955 against 192 for 1954; 1,585 voluntary terminations in 1955 as against 1,908 for 1954.

"It is high time to put this house in order.

"Again, Mr. Chairman and members of the committee, permit me to thank you for the opportunity to attend here and express my views on these very important matters."

EXHIBIT A

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 8, 1955.

Hon. CHARLES E. WILSON,
Secretary of Defense,
Department of Defense,
Washington, D. C.

MY DEAR MR. SECRETARY: For some time Members of Congress have been receiving complaints about the tactics being used by various dealers in selling new automobiles to members of the Armed Forces returning from posts outside of the country.

It seems that some of these retailers have sent representatives abroad who, through fraud and deceit, induce these men who are about to return to the United States to sign contracts, and to pay deposits for the delivery of new automobiles to them at the port of their arrival in this country. As part of this scheme these retailers have made exclusive rental agreements for offices in the hotels in this country at which these men and their families are temporarily lodged upon their arrival here. The deceptive practices are continued at those places until the delivery of a new automobile is made and payment obtained.

No purpose can be served by setting forth in this letter the nature of the fraudulent representations that are made, nor is it necessary for the purpose of this letter to determine whether or not these practices are actually fraudulent or merely unethical business practices. The result of all of these practices is that these men are being duped and taken advantage of. They are paying more for these automobiles than if they bought them in their hometowns or, for that matter, if they bought them at the port of arrival. They are paying higher finance charges than they would pay if they took the opportunity of financing their automobiles in their hometowns or in the city in which they are discharged from the service, and they are being deprived of the inspection and service that ordinarily goes with a new-car purchase when made in their hometowns.

The automobile manufacturers, when apprised of these practices, have taken the position that these retailing practices are no concern of theirs.

I believe you will agree with me that in the absence of the manufacturers undertaking to prevent these practices, something must be done to help these men.

My suggestion is that you immediately issue a directive requiring commanding officers in all stations outside of this country to alert the men under their command to this situation, and to advise those men that it is inadvisable for them to make such purchases while abroad, or, for that matter, even at the place of arrival in this country, or the place of discharge from the service in this country, and that their best interests will be served by their making such purchases from dealers in their home communities. The hometown dealers, in almost every instance, can arrange for the delivery of a new automobile to them at their point of arrival or discharge in this country, which would then be available for them for transportation to their hometowns.

I hope you will agree with me that such a directive will serve a very useful purpose. As a matter of fact, the directive and the notice from the local commanding officer can be appropriately worded so that neither manufacturers nor retailers need be accused of any wrongdoing or impropriety, and yet provide some measure of protection to the members of our Armed Forces.

With kindest personal regards, I am,

Sincerely yours,

ABRAHAM J. MULTER.

EXHIBIT B

MANPOWER AND PERSONNEL
ASSISTANT SECRETARY OF DEFENSE,
Washington, D. C., September 23, 1955.

Hon. ABRAHAM J. MULTER,
House of Representatives.

DEAR MR. MULTER: This is in reply to your letter of September 8 concerning certain practices of automobile dealers in selling to members of the Armed Forces returning from overseas posts.

You appreciate, I am sure, that no agency of the Department of Defense sponsors any plan of automobile sales such as you describe, and the Department is, therefore, without jurisdiction to discontinue it. The selection of an automobile salesman or sales contract is a matter of individual choice.

Overseas representatives of United States automobile dealers are not amenable to military control. So long as they comply with the laws of the locality in which they do business they can offer their merchandise for sale to both civilian and military. Control of this group like their contemporaries at the port would appear to rest with the automobile dealers, their trade associations, and perhaps the manufacturers.

I believe that the directive you suggest would be more restrictive than is appropriate for issuance by this Department and that it might affect the legitimate activities of firms and dealers who render real service to our personnel. I believe that the objective we seek, the use of caution and judgment by servicemen in their purchases from unknown vendors, can best be accomplished by a continuation of the present normal counseling given by commanders to their troops. I am taking the liberty of sending a copy of your letter to the military departments.

Your interest in the welfare of our Armed Forces personnel is appreciated.

Sincerely yours,

CARTER L. BURGESS.

EXHIBIT C

CONGRESS OF THE UNITED STATES,
HOUSE OF REPRESENTATIVES,
Washington, D. C., September 28, 1955.

CARTER L. BURGESS,
Assistant Secretary of Defense,
Department of Defense,
Washington, D. C.

DEAR MR. BURGESS: Receipt is acknowledged with thanks of yours of September 23.

I fail to understand how the directive as suggested by me is in any manner restrictive. It does not require the Department or any commanding officer to take a position on the matter, nor in any manner to interfere with automobile dealers in this country or abroad. It has always been proper for the Defense Department to alert the members of the Armed Forces against dangers that they may encounter, whether physical, moral, or financial.

Alerting these men to these practices is in direct line with such procedure.

Sincerely yours,

ABRAHAM J. MULTER.

H. R. 10310

[84th Cong., 2d sess.]

A bill to provide for the regulation of motor vehicles on the highways of the United States, and for other purposes

Be it enacted, etc., That this act may be cited as the "General Motor Vehicle Act of 1956."

DECLARATION OF POLICY

SEC. 2. It is hereby declared to be the policy of Congress through the exercise of this act of its power to regulate commerce, in accordance with which policy all of the provisions of this act shall be interpreted, to promote safety in the operation of motor vehicles by the general public on the highways of the United States, and to regulate the trade practices between manufacturers of motor vehicles and their franchised dealers and the general public.

DEFINITIONS

SEC. 3. As used in this chapter—

(a) "Manufacturer" means any individual, partnership, corporation, association, business trust, or any other form of business enterprise, or any branch or agent thereof engaged in the business of manufacturing or assembling motor vehicles or of selling motor vehicles for resale, or servicing, or financing motor vehicles intended for resale.

(b) "Dealer" means any individual, partnership, corporation, association, or any other form of business enterprise, or any branch or agent thereof, engaged in the business of purchasing motor vehicles for resale and of exchanging or servicing motor vehicles.

(c) "Motor vehicle" means any motor driven or propelled vehicle, except airplanes, road rollers, traction engines, power shovels, and other equipment used in construction work and not designed for or employed in general highway transportation, as well as farm and agricultural machinery, and vehicles designed for running on tracks or rails.

(d) "New motor vehicle" means a motor vehicle which has never been the subject of a sale with intent to pass an interest therein and has never been driven, pushed, towed, or propelled over a public highway.

(e) "Used motor vehicle" means a motor vehicle which has been sold, bargained, or exchanged, given away, of whose title has been transferred from the person who first acquired it from the manufacturer or dealer, and so used as to have become what is commonly known as secondhand, within the ordinary meaning thereof, or which has been driven, pushed, towed, or propelled over a public highway.

(f) "Franchise" means the right, privilege, or authorization accorded the dealer by the manufacturer, whether by contract, agreement, or otherwise, to purchase, sell, and service motor vehicles.

(g) "Commerce" means commerce among the several States or with foreign nations, or in any Territory of the United States or in the District of Columbia, or between any such Territory and another, or between any such Territory and any State or foreign nation, or between the District of Columbia and any State or Territory or foreign nation.

UNLAWFUL PRACTICES

SEC. 4. It shall be unlawful for anyone to sell, ship, transport, drive, push, tow, or propel any motor vehicle in commerce unless accompanied by a manufacturer's certificate of fitness which must state (i) that the motor vehicle and all the parts and accessories thereon have been inspected and found in good working order, safe and ready for operation on the public highways, and in complete accord with all specifications as set forth in all descriptive and advertising matter, and (ii) that the vehicle has been road-tested for 500 miles and found in good operating condition after have been road-tested for at least 100 miles at each of the speeds of 15, 30, 45, 60, and 75 miles per hour.

SEC. 5. It shall be unlawful for any manufacturer or dealer to sell, ship, transport, drive, push, tow, or propel in commerce a motor vehicle with equipment, parts, or assessories different from or in addition to those specified in the current literature and advertisements of motor vehicles of the same make and model for which an additional or extra price or charge is made or sought to be collected for such equipment, parts, or accessories: *Provided*, That nothing herein shall prohibit the order or shipment of any motor vehicle equipped in accordance with the specifications set forth in a writen order or written agreement of the parties, which separately itemizes each additional or extra item by full description and price.

SEC. 6. (a) It shall be unlawful for any manufacturer to sell, ship, transport, drive, push, tow, or propel in commerce any motor vehicle without first having sealed the speedometer thereof so as to prevent tampering therewith or to prevent its operation.

(b) It shall be unlawful for anyone to replace, disconnect, or prevent the normal and proper operation of the speedometer on any motor vehicle or change its reading in such a manner as to mislead or deceive a person as to the usage, mileage, condition, or other character of the motor vehicle.

SEC. 7. It shall be unlawful to deliver a motor vehicle to a retail purchaser unless such delivery shall be accompanied by an itemized invoice of the cash sale price which shall separately set forth the amount attributable to each part, piece of equipment, and each accessory; Federal excise tax; State or local taxes; transportation; advertising; handling charges; service; motor-vehicle license; motor-vehicle title registration; and any other charge included in the price of the vehicle delivered: *And provided further*, That when sale of a motor vehicle is made other than on a cash-delivery basis the invoice shall also include the components of the charges added to the sale price by reason of the fact that the vehicle is delivered under a time sale or other agreement, separately stating the amount of each item charged in connection with the financing and the insurance, if any; and also indicating whether or not, and if so, how much of such charges are refundable if the balance is paid before maturity.

SEC. 8. It shall be unlawful for any manufacturer or dealer to charge or collect as a charge for transportation of a motor vehicle or taxes thereon any amount in excess of the actual cost to such manufacturer or dealer of the freight or other transportation charges incurred or taxes payable by the manufacturer or dealer in making delivery of such motor vehicle.

SEC. 9. It shall be unlawful for any manufacturer or dealer to advertise, or cause the advertisement of a motor vehicle in a manner so as to confuse or mislead, or to tend to confuse or mislead, a prospective purchaser as to the price or description of such motor vehicle that is intended to be or has been delivered at the dealer's place of business.

SEC. 10. No manufacturer shall directly or indirectly require any dealer or group of dealers to advertise or pay for the advertisement of the manufacturer's product except by the usual signs at a dealer's place of business indicating he deals in the manufacturer's products.

SEC. 11. It shall be unlawful for any manufacturer to threaten to terminate, to terminate or cancel, or to fail to refuse to renew the contract, agreement or franchise of any dealer because of the dealer's unwillingness or refusal to purchase parts, accessories, equipment, or tools of any particular type, kind, or description from said manufacturer.

PRICE DISCRIMINATION

SEC. 12. It shall be unlawful for any manufacturer in any manner whatsoever, or by any device or method whatsoever, to discriminate pricewise between dealers by way of discounts, rebates, or other allowances to any dealer over and above, or any different from, any discounts, rebates, or other allowances available at the time of such trcansaction on equal terms to all other dealers. Volume discounts, allowances, or rebates are hereby expressly prohibited.

MANUFACTURER-DEALER RELATIONS

SEC. 13. (a) Every contract or agreement between a dealer and a manufacturer by which such dealer in motor vehicles operates as such under a franchise granted by such manufacturer may include provisions to provide for the termination or cancellation of the contract by mutual consent or upon breach of provisions specifically contained therein, and such contract shall be canceled only for one or more of the reasons stated therein.

(b) Nothing contained in this act or in any other law shall render unlawful any contract or agreement between a manufacturer and a franchised dealer, in which such manufacturer agrees that such franchised dealer shall have the sole and exclusive right to sell in a specified geographical area and/or for a specific period of time a new or used motor vehicle produced or distributed by said manufacturer.

(c) Nothing contained in this act or in any other law shall render unlawful any contract or agreement between a manufacturer and a franchised dealer in which such dealer agrees to sell only within a designated geographical area and to refrain from selling oustide said area any new or used motor vehicle produced, assembled, or distributed by said manufacturer.

(d) Nothing contained in this act or in any other law shall render unlawful any contract or agreement between a manufacturer and a franchised dealer in which such dealer agrees not to resell, either directly or indirectly, any current model motor vehicle made by such manufacturer, to any person, partnership, corporation, or other entity engaged in the business of selling new or used motor vehicles other than a person or entity operating under a franchise or authorized dealer agreement with such manufacturer.

(e) Nothing contained in this act or in any other law shall make it unlawful for a manufacturer of motor vehicles to enforce any agreement authorized by subsection (d)

by refusing to sell to, or canceling the franchise of, any dealer who knowingly engages in the sale of a motor vehicle of current model made by such manufacturer to any person, partnership, corporation, or other entity engaged in the business of selling new or used motor vehicles other than a person or entity operating under a franchise or authorized dealer agreement with such manufacturer.

ENFORCEMENT

SEC. 14. Any manufacturer or dealer shall be entitled to sue for and have injunctive relief, in any district court of the United States having jurisdiction over the parties, to enforce the terms of valid agreements or to enjoin violation thereof, or against threatened loss or damage by a violation of this act, when and under the same conditions and principles injunctive relief against threatened conduct that will cause loss or damage is granted by the courts, and upon the execution of proper bond against damages for an injunction improvidently granted: *Provided, however,* That the parties may agree to accept the decision of an arbitration body to be composed of three members—one of whom shall be selected by the manufacturer; one of whom shall be selected by the dealer; the third of whom shall be selected by the two appointees, provided the third person so named shall not be a manufacturer or dealer, or a stockholder, officer, or employee of, or person affiliated with, either a manufacturer or a dealer.

SEC. 15. Anyone who shall be injured in his business or property by reason of anything prohibited or made unlawful by this act may sue therefor in any district court of the United States in the district in which the defendant resides or is found or has an agent, without respect to the amount in controversy, and shall recover twofold the damages by him sustained, and the cost of suit, plus a reasonable attorney's fee.

PENALTIES

SEC. 16. Any person violating any of the provisions of this act shall, upon conviction for each violation, be fined not more than $10,000, or imprisoned for not more than 1 year or both.

SEC. 17. Whenever a corporation shall violate any of the provisions of this act, such violation shall be deemed to be also that of the individual directors, officers, or agents of such corporation who shall have authorized, ordered, or participated in doing any of the acts constituting in whole or in part, such violation, and such violation shall be deemed a misdemeanor, and upon conviction therefor of any such director, officer, or agent, he shall be punished by a fine of not exceeding $5,000 or by imprisonment for not exceeding 1 year, or by both.

SUITS BY UNITED STATES

SEC. 18. The several district courts of the United States are invested with jurisdiction to prevent and restrain violations of this act; and it shall be the duty of the several district attorneys of the United States, in their respective districts, under the direction of the Attorney General, to institute appropriate proceedings to prevent and restrain such violations and for damages and penalties. Pending final determination of the matter, the court may issue such temporary restraining order or prohibition as shall be deemed just in the premises.

SEC. 19. A final judgment or decree rendered in any criminal prosecution or in any suit or proceeding brought by or on behalf of the United States under this act to the effect that a defendant has violated said laws shall be prima facie evidence against such defendant in any suit or proceeding brought by any other party against such defendant under this act as to all matters respecting which said judgment or decree would be an estoppel as between the parties thereto.

SEC. 20. Whenever any suit, proceeding, or criminal prosecution is instituted by the United States to prevent, restrain, or punish violations of this act, the running of the statute of limitations in respect of each and every private right of action arising under said act and based in whole or in part on any matter complained of in said suit or proceeding shall be suspended during the pendency thereof, and the time within which to bring such suit or proceeding shall be extended by the length of time elapsed between the institution and final determination, by appeal or otherwise, of such suit, proceeding, or criminal prosecution.

TECHNICAL AMENDMENTS

SEC. 21. (a) Part II of subchapter C of chapter 33 of the Internal Revenue Code of 1954 (relating to tax on amount paid for transportation of property) is hereby amended by adding at the end thereof the following section:

"SEC. 4274. Statement of transportation charges.

"(a) Requirement: Any person who, in connection with any sale of property, collects form the purchaser any amount as a charge for the transportation of such property shall, in any case in which any part of the amount attributable to such transportation is taxable under section 4271 (a), furnish such purchaser a statement showing—

"(1) the amount attributable to such transportation upon which a tax is imposed by section 4271 (a), and

"(2) the amount of such tax.

"(b) Treble damages:

"(1) Recovery by purchaser: Any person who, by reason of any misrepresentation in the statement required under subsection (a) of this section, is required to pay any amount as a charge for the transportation of property, including the tax imposed thereon, which exceeds the amount actually paid by the seller for such transportation, including such tax, may, within 2 years after the date of such payment, bring a civil action against the seller to recover three times the amount paid as such transportation charge, including such tax, in excess of that actually charged the seller. Whenever any person successfully maintains an action under the provisions of this paragraph, such person shall be entitled to recover, in addition to the amount provided in the first sentence of this paragraph, a reasonable attorney's fee, to be fixed by the court, which fee shall be taxed and collected as part of the costs in the case.

"(2) Recovery by United States: In any case in which a person entitled to bring a civil action against a seller under the provisions of paragraph (1) of this subsection, shall fail to bring such action within the period of time prescribed therein, the Attorney General is authorized to bring a civil action against the seller in the name of the United States, within 2 years after the expiration of such prescribed period of time, to recover three times the amount paid as a charge for the transportation of the property purchased, including the tax thereon, which exceeds the amount actually paid by the seller for such transportation, including such tax, plus the sum of $500 as additional costs of the suit, the amount recovered to be paid into the Treasury of the United States.

"(c) Cross-references:

"(1) For penalty for false statement to purchasers relating to tax included in purchase price, see section 7211.

"(2) For penalty for failure to furnish statement required by this section or for furnishing false statement, see section 7276."

(b) The table of sections for such part II is hereby amended by adding at the end thereof the following:

"SEC. 4274. Statement of transportation charges."

SEC. 22. (a) Subchapter B of chapter 75 of the Internal Revenue Code of 1954 (relating to offenses in connection with certain taxes) is hereby amended by adding at the end thereof the following section:

"SEC. 7276. Misrepresentations in connection with tax on amount paid for transportation of property

"Any person required under the provisions of section 4274 to furnish a statement who willfully furnishes a false or fraudulent statement or who willfully fails to furnish a statement showing the information required under section 4274, shall, for each such offense, upon conviction thereof, be fined not more than $10,000, or imprisoned for not more than 1 year, or both."

(b) The table of sections to such subchapter B is amended by adding at the end thereof the following:

"SEC. 7276. Misrepresentations in connection with tax on amount paid for transportation of property."

SEPARABILITY OF PROVISIONS

SEC. 23. If any provision of this act, or the application of such provision to any person or circumstance, shall be held invalid, the remainder of the act, and the application of such provision to persons or circumstances other than those to which it is held invalid, shall not be affected thereby.

EFFECTIVE DATE

SEC. 24. This act shall take effect 90 days after its enactment.

NOW LET US HEAR FROM THE AUTOMOBILE OWNER

(Extension of remarks of Hon. ABRAHAM J. MULTER, of New York, in the House of Representatives, Thursday, January 19, 1956)

Mr. MULTER. Mr. Speaker, for some weeks now congressional committees have been hearing from automobile manufacturers and dealers. Each group has been telling how good they were and the faults of the other.

There is a third side to this story: That of the consuming public.

Following is an item I received unsolicited, which is the consumer's story. I am afraid it is all too typical. Incidentally, it confirms one phase of my testimony before the committee of the other body. The item follows:

"YOU ARE HELPING TO SEND TENS OF THOUSANDS OF AMERICANS TO THEIR DEATHS EVERY YEAR BY FAILING TO PUT A STOP TO THE FLAGRANT ABUSE OF THE CONSUMER BY THE AUTOMOBILE INDUSTRY

"Abuse through—

"1. Cars with engines designed for constantly increasing power 'to meet competition'—in spite of the fact that the cars' chassis, the cars' safety elements, our public highways, and the maturity of our drivers are not necessarily able to handle this power safely.

"2. Cars assembled so rapidly as to breed possible carelessness. (Buick was producing 67 an hour, when I went through the plant in August.)

"3. Frequent dishonesty in servicing, with the average consumer unable to know what has to be done or, after he gets the bill, what was done.

"4. Making excuses for defects to customers, often as if they were imagined by the new car owner, instead of admitting them an either correcting them properly or seeing to it that the customer gets a corrected car either this year or adequate ad-

justment when such corrections had been made.

"5. Refusal to accept responsibility for a defective product, forcing customer either to accept it or to buy a new one.

"6. Lack of any definite pattern in costs to the automobile owner in servicing, parts or gasoline products, with many of these products overpriced, especially by dealers and in tourist areas.

"7. Constantly increasing prices for cars with constantly decreasing quality in workmanship, while the companies boast constantly increasing net profits.

"8. Dealer policies that result in the cheapest kind of bargaining tactics to sell cars, with the customer never knowing exactly what he is paying, and for what.

"The following is a record of servicing required by my 1955 Buick super convertible (cost, $4,086.29):

"The first 6 months of servicing is one small evidence of the foregoing.

"Please note that many of the 'subsequent servicings' reported below were necessitated by careless, inefficient dealer servicing originally. * * * And almost all of the original dealer servicing would not have been necessary if the factory had produced the proper, efficient engineering and workmanship for which the customer pays so highly when purchasing a car.

"Picked up car March 11, 1955. Back plastic window had flaw in it. Was replaced.

"Trunk flooring torn and sloppy. Replaced, but in process floor greased up and stained.

"Left door hanging 1 inch off frame—both doors rattling and banging against locks; when car 10 days old, left door jammed and could not be opened. Serviced March 22, March 24, April 11, April 28, May 2, June 1, June 21, July 5, September 27. Apparently, because of body shake and poor engineering originally, these doors always will rattle and bang—and periodically the left door will shimmy out of position so badly that it will jam. It wasn't until fifth servicing that left door was hung flush with dash. Then I was advised that lock had been welded into wrong place. Rattling continued. When Buick servicemen unjammed left door on March 22, they sprung it. When they righted this on March 24 they broke the inside trim. There also is a dent under lock outside. Car had two different locks on doors when new. This was corrected and new striker plates were installed April 28 and again June 21, but chucking noise did not disappear. Body shake of car, caused by only slight bumpy roads, jiggled doors out of position during summer months until noise became unbearable and left door became more and more difficult to open. I advised Buick that left door was on its way to jamming again. Their eastern service manager insisted nothing was wrong. On September 20 it jammed shut again. They opened it, but door continues to bang around in its frame causing irritating noise that interferes with driver's control of car. Right door also rattles and bangs, but eastern service manager refused to do anything about it when he had the car in New York for going over, because 'we might damage something else in trying to reposition this door.' In spite of above servicing, I am left with a noisy, unsafe car in spite of original investment of over $4,000 for what should have been a well-engineered, carefully and accurately assembled car.

"Carburetor needed adjustment March 22. Constant thudding noise; low gas mileage. Serviced April 2, 11, 28, June 1. After first adjustment car stalled. Buick man readjusted and cut off all air so had to stop on road for another readjustment same day (April 2). Gas mileage still poor—do well when we average 13 miles per gallon.

"Speedometer cable needed readjustment March 22. Serviced April 11. Buick admitted this defect in 1955 Supers. Failed to repair first time. Now O. K.

"Top leaked at left side. Serviced March 22 and September 20. Still leaks. Also air pours through the top.

"Air coming through vents March 22. Air still is objectionable unless heat is on.

"Discovered through skidding noise under car when it stopped or slowed that motor that runs the top was loose. Serviced March 22. Now O. K.

"Reverse gear caused car to hop, March 22. Repaired.

"Left front tire fell apart at seam. Had reported 'feel steady thump as if tire was bad' on March 22. They could find nothing.

"On June 3, after 3 days in Buick shop when the factory representative was supposed to see what he could do to improve ride, a customer, watching as they started to drive out the car for delivery to me, discovered a 5-inch gash in front left tire; it had fallen apart at seams after only 3,000 miles of driving. (Not one of the many men who worked on the car spotted it, although front end was supposed to have been checked.) U. S. Royal (a subsidiary of General Motors) agent insisted that I pay $5 for mileage used, although they admitted it was defective, and although tire was still on warranty, according to Buick. Buick paid when I refused to. Bouncing noise continued in right rear tire which Buick replaced July 9–16. Bad front end of the car wore down these brandnew tires which I had put in front in less than 3,000 miles.

"Right rear window failed to close; wires were so badly taped, according to Buick dealer who serviced that they short-circuited. Serviced April 4, 11, and 28. Wires were repaired by District of Columbia dealer, but upholstery was not properly restored. It took two followup servicings by my own dealer to get it right. Now O. K.

"Boot that covers top was improperly designed so that it took three men to snap it on. Serviced April 3 and July 9. Buick sent new boot from factory, same size, but they sent snaps separately for dealer to install on outer rim. Boot still too tight; seams are ripping open.

"Left visor was sprung. Rattled and fell into line of vision. Serviced April 11, April 28, and July 9. It's now sprung again.

"Front floor carpeting not laid properly; ended below front seat, underlining exposed. Serviced April 11 and July 9. Was relaid first time, but it blew up when the top was down. Reinstated. Now O. K.

"Reported oil leak—either from engine or Dynaflow, or both. Serviced April 28, August 22, and September 8. On August 22, when oil was changed at service station, was advised that there was no gasket in engine oil equipment—then they found it. Also on August 22 a Buick serviceman informed me, when I needed a quart of Dynaflow oil after only 6,000 miles that they "all leak." In Flint, Mich., the Buick plant, when I complained that I had needed 2 quarts of engine oil in the last 1,000 miles, they said they were instructed to tell customers that "that's normal for a Buick." When I returned to my own independent serviceman at end of a trip on September 8, he discovered that the gasket in engine oil drain was faulty (Buick dealer admitted "we have had some of those") and the Dynaflow still was leaking. Buick repaired Dynaflow.

"Talked to factory representative on May 20 after returning from trip on New York State Thruway in wind when car was impossible to handle, and rattles were unbearable. He asked to go over car himself the next week or so. We made date for June 1 after my frequent calls to pin him down.

"On June 1 factory representative supervised checking of car. He said front end needed correction, and wheels were alined. He also tightened power-steering wheel to degree where it was hard to handle. I later was advised that this could damage steering gear over period of time. Front end continues to be weak and car still is difficult to handle. Car has had front-end correction and wheel alinement and balancing 4 times in 13,000 miles.

"As result of my advising the president of GM that my unanswered letters to him would be left with my insurance papers and that my family were being instructed to sue GM to the hilt if I should lose my life in this unsafe car, the eastern service manager for Buick flew up to see me on June 21. He drove car and insisted it was normal. He did admit a strange noise from rear left tire * * * admitted to chucking of left door against lock * * ? and he did suggest that either I bring the car to New York for the Fisher Body man to go over under his supervision, or he would send the man up here to go over it. I chose New York in order for the manager to supervise, hoping this would result in more positive results than in the past. Later was advised that it was against GM policy to reimburse me for the train fare involved in so doing. It was at his instruction that two new striker plates were installed on the doors."

Following is his list of repairs (on a car still new and already serviced as this record indicates so far): Left rear tire was replaced. Front floor carpeting reinstalled. Right quarter drain hole was opened (this had been neglected at factory). Left vent window spring was repositioned. Top boot cover was restitched. Left visor again was realined. Both door garnish mouldings were reset but the manager telephoned me to say that he would not reposition the right door (which I complained was chucking, rattling, and obviously out of position) because they "might damage something else." He also told me during this call that my complaint of overheating was unjustified—these motors "run hot." Dealer later found that thermostat was defective. Fan belt and power steering belt were replaced.

"Brought car to dealer on July 25 to be put in completely safe condition for cross-country trip. Pointed out that motor was running hot, and car pulled to right, especially when brakes were applied. (Note that this was less than 10 days after car was gone over in New York City eastern service division shop.) I also had them put two new tires on front.

"Dealer discovered that thermostat was defective.

"When I got car on road, found pulling had not been eliminated. Car was almost impossible to handle on road from here to California, and in San Diego (August 15) brought it into an oldtime wheel alinement specialist who reported the front end to be extremely loose. He corrected this, balanced wheels, and changed the cam and caster.

"When I returned to tell him car handled better, but still pulled when I applied the brake, he advised that there must be grease on the brake lining. (See story on this after I got home.)

"A serviceman who lubricated car (August 8) discovered inner tread of each front tire was worn from defective front end (less than 3,000 miles after brandnew tires were put on front), with compensating wear on rear. He also showed me a drawer full of Buick transmission differential plugs he had to keep on hand because they regularly broke off when he opened them.

"Stopped at Buick plant at Flint August 31, where we saw cars coming down assembly line with sprung doors, just as I had complained of in March.

"Visited consumer service office, Flint, August, to complain of following:

"Excessive consumption of engine oil.

"Excessive consumption of Dynaflow oil.

"Excessive body shake, resulting in loose doors and general noise and discomfort.

"Advised that left door was on way to jamming again.

"Car scraping bottom on inclines.

"Poor handling of the car on the highway.

"Young man's comment on use of oil was, 'Two quarts per 1,000 miles is normal. We must tell you that, but I wouldn't want it on my car.'

"Regarding other complaints, he said they would be forwarded to New York City service office (where car already had been serviced).

"Tired of Buick's constant motions without action in correcting faults reported herein, and concerned about continual risk of life entailed by car's poor performance; on September 8 I took car to my own serviceman upon return from the coast. He discovered:

"Defective rear axle oil seals had leaked so much grease on my brake linings that although right lining could be cleaned, left brake lining had to be replaced.

"Defective drain plug gasket had caused leakage of engine oil.

"Dynaflow still was leaking.

"Tailpipe was hitting against differential as result of body shake.

"Because of design of this car, repair of brake linings and rear axle oil seals was an expensive job. This repair bill, including complete servicing was $60, greater than I ever had in the 6 years and 90,000-mile history of my 1949 car (including replacements).

"In talk on September 9 with spring man who had corrected the front end of the car, which again was in bad shape as result of 2,000 miles driving over good highways, he advised that in 1 week he had had 3 new Buicks in for change of shock absorbers because of poor performance of those on the Buick.

"Brought car to Buick dealer September 12 for repair of Dynaflow leak—also brought along left brake lining to show them. Also to ask for repair of left door which was banging around and about to jam.

"Eastern service manager happened to be in that day. He insisted that there was no trace of grease on the lining. When I picked it up I got grease all over my suit. He also drove the car and assured me that 'nothing was wrong with the door.'

"September 27 left door jammed and could not be opened. Buick dealer opened door. Said car must have been jacked up causing chassis to spread, thus admitting poor structure of car. Car had only been raised on standard lubrication rack.

"Other defects: Body shake caused hood spring to loosen, causing hood to vibrate as you drive. Knobs of heater controls fall off periodically. Car continues to handle badly, and to be uncomfortably noisy as doors shake in their frames.

"This car is not an isolated case (the term used by General Motors to pass off dealers' reports on customer complaints, and continually used until, according to my own dealer, defective cars reported amount to 3 to 4 percent of the sales, a sizable percentage of over a million cars) but is typical of careless engineering in an effort to turn out cars for rapid sales, is indicated by:

"The record showing that, while denying the defects verbally and failing to correct them through servicing, General Motors (Buick) picked up the dealers' bills for servicing this car and did some servicing themselves.

"Reports from Buick owners and both Buick and independent servicemen whom I met all over the country, plus the consumer report on 1955 cars revealing the same problems.

"The promotion sent by Buick's main office to all Buick owners, urging wheel switching every 2,000 to 4,000 miles to prevent tire wear.

"Advertisements for the 1956 Buick, claiming new front-end geometry, newly balanced chassis, new shock absorbers (although the 1956 cars generally have not been changed basically).

"The public is helpless against the literally deadly competition between automobile companies: The reckless pricing and poor quality of auto products and auto servicing; the constantly increasing power of cars; the slowness with which safety factors are being added and then only as extras; the pack and other price policies that make it impossible for a customer to know what he is buying and for what price.

"Isn't it time for Government regulation of the automobile industry?

"Miss JANE BARTON,
"Albany, N. Y.

"(Who has never owned anything but a Buick and had never expected to own anything else.)"

PURCHASE OF NEW AUTOMOBILE—LETTER FROM L. J. SALTER, OF NORTH ROSE, N. Y.

(Extension of remarks of Hon. ABRAHAM J. MULTER, of New York, in the House of Representatives, Tuesday, February 7, 1956)

Mr. MULTER. Mr. Speaker, I desire to call to the attention of our colleagues the following letter which was forwarded to me on February 6, 1956, by Mr. L. J. Salter, president of the Salter Canning Co., of North Rose, N. Y.

The letter concerns Mr. Salter's experiences in purchasing a new automobile:

SALTER CANNING CO., INC.,
North Rose, N. Y., February 6, 1956.

Representative ABRAHAM J. MULTER,
Washington, D. C.

DEAR MR. MULTER: I have followed with interest the discussions in Congress on the plight of auto dealers, including your insertion in the RECORD of January 24. There is one aspect, however, that has not been presented: namely, to what extent has the public turned against buying new cars because of bad experiences with the ones they presently own? Here is an angle that the dealers in no way were responsible for but which is injuring them unmercifully. Here's how:

I now own my third Lincoln, bought in the spring of 1953. The first two were excellent but this third one (cash paid on delivery) occasioned so much trouble that I often wished I had the old one back. On the day it was delivered I had difficulty in starting the motor and when it did start it galloped, rocking the body of the car. The following day I decided to take my wife for a ride in the new "buggy." We were not 10 miles from home before the motor began to halt, wheeze, and stumble, and I had to turn back for fear of being stranded. I complained to the dealer (45 miles away) and he sent down a mechanic who put in all new spark plugs. This did not help and over the next 2- or 3-month period I drove my car to the dealer (in Rochester), several times, to try to cure the evil. On one occasion I had to stay overnight in Rochester, to complete the overhaul. Later I learned that many other Lincoln owners had similar troubles with this model.

I had also discovered that the car's rearvision mirror was unusually low, blending with the front glass, and 2 or 3 times on approaching a curve or crossroad I narrowly missed collision with approaching cars hidden behind the mirror. I complained to the dealer; he replied that other owners had the same complaints but he could not provide mirrors with shorter stems. I thereupon wrote the Ford Motor Co., pointing out that my attorney informed me that if an accident could be proven due to faulty design, it—Ford—could be sued. I had a shorter-stemmed mirror in trigger time.

Now I wish to emphasize that I believe the dealer was doing his best under the circumstances. But I could not see how he could stand all these repairs, and I assumed that he charged them back to Ford. Apparently not, from information now available. At one point in the attempts to "cure," a salesman told me that Ford put together a Mercury in 28 minutes. I replied that Ford put together this Lincoln in 10.

Lincoln was not the only "bad egg" that year. I heard of a man who bought a new Cadillac and started for Texas; he spent more time in garages than on the road with it. Back ends went out of Chryslers, and a friend owning a new Nash had two new rears put into it. I assume all these expenses were absorbed by the dealers, not the manufacturers.

For the past year and a half my Lincoln has operated excellently. I would like to buy a new car, but I simply balk at going through such grief again. I have lost confidence in the new cars, like, no doubt, thousands of others have. In fact, today, with dealers in the plight they find themselves, there is a greater risk of no service whatsoever. I just wonder if the makers, in futile attempt to overcome this negation, are not hoping the new crop of gaudy colors will rebait the hook. Not for me, and I doubt for the man on the street. Too many of the latter have, in my presence, commented upon the gruesome mess of design and colors. The interesting thing is that the body design of the cars is fundamentally good, but that the gingerbread on the sides, the chopping up of otherwise flowing lines, made more hideous by colors that do not complement, suggests a managerail floundering around with a double-barreled shotgun. The aim may be rotten, but scattered shot must hit something.

So the dealers, poor devils, are caught between the makers piling unwanted cars upon them and the public resistance to being mulcted again. The seriousness of the latter is that, while the makers are guilty of asking higher prices for poorer and poorer products, the public blames the dealer for the makers' sins.

It might be a very good thing if auto dealers in certain zones alternately agreed to shut up shop and boycott the makers over a period of time. This would have to be all dealers of all makes of cars within a designated area. I have found that in dealing with big business the club or knobbed battle ax is much more efficient than legislatoin or the bended knee.

Most sincerely,

L. J. SALTER.

Mr. MULTER. I know that your committee has labored long and hard with this problem and so have your predecessor committees, that is, the standing committees of prior Congresses. This is not a new problem.

Let me give you the titles of the various subdivisions of the topic as I think they have been presented to your committee and which will highlight the problems to which you are directing yourself.

You have as one title concentration of the motor vehicle industry. Another is competition in production and prices; competition among motor vehicle dealers; padding, new and used car prices, more recently referred to as packing; dealer price-fixing activities; the legal aspects of used car valuation or appraisal bureaus; unfair methods of motor vehicle manufacturers in their relations with their dealers; manufacturer's treatment of dealers, abuses of installment financing; itemized invoices needed for consumer protection; deception in charges for transportation of motor vehicles; sale of driven cars as new cars.

I have covered possibly not under the same titles or headings almost all of these subjects, both in my statement and in an attempt to remove most of those abuses by my bill, a copy of which I have submitted to the committee with my statement, which bears the number H. R. 10310.

Now, the title I read to you a moment ago, strange as it may seem, come from House document volume No. 27, Report on Motor Vehicle Industry No. 468 of the 76th Congress, 1st session, 1939, and the headings come from the headings of the conclusions made by that committee in 1939.

You will find that, just as all of these abuses that resulted in those conclusions under those headings were documented at that time, almost word for word, item for item, they have been duplicated in the testimony before the Senate committees this year and before your committee up to the present time, and I am sure that before you close your hearings they will be documented completely.

After 1939 the automobile manufacturers indicated that they were going to clean house, they would clean up these abuses without any legislative intervention, and that it should be left to them.

Well, the fact that you are hearing this identical testimony from new witnesses as to new occurrences since 1939 demonstrates that the industry cannot be relied on to clean up these abuses, and unless you are going to enact legislation you will never stop these abuses. You have had documented, as I say, all of them. I am not going to touch on too many of them.

Mr. KLEIN. May I interrupt the gentleman?

Mr. MULTER. Yes.

Mr. KLEIN. I notice, Mr. Multer that your bill was just introduced on the 29th of March?

Mr. MULTER. Yes.

Mr. KLEIN. I must say that neither I nor the staff have had an opportunity to examine it, nor have we gotten a report yet from the executive departments. So might I suggest that you just explain your bill?

Mr. MULTER. Yes. My bill does not contain any novel or new thoughts, and I do not pretend to claim any originality in the ideas contained in the bill.

You will find that most of them have been presented to your committee in other bills, in individual bills. What I sought to do was to take them all and put them all into one bill so that you can eliminate all of these abuses, and bring them before the House for action so as to do the full job at one time.

I cover the question of franchise dealers that you discussed with Judge Barnes. You know the strange thing about it is, as you probably recall, that inclusive franchises were the order of the day many years ago. A man who got a franchise from an automobile manufacturer got an exclusive right just as he bound himself to sell only that particular automobile, whether it was Buick or Ford or Chrysler, whatever it was, and he also got with his franchise a territorial restriction and a time restriction.

His contract ran for a period of years, and no one else could sell in his territory. Now, a few years ago the automobile manufacturers, in order to get out from under that kind of contract, in order to be able to push their cars as fast as they could, wherever they could, went to the Attorney General and asked him, "What about this? Can we continue to do this, or are we in violation of the antitrust laws?"

The opinion came down shortly thereafter from the Attorney General that you cannot give these restrictive contracts in your franchise-dealer agreements because they are in violation of the antitrust law, and the Big Three then used that as their excuse not to give their dealers these exclusive franchise contracts.

I know there is a division of opinion between the dealers. Half the dealers want the exclusive territorial rights, and the other half are against it. The fellow in the little town wants his exclusive territorial right. He does not want anybody coming in there. The fellow in the big city says, "I am going to sell my car wherever I can."

Now, whether or not you should take sides in the question I think is beside the point. I think that is a matter which the dealers can work out with the manufacturers, provided they will be in a position to negotiate with the manufacturers. In some places it may be the thing to do and in other places it may be the thing not to do, but I do not believe the manufacturers should be in a position to sit back and say, "Our hands are tied because of the antitrust laws and the opinion of the Attorney General."

Mr. KLEIN. Does your bill, Mr. Multer, contain anything on territorial security?

Mr. MULTER. Yes. My bill, sir, has a provision permitting, not directing, permitting the manufacturer and dealer to negotiate freely on the subject of franchises.

Mr. KLEIN. Do they not have that right at the present time without any legislation?

Mr. MULTER. The manufacturer contends that he does not have and his position is bolstered by the Attorney General's opinion that to give the exclusive franchise with exclusive territorial rights is a violation of the antitrust laws.

Now, I do not agree with the opinion, but I think the manufacturers have a right to rely on the opinion of the Attorney General rather than mine, and they have a right to say to the dealers that as long as that opinion is outstanding, unless it is reversed by legislation or by another opinion to the contrary from the Attorney General, we are not going to give you exclusive franchises.

Under my bill they are permitted to do it, not directed to do it. It is left to free negotiation and I say in my bill that if they make that kind of contract it will not be in violation of the antitrust laws.

Mr. KLEIN. Looking at it realistically, if the Department of Justice has held that this would violate the antitrust laws if there was such a clause in the agreement, you would have to override the opinion of the Attorney General?

Mr. MULTER. Yes; I do.

In other words, if this bill were enacted, it overrides the Attorney General's opinion.

Mr. KLEIN. It is similar to the Steed bill, then, on that point?

Mr. MULTER. Yes. On that point it is quite like the principle in the Steed bill.

I also cover in my bill the question of putting the responsibility directly on the manufacturer for anything that is wrong with the car, and then, of course, if he wants to let the car be sold anywhere at all and continue to advertise that it can be serviced in any service department of a franchise dealer, let us put the responsibility where it belongs, on the manufacturer.

Require him to inspect and road test and certify that every car that leaves his plant, before it arrives at the dealer's shop, is in good condition and safe for use.

Now, you will probably recall the words of the late Judge Holmes of the United States Supreme Court in that famous McPherson versus Buick case where there were inherent defects in the automobile and Judge Holmes, writing for a unanimous Court, said that an automobile is potentially a lethal weapon and that is what it is as it leaves these manufacturers' plants today. They do not test them, they do not do anything except pass it on to the automobile dealer, who is required to give not the automobile dealer's warranty but the manufacturer's warranty, and then the automobile dealer, because of the economics involved, is forced to kid that purchaser along for 4 months or 3 months or 4,000 miles, or whatever the terms of the warranty may be, and then at the end of the warranty when the warranty has expired, either because of mileage or the period of time, then the owner of the car begins to get a bill for repairs, so-called repairs, and 90 percent of those repairs are not repairs. They are correcting inherent defects, defects that were in the car when it left the manufacturer's plant.

I will take you into any automobile dealer's shop in Washington or anywhere in the country and pick out at random any new car that is on that man's floor ready for delivery, ready for delivery to the purchaser, and I tell you we will run it around the block and there will be a dozen different defects that will turn up in that time. If you happen to pick one that does not have them, it is the exception, not the rule.

My bill will prevent that.

Mr. KLEIN. Would you advocate similar legislation in other industries?

Mr. MULTER. Wherever you are putting an object such as an automobile in the hands of a user which may be a potentially lethal weapon, I say yes, it should apply to every industry; if there is any other industry that does this.

I do not know any other industry that would take an item that sells for anywhere from $1,500 to $5,000 or more and, except in the case of the custom-built car, you get an object that is delivered to the person which he has a right to believe is safe for use and which is not safe for use.

Now, there are any number of accidents, unexplained accidents, on the road every day in the week which are caused by inherent defects in the automobile, and as a practicing lawyer, you know there are many cases where you just cannot explain why the accident happened. The road was good, visibility was good, the person was sober who was behind the wheel, he was apparently an experienced driver, and there is an accident.

Mr. KLEIN. The gentleman is absolutely correct and, as he knows, I usually agree with him, but I know he also agrees with me in our opposition to the relaxation of the antitrust laws. This is what we would be doing in your bill and this would call for similar action in other industries, as Judge Barnes pointed out.

So we should be very careful about passing legislation such as this for a particular industry. I would be opposed to it even if it applied generally to most industries.

Mr. MULTER. What you say applies to that part of my bill which is directed to the automobile dealer's franchise contracts and their terms. I respect your views on that subject. I, nevertheless, urge the contrary views so far as that is concerned.

But, so far as road testing is concerned, so far as inspection is concerned, so far as phony advertising is concerned, you are not in any way interfering with the antitrust laws when you tell these manufacturers, "You are going to be responsible for all of you advertising. You are going to be responsible for a good car being delivered in safe condition. You are not going to be permitted to continue to charge phantom freight when your freight is actually $50 a car and you charge your customer freight of $235 a car, because that is the rail freight."

Mr. KLEIN. Well, the gentleman agrees that if they do not label it as freight, if they do not falsely advertise, then the companies cound charge any amount they would choose?

Mr. MULTER. Yes; but then you and I have the right to go to the dealer and say, "Your price for this car is $2,500. It is not worth that to me. And you will bargain with them. But when you get through bargaining and you have the price fixed and he says, "That is what I paid for freight and this is what I paid for freight to them and that is what you have to pay," then there is no argument.

You and I, who do not know the facts, might argue.

Mr. KLEIN. But that is at the present time illegal. The Federal Trade Commission

would step in there because it would be misrepresentation.

Mr. MULTER. They have not done it. How long do you think it will be before they file their first complaint to cease and desist against the manufacturer?

It will take them 5 years. After they have gotten the cease-and-desist order, it will take them another 5 years to go into court and punish for contempt.

Let us write into the law that this is a violation and if you violate this law you can be taken into court either by the person harmed or by the United States attorney and pay the penalty for violating the law; that is the way to handle this situation.

Mr. KLEIN. It is my opinion that the gentleman does have that right.

Mr. Friedel?

Mr. FRIEDEL. On page 5 you say:

"Only recently, as a result of testimony adduced in the congressional hearings, the Federal Trade Commission filed charges against the General Motors Corp. for false and deceptive advertising."

Mr. MULTER. Yes.

Mr. FRIEDEL. You said, "How long did they do it?"

Mr. MULTER. Look how long General Motors has been carrying on this false advertising, as long as I can remember. This is just the filing of the complaint. What about against the other companies?

Mr. FRIEDEL. I am in accord with you all the way through.

Mr. MULTER. I think if you are going to rely on the Federal Trade Commission to enforce these laws, we are not going to get anywhere, that is just the history of their operation.

Now, in addition to that, you have the question of bootlegging that you are very familiar with, and that can be covered only if you permit the manufacturers to make these agreements, exclusive agreements, with their dealers. If you do not, you will never stop the so-called bootlegging.

Another part of my bill which is also aimed against preventing deception and fraud and misrepresentation of dealers, and that is to require them to itemize their invoices.

The recommendation was made in 1939, as I told you before. The companies said they were going to follow it. They do not follow it.

My bill provides that not only will they be required to itemize it but that they cannot collect for any so-called extra unless it has been ordered in writing and itemized on the bill.

Now, I think every member of this committee has an automobile. I wonder if you ever checked on whether or not you have an electrically operated windshield wiper or a vacuum one. The joke about it is this:

The standard equipment on all these automobiles is a vacuum-operated windshield wiper, but when your car is delivered to you it is delivered with an electrically operated one for which you are billed extra and you do not know it, and you pay for it as an extra.

Your cigar lighter on your car—there is not an automobile manufacturer that does not have a hole, a receptacle, built into the dashboard for the cigar lighter. But the electric lighter itself is extra and is charged to you as such and billed to you as such, and there are any number of other items all the way down the line.

Then there comes the question of buying parts. The franchise dealer will lose his franchise if he goes to the company that makes the spark plugs for the manufacturer and buys them directly from him. That is a violation of his franchise. He must buy directly from the manufacturer.

Why? The manufacturer adds on a profit. A spark plug is not one bit better because it carries the name Ford or Chrysler or General Motors. They all have been manufactured for them by other companies. You can buy that spark plug, if you buy it from an independent accessory shop, under the name of the manufacturer, and you will buy it for almost half the price that you will pay to your serviceman to get it marked Ford or Chrysler or General Motors.

You can be sure that your spark plugs will operate just as well and just as efficiently whether you buy it from the independent accessory dealer and have a serviceman put it in as if you buy it from your dealer.

Mr. KLEIN. Could you buy that car without the cigar lighter and buy the cigar lighter some place else and put it in?

Mr. MULTER. Yes; you could.

What happens to your cigar lighter when it is lost out of the dashboard or swiped? Every time you park it in a public parking lot where you must leave your keys in the car, when you come back your cigar lighter is usually gone. You do not want the hole there, you want the cigar lighter. If you are smart, you buy it from the independent shop, not from the serviceman, and you buy it for half the price.

Now, there is one other thing I would like to call your attention to, Mr. Chairman and gentlemen of the committee.

Mr. FRIEDEL. Before you get into that, I want to get this into the record.

Mr. MULTER. Yes.

Mr. FRIEDEL. The Senate committee sent out a questionnaire to the different dealers with reference to phantom freight charges. They sent 203 questionnaires to the Maryland dealers; 150 of the dealers said they would like to stop that abuse, and 12 said they would like to continue their present arrangements.

Look at the proportion; 150 to 12 in favor of eliminating phantom freight charges. I think that is one of the things that should be corrected immediately.

Mr. MULTER. There is is not any doubt that you are right, Mr. Friedel. Ninety-five persent or more of the automobile dealers are decent, honorable men. They have occupied places of dignity and respect in their communities. They want to do a decent job. Most of them are the leaders in the civic and philanthropic endeavors in their communities and they have been respected.

In recent years they have become the most despised men because of the pressures of the manufacturers of these automobiles. Their very livelihood is at stake. Their tremendous investment of capital in their place of business is at stake unless they meet the pressures of the manufacturers and something must be done by this Congress to lift those pressures from their backs.

There is one other important thing I would like to call your attention to. It is covered in my statement under the heading of "Cheating Our Soldiers."

A practice has grown up, started by some of the dealers, of sending representatives into the camps abroad where men are about to be discharged and sent home, and they sell these soldiers on the idea that they will sell them a car at list price for delivery at their port of debarkation in the United States, either in New York or San Francisco or wherever they may happen to be coming into the States, and that they will use their travel allowance from that point to their home as the downpayment on the car and the car will be financed for them there.

They are not told about the fact that they will get no service when they get their car back home except that they will pay for it. They are not told that they will have to pay list price and that the car back home is selling under list.

There is not a dealer anywhere in the country who gets list price for his car. They are not told about the high-pressure deals being made now, about buying a car without a downpayment and getting 3 to 5 years to pay.

There are many other very serious abuses coming close to actionable fraud that are perpetrated on these men in order to get them to sign these contracts of purchase of a new automobile before they get back to the States.

Mr. KLEIN. Can the gentleman tell me what he proposes to do on that subject and where it is in the bill?

Mr. MULTER. I think that might be covered by that section of my bill against fraudulent advertising and making the company responsible for the advertising.

Mr. KLEIN. You mean the manufacturer?

Mr. MULTER. Yes.

Mr. KLEIN. Even though these people that make these representations are not the manufacturer?

Mr. MULTER. Let me follow one step further.

The dealers complain to the manufacturers about these fraudulent practices. You know what the manufacturers did? They did nothing to try to stop them. They set up their own selling offices in Europe and have their own representatives now selling these cars, with the additional representation, "You are not buying from a dealer, you are buying from a manufacturer."

It was called to my attention and I wrote a letter to our distinguished Secretary of Defense, Mr. Wilson, and I thought that I would get a better answer than I did from a man who would try to protect the General Motors industry.

He did not answer the letter, but Mr. Burgess, his Under Secretary, answered it and said that they cannot do anything about it.

Mind you, I did not ask them to make a charge of fraud. I submitted these letters to you.

My first letter is dated September 8, 1955. I call the attention of the Secretary of Defense to the entire problem and I then conclude with this paragraph:

"I hope you will agree with me that such a directive" meaning a directive to the commanding officers to alert the men to these practices "will serve a very useful purpose."

As a matter of fact, the directive in the notice from the local commanding officer can be appropriately worded so that neither manufacturers or retailers need be accused of any wrongdoing or impropriety and yet provide some measure of protection to the members of our armed services.

The answer from Mr. Burgess, September 23: "Sorry, can do nothing about it."

The letter in full is in my statement. That is, in effect, his answer.

On September 28, I wrote again to him and said: "I fail to understand how the directive as suggested by me is in any way restrictive."

Then I concluded: "Alerting these men to these practices is in direct line with such procedure" which is the procedure of the Department to alert their men to any dangers that may affect them wherever they are stationed, not only healthwise but also financialwise.

Now, do we have any precedent for this?

Of course we have. The insurance companies were perpetrating frauds on our soldiers and selling them life insurance under false pretenses and fraudulent representation. The same Defense Secretary, the same Under Secretary, when the matter was called to his attention, what does he do?

Immediately he investigated. What does he find? That the charges are correct. What does he do?

The same Secretary, the same Under Secretary, issues a directive dated December 21, 1955, No. SCCNAV1741.5. What does he do? Not only directs his commanding officers to alert the men as to these dangers and as to the perpetration of these frauds, but in the directive makes every commanding officer

responsible for seeing to it that no such salesman comes upon the base or operates in the vicinity of the base except that he is licensed, and except further that he will submit to restrictions and make no false representations.

Now, as I say in my statement, the adage, "What is good for General Motors is good for the rest of the country," can be slightly changed. Apparently what is wrong for the insurance companies is not wrong for General Motors.

Now, whether my bill is strong enough to cover this kind of situation, Mr. Chairman, I do not know. It may not be. If it is not, it should be strengthened, but something should be done to protect those men and our Secretary of Defense should be told in no uncertain language that he is not doing his full duty. He is violating his duty and his obligation when, in the one instance, when fraud is called to his attention he investigates, and in the other he refuses to investigate.

In the one instance, when he finds the facts justify the charge, he issues a proper directive and, in the other cases, he closes his eyes to it because it involves an industry with which he has been so closely allied.

Mr. KLEIN. Well, it is not only he. I do not think it is any surprise to the gentlemen who know that General Motors gets special consideration from this administration in other branches besides the Army. I think that is a situation that should be called to the attention of the Armed Services Committee. I agree with the gentleman that something ought to be done about it.

I do not know, frankly, whether this committee would have any jurisdiction over that phase of it. It certainly is an alarming thing. It is a surprise to me. I had never heard of it before.

Mr. MULTER. That is the situation, sir. It is substantiated by the facts. An investigation of the manufacturers will disclose it very quickly. There are half a dozen dealers in any of the big ports of the countries that you can call upon and they will substantiate the facts.

The facts were given to me in the first instance by dealers. I did not take their word for it, I asked the Secretary of Defense to investigate and determine what is the fact, and he refuses even to investigate.

Thank you very much, Mr. Chairman, for the opportunity to come here.

Mr. KLEIN. Any other questions?

Mr. MULTER. If there are any other questions, I will be glad to try to answer them.

Mr. KLEIN. I may say that my colleague from New York always contributes matters of value. I am sorry that we did not have the information which you disclosed when we interviewed the representatives of the manufacturers because it is a bad situation.

I believe the Department of Defense ought to be able to deal with it.

Mr. MULTER. You are absolutely right. They can deal with it if only they will.

American Aid Abroad

EXTENSION OF REMARKS
OF
HON. LAWRENCE H. SMITH
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. SMITH of Wisconsin. Mr. Speaker, American citizens of all classes since the end of World War II have had many opportunities to visit interesting places in other lands. Recently Mr. Chester D. Tripp of Economic Trend Lines, Chicago, has been reporting his impressions of a trip that has taken him around the world. The title of his report is "Around the World in 90 Days" and under leave to extend my remarks I am quoting from an Economic Trend Line report under date of June 17, 1957, part 3.

I am impressed by the observations made by Mr. Tripp as follows:

In the first place the American people are seriously deluded in thinking that a billion Asians want democracy or even have the least idea of what it is. Another impression reminds one of the Greek philosopher's remark that there is only one God but many religions.

I regretfully come to the conclusion that religious differences are probably the greatest separatist influence that the world faces today. And, you think again and again of the terrible population congestion and the lack of aridable acres to feed them properly.

I also had the feeling that well-advised people in the Orient know more about Russia than we do. In the main, they are not interested in communism any more than they are in democracy. They also do not fear Russia, and put much more weight on the internal difficulties of Russia than we do. In their opinion, Russia has reviewed the scene and decided that they cannot win a shooting war. They are hoping for an ideological conquest, and it makes one wonder if we should not put more effort into selling our ideology and less in armament. I do not mean by this to sell democracy, but to sell a spirit of helpfulness and cooperation through individual and not through Government spending. Investment in Asia is not a safe thing for either the individual or the Government, but rather than have our Government do it, it might be possible for the Government to indemnify individuals who try to make the effort.

May I leave you with one last thought. Asia is full of hope, discord, poverty and trouble, but this has been true for centuries and the world still goes on. One thing is certain, basic problems should be improved and this is going to take more than American dollars and involves understanding and cooperation that is not yet visible.

Keep Your Eyes Open, Congressmen

EXTENSION OF REMARKS
OF
HON. WILL E. NEAL
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. NEAL. Mr. Speaker, the extent of the harm inflicted upon our business and industry by foreign competition is indicated in the following editorial taken from the Parkersburg (W. Va.) News in its edition of June 22, 1957.

Headed, "Keep Your Eyes Open, Congressmen," it spells out that our advantages in the export trade, including air travel and communications in general, are already being severely challenged from abroad, the challenge in most instances coming from nations whose very prosperity and economic well-being have been generously subsidized by the American taxpayer.

A great many of our businessmen today are beginning to question the judgment of those who sit in chairs of authority when it comes to our export-import policies. They are openly questioning the advisability of such things as OTC under whose broad umbrella we are required to surrender our hegemony over our own trade to the collective judgment of nations whose ideologies veer far, far to the left of our recognized American standards:

KEEP YOUR EYES OPEN, CONGRESSMEN

The chairman of Britain's Export Council proposes that England launch a policy of cutthroat shipping competition as a means of winning back more of the North, Central, and South American market. He protests that other European countries are sending more ships to the Western Hemisphere, and that England must jump into the competition with more and better and cheaper shipping or continue to lose ground.

It's all right with the American people for England and other European countries to engage in a shipping war so long as they do not do so with American money. But it isn't all right with them if these American markets, particularly the United States market, is to be won at the expense of American producers and wage earners.

Maybe the gentlemen of Congress would do well to keep a weather eye on our tariff schedules and the various agreements which soften their impact on the importer in view of what is happening in Europe.

Supreme Court Confuses Matters

EXTENSION OF REMARKS
OF
HON. GLENARD P. LIPSCOMB
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LIPSCOMB. Mr. Speaker, under leave to extend my remarks, I am submitting for inclusion in the RECORD an editorial entitled "Supreme Court Confuses Matters," which appeared in the June 19, 1957, issue of the Los Angeles Times. The editorial presents a critical appraisal of the recent work of the Supreme Court, with particular reference to the series of security cases decided adversely to the Government.

I would like to draw special attention to that part of the editorial which calls on Congress to close the loophole in the Smith Act resulting from the Supreme Court's decision, on June 17, 1957, in overruling the Smith Act convictions of 14 California Communists. The Court acquitted 5 of the Communists and ordered a new trial for the other 9. The editorial states as follows:

We think Congress should also act to tighten up the Smith Act, so as to eliminate the equivocal language the High Court found in it. As a weapon against the Communist menace, the Smith Act is currently a broken reed.

What will be the result of the Supreme Court decision if Congress fails to take action to restrengthen the Smith Act? Here is the view of the southern California district chairman of the Communist Party, herself one of the nine Communists for whom a new trial was ordered, as reported in the June 18, 1957, issue of the Los Angeles Herald-Express:

This decision will mark a rejuvenation of the party in America. We've lost some members in the last few years, but now we're on our way again.

I believe it is important that Congress take the steps called for in the editorial to be sure the Communists are not actually on their way again. The entire editorial follows:

SUPREME COURT CONFUSES MATTERS

In a tidal wave of decisions marking the drawing to a close of its current term, the United States Supreme Court leaves the Nation in a rather confused state. While it did not this week—as it had done on previous occasions—decide any cases by less than a majority of the Court, some of its rulings were on such close questions that the logic escapes ordinary minds.

ABSTRACT MATTER?

Who, for example, would be able to tell when a man who advocates overthrow of the Government by force and violence is advocating it as an abstract matter, and when he is trying to start a revolt? Yet the Court appears to call on judges and juries to draw such a distinction. Advocating subversion as a matter of principle appears to be lawful; advocating subversion by action is unlawful, and Congress was wrong when it failed to specify this fact.

We think the general public will be inclined to agree with Justice Clark, who chided the Court for the acquittal of five California Communists on the ground that this was the first time in its history the Court had usurped the functions of a jury.

We believe with the majority of the Court that the criminal law must be construed strictly for the protection of the innocent, but we do not believe that Congress intended to give the word "organize" so narrow a meaning as to apply it solely to the rebirth of the Communist Party in 1945. The majority of the Court holds that is the meaning of the word.

MINORITY DECISIONS

As for minority decisions, it would seem there should be some provision to obviate them. According to authorities on constitutional law, the Supreme Court has at present no power to call in retired or lower court justices to fill in their number when the membership of the Court is below full strength. Several years ago the Court decided the insurance business must be regulated by the Federal Government, overturning many years of regulation by the States; and this epochal decision was by four justices because some disqualified themselves. Recently such an important decision as the General Motors-Du Pont antitrust case was decided by four justices.

Congress may be able to provide by law for the Court to recall retired justices—Justices Minton and Reed are in that status now—or call up judges from the Court of Appeals to sit in cases where members of the Court are disqualified. Either that or the Court should postpone decision or order reargument in cases in which a majority of the entire Court cannot agree.

CURE BY CONGRESS

Decisions of the Supreme Court are such important matters that at least five judges should join. In the antitrust case mentioned, Justices Whittaker and Brennan had joined the Court after the case was argued; reargument would have been appropriate. It would have caused some delay, but that would have been preferable to having such important business principles decided by what may have been a minority ruling.

In the insurance instance, Congress cured the situation by legislation and we are back to our time-tried State regulation.

We think Congress should also act to tighten up the Smtih Act, so as to eliminate the equivocal language the High Court found in it. As a weapon against the Communist menace, the Smith Act is currently a broken reed.

Confusion also was caused by the decision that, in discharging John Stewart Service from the State Department, Secretary of State Acheson violated the regulations of his own Department. How Acheson, who is rated a pretty good lawyer, could make such a mistake appears to be explainable only on the ground that law is too complicated a matter to be understood by anybody but an august few.

What the public sees is the probable reinstatement of Service in a post for which his connection with the Institute of Pacific Affairs, however, innocent, was a disqualification. No man of good judgment could have failed to note the bias of that organization. One who failed to note it has no place in the State Department in any important post.

Report to the People

EXTENSION OF REMARKS
OF
HON. HENDERSON LANHAM
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LANHAM. Mr. Speaker, under leave to extend my own remarks, I am including an editorial by Mr. Milton L. Fleetwood, editor of the Daily Tribune-News, of Cartersville, Ga., relative to Aidmore Hospital for crippled children, located just off the grounds of Emory University in Atlanta, Ga.

Mr. Fleetwood's article speaks eloquently for itself:

REPORT TO THE PEOPLE

(By Milton L. Fleetwood)

Through the courtesy of Oscar Burgess, exalted ruler of Cartersville Elks Lodge, this writer was privileged to attend the semi-annual meeting of the board of trustees of Elks' Aidmore Hospital in Atlanta Sunday.

This board, among other actions taken, voted to cooperate with the Augusta Elks Lodge in establishing a clinic for crippled children in that section of Georgia.

The Augusta Elks have accumulated through the years a fund of $50,000. With such a fund in hand, they will be able to apply to the Hill-Burton Hospital Authority for an additional $50,000.

With this total of $100,000 in sight, the trustees of Elks' Aidmore Hospital voted to back the Augusta project to the limit.

Thus will be established another haven for the crippled children of Georgia.

Aidmore, located just off the grounds of Emory University is a 64-bed children's convalescent hospital, offering nursing care, dietary treatment, physical therapy, speech therapy, and a medically supervised recreation program.

The education of all white patients is provided for, by school teachers supplied by the Atlanta school system and DeKalb County school system. The education of the colored children is provided for by the Fulton County school system.

Aidmore is not a general hospital, and acutely ill children can not be admitted because no surgery is performed at Aidmore.

White children from infancy to 21 and colored children through age 14 having certain handicaps come within the scope of Aidmore treatment and are accepted when beds are available.

Aidmore patients are accepted only after the Georgia Department of Public Health qualifies them.

In addition to supporting Aidmore itself, the Elks of Georgia are cooperating with the State Crippled Children's Division. They also provide transportation costs to and from State clinics and hospitals, for those children whose families cannot afford to pay it themselves.

The Elks' also often provide hospital costs and medical fees for children who do not qualify for treatment at Aidmore and whose family cannot bear the costs involved.

The Elks do not stop here since they also purchase braces, wheelchairs, crutches, hearing aids, eyeglasses, and other appliances for handicapped children not qualifying under other assistance programs and whose families cannot pay the costs involved.

A visit to Aidmore touches the heart strings of all who pass thru the various departments.

We wish that some of the northern radicals could visit Aidmore and see how the kind hearts of Southern Elks have provided equal facilities for both white and colored patients.

The same skilled doctors are ready and willing to serve the needs of the colored children as well as white children.

The Elks of Georgia have demonstrated they are worthy of being called the "Best People on Earth."

While not a member of the Elks we have long maintained a devoted interest in all their undertakings. This Sunday visit certainly could not lessen our appreciation of their good works.

America's Influence for World Peace

EXTENSION OF REMARKS
OF
HON. WILLIAM H. AVERY
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. AVERY. Mr. Speaker, former Gov. Alf M. Landon has long been recognized as an analyst and student in foreign affairs. He has given a great amount of study to the foreign policy of the United States and its development to the end of bringing peace to the world.

Because of the former Kansas Governor's recognition in the field of international relations, I want to insert in the RECORD for today a speech by Mr. Landon given in Wichita, Kans., to the Kansas Institute of International Relations:

AMERICA'S INFLUENCE FOR WORLD PEACE

(Address by Hon. Alf M. Landon, Kansas Institute of International Relations, Wichita, Kans., June 16, 1957)

Pax Romana and Pax Britannia are the world's two historic peace periods.

Both were built on the military strength and economic strength of Rome and Britain.

Both countries received enormous contributions from conquered peoples of soldiers and money and trade—including slaves—in the case of Rome. That's the first rule of imperialism and that's the role of Communist Russia—including slaves.

Pax Americana—in complete contrast—is building on the Eisenhower doctrine of giving military and economic strength, plus the general principles in 6 of Woodrow Wilson's 14 points, as common ground for the free nations.

In April, in the Mediterranean Sea, when we mobilized the Sixth Fleet in support of Jordan's independence, the whole world saw

what the Eisenhower doctrine means. That was a victory for the free nations of far-reaching consequences based on America's military and economic strength.

In October, in 1956, the application of equity and justice, as outlined in those six points, to the Suez controversy and the Britain-France, and Israel's invasion of Egypt has succeeded in reducing the widespread distrust of the United States among the peoples of Asia. That also was a victory for all the free nations of far-reaching consequences.

Point 1: Open covenants openly arrived at.

While there are problems associated with that, it fits our policy with all nations, even in the preliminary discussion of the disarmament conference.

Point 5: A readjustment of all colonial claims in which the interests of the population concerned must have equal weight with the claims of the government whose title is to be determined.

Points 10 and 12: On self-determination.

That, of course, is in line with America's traditional belief that every people have a right to choose their own government.

Point 14: "The formation of a general association of nations under specific covenants for the purpose of affording mutual guaranties of political independence and territorial integrity to great and small states alike."

Eight months ago, for the first time in the life of mankind, collective security stopped two major powers' invasion of a smaller and weaker country.

It is true that was not due so much to the strength and the organization of the United Nations, as it was to the position of the United States and Russia.

Nevertheless, it was not two major powers acting in collusion against two other major powers. It was the vote of censure by practically all the nations of the world standing on the principles which Britain and France and Israel signed with the rest in the United Nations charter.

The extent that the Eisenhower administration's foreign policies are being conducted in harmony with the United Nations is even creating some criticism.

Point 3: "The removal of all economic barriers and establishment of an equality of trade conditions among all nations."

While we have not followed that free trade policy 100 percent, we have made sizable progress toward freer trade in our reciprocal trade treaty and negotiated tariffs. I believe that freedom of exchange, money, goods, services, arts and sciences, travel, students, all contribute to a better understanding between peoples. That that has broad and deep influence in the conduct of public affairs. History is full of the effect of personal likes and dislikes, of national sentiment on both internal and international affairs.

America's influence for world peace is not only based primarily on its military strength and economic strength, but also on a realistic altered concept of the true meaning of world leadership and government's responsibility to humanity.

We have used that great strength to make enormous contributions against the tyranny of Prussian militarism, nazism, fascism, and communism alike, and for freedom of the individual.

Instead of following the role of empire, as Russia is doing, and receiving contributions, we are now continuing to make enormous contributions to foster modern higher health standards, higher production and living standards, higher educational standards, building up their national defense in 69 countries, centuries older than America.

Peoples who, for centuries, have only known power and ruthless willingness to wield it are finding it difficult to understand America's using its resources and great strength to promote peace based on the practical problems and intellectual movements for the general welfare of humanity. We saved helpless Russians in World War II. Not until her plans for reducing all the world to Communist colonies were revealed did we start our programs of military aid.

New ideas and new philosophies are stirring masses of heretofore somewhat lethargic peoples the world over. There is much soul searching and wrestling going on today in America with such problems as segregation. India has not only her caste or segregation problems, especially regarding the untouchables, but also bitter religious differences between the Moslems and Hindus. Religious segregation is also true in Pakistan, the 11 Arabian nations and Israel. South Africa has bitter racial problems.

Freedom is in the air everywhere. But it is more than freedom.

That new thinking, the new faith, that new desire, to establish on a better basis the day by day workings of society and bringing the real meaning of the truths of civilization to more peoples is taking on truly great proportions. It is voiced in the most unexpected places.

The new ventures in the ancient problems of human relationship have become so real and taken on such proportions in many countries that governments all over the world are reviewing their policies and actions.

That recent and world wide practical application of the general welfare statement in our American Constitution that "all men are entitled to life, liberty, and the pursuit of happiness" is reshaping politics and economics even in darkest Russia and China.

I remember President Franklin D. Roosevelt discussing with me, I think it was my last visit with him, what has come to be known as the point 4 international gift program. President Roosevelt was thinking of it as a definite, but temporary, contrast to the colonial policies of Britain and France.

I agreed with Mr. Roosevelt that it was a good start on a sound foundation for a peaceable world. With his permission, I mentioned our discussion to the reporters when I left the White House. I believe the whole program, great as its accomplishments now, needs revision in the light of experience.

It will be a great mistake to ignore the rising tide of legitimate criticism against our foreign aid program.

1. Its size. Trying to do to much too quickly. That, of course, is characteristic of all American undertakings.

2. Attributes of permanence. However, it must be remembered that a large part of the program is a matter of our national defense.

3. The mistakes and waste by administering and planning through inexperienced personnel—especially waste.

To ignore these points of legitimate criticism is to jeopardize the future of the program both at home and abroad.

For illustration, take the recent tragic kidnapping and murder in Iran of two American men—point 4 employees—and the wife of one of them by a bandit gang. They had no business in that location. They ought never to have been there—especially the American woman.

The unproar that tragedy aroused resulted in the resignation of the Prime Minister of Iran—who was a great friend of the western democracies. The repercussion of the tragic affairs of a noncommissioned officer—in Korea, in Japan, and in Greece is spreading all over the world. We have had similar experiences in Germany. There have lived few peoples with soul so dead that they did not resent being told too much and too long what to do by a foreign country. Too much and too long of that is as bad as too little and too late.

I was the first Republican leader to speak vigorously in support of the Turko-Grecian loan—saying at the time it would have to be expanded to include the Pacific. I remember how bitterly that policy was fought by the left wingers in this country. They screamed it would mean war with Russia. I strongly supported the Marshall plan.

The questions I raise about our foreign aid program—is it balanced—is it being spent wastefully—is it being placed where it will do the most good for peace. I firmly believe it should be shifted from gifts to loans. Loans are made in the atmosphere of understanding—of cooperation and mutual respect. Outright grants are made in the atmosphere of condescension.

I think it is time to start calling a halt to our foreign aid program. Its continuance indefinitely on the present scale is fraught with dangerous consequences to the United States.

The present size of our national debt—the rate of our taxation—local, State, and National—is a threat to the strength of the United States. Any weakening of the economic strength of the United States will be of disastrous consequences to the free world.

We have a patchwork act designed to provide for the unification of our Army, Navy, and Air commands. I do not know of any essential Government function where we have done such an inadequate job as we have in the organization of our Armed Forces for national defense. We have Joint Chiefs of Staff and a Chairman where we must have a General Staff and a Chief of Staff. Without that, we cannot have unity of the three services—now wasting the public's money and manpower by bitter rivalries—nor can we have the coordinated plan our national defense demands. I am not only concerned regarding this fallout from the H-bomb—but the continuing fallout between our admirals and generals.

All the evidence points to the fact that we could have stronger defense for much less money if the three services were more efficiently unified and organized.

We have Federal aid to small business—to farmers—immersed in bureaucratic redtape to the extent that their benefits are clogged and their costs are increased.

According to the Hoover report, the Federal Government is spending money for a lot of enterprises it does not need to, and the new Federal budget proposes to take on some more nonessentials. Mr. Eisenhower's budget proposes 14 new grants-in-aid to the States on top of the existing 58.

Unfortunately, Government does not have the check on its activities on wasteful and inefficient management that business has in its profit-and-loss statement.

The President has said he is not going to welsh on his promises to the American people in the 1956 national Republican platform. But how about his promises to reduce the national debt and national tax rate by economy and efficiency in Government? The only way to restore a sound fiscal policy in America is a determined, persistent, and consistent reduction of our monstrous national debt. The place to start is with the Federal budget now pending before the Congress.

The Secretary of the Treasury's responsibility and integrity to his job compelled him to voice his grave fears of the gargantuan size of the Federal budget. Having expressed his official opinion that clashed with the President's and the rest of the Cabinet, he resigned.

Of course, Secretary of Treasury Humphrey's resignation was expressed in polite terms of having nothing to do with his vigorous statement on the menace of the President's budget to our national security.

The President's acceptance of Mr. Humphrey's resignation was expressed in the same diplomatic language. That is the way political policy differences are settled at the presidential levels. It is like divorced Hollywood stars announcing that they are still the best of friends.

The Federal budget must be sliced. Where it is sliced is of prime importance to our national security. The principal attack must not be confined to our foreign aid and military expenses, although economies can be effected there. Major economies must be made in other Government functions, if the National Government credit is to be maintained.

Any objective translation of the Communist patter must reach the conclusion that their plans have not worked out for either industrial or agricultural production, and admissions that great and terrible injustices were done in the name of the Communist revolution. There is a growing rift between the people and the party privileged class not only in their colonies but in Russia and China. The Soviet has failed in its desperate and persistent attempts to weaken America's influence for peace by developing friction between the free countries into a split. Khrushchev's foreign policies in the Near East suffered a disastrous defeat. The sheer brutality of the Communists in Hungary shocked the whole world. Khrushchev this week slyly fell back on the old Communist pretensions that their ideology is a bigger weapon for conquering the world than their H-bomb. He must mean they have perfected new methods of brainwashing.

All that does not mean a change in the Soviet's objectives of reducing the rest of the world to Russian or Chinese colonies by force.

That does mean that the Communist dictators feel compelled to reshuffle their tactics, temporarily at least, by fear of incipient public opinion at hime, in their colonies, and their loss of public respect and prestige abroad.

The basic error in Marx and Lenin thinking and teaching is becoming evident.

They believed and taught that communism could be established by seizing complete control of a country—liquidating the existing middle class—and bringing up an entire new generation in the belief that all democracies were decadent—that all evil came from capitalism and all good came from communism.

Despite the fact that the slightest deviation from that basic tenet of communism has been punished by torture, murder and slave camps on a scale never heretofore known in the world's history, the revolt against the heartless Soviet tyranny is stirred by the students and the coming generation—not only in Hungary and Poland—but in Russia itself. Youth at any time and in any country has always raised their voices in protest against inhumanity and in behalf of freedom, equity and justice.

I submit that the more literate a country becomes—and education of the masses is one of the proudest boasts of the Soviet—and the bigger the middle class a country develops—and that is growing in Russia—I submit the more any government must consider public reaction at home to its policies and acts.

Mankind has never known such a horrifying attempt to mold the thinking and the beliefs of masses of people like the Communists have attempted in China, in Russia and in their colonies. The press—the radio—all literature—were controlled. It was an offense punishable by sentence to the slave camps—to listen to any outside radio. Broadcasting from the free countries was jammed by the Soviet electronic instruments.

The music, arts, and sciences of the world were either derided and ridiculed or claimed as Russian.

Even an agricultural scientist was punished by Stalin for saying that America was producing better corn than Russia. Now Khrushchev is importing hybrid corn seed from America. The economy of Russia has forced a drastic revision in communistic thinking and planning. Neither the Russian industrial production or agrcultural production can sustain a long war, let alone mounting peacetime demands. Attempting to meet these demands, the management of industry and agriculture is being decentralized by the Soviet. While control will center in the Kremlin, the scattering over Russia of this new privileged class means some weakening of centralized control. That is of political significance.

That should mean in time the growth of local government and strong local government is always a check to centralized tyranny.

All that adds up that public opinion is more existent today, although still subject to control and punishment, than heretofore in Russia and its colonies. What's more important, incipient public opinion always generates and grows. If that be true time is fighting on the side of the free world.

I believe that a working and sizable public opinion can be as great a deterrent to war as the H-bomb itself.

A rising tide of public objections is evident the world over to further atomic and hydrogen bomb tests.

Scientific opinion on the required limitations of these tests to avoid menacing all present and future life is divided.

Public opinion here and in the free world at least is aroused by the discussion and warnings in recent months. Although the necessity of preparing for a nuclear war cannot be ruled out as long as one man in the Kremlin can start it. And don't overlook the fact that most wars have been started by one man. However, I believe there is something more significant and vital in the background of public thinking than these bomb tests—as important as that question is.

That is the belief that there can be no victor in a modern war is at least pentrating the inertia of peoples and their governments.

Norman Angell, in The Great Illusion, published in 1913, explained that simply and persuasively. But it has taken two world wars and one lessor one to dramatize the fact that all—including neutrals—are losers in modern war. It should be obvious that nuclear neutrality—or for that matter neutrality of any kind with H-bombs dropping—is an iridescent dream.

Wars are never the desire or the will of popular governments.

Wars are the product of the stupidity—the cupidity—the arrogance—or the fanaticism of the Napoleons—the Kaisers—the Hitlers of the world.

All of them and their people were lured to their defeat and destruction by early and easy victories.

In our time, peace or destruction got down to one man in the case of the Kaiser and Hitler—now once again it is one man in Khrushchev, who apparently has just about nailed down his supremacy in the Kremlin. While he could still slip, the chances of his doing so are becoming more and more remote. Today, the 11 in the Kremlin must be discussing whether to consolidate their great territorial gains—check the cracks beginning to appear in their monolithic structure before they widen farther—or lured as Napolen—the Kaiser and Hitler were by early and easy conquests—they may still be deluded by their fanaticism into believing that democracies are decadent and will not fight unler any circumstances.

Until the 11 in the Kremlin's decision becomes clear and unmistakable—until the party boss Khrushchev decides whether he wants to be another Hitler—or a Moses—there must be no weakening by the free countries of their military defenses—and their economic strength—if they prefer freedom to Communist slavery even to the point of no return.

A U. N. Police Force Can Only Have One Master

EXTENSION OF REMARKS
OF
HON. DANTE B. FASCELL
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. FASCELL. Mr. Speaker, I have been impressed by the public interest being manifested in resolutions introduced in the House recently by a bipartisan group calling for the creation of a permanent United Nations Police Force. My colleague on the House Foreign Affairs Committee, the very able and distinguished gentleman from Missouri, Representative A. S. J. CARNAHAN, has taken the lead in presenting this important matter to the House.

I hope it will be possible for the House Foreign Affairs Committee, or an appropriate subcommittee to have early hearings on the resolution. The resolution raises a question which must have the earnest and serious consideration not only of the Congress, but of the executive branch as well. Many problems are inherent in a proposal such as this. I can think of no better way to bring these problems into the open for discussion and debate than through hearings.

Mr. Speaker, I would like to insert an editorial from the Winter Park (Fla.) Herald, commenting on the resolution. This is an interesting and lucid explanation of the resolution and I commend it to the attention of Members of the House:

A U. N. POLICE FORCE CAN ONLY HAVE ONE MASTER

A resolution for a permanent United Nations police force has been introduced in the House by Representative A. S. J. CARNAHAN, Democrat, of Missouri, and Representative PETER FRELINGHUYSEN, Republican, of New Jersey. A similar resolution has been introduced in the Senate by Senator JOHN SPARKMAN, Democrat, and Senator RALPH FLANDERS, Republican.

In the resolution it is stressed that the U. N. emergency force in Egypt has made significant contributions toward stability in the Middle East, and that the force has constituted a step toward the maintenance of international peace and security.

The resolution proposes, however, that the force be made permanent and organized in an entirely different way than now is the case.

The U. N. police force should be organized, trained and financed by the United Nations, the resolution suggests. No individuals should be accepted for membership in the force who are nationals of the permanent members of the Security Council or of states not members of the United Nations. The expenses for the force should be paid by the United Nations and be included in the U. N.'s regular budget.

The idea of a permanent U. N. police force or "fire department," at any time ready to rush out to fight dangerous fires, is worth every support. Such a force will have to come, sooner or later if we are going to preserve the peace, but it is packed with many complicated problems.

A weakness of the present young international police force is the fact that it is a heterogeneous group of units from various

nations. Too many of these units are governed by the policy and political interests of their home countries. Although they are under a unified command, the officers and other members are easily influenced by the thinking of their home governments. In some delicate situations they will be led by direct instructions what action to take. It is generally accepted that the action of the unit reflects as much on its home country as on the U. N. As long as the members carry the uniforms of their own defense forces they always will feel themselves primarily as members of those forces.

Another weakness in the present setup can be mentioned, and there is an obvious risk that this weakness might lead to the undermining of the whole idea of an international police force. There is a tendency to call on the same members of the U. N. whenever neutral observers or neutral supervisors are needed. Because of the opportunities of playing politics and raising obstacles which are offered on such missions, U. N. members under Moscow control are only too eager to serve. Another category of U. N. members is the one generally recognized as being neutral and willing to serve because of an honest wish to contribute to the peace. This group has, however, gradually become cooled off because of the obstructionist tactics of the first group. They feel that very little can be accomplished and many of these members, who are professional soldiers, feel they gain nothing by their international assignment and would profit more by staying home. The tendency of the international police assignments of being drawn-out affairs because of the obstruction of other police members and because of the lack of intention of the parties in controversy to come to some agreement will most probably make the neutral nations increasingly hesitant to serve.

An international police force recruited directly by the United Nations, uniformed, equipped and trained by the U. N. and with its members entirely disconnected from their home government and armed forces, would serve the purpose vastly better. There would be no question of any member serving more than one master.

On the other hand, even such a force could well be made victim of politics. This would, however, be in the open and in the United Nations. Such a force would be considerably more expensive to finance than a force trained and equipped by the member nations and only called upon when needed. A U. N. organized force would have to be kept, equipped, trained and paid whether it is used or not.

Particularly when it comes to appropriations of money, nations against the use of the force for a special action will have an opportunity of sabotaging the force and strangling it by denying it necessary funds.

Programs of American Charities and Voluntary Agencies Abroad

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 29, 1957

Mr. FULTON. Mr. Speaker, I submit the statement of William H. McCahon, Chief, Voluntary Foreign Aid Staff, International Cooperation Administration, before the Committee on Foreign Affairs of the House of Representatives, showing the working of the 1958 program for humanitarian purposes abroad of American nonprofit voluntary agencies developed in conjunction with the United States mutual-security legislation.

The statement follows:

My name is William H. McCahon. I am Chief of the Voluntary Foreign Aid Staff of ICA and serve also as Executive Director, ex-officio, of the Advisory Committee on Voluntary Foreign Aid. That Committee consists of nine members, all serving without compensation, and is chaired by Mr. Charles P. Taft. I have served in this capacity since July 1, 1953, and for 3 years prior to that as Associate Chief. In carrying out the responsibilities of this position, I have become closely acquainted with the personnel of the American voluntary agencies and have had an opportunity to observe and obtain a personal knowledge of their varied activities abroad. I am convinced that these groups of private citizens play an important role in international relations which today is of great value to our country. Acting on behalf of the American people they, as private citizens, are extending a helping hand to friendly peoples around the world, who, through circumstances beyond their control, need our assistance. The request we are making represents one material way in which the United States Government indicates its interest in supporting and furthering the overseas activities of its own citizens' groups.

For fiscal year 1958, an appropriation of $2.2 million is being requested which is $0.3 million less than last year's appropriation. If approved, the funds would be used to continue ocean-freight support for shipments of relief and rehabilitation supplies by approved American nonprofit voluntary agencies engaged in humanitarian activities abroad. Section 409 of the Mutual Security Act of 1954, as amended, defines approved agencies as those registered with the Advisory Committee on Voluntary Foreign Aid, and the American Red Cross. These private agencies draw their principal support from voluntary donations of the American people both in cash and in kind. It has been conservatively estimated that their combined constituencies comprise at least 75 percent of the American people. The program is typically American, representing, as it does, a material expression of good will by our citizens for their less fortunate friends abroad.

It is estimated that supplies valued at $32.8 million will have been shipped and distributed this fiscal year at a cost to the Government of $2.5 million. Thus each tax dollar spent to pay ocean-freight costs is multiplied nearly 14 times in terms of the value of the goods furnished and delivered. The funds requested for next year would, on this basis, move goods valued at approximately $29 million. These supplies include food, clothing, medical and hospital supplies, school supplies, handtools for trades and agriculture, and other self-help supplies. Many of these goods are donated in kind without any cash contribution to cover delivery costs. Hence, the value to the agencies of ocean-freight support without which the program could not go forward. The whole activity is of unique importance in terms of its contribution to international friendship and good will because it represents people-to-people giving at levels not normally reached by government-to-government aid programs.

In each case, before expending funds appropriated for this purpose, a formal agreement is entered into between the United States and the receiving government under the terms of which the latter guarantees duty-free entry of these goods and payment of inland transportation costs from the port of entry to the ultimate point of distribution. The American voluntary agencies, for their part, bear the cost of solicitation, processing, warehousing, packaging for export, and transportation to United States ports, as well as maintaining United States citizen representatives abroad to supervise distribution and to insure that the supplies reach the persons for whom they are intended. Thus, the program represents a three-way cooperative arrangement between the American voluntary agencies, the United States Government, and the foreign governments, with each contributing materially to its success. All goods are clearly marked to identify their United States origin. These markings bear the United States emblem and the wording "gift of the American people—ocean freight paid by the United States Government." Also, the origin of the supplies is made known to the individual recipients through the United States citizen representatives of the agencies, resident in the countries of distribution.

These private agencies are carrying on many other activities and services of interest to the United States. They constitute a useful channel through which United States agricultural surplus commodities can be distributed to needy people abroad. Over the past several years, they have taken on ever-increasing responsibilities in moving substantial quantities of these surpluses. They are also active in the fields of technical assistance and refugee resettlement. In the latter field, their outstanding services on behalf of Hungarian refugees is still vividly in mind.

The following 31 agencies are those which now benefit from participating in the ocean-freight subsidy: American Baptist Relief; American Friends of Austrian Children; American Friends Service Committee; American Jewish Joint Distribution Committee; American Mission to Greeks; American ORT Federation; American Red Cross; Assemblies of God—Foreign Service Committee; Brethren Service Commission; Catholic Relief Services—National Catholic Welfare Conference; Church World Service; Congregational Christian Committee; Cooperative for American Remittances to Everywhere (CARE), Inc.; Foster Parents' Plan; Heifer Project; International Rescue Committee; Iran Foundation; Little House of Saint Pantaleon; Lutheran World Relief; Mennonite Central Committee; Near East Foundation; Pestalozzi Foundation of America; Refuge des Petits; Romanian Welfare; Salvation Army; Save the Children Federation; Tolstoy Foundation; Unitarian Service Committee; United Lithuanian Relief Fund of America; World Relief Commission of the National Association of Evangelicals; and World University Service.

Jensen Says Eisenhower Is Undisturbed by Cuts

EXTENSION OF REMARKS
OF
HON. JOHN J. ROONEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. ROONEY. Mr. Speaker, under the leave to extend my remarks in the RECORD, I include the following article from the Washington Evening Star of June 22, 1957:

JENSEN SAYS EISENHOWER IS UNDISTURBED BY CUTS

President Eisenhower was pictured today as "not too disturbed at what Congress has done in reducing his budget."

Representative JENSEN of Iowa made that report on Mr. Eisenhower's attitude after Mr. JENSEN and 39 other House Republicans had breakfast with the President at the White House.

The get-together over scrambled eggs, bacon, and fish cakes was the third in a series. Mr. Eisenhower is having all Republican members of Congress in as early morning guests in an effort to win enactment of his legislative program.

COMMENT IS SURPRISE

Mr. Eisenhower has had some rough going in Congress in trying to win approval of the administration's $71.8 billion budget. The House and Senate already have voted some deep cuts, and the President on more than one occasion has spoken out in opposition to such reductions.

So the remark by Mr. JENSEN that Mr. Eisenhower's "not too disturbed"—or at least doesn't seem to be—about the cuts came as something of a surprise.

Mr. JENSEN, a member of the Appropriations Committee, told newsmen:

"He recognizes that it is the duty of Members of Congress to exercise their own good judgment."

Mr. JENSEN went on to say that he regards Mr. Eisenhower as a great guy who is very considerate regarding the views of others.

"I have not been able to see eye-to-eye with him on some of the things he has recommended, but he always is willing to give Members of Congress the privilege of voting their convictions and still stay in the President's good graces," Mr. JENSEN said.

House Republican Leader MARTIN of Massachusetts reported there was no discussion of business whatsoever at his table. As at the two previous breakfasts, Mr. Eisenhower moved around the White House state dining room and chatted with House Members seated at four different tables.

SOCIAL GATHERING

"It was just a social gathering at my table," Mr. MARTIN said, adding that several of the House Members did a bit of lobbying in an effort to lure Mr. Eisenhower to their particular States for a summer vacation.

Mr. MARTIN said he and Representative MCINTIRE of Maine put in some solid plugs for New England on the ground it's cool there with plenty of good trout fishing.

"The President is still looking around (for a vacation site) and I think it is barely possible he will go to New England," Mr. MARTIN said.

Several of the GOP lawmakers reported Mr. Eisenhower was in a jovial mood. One—Representative MICHEL, of Illinois—remarked that the President was light of heart enough to appreciate rock 'n roll music.

That was an allusion to rock 'n roll numbers Mr. Eisenhower heard at a young Republican rally at Constitution Hall last night.

Unhappy Haiti

EXTENSION OF REMARKS

OF

HON. DANTE B. FASCELL

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. FASCELL. Mr. Speaker, our mutual security program is presently under consideration by the Committees on Appropriations and Foreign Affairs.

Many have felt that we should emphasize more strongly our alliances with our close allies in the West Indies, Central and South America.

One must admit the difficult problems that exist for peoples in Asia, Africa, and Europe.

But good judgment warrants close attention and scrutiny to the peoples of this hemisphere. We must exert every effort to help our friends to help themselves.

A desperate situation existing in the West Indies has been brought to my attention by the attached letter, which is published in an effort to be informative and constructive in pointing out the dangers which exist on our doorstep.

The letter follows:

UNHAPPY HAITI

The recent political crisis was but a symptom of Haiti's abysmal poverty. It is a country where almost three-fifths of the 4 million people of the old island of Hispaniola are crowded into approximately one-third of the island's land. Of that one-third, a good deal less than half is arable.

One Haitian child out of each 5 or 6 goes to school. The people are more than 80 percent illiterate. The Creole French patios that they speak is not a written language.

Mutual distrust between the Mulattoes and the Negroes is ancient. Meantime, the country's economic state has grown worse until today.

Haiti has a gross debt of almost 65 million. This in a place whose annual budget comes to approximately $35 million; its gold and dollar reserves has dropped $11.3 million last year to $5.8 million now.

Haiti needs help. It needs somebody to put its agriculture in order, to teach it how to feed itself, and to get the most from its two principal cash crops, coffee and sisal; rice is another potential. An American concern has engaged in the last year in developing rice into a cash commodity, of which Mr. Frank R. Cusumano is chairman of the board—an investment of $500,000. The United States should take part in aiding this development. We find much to be desired from our American Ambassador in bringing a stronger alliance with this unhappy country in its entire need of educational and medical assistance.

Only the United States can help. Any efforts on our part to be successful must be planned long range and must be sound financially. Such an approach can work in the Carribean, as it has worked in Puerto Rico.

The newspapers have followed closely the Haitian plight, especilaly the New York Times and the Herald Tribune. They have voiced in unison the tragedy of this unhappy country. Through the indignation of our thinking people, such conditions to the civilized world should be eradicated by the United States cooperation and our foreign-aid program.

The gist of this communication came from the Morning Sun papers, Baltimore, written June 10, 1957, by Mr. Price Day.

Yet we have in the past assumed responsibility for Haiti. When the United States marines went there in 1915, to stay until 1934, we acknowledged Haitian stability as our problem. Some observers believe that the country is more unstable economically and politically today than it was in 1915, although no one in our foreign-aid program has proposed a solution to this problem.

The outlook is for deeper poverty; graft and corruption even worse; and politics progressively more chaotic.

No one wants much of anything to do with Haiti and the families of Latin-American nations, most of them speaking Spanish. Haiti is an orphan. Her isolation is almost complete. The United States may not be much of a friend to Haiti, but it is the closest thing to a friend that Haiti has.

The United States should recommend a free and honest election as soon as possible by the Haitians. Dr. Francois DuValier, a candidate, is an able leader, without communistic influence. Educated in our country in public health, hoping for a speedy election in order to put Haiti where it rightfully belongs, as our friend.

FRANCIS K. CUSUMANO.

Arthur T. Vanderbilt

EXTENSION OF REMARKS

OF

HON. WILLIAM B. WIDNALL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. WIDNALL. Mr. Speaker, the State of New Jersey has suffered a great loss in the untimely death of Arthur T. Vanderbilt, chief justice of the New Jersey court system.

For many years, Arthur T. Vanderbilt was a strong and active leader in the cause of good, clean, representative government. His leadership attracted good candidates to run for public office and over a period of years he contributed greatly toward the development and progress of the State of New Jersey.

With the advent of the New Jersey constitution in 1947, a court system evolved that became a model for the courts in the other 47 States. There was nothing more natural than Arthur T. Vanderbilt becoming chief justice of the new court system for he had been its chief advocate and molded its creation. To put into effect the marked changes that were to take place in the new system, a strong hand was needed at the top. Chief Justice Vanderbilt was determined that New Jersey should not only have the framework of the best court system and one that would be a model for other States, but that it should operate with efficiency, with dispatch, and with earnest attention of the judges and lawyers to their duties. The record speaks for itself and the residents of New Jersey are grateful for his accomplishments in their interest.

Under leave to extend my remarks, I am inserting the following editorial from the Ridgewood Herald News of June 20, 1957:

ARTHUR T. VANDERBILT

The greatest monument of all time to the late Chief Justice Arthur T. Vanderbilt is the New Jersey court system. However he may be evaluated in the perspective of history, the judicial reform as written into the New Jersey constitution of 1947 will stand as his most enduring achievement.

Justice Vanderbilt possessed the weaknesses as well as the strengths of a personality type usually classified under the term "strong man." The connotations of the term are by no means derogatory. Experience teaches us that even under the most efficient democratic system situations arise which call for strong, authoritative leadership. Such a situation prevailed under New Jersey's antiquated court system prior to the constitutional convention of 1946.

More than 5 years before that event Mr. Vanderbilt had been commissioned by the then Governor, Charles Edison, to draft the model of a new constitution for New Jersey, particularly with regard to the improvement of the judicial system. Nothing came of it until the convention under the

regime of Gov. Alfred E. Driscoll finally got underway. Mr. Vanderbilt was not a delegate to the convention but the Vanderbilt shadow, focused in his constitutional draft, hung over the entire convention. The court system which evolved, and which has been recognized throughout the United States as a model of efficiency, bears the stamp of the Vanderbilt personality.

It was those very qualities of strength which frequently brought Justice Vanderbilt into sharp political and judicial conflict, as for example, when his ruling that the legislature is powerless to change any rule adopted by the courts brought him into sharp conflict with Gov. Robert B. Meyner.

The role of a reformer in a democratic society is never smooth, and Justice Vanderbilt experienced his share of the ups and downs of social and political evolution. Whoever assumes such a role must be evaluated by the net result rather than by the passing frictions of his career. And on this score Chief Justice Vanderbilt will hold a high place in the esteem of future generations.

Supreme Court and the Reds

EXTENSION OF REMARKS
OF
HON. ROBERT C. BYRD
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 19, 1957

Mr. BYRD. Mr. Speaker, permit me to call to the attention of our colleagues Mr. Constantine Brown's article entitled "Supreme Court and the Reds," which appeared in the Washington Evening Star of June 24, 1957.

SUPREME COURT AND THE REDS: RECENT DECISIONS IN CONSPIRACY CASES DRAW STRONG CRITICISM AGAINST JUSTICES

(By Constantine Brown)

A drive has been started in Congress for new legislation to offset the damage done by the recent decisions of the Supreme Court in connection with the Communist conspiracy which works underground in this country.

In the opinion of a number of members of the Senate and House committees responsible for unearthing these Communist activities, the Red conspiracy continues as effectively as it did after 1933, when the United States became the last great power to recognize the U. S. S. R.

The Senators and Representatives who became irked at the Supreme Court decisions maintain the judges must live in an ivory tower not to recognize that the American Communists' and fellow travelers' aim is the destruction of the Constitution.

Since the integrity of the High Court must remain above suspicion, the legislators are determined to introduce new laws to close existent legalistic loopholes which permit attorneys for subversives to exculpate their clients.

Laying aside all the technicalities about which lawyers quibble, our legislators say it would be difficult to maintain that a free society should not be allowed to protect itself from a conspiracy which seeks its destruction.

Our social order has a right to provide for its perpetuation. Yet in recent days the Supreme Court has issued decisions which have the force and effect of tying the hands of the FBI and of Congress in their attempts to expose Communist infiltration and subversion in our Government.

In the last year, it is pointed out, the Court has issued 10 rulings which have given aid and comfort to the Communist cause; have seriously curtailed the effectiveness of the FBI and Justice Department; and have caused exultation at the headquarters of the Communist Party where it was announced that henceforth the thinned ranks will be swollen again.

Led by Chief Justice Warren and Associate Justices Douglas and Black, the Court has dragged in every technical rationalism to reverse decisions of lower courts in Communist or contempt cases.

In one of the most recent decisions—the Jencks case—the conviction of the labor leader for falsehood in signing a non-Communist affidavit was set aside because he had not been given access to FBI reports.

Communists and fellow travelers have been trying for years to destroy the effectiveness of the FBI. They have tried every trick and subterfuge to deal a fatal blow to our top investigating agency by forcing it to reveal its secret information sources. Now they appear to have succeeded.

In an article in the American Legion magazine of March 1954, J. Edgar Hoover, director of the FBI, highlighted the confidential nature of the FBI files, saying that a citizen who reports informaiton "* * * can be certain that his assistance is appreciated and that his identity will be kept confidential if he so desires."

It seems strange to many Americans that our Supreme Court desires to violate that confidence.

The latest mental effluvium from the Supreme Court reversed the conviction of another labor leader, John T. Watkins, for contempt of Congress on the ground that the inquiries of the House Un-American Activities Committee infringed on Watkins' constitutional rights.

This decision, if allowed to stand, will destroy the ability of congressional committees to expose the tangled web of Communist subversion in our Nation. It will prevent congressional committees from exercising the power of subpoena and contempt citations as a means of focusing public attention on specific situations.

Naturally all American citizens desire to preserve the Constitutional guaranties of our people. These are not matters to be taken lightly. Nevertheless, it is preposterous to ignore the social responsibilities that accompany citizenship and to maintain that we should be so free that each citizen shall have the right to conspire to destroy our Government with impunity.

In the words of Justice Tom C. Clark, former Attorney General of the United States, who has dissented from most of these opinions, this type of reasoning is "picayunish," "immaterial" and "mischievous."

There is a growing body of public opinion advocating that it is high time for the Supreme Court to cease curbing Congress and the Justice Department and to return to the principles of law and abandon the philosophy of "social action" which seems to be the primary motivating factor.

Transportation of First-Class Mail by Aircraft

EXTENSION OF REMARKS
OF
HON. JOHN LESINSKI
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LESINSKI. Mr. Speaker, as pointed out in the following letter from Mr. Paul A. Nagle, president of the National Postal Transport Association, Congress has never formally authorized the transporting of first-class mail by aircraft. Although the experiment which has been going on for 4 years may be proper, I personally believe we should look into it further and either authorize its continuation and extension or else bring it to a halt. There may be some merits to the operation, but they may be overshadowed by the disadvantages that are encountered. To resolve the question I am suggesting that a thorough investigation of the situation be made.

Mr. Nagle's letter is as follows:

Hon. JOHN LESINSKI,
House of Representatives,
Washington, D. C.

DEAR MR. LESINSKI: During the questioning which followed my testimony in regard to H. R. 5836, on March 22, you expressed some doubt about the handling of 3-cent mail by aircraft under existing experimental procedures.

On April 18, Deputy Postmaster General Stans was interrogated in regard to the operation and he said, first, that the operation is making money; and later, that it is not losing money. The Postmaster General said during the hearings that the 3-cent flying experiment has the blessing of the courts. Actually, no such clear determination of granting or withholding approval was developed in the courts. The decision which was reached hinged more upon jurisdiction than upon any valid judicial opinion. The suit had been brought by five western railroads and all during the court procedures, the approach of the Post Office Department's attorney was directed more closely to a lack of competence by the railroads to bring suit rather than upon the legal issues involved.

The United States Supreme Court on May 7, 1956, declined to review the decision of January 28, 1955, of the United States District Court for the District of Columbia (C. A. No. 4958–54). The district court in turn had ruled that Congress had not sanctioned the experiment but that because of "the failure at this point of the plaintiff to show irreparable injury the motion for permanent injunction will be denied."

The same decision noted:

"It has been pointed out that this experiment was recognized by the Congress in the form of the fact that the hard-working, very efficient, and all-powerful Appropriations Committees of both sides of Congress, the House of Representatives and the Senate, knew by reporting that this experiment was going forward. It is argued on behalf of the Postmaster that in the legislation that appropriated sums of money to carry on his Department the House saw fit—or the Senate, rather—saw fit to refer to this experiment then going on, and the House report which was more voluminous, omitted it. Then it is urged that because the Appropriations Committee required quarterly reports, that those indicate notice, as was the case of *Brooks* v. *Dewar* (313 U. S. 354).

"One has to know the function of the Appropriations Committee and the means by which our Congress operates to appreciate that that is not a tenable argument.

"First of all, there is a standing rule in the Congress that one may not have legislation in an appropriation act, and it is subject to the very striking attack of a point of order. All Congressmen and all Senators know that, and in the House of Representatives it is especially dealt with constantly. So that if it is a matter that in broad legislation appropriating nearly a billion dollars reference is made to the quarterly reports, it is merely a "watchdog" procedure which that very efficient committee, the appropriations, uses, so that it will be abreast of needs, because

deficiency appropriations are likely to come, surpluses build up, and the committee wants the information."

Certainly, in this stage all of us are acutely familiar with deficiency appropriations and we will understand the Court's further findings that:

"The Court is bolstered in that because at one point the experimental use of service in connection with transportation of mail by air to include the autogyro was given the postmaster by the act of April 15, 1938, 52 statutes 218–220. It had a limitation. It set up standards, and it also provided a limitation of its life and was later repealed."

The Court said that, "It may well be that the American people are on the verge of a new classification of mail matter." However, it added:

"The Court stresses that because the Court will not rule as a matter of law that the Postmaster General is acting beyond those limits of authority delegated to him by the Congress of the United States, which has from the people the sole directive to establish post offices and post roads."

Qualifying this finding, the Court made the further observation:

"The Court will also rule that as a matter of law, under the grant of moneys to run, maintain and operate the Post Office, the Postmaster General did have the right to experiment, his actions in that sense are not unlawful, but the Court will rule that prolonged experiments which by the running of time demonstrate that the knowledge acquired by the experiment has been received and that it is a promulgation of an executive attempt to usurp the power of the legislative function is unlawful."

Surely we cannot misconstrue the significance of the final sentence quoted above and accordingly, we will place into its correct current context the further determination from the Court's decision that:

"The Court will rule as a matter of law that the Postmaster has a right to make this experiment on the west coast, limited, as the Court said, in that it shall not be unduly prolonged."

It seems to us that an experiment which is in its fourth year is certainly quite close to being "unduly prolonged" especially when clear congressional sanction has not in the interim been granted.

The pattern of highway post-office service has not at all kept pace with suburban development and with the withdrawal of railroad service. The pattern of change in distribution in transit has been one of contraction rather than one of expansion.

Accordingly, we suggest that it is inappropriate for the Post Office Department to claim improved postal service by means of 1 or 2 dramatic actions while the general pattern of service is impaired.

Sincerely yours,

PAUL A. NAGLE,
President.

Uncle Sam the Employer

EXTENSION OF REMARKS
OF
HON. WILLIAM A. DAWSON
OF UTAH
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. DAWSON of Utah. Mr. Speaker, I recently introduced legislation, H. R. 8104, which would permit the Treasury Department to cooperate fully with the respective States in withholding State income taxes from the salary of Federal employees.

Under leave to extend my remarks in the RECORD, I include the editorial comment of the Deseret News-Telegram of Salt Lake City, which puts its finger squarely on the inequity of the present Federal law pertaining to this matter. I differ with the editorial on only one point: I am very hopeful that Congress will recognize and correct this situation.

The editorial follows:

UNCLE SAM THE EMPLOYER

Probably Congressman WILLIAM DAWSON is no more hopeful of actual action than we have been in protesting the Federal Government's refusal to withhold State income taxes in Utah.

Still, protest against this bit of governmental high-handedness needs to be written clearly in the record. Mr. DAWSON's bill calling on the Government to cooperate puts the protest on record. We hope he will push vigorously for hearings and for a floor vote on the matter. That is the only way it can be brought to the full attention of Congress.

As Congressman DAWSON has pointed out, the 82d Congress thought it was laying the foundation of cooperation when it passed Public Law 587. In reporting the bill favorably, the House committee declared that "Every practicable step should be taken to cooperate in the area of withholding with the State and Territorial governments in view of their cooperation with the Federal Government in fiscal matters generally, and particularly in withholding the Federal income tax from their employees."

But Utah has discovered, along with four other States, that a big loophole still exists in that cooperation. The Treasury Department reports it is not allowed by law to withhold taxes in a State that withholds only from employees who have not established permanent residency.

The primary purpose of the Utah withholding tax law passed by the 1957 legislature was to collect income taxes from construction and other workers temporarily in the State who would otherwise file no Utah returns. It is a worthy and justifiable aim. But the effort is crippled when the Federal Government—which, unfortunately, is Utah's largest employer—refuses to abide by regulations governing other employers.

This refusal if allowed to stand could open the way to all sorts of mischief in the Federal Government's role of employer. Congress should correct it.

The Small Farmer's Battle for Survival

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. HUDDLESTON. Mr. Speaker, last Saturday morning it was my privilege to address the ninth annual meeting of the Alabama Association of County Agricultural Agents at the Thomas Jefferson Hotel in Birmingham, Ala. The meeting was well attended by the County Agents in our State and by the members of their respective staffs. I selected for my subject "The Small Farmer's Battle for Survival."

I am pleased to insert my speech in the Appendix of the RECORD, under leave heretofore granted.

THE SMALL FARMER'S BATTLE FOR SURVIVAL—AN ADDRESS BY CONGRESSMAN GEORGE HUDDLESTON, JR., OF ALABAMA, AT THE NINTH ANNUAL MEETING OF THE ALABAMA ASSOCIATION OF COUNTY AGRICULTURAL AGENTS, THOMAS JEFFERSON HOTEL, BIRMINGHAM, ALA., JUNE 22, 1957.

I am glad to have the opportunity to participate in the program here today for at least two reasons. First of all, it gives me an opportunity to discuss with you what I consider Alabama's most important farm problem, "The Small Farmer's Battle for Survival." Another reason equally as important is that I have a chance to be back in my home State and my home town, Birmingham. It is especially pleasant and refreshing to be here today, particularly in view of the multiplicity of problems before the Congress this session, which constantly keep Members embroiled in some form of turmoil.

This meeting of the Alabama State Association of County Agricultural Agents represents to me about as important a meeting as can take place in our State or anywhere in the Nation.

Basically, what I am going to be concerned with this morning is the question of the survival of our family farms. I should like to consider with you at least three problems farmers face today, problems of real significance to farmers and city people as well.

The first of these is the status of the family farm; second, the problem of falling farm income and the cost-price squeeze; and third, how we may attack these problems.

With respect to the status of the family farm, there are disturbing reports from the broad agricultural domain of the Nation, telling that increasing numbers of farm families are leaving the soil because of the deterioration of their competitive position. Examination of the reports reveals that the acreages previously in family farms are becoming consolidated by purchase into larger holdings where hired labor supplants the family-unit enterprise.

This has been a concern of farm people, agricultural leaders, and Members of Congress for some time. Studies have been conducted to determine ways and means to protect, foster, and promote the family farm as the continuing dominant unit in American agriculture. Special attention has been given to the problem of adjusting our farm programs to accommodate the convenience, productivity, and prosperity of the family-farm unit.

We need only to observe the trend during the past 4 or 5 years to be convinced that there is a deterioration of the economic structure of the family farm. The disappearance of thousands of small family-operated farm units proves beyond a doubt that such a trend exists.

Let us examine the record for a moment to see what is happening. Since 1930 we have observed a continuous trend toward fewer and larger farms in the State of Alabama and in the United States as a whole. In 1954 there were 80,439 fewer farms in Alabama than in 1930. This represents a decrease of about 31 percent in the total number of farms in the State. In 1954 nearly 35,000 fewer farms were in the State than in 1950, representing a decrease of over 16 percent in 4 years.

While we have fewer farms, there has been an increase in the number of farms in the larger size groups. For example, since 1950 the number of farms in the size group under 10 acres has slightly increased. There was a decrease in the number of farms in all size groups from 10 acres to 219 acres. All size groups from 220 acres to 1,000 acres and over, showed an increase in the number of farms from 1950 to 1954.

The trend for the Nation is similar to that in Alabama. Over a million and a half fewer farms were in the country in 1954 than in

1930, and about 600,000 fewer farms in 1954 than in 1950, a decrease of about 23 percent from 1930, and a decrease of over 11 percent since 1950. As is true for Alabama, the trend is in the direction of fewer family farms and an increasing number of large farms. There was a decrease in the number of farms in all size groups from 10 to 260 acres. The number of farms from 260 acres to 1,000 acres and over, showed an increase.

In the numerous discussions of changing world conditions and changing technological developments in the agricultural industry, we hear a great deal about the factors responsible for the increases in production on our farms, and the increasing productivity per man employed on the farm. But what is the trend with respect to our total farm population? This trend is in the same direction as the number of our farms. Today, only about 13 percent of the people in the United States live on farms. The other 87 percent live in urban or suburban areas and are available for many other pursuits. Twenty-five years ago the farm population in the United States was about 25 percent of the total population.

For Alabama the decrease in farm population has been even greater than for the Nation as a whole. In 1930 almost 51 percent of Alabama's population was classed as "farm." In 1950, the latest year for which official State population data are available, it was about 32 percent. This represents a decrease of about 28 percent. Meanwhile, from 1930 to 1950, as Alabama's farm population decreased 28 percent, her total population increased by 16 percent, or by a total of about 415,495 persons. If we consider the decade from 1940 to 1950, the picture is somewhat different. Total population for Alabama increased by 228,782 persons, or about 8 percent. Farm population decreased 378,-171 persons, or about 28 percent. Rural nonfarm population increased almost 37 percent during this same decade.

A significant observation to be made from these population figures is the trend of our farm population to migrate to the urban areas within the State and to other urban areas in the Nation.

This growing migration from the farm to the city today is a matter of real concern to the small family-size farmer. It is becoming more and more difficult for a young man to get started in farming and to own his farm. Because of technological developments which have greatly increased the productivity per man employed in agriculture, the decreasing number of people on farms has had no adverse affect on our production. We have been able to produce more than is required for market demand for a number of years.

In view of the prospect that our population 20 years from now will exceed 200 million people, will American farmers still be able to produce an abundant supply of agricultural products, if the present trend of migration from farms continues? When we consider the rate at which productivity per man employed in agriculture increased during the past decade, there seems sufficient reason to believe that it can be done. The advance of technology, mechanization of farms, and the application of new sciences has rendered the land more productive. These advances assure an abundance of food and fiber for the larger population, at less and less cost, in relation to individual income. One farm worker today produces food for 20 persons. As late as 1930 a worker in agriculture provided food for only 10 persons. The output per farm worker has doubled during the past 25 years. Fewer persons are required in agriculture as efficiency advances, and the threat is ever present that the increase in mechanization will bring greater industrialization into agricultural production. A natural result will be the concentration of economic resources in fewer and fewer hands.

Do we want our agricultural industry to move so far in the direction of the "factory in the field," as to entirely supplant family-farm operations? Do we desire our agricultural industry to approach the point where opportunities are few for sons to follow in their fathers' footsteps and venture into individual and family enterprises upon the land? It seems to me that if we permit such a trend to continue without modification, it will endanger our free-enterprise system. It should be our aim to keep opportunities open for individual venture, with the hope of due reward and the perpetuation of the rural family and the community order, indispensable to the Nation as a source of spiritual, social and political vitality.

Agricultural authorities have pointed out time after time that our future need for food and fiber can be supplied from our present farmland through the application of scientific methods and technological developments. But scientific farming costs money and except for a few of the largest commercial farms, few can afford to enlarge their land holdings and purchase the latest equipment.

This brings me to my second point, the problem of falling farm income, and the cost-price squeeze.

We have heard a great deal about farm income, farm prices, farm price supports and the cost-price squeeze during the past 5 years. Probably the most disturbing aspect of the immediate farm situation is that farm income has been dropping sharply particularly since 1951. Farm markets have been breaking under the impact of heavy production and reduced export demand. Many of the younger generation of farmers who started farming after the war under a heavy debt load are in danger of being forced out of farming entirely if the reduced incomes continue.

Falling farm prices have directly affected net farm income in recent years. The realized net farm income for the United States has sunk from $14.8 billion in 1951, to $11.8 billion in 1956.

For the State of Alabama, the realized net farm income dropped fro $300.7 million in 1951 to $262 million in 1955.

During this period of falling prices, the prices paid by farmers for the commodities required for production and for living, have either risen or have not fallen as rapidly as have prices received by farmers for their products.

This cost-price squeeze and farm income situation can be seen more clearly if we compare the current index of prices received and prices paid by farmers with the index of prices received and prices paid in the base period 1910–14.

In 1951 the index of prices received was 302, or over 3 times that established in the base period. The index of prices paid for commodities which farmers used in production was 282, or 2.82 times as much as in the base period. The ratio of prices received to prices paid was 107. In other words, the relationship of prices received by farmers to prices paid by them was 7 percent more favorable than in the base period. Another way of saying the same thing is that prices received in 1951, on the average, were 7 percent above parity.

As of May 15, 1957, the latest date for which these price relations are available, the prices-received index had dropped about 20 percent, to 243. The index of prices paid had risen to 296, an increase of 5 percent. The ratio of prices received had dropped to 82, a decrease of over 23 percent. In other words, farm prices today average about 18 percent below parity.

These figures demonstrate beyond a doubt, what we mean by a cost-price squeeze and falling farm prices.

Is there any hope of finding a solution to the problems of the declining number of family farms, the falling farm prices, and the reduced incomes? How can this trend be stopped? Answers to these questions have been attempted in a number of ways, by those interested in farm problems. However, I don't need to remind you that these problems have not been solved. It appears obvious that a floor must be maintained below which farm prices cannot drop, if further declines in prices and income are to be prevented. Our farm program has attempted this for a number of years. In view of a relatively rigid price structure for industrial goods and the numerous price maintenance schemes used by industry, there can be no doubt that farmers are entitled to similar price protection.

This fight for economic justice for the farmer has been going on for a long time. Some progress has been made through the numerous farm programs, for farmers to share in our relatively high degree of prosperity. But the battle has not been won. There are forces that curb and impair the operation of programs intended to give the farmer such price and income protection such as other industries have been able to provide for themselves. We must all continue this fight together, farmers, farm leaders, Congressmen, Senators, and farm organizations to provide a program that is just both to farmers and to society as a whole.

Through our farm program many attempts have been made to find new markets and new uses for agricultural products. The solution to our temporary oversupply of agricultural products probably lies within these two areas. While a great deal of effort has gone into expanding our markets at home and abroad, this is one area in which all possibilities have not been exhausted. We must make a more determined effort to sell our farm products in foreign markets.

Another area in which there is room for advancement is in the use of more scientific methods and more extensive mechanization. In recent years, we have seen examples of what technology can do for agriculture. Fewer farmers are producing about 69 percent more food than they did 40 years ago. Steel, chemicals, and power now substitute for additional land and labor to increase food production. For instance, about 2½ times more tractors are now on the Nation's farms than in 1940. Since 1910, tractors in use on farms have increased from 4,500 to nearly 5 million in 1954.

These advancements have been taking place in Alabama as well as in the Nation as a whole. In 1954, over 11,000 more farms had telephones than in 1950; nearly 11,000 more farms reported electricity in use; and over 2,000 more farms reported milking machines in use. There were more than 500 additional grain combines on farms, some 2,260 more cornpickers, and 572 more pickup hay balers. Farmers also had nearly 13,000 more motor trucks, 20,000 more tractors, and 12,000 more automobiles.

Don't be misled, however, all the Alabama farms are not mechanized. In 1954, nearly 58,000 Alabama farms were without tractors. This is nearly 39 percent of all farms in the State.

A higher degree of mechanization on more farms will assist Alabama farmers to raise the level of their income. But before this can happen, farmers must have access to credit on reasonable terms, in order to purchase the required equipment. In many instances, they must have credit to be able to enlarge their farming operation, and thus to justify the use of modern machinery.

Much emphasis has been placed on diversion of agriculture as a means of stabilizing individual farm incomes. Diversification certainly is important. A farmer who carries on

a diversified operation is less vulnerable to complete loss of income due to crop failures than is one who operates on a single crop basis. But here again, in this era of mechanization, we reach limits. One small farmer cannot afford to buy mechanical equipment suited to a large number of crops. This is especially true of harvesting equipment, whose specialized use is limited to a few weeks of each year.

It must be recognized that any discussion of the family-type farm is easily associated with affection and sentiment, and perhaps emotion. This is true because of the long identity of this rural order with the fundamental values. As pointed out earlier, these family-size farms are threatened by the technical evolution and the growing competition within agriculture. However, there is every reason to believe that the family system in farming, in adequate production units, can continue to be the most efficient, the most economic, and the most satisfying operation in a prosperous agriculture.

Our farm program must be more adequately adapted to the family farm. These programs should not promote the "factory in the field" type of farming operation. Except in a few specialized operations, there probably are no values for the Nation in substituting a hired labor agriculture for the independent family farm. Greater emphasis must be placed upon the development of our smaller farms into adequate units with resources sufficient for economic production. We must do more to protect the rights of tenants as well as those of landowning farmers.

Steps ought to be taken to protect the income of family farms by giving them a fair return on their production. Government efforts should be directed toward this objective, and the major benefits should be limited to the output level of the family-type farm.

Much could be done to improve the status of small farms by the enactment of legislation that would assure each family-size farm its fair share in the Nation's agricultural production, and in the prosperity which the American system has provided for the Nation's general economy.

The needs of small farmers and their families for a decent standard of living must be protected. This is only fair. Its accomplishment, depends upon the inclusion of adequate production adjustments in the farm program.

Operations under the Farmers' Home Administration ought to be intensified. This is especially true of those operations that provide the small farmers with credit to acquire adequate farms and equipment. Lending through the Farmers' Home Administration should be on a constructive basis, within the capability of the farm, under the management of its owner, to repay in a reasonable term of years.

The small farmer can no doubt be assisted by placing greater emphasis on marketing. This requires expansion of the Research and Marketing Act of 1946 with special reference to the section which authorizes Federal matching of State funds for action and service programs in the field of farm marketings. A substantial part of the answer to the family-farm problem lies in cooperative marketing where farm families assemble their products at one location for grading and cleaning, and for sale in quantities sufficient to attract buyers for extensive distribution. It has been suggested that the Secretary of Agriculture should examine the feasibility of expanding the Farmer Cooperative Service of the Department of Agriculture to include a section devoted to the small farmer service phase of cooperative activity.

There are real opportunities for community programs to cut production costs and improve the competitive position of the family farm. Cooperative arrangements can make available equipment and services of high quality to increase the productivity of the family farm. Much could probably be done through the organization of cooperative breeding associations, cooperative use of tractors, combines, ditching, and other equipment. Modern equipment requires heavy capital investment and its efficient and full use can in many instances be more fully realized by cooperative effort of individual farmers who find a common need.

We must do more in the field of vocational instruction in the junior and senior high schools to help our young people discover the occupation for which they appear to have the greatest aptitude and in which they have a real interest. Our national welfare demands that this be done, regardless of whether the young people select careers in farming or some industrial activity.

Last, but not least, we must continue to encourage more trained leaders to take part in community organization. Programs for economic improvement can be put into effect far more quickly and beneficially in organized rural communities. Local initiative and cooperation are essential in programs directed as improving the economic position of the family farm. The county agricultural agent has long been providing leadership in our rural communities, but with increasing demands he needs help to carry on the numerous community programs.

When we reflect more fully upon the problems I have just discussed with you it must be clear to all of us that we are living in a changing world, and that the farmer's position is also constantly changing. The extent to which the farm problems are solved so that the farmer can share in the Nation's growing prosperity, measures the extent to which all sectors of our economy will benefit. The problems which farmers face today are not insoluble, but their solution will require the determined efforts of leaders in Government, farm organizations, farm leaders, farmers, and numerous research institutions. Such efforts will be rewarded by a solution that will be in the interests of all sectors of the economy. To this end, let us all strive to make American agriculture strong and secure. What we do to render farmers better able to play their role in this changing world will help the entire Nation to achieve final victory in its struggle for world peace, security, and economic opportunity for all.

The Returns Are In

EXTENSION OF REMARKS
OF
HON. FRANK E. SMITH
OF MISSISSIPPI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 28, 1957

Mr. SMITH of Mississippi. Mr. Speaker, under unanimous consent, I include the following statement from the Committee on Foreign Trade Education, Inc.:

CONCLUSIONS REACHED BY THE COMMITTEE ON FOREIGN TRADE EDUCATION, INC., IN THE RETURNS ARE IN, A RESEARCH REPORT ON THE INTERNATIONAL TRADE—ATTITUDES OF THE MAJOR NEWSPAPERS OF THE FREE WORLD

The continued development of trade is an all-important factor to the survival of the free world.

The United States is recognized to have outstanding responsibility in leading the free world's economy.

But domestic protectionism, an amazingly large part of the world understands, is undermining our ability to utilize the initiative.

In that vacuum the Soviet economic offensive, plus what very well may become restrictive regional trade arrangements, are considered increasingly attractive alternatives.

OTC, the administrative realization of GATT, is widely regarded as the gauge of future United States action on trade—whether the United States can maintain the leadership of the free world or will revert to the high tariff theories of the Smoot-Hawley-depression period.

Authorization of United States membership in OTC is again before the Congress (introduced by Representatives JERE COOPER, Democrat, of Tennessee, and ROBERT W. KEAN, Republican, of New Jersey, as H. R. 6630 and H. R. 6631). The great majority of Americans, those who favor the general lines of this country's anti-Communist foreign policy during the last 10 years, must now get behind OTC. It is the next, indispensable step in building a foreign economic policy that builds up—instead of tears down—our foreign political policy.

All of us, not just the few, must be protected by a foreign policy that succeeds and a domestic economy that continues to prosper: OTC must be won in 1957.

If we fail, we stand indicated, as Politiken (Denmark) puts it: "The United States talks more of trade liberalization and expansion that they do about it."

P. G. & E. Co., Already Second Largest Beneficiary of Fast Tax Writeoff, Can Get the Same Deal on the Trinity River Project as Idaho Power Co. Got on Snake River

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ENGLE. Mr. Speaker, in presenting its proposal to build the Trinity River powerhouses, the Pacific Gas & Electric Co. has indicated a great solicitude for the Federal taxpayer. The P. G. & E. Co. says that it will pay $65 million in Federal taxes over the 50-year period of the proposed contract. While thus asserting that it will fatten the United States Treasury to the tune of $65 million, the P. G. & E. is holding fast tax writeoff certificates amounting to $179 million. This has been calculated as a benefit to the P. G. & E. Co. to the tune of $270 million over the normal 33-year amortization period, and $880 million over 50 years. The actual loss to the Treasury of the United States in interest that the Federal Government will have to pay on borrowed money because of the P. G. & E. Co.'s tax payments being reduced during the writeoff period is about $220 million. The difference in the value to the company and the actual cost to the Treasury is explained by the fact that the value to the company is based on the commercial interest rates for money, whereas the actual cost to the Treasury is less due to the fact that the Federal Government

borrows its money at lower rates of interest.

On the basis of the compilation submitted by the Office of Defense Mobilization, the Pacific Gas & Electric Co. is receiving the second largest subsidy in the Nation in accelerated tax depreciation certificates. Since the P. G. & E. Co. has indicated such an interest in saving the taxpayers money, I wish to suggest that this company forfeit the subsidies it has received, thus saving the Treasury the amount of $220 million. The Idaho Power Co. set a good precedent for the P. G. & E. last week. This is four times the cost of construction of the Trinity River powerhouses of $55 million.

It will be recalled that the Idaho Power Co. led the Federal Power Commission to believe that its construction on the Hells Canyon project would not cost the Federal Treasury a cent. Now we find out that the Idaho Power Co. secured the benefit of accelerated tax depreciation certificates, which would, unless forfeited, cost the Federal Treasury, according to the estimate of Russell C. Rainwater, Chief Accountant of the Federal Power Commission, the sum of $83.5 million and will yield a benefit to the Idaho Power Co. in the amount of $339.3 million over a 50-year period.

Since the Idaho Power Co. secured a writeoff under what the Office of Defense Mobilization calls normal procedures, what is to prevent the P. G. & E. Co., if granted the right to build the Trinity River powerhouses, from making a similar application? If such an application is made and certificates granted covering 60 percent of the cost of the power facilities, the actual cost to the Federal Treasury would be about $43 million, and the value of the tax writeoff to the Pacific Gas & Electric Co. would be $170 million over the 50-year contract period, or more than 2½ times the $65 million the company claims it will pay the Federal Government in taxes. It is apparent from these figures that in such event the Federal Government would save no money whatever, but actually would lose money by turning the powerhouses on the Trinity over to the Pacific Gas & Electric Co.

Statehood for Hawaii

EXTENSION OF REMARKS
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. BURNS of Hawaii. Mr. Speaker, Hawaiian statehood is a most important matter. The number of hearings and investigations conducted by the Congress on the subject clearly shows this importance. Hawaiian statehood has been the subject of as many, if not more, hearings and investigations than any other subject ever considered by the Congress.

Because it is important and because a great many Members of Congress are understandably concerned with the subject and wish to be better informed, I am including herein an index of congressional hearings on statehood for Hawaii and an index of the printed volumes on House and Senate hearings and reports on Hawaiian statehood. Within the printed volumes is the complete story of Hawaii:

INDEX OF CONGRESSIONAL HEARINGS ON STATEHOOD FOR HAWAII

Twenty congressional investigations on the question of admitting Hawaii to statehood have been made since 1935. The date, authorization, and locale of these hearings are as follows:

1. May 31, 1935, H. R. 3034, Washington.
2. October 7–18, 1935, H. R. 3034, Hawaii.
3. October 6–22, 1937, Senate Concurrent Resolution 18, Hawaii.
4. January 7–18, 1946, House Resolution 236, Hawaii.
5. June 4, 1946, H. R. 3643, Washington.
6. March 7–19, 1947, H. R. 49 and 10 other identical bills, Washington.
7. January 5–20, 1948, H. R. 49 and S. 114, Hawaii.
8. April 15, 1948, H. R. 49 and S. 114, Washington.
9. November 1–12, 1948, H. R. 49 and S. 114, Hawaii.
10. March 3 and 8, 1949, H. R. 49 and related bills, Washington.
11. May 1–5, 1950, H. R. 49, Washington.
12. February 23–27, 1953, H. R. 49, Washington.
13. March 6, 1953, S. 49, Washington.
14. June 29, 30, July 1, 2, 3, 6, 7, 9, 11, 1953, and January 7 and 8, 1954, Senate committee on S. 49; S. 51; and H. R. 3575, Washington.
15. January 13, 14, 15, and 19, 1954, Senate committee on S. 49; S. 51; and H. R. 3575, Washington.
16. December 16 and 17, 1954, House subcommittee (public hearings), Hawaii.
17. January 25, 27, 28, February 2, 4, 7, 8, 14, 15, 16, 1955, House on H. R. 2535 (Hawaii-Alaska), Washington.
18. February 21, 22, 28, 1955, Senate on S. 49 (Hawaii-Alaska), Washington.
19. April 1 and 2, 1957, Senate subcommittee on S. 50, Washington.
20. April 8, 9, and 16, 1957, House subcommittee on H. R. 49, Washington.

PRINTED VOLUMES ON HOUSE AND SENATE HEARINGS AND REPORTS ON HAWAII STATEHOOD

	Pages
1. Administration in Hawaii, Senate Interior Committee hearing, Jan. 16, 1933	149
2. Hearings before House Territories Committee, May 31, 1935	20
3. Statehood for Hawaii, hearings before House Subcommittee on Territories, Oct. 7 to Oct. 18, 1935	343
4. Statehood for Hawaii, hearings before joint committee, Oct. 6 to 22, 1937	735
5. Statehood for Hawaii, report from chairman joint committee, Jan. 5, 1938	100
6. Statehood for Hawaii, House Subcommittee, Jan. 7 to 18, 1946	909
7. Statehood for Hawaii, hearing, House Territories Committee, June 4, 1946	75
8. Statehood for Hawaii, hearing of Committee on Lands, Mar. 7 to 19, 1947	310
9. House Report 194, Public Lands Committee, Mar. 27, 1947	40
10. Cordon Report on H. R. 49 and S. 114, Jan. 5 to 20, 1948, Hawaii	18
11. Statehood for Hawaii, Senate Interior Subcommittee, Apr. 15, 1948	497

PRINTED VOLUMES ON HOUSE AND SENATE HEARINGS AND REPORTS ON HAWAII STATEHOOD—Continued

	Pages
12. Statehood for Hawaii, report by Mr. Butler, June 21, 1959	15
13. Statehood for Hawaii, House subcommittee, Mar. 3 to 8, 1949	77
14. Report 254, Committee on Public Lands, Mar. 10, 1949	27
15. Statehood for Hawaii, Senate Interior, Insular Committee, May 1 to 5, 1950	550
16. Statehood for Hawaii, Senate Interior, Insular Report, June 29, 1950	59
17. Supplemental report, Senate Interior Committee, Aug. 28, 1950	29
18. Statehood for Hawaii, Senate Report 314, May 8, 1951	69
19. Statehood for Hawaii, House Insular hearings, Feb. 23 to 27, 1953	209
20. Statehood for Hawaii, House Interior Report 109, Mar. 3, 1953	73
21. Statehood for Hawaii, Senate hearings, Insular Affairs, Mar. 6, 1953	58
22. Statehood for Hawaii, Senate hearings, Insular Affairs, June 29, 30, July 1, 2, 3, 6, 7, 9, 11, 1953, and Jan. 7 and 8, 1954	652
23. Statehood for Hawaii, Senate hearings, Insular Affairs, Jan. 13, 14, 15, and 19, 1954	86
24. Statehood for Hawaii, Report 886 (to accompany S. 49), Jan. 27 (legislative day Jan. 22, 1954)	94
25. Hawaii-Alaska hearings, House Interior Committee, Jan. 25–Feb. 16, 1955	188
26. Hawaii-Alaska hearings, Senate Interior Committee, Feb. 21, 22, and 28, 1955	188
27. Report No. 88 on H. R. 2535, House Interior Committee, Mar. 3, 1955	126

Easing Way for a Bandit

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. CRAMER. Mr. Speaker, some of our colleagues are now calling for trade with Red China which is the softening-up process of today that tomorrow will call for diplomatic recognition and membership in the U. N. When that day arrives, Communist Russia will have another country that it dominates with a vote and a voice in the United Nations.

I wonder how short our memories are—and I recall the heated words of condemnation of Red China only a few months and years ago—by those who now shout for resumption of trade.

The following editorial from the St. Petersburg Independent I believe approaches the problem most realistically and offers sound words of caution:

EASING WAY FOR A BANDIT

The decision of Great Britain, Japan, and other nations to break the embargo on nonstrategic trade with Red China has been fol-

lowed by a rising voice in this country that the United States follow suit.

Export-import interests on the west coast are insisting that the United States resume nonstrategic trade with Red China. And now Senator WARREN MAGNUSON, chairman of the Senate Commerce Committee, has said that his group will begin studies on United States trade policies toward Red China.

"I know the administration's policy is against such trade," Chairman MAGNUSON declares. "But we have got to be realistic. The rest of the world is going to trade with China. We can't keep 400 million people behind an economic bamboo curtain forever just because we do not like their government."

While proponents of the embargo which has been in effect since the Korean war insist that open trade with Red China will inevitably lead to her industrialization and increase her potential as an enemy of the free world, an even greater danger lies ahead.

The move to renew trade with Red China is obviously the first move in the drive to give the Peiping Government American diplomatic recognition and eventually Nationalist China's seat in the United Nations.

Indeed, the people who now support trade with China use the same argument of those who favor opening the United Nations to the Peiping Government. They say, as does Senator MAGNUSON, that "we can't keep 400 million people" isolated "just because we don't like their government."

It isn't, however, merely a question of just not liking the government of Red China. The fact is that the United Nations is still at war with Red China. The U. N. termed Red China an aggressor in the Korean war. Red China is still an aggressor. Even the truce that brought the Korean fighting to a halt has been continually broken by Red China. She still holds American prisoners on trumped up charges. No accounting has been made for some 450 Americans reported missing in action in the Korean conflict.

Diplomatic recognition is based on the assumption that there is some basis for honorable relationship between nations. Yet there is no evidence that Red China's attitude toward the United States and the free world has changed one iota since American soldiers were dying on Korean battlefields.

To give diplomatic recognition to Red China and to allow her a seat in the United Nations would be to sanction her crimes not only against the United States but other members of the United Nations. Yet the softening-up process is now under way. Today it calls for renewed trade with Red China. Tomorrow the call will be for diplomatic recognition and full membership in the United Nations. Because, we are told, we can't continue to ignore 400 million people "just because we don't like their government."

Court Curbs Legislative Inquiry

EXTENSION OF REMARKS
OF
HON. WILLIAM M. TUCK
OF VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. TUCK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Richmond Times-Dispatch, of June 21, 1957, concerning the decision of the United States Supreme Court in the John Thomas Watkins case.

The editor describes the majority opinion as a "bewildering welter of words" resulting from "slovenly judicial thinking," and very appropriately states that what the country needs "is less verbosity and more 'luminosity'."

The editorial is as follows:

COURT CURBS LEGISLATIVE INQUIRY

The so-called Watkins decision of the United States Supreme Court has created a raging controversy between Congress and the judiciary. Its repercussions are certain to trouble us for years to come.

The Court faced a double-barreled question: (1) a citizen's right versus the right of Congress to question him and (2) the right of the courts to determine the latitude of congressional inquiries.

John Thomas Watkins, 47, a resident of Rock Island, Ill., is a leader in Walter Reuther's United Automobile Workers (CIO). Questioned by the House Un-American Activities Committee in 1954, he admitted having associated with Communists between 1942 and 1947. He said he did so "strictly in connection with my labor union activity," but that he was never a card-carrying member of the party.

He said he would answer questions about himself, and about the identity of persons who he believed are still Communists. But he refused to identify any associates who (he believed) were no longer party members.

As a result of his refusal he was convicted of contempt.

His appeal was financed by the CIO union. On Monday the Supreme Court reversed the conviction, on the ground that the House committee had exceeded its powers of inquiry to a point of conflict with "individual rights" guaranteed by the first amendment to the Constitution.

The 6–1 majority opinion, written by Chief Justice Warren, was a bewildering welter of words. Brief but more to the point, was the separate but concurrent opinion of Justice Frankfurter, who wrote, in part:

"The immediate problem before us, the scope of inquiry that a committee is authorized to pursue, must be defined with sufficiently unambiguous clarity to safeguard a witness from the hazards of vagueness in the enforcement of the criminal process against which the due process clause protects * * * the question must be put with relevance and definiteness sufficient to enable the witness to know whether his refusal to answer may lead to conviction for criminal contempt. * * * The actual scope of the inquiry that the committee was authorized to conduct, and the relevance of the questions to that inquiry must be shown to have been luminous at the time. * * * The circumstances of this case were wanting in these essentials."

This is redundant in spots, and not very luminous. But the gist of it is, that the legislative committee must confine itself to specific questions relevant to possible, proposed or pending legislation.

Now the Supreme Court, when called to rule, has appropriated the right to decide whether the questions (as in the Watkins case) were pertinent and "luminous."

In his sharply dissenting opinion, Justice Clark conceded that "the rules of conduct placed upon the committee by the House admit of individual abuse of unfairness."

"But that [he said] is none of our affair. So long as the object of a legislative inquiry is legitimate * * * it is not for the courts to interfere with the committee system of inquiry. To hold otherwise would be an infringement on the power given the Congress to inform itself, and thus a trespass upon the fundamental American principle of separation of powers. The [Court's] majority has substituted the judiciary as the grand inquisitor and supervisor of congressional investigations."

It is a literary axiom—and should be a legal one—that verbosity and obscurity of language reveal bewilderment, lack of certainty, or an attempt to fit facts to preconceived theory.

The language of the Watkins decision is a case in point. The Court's majority obviously considered it its duty in this instance to preserve the rights of individual, as well as the separation-of-powers principle which precludes the Legislature from assuming any function of the judiciary. The Court solved the problem by a strict construction of constitutional language without taking into consideration the unprecedented situation created by the activities of an American political party serving as agent for a foreign despotism openly hostile to the Government of which the Court is a part.

If the American people, like the Court, appear bewildered by this week's decisions, it is partly because of the Court's inconsistency.

The Court showed no fastidious concern for the rights of individuals, the rights of States, and "the separation of powers" when it deleted the 10th amendment in the school decision on May 17, 1954.

The reasoning and language of both majority decisions must be attributed to slovenly judicial thinking. What the country needs is less verbosity and more "luminosity."

The Lawmaking Court

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. HUDDLESTON. Mr. Speaker, recent decisions of the Supreme Court are causing grave concern in all sections of the country. There seem to be considerable fears among our people that the Court is encroaching on the legislative powers granted to Congress by the Constitution. The feeling is that Congress should reassert its right to make the Federal laws and should take action to prevent the Court from usurping its constitutional authority. Under leave to extend my remarks in the Appendix to the RECORD, I insert herewith an editorial which appeared in the June 19, 1957, edition of the Indianapolis, Ind., Star. The editorial protests certain Supreme Court decisions of recent days, and urges Congress to reassert its right to make the Federal laws. It warns that, if present trends continue, "soon there may be no more need for Congress, but only for the Supreme Court and a retinue of hired sociologists."

The editorial follows:

THE LAWMAKING COURT

The latest batch of United States Supreme Court decisions has hit the country with the shivering impact of ice water. Whatever the legal technicalities may be in the individual decisions, they make it crystal clear that the majority members have arbitrarily suspended the historic functions of the Supreme Court. They have devoted themselves to amending laws by judicial fiat and prescribing rules of political conduct according to sociology instead of law.

It is of less importance that almost every recent decision of the Court has been helpful to Communists and their dupes where they were in any way involved than it is that these same decisions are based on a philosophy which denies the vitally necessary conservatism of the courts. It is the func-

tion of Congress or the State legislatures to bring about change. If liberalism, progressivism or government centralism is the desire of the public, the legislative bodies are set up to implement that desire and the executive branch to carry it out. The Supreme Court is intended as a safeguard against tyrannical use of these powers. It has all but ceased to function in this capacity.

The Court has done more damage to the Constitution in recent years than it has prevented. It has virtually nullified article 10 of the Bill of Rights in a whole series of decisions usurping to the Federal Government "the powers not delegated to the United States by the Constitution, nor prohibited by it to the States." Notable among these was the Steve Nelson decision, which declared that since Congress had passed a law dealing with sedition, none of the States could henceforth enforce their sedition laws. No less flagrant is the decision announced this week that State legislators cannot delegate to State attorneys general any broad powers to investigate subversion.

The Court took to itself functions it has never before exercised when it "acquitted" five California Communist leaders who had been convicted of conspiring to overthrow the Government. In effect it placed itself above the jury as a judge of the facts, where historically it has confined itself to consideration of the law. Justice Tom Clark indicated the gravity of the change in court policy when, in a dissenting opinion, he said, "It is somewhat late to start in now usurping the function of the jury."

But it was a day for usurping functions, in the opinion of the majority. In setting aside the 1951 loyalty firing of John Stewart Service by Dean Acheson, then Secretary of State, the Court made it virtually impossible for the head of a Federal department to discharge a man he believes to be disloyal without going through endless redtape. Then, in the most far-reaching decision of the day, the Court took upon itself the power of Congress to determine how congressional committees shall operate.

The Court's uncalled for, unsupported blast at the House Committee on Un-American Activities in the case of John T. Watkins, a union leader who had refused to talk and been held in contempt of Congress, went far beyond the evidence in the case. It displayed bias on the part of the Court which, in lesser tribunal, would have disqualified it from hearing the case. And in the decision which included the tirade, the Court set a precedent which would make it all but impossible for any congressional committee to require evidence from a balky witness. The Court was saying that its nine men know better than Congress knows what kind of information Congress needs in order to act intelligently in making the laws.

A great bulk of Supreme Court decisions in the last few years points to one inevitable conclusion. The Court has forgotten that it is up to Congress and the executive department to make and administer the Federal laws. It has ignored the provision of the Constitution which says "* * * the Supreme Court shall have appellate jurisdiction * * * with such exceptions and under such regulations as Congress shall make." The Court having ignored the supremacy of Congress, it is up to Congress to enforce it.

Representative GEORGE HUDDLESTON, JR., introduced a bill in Congress last year which provided that, "The established law of the United States shall be revised or changed only by legislative enactments or by constitutional amendments." It provided also that "The courts of the United States and the courts of the several States shall not be bound by any decision of the Supreme Court of the United States which conflicts with the legal principle of adhering to prior decisions and which is clearly based upon considerations other than legal." It is a good bill, and the Court itself has demonstrated how badly it is needed. It should be brought up again, and passed.

If Congress does not reassert its right to make the Federal laws, there may soon be no more need for Congress, but only for the Supreme Court and a retinue of hired sociologists.

A Newspaper Milestone

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. ASHLEY. Mr. Speaker, the Sentinel Herald, the hometown newspaper for the residents of Sylvania, Ohio, is celebrating its 50th anniversary this month. I am proud to include the following two articles commemorating this milestone in the Herald's long and outstanding service to its readers. The first appeared on Thursday, June 13, 1957, the day the designation volume 50 first appeared on its masthead. The second article, from the following edition tells the story of change recorded by the newspaper in its 50-year coverage of the local scene.

Just as we honor the tradition of the weekly newspaper, it is appropriate to single out the Sentinel Herald's editors for special mention. The Sentinel Herald is currently edited by Milton M. Ferguson. It is likewise fitting, I feel, that Editor Ferguson called upon past Editor Harry Quinnell to review the Sentinel Herald's history in the anniversary edition. Both of these men, and their predecessors, have earned our praise for a job well done.

The articles follow:

FIFTY SHORT YEARS

With this edition of the Sentinel Herald you will note that folio line in the upper left of the masthead indicates that we are starting our 50th year. This is a big milestone in our history and we might have celebrated with a large historical edition but we prefer to make it a year long period of historical features and stories about the suburban area we serve, the businesses and the newspaper itself. We particularly invite people of the area who have interesting stories about the past to help us with information, pictures, and historical data.

As to our feeling at this milestone, it is with the greatest confidence in the area and its people that we face the future. It is an area of beautiful and pleasant homes which we consider second to none as a fine place to live and raise families. We believe the present rapid rate of growth will be even greater when the great port of Toledo is open to large ships through the St. Lawrence seaway in 1959. Our first 50th year feature will be by Harry Quinnell, former publisher of the Sentinel, next week.

We look forward to our 50th year and those to follow with great enthusiasm.

REVIEWS 37 OF OUR 50 YEAR HISTORY—HARRY QUINNELL WRITES OF EARLY PRINTING TRIALS

"Vol. 50—No. 1," thus read the dateline on page 1 last week, for the Sentinel celebrates the 50th anniversary of publication. Congratulations.

It was the privilege of the writer to have been the owner and editor of the Sentinel for 23 years—1920–1943.

When he bought the Sentinel in 1920, Sylvania had no gas lines; electricity was furnished by the Toledo & Western. A powerline for heavy motors ran to the Sylvania Tannery and the Sentinel. However, when a car came in to the depot it took so much power it would stop the presses.

Type metal in the linotype was heated with a gasoline burner. The operator spent as much time adjusting the burner as he did setting type. Actually the production of a newspaper was indeed a heart-breaking job at times.

It was not long before the Toledo Edison Co. brought electricity to the village and the mechanical work in the newspaper office became easier.

For 10 years the newspaper subscription list grew and business was good. New machinery was installed and we were able to increase business to a point where we were running a day and night shift.

Then came the depression.

We shall never forget the bank closings, people out of work, and all the confusion of those first few days.

People flocked to the newspaper office to see what we knew about the situation. It was difficult to answer the hundreds of questions, for we knew little more than the people did. Some were bitter. Some were philosophical.

Times were bad. Farmers slaughtered hogs and made sausage which they sold at 2 pounds for 25 cents, to any who had the 25 cents.

With the inauguration of the FERA, WPA, and other alphabetical organizations, people were given jobs on public works programs, and at least managed to get along.

During this period the newspaper carried on and survived the depression.

After the depression we decided to make up for lost time and once again the subscription list grew quite fast.

Then came World War II, Japan had bombed Pearl Harbor in a sneak attack and sunk many of our warships.

With most of the Sentinel employees going into the Armed Forces, one son in the Navy, the other in military school, we decided it was just too much for the editor and his wife, so we leased the plant to a family of printers and 2 years later sold to Corbin and Long of Detroit.

The years we spent in Sylvania were happy ones. We worked hard, had many wonderful experiences, made many wonderful friends. What more can one ask of life?

For the future of the Sentinel and the community we are happy to see Milt Ferguson at the helm. We know he will be a great asset to the community, using his influence only for the good of all concerned.

In spite of radio and television, the weekly newspaper is still the greatest power in any suburban community. May I ask that you support it with your subscriptions and advertising.

Sincerely,

HARRY QUINNELL,
Toledo, Ohio.

Beloved, in the Sight of God

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LANE. Mr. Speaker, "And the greatest of these is charity."

Charity was the pre-eminent virtue of Rt. Rev. Msgr. Edmund D. Daly, who passed to his eternal reward on June 19, 1957.

He was 79 years of age. For the past 26 years he served as pastor of St. Patrick's Church in Lawrence, Mass.

Father Daly was the friend, confidant, and spiritual adviser to all in his large parish.

As priest, administrator, educator, and community leader, he won the respect and admiration of all faiths.

He became the new pastor of St. Patrick's on May 11, 1931.

At the start of a depression that dulled many lives with its fears and its privations.

Resolutely, Father Daly assumed his extra burdens. In addition to his priestly duties: hearing confessions, saying Mass, comforting the sick, and consoling the bereaved; he drove himself to build up every parish activity.

The schools of St. Patrick's, the Holy Name Society, the Boy and Girl Scouts, the sodalities.

Baptism, confirmation, holy matrimony, extreme unction.

Blessing them with the sacraments through the cycle of their lives.

Under Father Daly's inspiration, St. Patrick's became a family parish, whose thousands of communicants were united in Catholic fellowship.

In the years that passed, he nodded approvingly as he saw many of the children grow up and, following in his footsteps, dedicate their lives to the sacred vocation of religion.

By the side of the main altar of St. Patrick's, stands the American flag.

The parish devoted to God and country.

Each time the pastor saw that flag he remembered in his prayers the young men from St. Patrick's who went off to defend their country—to journey's end—and immortality.

There were silent tragedies and unseen misfortunes in the background of the parish. Those who came to the rectory at night, and pressed the bell, and asked to see Father Daly. There were others whose plight was discreetly brought to his attention by the good samaritans of St. Patrick's Charitable Aid Society, and the St. Vincent de Paul Society.

His generous heart could not rest until he had clothed the poor, and fed the hungry. Then he smiled, when he saw the light of hope shine again on faces once drawn with despair. In this, Father Daly found his modest and humble satisfaction.

"Even unto the least of these * * *."

As the angel of death touched his brow, the extent of his benefactions was known only to the Creator in Heaven.

Father Daly was self-giving and self-effacing.

In His holy name.

The church that he loved with his life, and has its own ways of knowing, was well pleased. Father Daly was elevated to the office of monsignor. Honored for his moral integrity and his healing kindness.

To the end of his long and uplifting mission as a priest of God, his was the supreme faith that: "The greatest of these is charity."

In requiem, I ask for unanimous consent to insert a copy of the eulogy delivered by Rt. Rev. Irving L. Gifford, D. D., pastor of the Sacred Heart Church, Quincy, Mass., at the funeral mass of his boyhod friend, Rt. Rev. Msgr. Edmund D. Daly, on Saturday, June 22, 1957.

The eulogy follows:

TRIBUTE BY BOYHOOD FRIEND

Text: You have not chosen me, but I have chosen you and have appointed that you should go and bring forth fruit and your fruit should remain. John 15, 16.

"I have appointed that you should go—"

Monsignor Daly, with his accustomed unction and fervor, preached at my first high Mass in July, 1911. He also honored my silver anniversary by his eloquence in 1936. Without either his unction or eloquence, I shall try to pay tribute to a genuinely holy priest and shepherd of souls.

As a student in Boston College high school in 1898, I remember Monsignor Daly very vividly. Even as a young man he had the beginnings of the dignity, poise and unction of his priestly years. He was an outstanding student and a distinguished speaker long before he mounted a pulpit. No one, then, was surprised when he entered the seminary in the fall of 1899. After a long and painstaking preparation as a seminarian, he was ordained in December 1903, and could say, at least, in the words of the Psalmist, "I will go to the altar of the Lord, to God who givest joy to my youth. In Thy tabernacle I shall dwell forever, I shall be protected under the covert of Thy wings, for Thee, my flesh and my heart have fainted away; Thou are the God of my heart and the God that is my portion forever."

I have chosen that you should bring forth fruit.

Monsignor Daly could have pursued higher studies at the Catholic University, but, characteristically, he chose to begin, at once, his work in the vineyard of the Lord. After 2 years of temporary assignments, he was sent to the Blessed Sacrament Parish in Jamaica Plain. Here, for 22 years, he endeared himself to all the parishioners. He organized a flourishing Holy Name Society and boys' sodality. It was, however, as the spiritual director of the St. Vincent de Paul Conference that he manifested his Christ-like love of the poor and the unfortunate. No one went unaided. He dispensed not only material assistance, but gave consolation in their sorrow, fatherly advice and practical spiritual solutions of their moral problems. Like the Good Shepherd, he was tireless in his care of the sick, and an understanding confessor and an eloquent preacher. His most effective sermon, however, was the dedicated devotion of his daily priestly life.

In 1927 Monsignor Daly was made pastor of the Church of St. Paul, in Wellesley. Here, his special talents were put to use in meeting the challenge of a new and rapidly growing suburb. His learning and culture were admired by discriminating parishioners, and even by fellow citizens of other faiths. The youth of the parish were closest to his heart. By every means he sought to enlighten, guide, and protect them against the insidious evils of our modern life.

In 1931, Monsignor Daly was appointed pastor of this parish. He faced the tremendous problem of renovating and reorganizing a district plagued by devastating financial depression. At once, he took personal charge of the St. Vincent de Paul society. During his priesthood here, the poor and unfortunate came first. In this situation, where poverty was aggravated by the plight of local industry, Monsignor Daly walked as an angel of mercy. In the spirit of dedicated devotion, he brought hope to the despondent, courage to the disheartened and aid to the destitute. Many of you, who passed through this ordeal, will remember him as a blessing from heaven. When he was made a monsignor in 1944, it was felt by all that no priest ever wore the purple with more distinction and grace.

He shared your sorrows and joys. In all your days, you could look up to him as a sympathetic friend, a loving shepherd and above all, as a man of God. In recent years, his failing health curtailed, to some extent, his vigorous activity. But his dauntless courage enabled him to continue the efficient administration of the parish, which has borne such abundant fruit. He was a devoted child of God's mother. He was ever in the school to encourage and guide teachers and pupils alike. He was ever in the church to visit His Eucharistic Lord and Master.

I have chosen that your fruit should remain.

Monsignor Daly was a priests'-priest; that is, he merited, through all his priestly life, the deepest admiration of his fellow priests. To achieve such renown, he had to exemplify the highest standards of efficiency and zeal. With his fellow curates, he was cordial and cooperative. To his superiors, he gave unfailing loyalty and complete obedience. As a pastor, he was dearly beloved for his tact, consideration, and genuine regard for the welfare of his assistants. He was a father, friend, and inspiring leader. Though I have known him for 60 years, in his presence I always felt a pupil at the feet of a master of Israel, and never did I leave his side without being inspired and uplifted.

Though a priests' priest, he was no less a priest of the people. His whole life was dedicated to the service of his flock. He was a living embodiment of the Good Shepherd. Well could he say, "I know mine, and mine know me." His recreations were few and simple, and always in good taste and moderation. He was no hermit, no anchorite, no cloistered monk. He was in the world, but not of it, a modern St. Francis, a 20th century poor man of Assisi.

Let's Have the Facts

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a letter which I have written to the Secretary of Defense, Mr. Wilson, after receiving a request for aid from Attorney Raymond C. Lyddy, who seeks information on possible harmful effects of a light ray on a group of servicemen engaged in a secret Army experiment during World War II.

Following are the original telegram from Mr. Lyddy and my letter to Defense Secretary Wilson:

On behalf of all veterans of the 538th Ordnance Company of the 9th Armored Division during World War II and specifically on behalf of Harold Saunders and John J. Zawesza, residents of your congressional district, I am herewith enlisting your aid in securing all available information from the United States Army concerning a secret experiment conducted by the Army during

World War II having to do with the construction, installation, servicing, and operation of a form of light ray mounted on tanks. We suspect that a possible connection may exist between my clients' exposure to these rays and their mechanism and an unusually high percentage of deformed births, stillbirths, miscarriages, mentally retarded children, and sterility reflected in the marital relations and families of these veterans. I should like to meet with you at your earliest convenience to discuss this matter in detail but any aid you may be able to give us in obtaining this formerly classified information would be sincerely appreciated.

RAYMOND C. LYDDY,
Attorney.

JUNE 24, 1957.

Hon. CHARLES E. WILSON,
Secretary of Defense, Department of Defense, the Pentagon, Washington, D. C.

DEAR MR. SECRETARY: Today I have received a formal request for aid from Raymond C. Lyddy, an attorney from Bridgeport, Conn., who is representing two residents of my district who were engaged in a secret Army experiment during World War II.

Mr. Lyddy believes that a possible connection may exist between the servicemen's exposure to a light ray mounted on tanks, and an unusually high percentage of deformed births, stillbirths, miscarriages, mentally retarded children, and sterility reflected in the marital relations and families of these veterans.

The veterans of the 538 Ordnance Company of the 9th Armored Division who participated in the experiment should be advised whether the exposure to the powerful rays and their mechanism is the cause of their unfortunate marital relations.

I believe that this classified material should be made known insofar as it does not impair our national security. I suggest that an authorized representative of the Army or Defense Departments meet with the attorney for the veterans involved, possibly in my congressional office as soon as possible.

First reports of the possible harmful effects of the experiment have given rise to all kinds of newspaper and radio speculation.

Perhaps if all the facts were made known many wild rumors and irresponsible estimates could be curbed.

Although the attorney and two of the veterans, Harold Saunders and John J. Zawesza, are residents of my district, other members of the company are residing in other parts of Connecticut. Therefore, Congressman EDWIN H. MAY, of Hartford, and Congressman ALBERT W. CRETELLA, of New Haven, join with me in asking for disclosure of information which may help to clear up this situation.

Sincerely,

ALBERT P. MORANO,
Member of Congress.

Unanimous Vote in Favor of Hells Canyon High Dam by Minnesota Delegation Is Request of Farmers Union Members From Seven Minnesota Counties

EXTENSION OF REMARKS
OF
HON. COYA KNUTSON
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, May 14, 1957

Mrs. KNUTSON. Mr. Speaker, I had the honor to speak at a meeting of the membership of farmers union from 7 counties of Minnesota, on Sunday, June 23, at Cambridge, Minn. The seven counties are: Anoka, Chisago, Isanti, Kanabec, Mille Lacs, Pine, and Sherburn.

I was asked to bring back a special message to the Congress. It therefore gives me the greatest pleasure to address the Congress on the subject of Hells Canyon legislation and to deliver this message from the farmers of these seven counties. Under unanimous permission of my colleagues, I insert the following message in the RECORD:

We, the members of the farmers union assembled here at our seven-county picnic, do hereby resolve that we send the following message to the Congress of the United States with Congresswoman COYA KNUTSON and ask all our Minnesota Congressmen to vote in favor of a high dam at Hells Canyon when legislation comes to the House floor.

Atoms for Peace Program for 1958

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 20, 1957

Mr. FULTON. Mr. Speaker, I believe the Congress and the American people should be kept advised of the development and authorization of funds and participation by our United States Government in the President's atoms for peace program. I am inserting in the CONGRESSIONAL RECORD from the United States Atomic Energy Commission, Washington, D. C., the statement by Harold S. Vance, Commissioner, United States Atomic Energy Commission, at hearings held by the House Committee on Foreign Affairs, June 24, 1957.

The statement follows:

It is a pleasure to appear before the committee today to testify on behalf of the $7 million authorization under the mutual-security program to provide funds in fiscal year 1958 for the atoms for peace program. In comparison with the much larger sums you have been considering for other mutual-security purposes, $7 million must seem relatively small; nevertheless, in our belief, and we hope in yours, this item bulks very large in terms of advance in amity with our friends, and contributions to human welfare around the world.

The atoms for peace program is the means of making real and vital and dynamic the announced policy of the United States to share information on the peaceful uses of atomic energy and to cooperate with free nations in reaping for all the benefits which atomic energy offers for better health and higher living standards. This United States policy was first announced by the President in his historic address before the General Assembly of the United Nations in December 1953. In subsequent addresses at Pennsylvania State University in June 1955 and at the meeting of the Presidents of the American Republics in Panama, July 1956, the President reaffirmed the policy and added practical details of action to bring it into being as a living force among the nations.

The United States Government, through the efforts of the Department of State, AEC, and ICA, has pursued the purposes of the foreign atoms-for-peace program vigorously and with a substantial measure of success.

Under the Atomic Energy Act of 1954, 44 agreements for cooperation have been negotiated with 42 nations. Seventeen additional agreements are now in various stages of negotiation.

We have opened the way through the issuance of appropriate regulations for American industry to engage in programs and projects abroad in the peaceful applications of atomic energy.

We have sent technical assistance missions and provided consulting services on peaceful atomic energy matters to 58 countries.

We have made available training in reactor science and technology and in the applications of radioisotopes to approximately 300 foreign nationals representing 52 countries.

Grants of $350,000 to fund up to one-half the cost of a research reactor project have been committed to 4 countries and it is expected that 3 additional grants will be committed this month.

Highly successful international conferences and symposia on the peaceful uses of atomic energy have been held in Geneva in 1955 and last month at our Brookhaven National Laboratory.

Many of these projects and programs, such as the training of foreign nationals, grants for the construction of research reactors and the Brookhaven symposium, have been financed with mutual security funds. We believe the record of accomplishment to date is good and represents a substantial contribution toward maintaining American leadership in the worldwide peaceful nuclear energy field. However, much more remains to be done if our leadership is to be maintained and enhanced. In brief, we have assumed a responsibility to assist friendly nations in putting the atom to the peaceful uses which promise to be of such great benefit to mankind. In fiscal year 1958 this responsibility entails the program which we are presenting here.

Vitally needed at present throughout the world are more scientists and technicians trained in the various fields of nuclear science and engineering. In each country a group of trained people supplied with facilities to teach and train a growing number of others is the fundamental resource for speed and spread in promotion of the peaceful applications of atomic energy. The shortage of trained people is one of the major deterrents to the successful prosecution of peaceful atomic-energy programs by our friends abroad.

Assistance to our friends in developing their national pools of nuclear scientists and technicians should be furnished in several ways. Basic education in the physical sciences is needed, of course. But our program is concerned with affording specialized training in the nuclear sciences to those having such basic education. In addition, and of great importance, is training in the operation of the scientific tools unique to the atomic-energy field. Through such education and training of their men of talent, friendly nations will be placed in a position to take their first steps into the new era of atomic energy at the service of consumers and industry and agricultural and medicine.

The peaceful uses of the atom are many and so varied that it would be difficult to say that any single one is most important or holds out most promise to mankind.

Some of the applications are relatively easy to understand and to apply after only a short period of training. These include the use of radioisotopes in medicine for diagnosis and therapy and research. Other applications include the use of radioisotopes in agricultural research to learn the methods of food intake and efficient use by plants and animals, and to create new plant varieties in the search for heavier-bearing, more disease-resistant varieties. The steriliza-

tion and preservation of food by means of radiation holds promise of increasing the supply and lowering the cost of the world's food. A multitude of industrial process and tracer uses have been devised already. More are being developed daily.

In this connection it should be noted that a survey which we recently made indicated that American industry is presently saving an estimated $400 million a year through the use of radioisotopes to improve the quality of its products and services. The benefits to agriculture, through the betterment of crop strains, more efficient use of fertilizer and the combatting of pests and plant diseases is calculated at another $200 million a year.

The medical benefits to mankind in the diagnosis of human ills, the alleviation of suffering and the increasingly effective treatment of diseases cannot, of course, be valued in dollars. Somewhere between 800,000 and a million patients are being treated with radioisotopes each year.

Finally, but probably foremost, in the field of peaceful uses is the generation of electric power by means of nuclear energy. This new source of power has gone into the hands of man at a time when the increased power requirements indicate the need of sources of energy supplemental to coal and oil. All will benefit by putting nuclear fuels to use in power generation.

The funds being requested for authorization in fiscal year 1958 in section 419 and other sections of this bill will provide for training the nationals of our friends abroad in most of the important ways needed for them to begin to achieve the benefits available from the peaceful atom.

We propose to continue the program which began in fiscal year 1956 of funding part of the cost of a research reactor for countries of the free world which can put such a scientific tool to valuable use. Although a research reactor is, as its name implies, a research instrument, it is also an important training device.

We also propose to assist countries in the acquisition of radioisotope equipment, including gamma sources for training and use in agricultural research and other items of equipment needed for training in the peaceful uses of atomic energy.

Naturally, the actual training in this country of the future scientists and engineers of friendly nations stands high in importance to speed the development of atomic energy programs by these nations. Although most of the funds needed for this purpose are requested for authorization under the technical cooperation title of this bill, I would like to underscore the importance of the training programs in nuclear science and engineering.

Funds under the Mutual Security Act help trainees from other countries to make use of courses in reactor technology and use of radioisotopes which are given at the International School of Nuclear Science at the Argonne National Laboratory near Chicago and at the Oak Ridge Institute of Nuclear Science at the Oak Ridge National Laboratory in Tennessee.

It appears that in a growing number of instances it will be desirable, and certainly more economical, to train foreign nationals in their own or nearby countries—for example, in the operation of radioisotope laboratories—rather than to bring them to this country for training. The Asian Nuclear Center, which is planned for establishment in Manila, will facilitate the carrying out of this kind of training program for cooperating countries of that area. Similarly the enlarged nuclear education and training facilities planned for establishment at the University of Puerto Rico will provide Spanish language training in the peaceful uses of atomic energy for Latin Americans. Let me remind you that this latter project will be carried out through a contract between the Commission and the university and is not being included as a funding requirement in the bill before you. Moreover, assistance to our friends in acquiring equipment for nuclear training and research will enable them to train their nationals in nuclear science and technology.

An important part of this program of furthering, on an international basis, the peaceful applications of atomic energy is to survey the needs of cooperating countries and provide them with expert advice and guidance in helping them to develop programs fashioned to fit their technological, economic, and scientific capabilities. Expert help is also needed by countries which must import fuel and have need for assistance in evaluating the potentialities and economies of constructing nuclear power facilities in lieu of conventional powerplants using imported coal or oil. This type of assistance is also planned for fiscal year 1958.

This, in brief, is the program we propose in fiscal year 1958 in furtherance of the peaceful uses of atomic energy by friendly foreign countries. Though the program is modest in cost, it will return dividends of international comity and economic betterment greatly outweighing its cost.

Salesmen of Freedom

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. BOSCH. Mr. Speaker, a look at my record will disclose that I have long advocated the creation of a Foreign Service Academy, and I now have a bill H. R. 4364, pending to accomplish this purpose. My first bill on the subject was introduced the first year I was in the House of Representatives, 1953. I am now more than ever convinced that the Foreign Service Academy would do much in making our Foreign Service effective throughout the world.

Under leave to extend my remarks, I include an editorial from the Long Island Sunday Press of June 23, 1957:

SALESMEN OF FREEDOM

Salesmen wanted: Salesmen of freedom. United States Foreign Service offers great opportunity, a challenging experience for 1957 college grads.

Uncle Sam hasn't put this ad in the classified columns yet.

It might be smart, though, if he did.

We need salesmen of freedom, as Sherman Adams termed Foreign Service personnel. The Assistant to President Eisenhower, in a recent address, urged young people to explore this field.

Adams is on firm ground—as firm as the granite which gives his home State (New Hampshire) its nickname.

A question comes to mind, though—one of our favorite questions: Why don't we set up a Foreign Service academy to train young men and women for the highly skilled and all-important profession of representing America overseas?

We should train salesmen of freedom as we train the soldiers for peace who carry our military responsibilities. And to do it we should have a special academy, like West Point, Annapolis, and the Air Force Academy. And in Kings Point Merchant Marine Academy we train men who might be called soldiers and salesmen of commerce.

A Foreign service academy is not a new idea. As far back as March 1954, Senator JACOB K. JAVITS (then a Congressman) offered legislation along this line. Congressman ALBERT H. BOSCH, Richmond Hill Republican, also has studied the subject thoroughly.

It should be dusted off again, and shined up. Perhaps some of the carried over and unspent foreign aid funds can be tapped for enough to get the plan going, once Congress approves.

How we make out in this troubled world will, in the long run, largely depend on how and what we do in the field of foreign relations. It may mean the difference between war and peace, a free world or an enslaved world. All along the line, we'll need the best-skilled representatives we can produce. We should have a program to develop these salesmen of freedom.

Reclamation Pays Its Way

EXTENSION OF REMARKS
OF
HON. WALT HORAN
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. HORAN. Mr. Speaker, under leave to extend my own remarks in the Appendix of the RECORD, I am pleased to include an editorial entitled "Reclamation Pays Its Way," from the Daily Journal of Commerce, published in Seattle, Wash. I think this points up very well the value of reclamation to this great Nation:

RECLAMATION PAYS ITS WAY

In the earlier years of the reclamation movement it was almost impossible to overcome eastern prejudice with respect to the reclaiming of arid western land to make it possible for farmers to make a living and eventually pay their share of the cost of bringing water to the soil that needed only water to make it exceptionally productive farmland. Even yet, there are millions of people in this country who have no understanding whatever of their returns as the result of large-scale reclamation projects in the sparsely settled West.

A short while ago final payments were made to the Bureau of Reclamation from the Sunnyside division of the Yakima project, a half-century old undertaking, that has paid its way and provided homes for large numbers of independent farmers. It is probably that few easterns—and many westerners, for that matter—appreciate the fact that many of the large publicly financed projects return their cost, with interest, to the Federal Government. The Bonneville Power Administration is well ahead of its repayment schedule. Congressman WALT HORAN, of this State's Fifth District, has compiled some statistics on irrigation and reclamation which should be made known to every citizen, every voter, of the 37 States east of the Continental Divide. The Congressman reports that money spent for reclamation between 1903 and 1957 has totaled $3,376 million. The cumulative value of the crops grown on reclamation projects from 1906 to 1957 has totaled $11,397 million. It is estimated that from these reclamation and trade areas tax payments in the period mentioned (1902–57) have been in excess of $5 billion. Through irrigation and reclamation, 3,200,000 acres of fertile but formerly arid land have been reclaimed, 4,100,000 acres have

received supplemental water and 93,500 farms have been brought under irrigation that never would have existed otherwise. Some 360,000 Americans are making their homes on these new farms, with five times that number of citizens, or 1,800,000 persons, living in communities and areas supported by reclamation projects. These residents are, in most instances, important purchasers of goods manufactured in the East, Middle West, and South, pay substantial transportation bills and, according to Congressman HORAN, enjoy incomes and material living standards well above the national average. Without reclamation these people might be living in overcrowded cities or in less healthful and less productive surroundings. They are paying their way and it has proved the best of good business to have carried out the reclamation projects so strenuously resisted when first proposed and for so many years thereafter.

Citation of Howard C. Zahniser

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. SAYLOR. Mr. Speaker, honorary degrees are frequently presented to guest speakers, past and potential donors to college endowment funds, and many other similar persons. All too frequently our colleges fail to recognize the outstanding abilities of their own graduates who have made distinguished records for themselves.

Therefore, when Geenville College of Greenville, Ill., conferred the honorary degree of doctor of letters upon my good friend, Howard C. Zahniser, I was deeply impressed.

Howard C. Zahniser has made a mark for himself in the field of conservation in this country that has never been excelled and seldom equaled. This record is a real tribute to his alma mater, and I congratulate Greenville College for recognizing their illustrious son.

The following is the citation for this honorary degree of doctors of letters by Dr. Mary Alice Tenney, professor emeritus of English, Greenville College, Greenville, Ill., historian of Greenville College and interpreter of early Methodism:

CITATION OF HOWARD C. ZAHNISER FOR THE HONORARY DEGREE OF DOCTOR OF LETTERS

I consider myself highly honored to be asked to present to you today an alumnus whose position in national movements gives glory to his alma mater.

He comes from a Pennsylvania family famous for their contribution to community life. In fact, I have heard it reported that in the section where he grew up it was often said, "There are three parties here, the Republicans, the Democrats, and the Zahnisers." From this family have come a host of teachers, preachers, and social workers.

In the case of our candidate unusual creativity supplemented this devotion to the good of others. While in Greenville he began his long career of creative community work as a distinguished editor of our college newspaper, the Papyrus, and later as the asastant to the editor of the city paper, the Advocate.

Students still recall his stimulating teaching for a year in the Greenville High School, for he instructed out of a great enthusiasm and voracious appetite for literature. He made my first days of teaching a joyful obligation, for I simply had to teach well with such an enthusiast in my classes.

After he left Greenville for the National Capital, he rose rapidly as an editor, feature writer, and broadcaster. His editorial work with the United States Department of Agriculture comprehended interests in fish and wildlife, plant industry, and conservation, but focused more and more upon the saving of our native resources, particularly the conserving of the wilderness areas of the United States. His inbred idealism asserted itself as he made articulate for all nature lovers this passion for our American heritage.

Since 1945 he has been editor of the Living Wilderness, and from 1951 to 1954 he was a member of the advisory committee on conservation to the Secretary of the Interior. He has been chairman of the Natural Resources Council of America. Ever since 1935 he has been an essayist and book editor for Nature magazine, and for 10 years has contributed the articles on conservation to the Brittanica books of the year.

His membership in a score of clubs for outdoor lovers and writers indicates the scope of his interests and the national recognition which he enjoys. Among them are the Sierra Club, of which he has been honorary vice president; the Wilderness Society, of which he is the executive secretary; the National Press Club; and the Cosmos Club of Washington. One of his recent and most significant honors in his election to the presidency of the Thoreau Society, a scholarly organization which meets annually in Concord, Mass.

Mr. President, this candidate for honors represents the historic emphasis which Greenville College has placed upon the union of Christianity and culture. In fact, it was he who adopted as the slogan for the Papyrus "Christianity and Culture in Education," a slogan later known to all who know Greenville College. This desire to make ideals articulate has been the shaping concept of his career.

President Long, I present to you Howard C. Zahniser, master of the arts of communication, and lover and preserver of God's creation, to receive the degree, doctor of letters.

Constitution

EXTENSION OF REMARKS
OF
HON. JOHN J. McFALL
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. McFALL. Mr. Speaker, under leave to extend my remarks, I include the following address by Dan E. McCall, a constituent of mine from Modesto, Calif. With this address, on April 11 of this year in Waterville, Maine, Dan won the 1957 annual American Legion oratory contest over 350,000 high-school contestants throughout the country.

The 1941 winner of this oratorical competition is now a well-known legislator, the Honorable FRANK CHURCH, of Idaho, United States Senator.

During the past year, while a high-school student, Dan won a variety of honors including the designation as the California State Exchange Club Boy of the Year, the Native Sons of the Golden West annual oratorical contest, the Bank of America State scholarship award, the California-Nevada Lions Club oratorical contest, the annual Optimist International oratorical contest, and the National Forensic League's national dramatic interpretation division in Oklahoma City last summer.

Just last weekend in Philadelphia, Dan won still another national award. He was 1 of the 13 winners of the Alexander Hamilton Bicentennial Commemorative Commission Students Constitutional Convention.

The State of California can well be proud of this young man's achievements. In particular, California's 11th Congressional District is happy to salute him:

CONSTITUTION

When Harry Emerson Fosdick preached the dedicatory sermon in his great new Riverside Church, he expressed the desire that some sign signifying its unique function might be placed over the entryway. He then jokingly suggested he would like to steal for that purpose a Fifth Avenue sign of a utilities company: Light and Power. Light and power—we might also employ the same sign to symbolize the purpose and functions of the Constitution of the United States, for it throws light upon the proper relation of man to man, and provides for the distribution of power among people.

It is easy to praise the Constitution, and most of us can; it is far more difficult, however, to appraise it, and too few of us do. It is to be revered, yes—but more important, revealed to layman as well as lawyer. It is to this latter task that I dedicate my efforts, to discern and set down those characteristics of the Constitution which make it a unique document, which account for its unparalleled success, to which may be ascribed its world-wide recognition and acclaim. For I assume that we are met here today to pay tribute to a document, or at least to the intellectual and moral achievements of a segment of humanity as set forth therein.

I choose to place first on my list of priceless ingredients the Constitution's concern for the individual, not for people—but for persons, not for numbers and the common man, but for names, and the human man.

A tired New York City housewife answered the doorbell to greet with a weary smile the community census taker. After asking the usual questions, he requested the number of children in her family. "Well, let's see," she said, "there's Mary and Henry and Jack"——

"No, no; I don't want the names, just the number."

She patiently smiled, "They ain't got numbers. All got names."

This is important. This is important because our Constitution does not promote a nebulum of numbers, rather—a nation of names. It places individual dignity even above the state's integrity. As James A. Garfield, who served many years in Congress before he became President, said, "I have represented a district whose approval I greatly desired for a long time, but I desired still more the approval of just one man, and his name is Garfield. For, he is the one man I am compelled to sleep with and eat with and live with and die with, and if I do not have his approval I should have bad companionship." The Constitution guarantees that every Garfield shall have the right to become the kind of Garfield he aspires to be.

It does not say Americans are lovers of freedom. Rather it says something much more basic, much more fundamental: Mr. Citizen shall be free. He may go to the Baptist church, or the synagogue, or St. Andrews—any church he likes. He may write what is in his own head. He may tell his friends what he thinks. He may market his own eggs, at his own prices, collecting

his own money. He is a human being. He is free, to be free. The Constitution is great then, not because it makes man free, but because it assumes he is free, that his birthright bears the stamp of individual freedom. He shall not have a number, but he may have a name. He isn't a statistic, he is a being.

The second unique feature which I nominate for distinction in documentary design is expressed in the reaction of Robert Louis Stevenson when he as a small boy standing one evening by his window watching the village lamplighter at work. Young Robert cried, "Oh, look, I can see something wonderful. There's a man coming down our street punching holes in the darkness." In 1787 a group of consecrated men trod the highways of humanity "punching holes in the darkness of their day." They pierced the veil of truth, and spread new light on old ideals and principles for man to live by. They made no new laws; they only saw more clearly than ever before the immutable laws of social science and formulated statements of their operation in the affairs of man. Accordingly, the Constitution was not written through the wisdom of Franklin, the genius of Jefferson, and the effusiveness of Hancock; rather it represents the combined prescience of all who had a part in its making. As Newton discovered the law of gravitation and put it into words for man's understanding, so the lamplighters who drew our Constitution looked back down the road of history, divining from the ebb and flow of oligarchy, a tyranny, feudalism, and all the many forms of oppression and freedom under which man had lived, new concepts of dignity, of worth, of worthiness. They gave these to the people—calling them the Constitution. John Adams called them "rights that cannot be repealed or restrained by human law—rights derived from the Great Legislator of the Universe." What I am trying to say is that the Constitution is not a promise or precept which man made, but a fundamental and universal law which he discovered; and such is its unique and distinguishing characteristic which sets it above and apart from all other political documents ever written. It is a recognition of natural law expressed as ideals to which man can aspire. Carl Schurz has said: "Ideals are like stars, you will not succeed in touching them with your hands, but like the seafaring man on the desert of waters, you choose them as your guides, and following them you reach your destiny."

We reach our personal destiny only as we understand that the Constitution outlines ideals; that those who live by its principles inevitably end up better equipped to live by their own. It is not liberty, but a document which proclaims the principles of liberty, not justice, but an outline which enables us to secure justice. It is a means—a human way of making ideals become realities.

Finally, the Constitution's uniqueness resides in its timelessness, its proven adaptability to serve the needs equally well of both the horse and buggy age and the horseless carriage era, the periods of Fulton's steamboat and Wright brothers' dreamboat, of the *Mayflower* and of airpower. An epitaph carved on a tombstone of a father's grave beside a lonely public highway in Arizona reads, "My son, if you are to see the heritage that I leave you prosper, you must build it anew yourself." The greatness of the Constitution lies in the fact that each generation may under its protection rebuild its heritage to suit the tenor of the times. In turn, each in his life must rebuild his understanding of the Constitution, his faith in it, his loyalty to it.

The great sculptor Thorwaldsen was once asked what his finest statute was. He answered simply, "The next one." It is this feature of the Constitution which enables us to look to each new year as the best possible one in our history. The exuberant 20th century Constitution is as modern as this morning. If it is to be taken down from the shelf, it must be taken into the self. It is not for us to dedicate; rather it is for us to be dedicated. The citizen who would serve and preserve, use and not abuse this framework of law and order, must understand that the first seven amendments are his guaranty to personal liberty and individuality, that the entire Constitution is a revelation of dependable natural law, and these laws are as timeless as the force of gravity and as constant as the sun. In this atmosphere Mr. Citizen may stand with his head in the clouds of idealism and his feet on the ground of reality, his eyes to the future because of his vision of the past, his faith in humanity because of his confidence in man.

As Walt Whitman said, "I see the genius of the modern, child of the real and ideal clearing the ground for broad humanity, the true America—heir of the past so grand, to build anew a grander future."

The Supreme Court Should Use the Light of Reason

EXTENSION OF REMARKS

OF

HON. WILLIAM C. CRAMER

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. CRAMER. Mr. Speaker, as a member of the Judiciary Committee of the House, I was, like many of my colleagues, I am sure, quite disturbed by the Supreme Court decision in the Watkins Case where the Court decided that a man who admits to having a long period of Communist affiliations can refuse to state to the Congressional Committee on Un-American Activities whether he knows that certain named persons with whom he is familiar were members of the Communist Party.

The scope of the decision is so far reaching that it cannot be permitted to stand unchallenged on principle. The majority of the court in the decision acknowledged broad investigatory powers in Congress as being inherent in the legislative process, but then goes on to strike down and encompass these admitted powers with wholly unwieldy and impractical restrictions, under the guise of protecting an individual under the first amendment against abridgement by law of freedom of speech or press or assembly.

The decision is so vague and indefinite that it gives no real guideposts to Congress or congressional committees that can be applied in an effort to comply with the decision.

The decision seems to make a distinction in the powers of Congress to investigate between the admitted power to "expose corruption, inefficiency waste" in the public interest and as a public affair and the lack of power or authority to expose private affairs or beliefs of individuals—and as applied to this case, apparently, even when these private beliefs constitute adherence to the communistic philosophy of overthrow of our Government by force and violence. Could not this lead to the wholly unrealistic conclusion that the belief in communism is really a private belief protected within the first amendment and thus not subject to congressional investigation and public scrutiny through this method? Such a possibly conclusion certainly is to be condemned in the interest of preserving our constitutional form of government in America.

If this decision stands, future investigations by Congress will be in constant jeopardy, and the first amendment could possibly be pleaded as often as the fifth amendment is pleaded today. The court, which in my opinion failed to recognize the practical problems and workings of Congress, and would unduly restrict the legislative arm of government in carrying out its admitted function of investigating matters charged with the public welfare, looking to future legislation, the effects of legislation, activities of the executive branch and so forth.

I would like to cite a few examples of what could possibly result in the field of congressional investigations, as I interpret the decision.

First. It could possibly place on Congress the burden of proving that the terms of the charter of the committee or the statements of the chairman preceding the questioning would reasonably establish to the satisfaction of any witness the pertinency of each and every question on which the witness might claim the first amendment which would be an almost impossible burden;

Second. It could possibly strike down the broad authorizing or chartering provisions of committees and thus limit measurably the scope of their investigations on the technical grounds that although the investigation would be within the power of Congress to conduct unless every phase of the investigation is spelled out, the witness would not be put on adequate notice of the pertinency of any question asked by the committee and on which he claimed the right to refuse to answer because of the first amendment;

Third. It could possibly be construed to require "preliminary control" by Congress of its committee activities to the extent of requiring specific enumeration of every facet of any problem to be investigated or that might arise during an investigation even though the history of the investigative process has shown that Congress cannot foresee the new fields often uncovered as the result of hearings and that must be exhausted if the public welfare is to be served;

Fourth. The practical effect could possibly be that most future witnesses before congressional committees could only be voluntary because the compulsory subpena procedure would be completely outmoded and the witness could refuse to appear on the basis that he believed his first amendment constitutional rights were being prejudiced because he wasn't advised adequately of the questions to be asked and the pertinency thereof; or upon appearance could raise the same question and refuse to answer.

Fifth. It could conceivably require that any committee lay a foundation of

a more specific nature than the "charter" granted by Congress in order to establish the pertinency of every question asked in order to prevent a witness from claiming the "right of silence" which is surely an impractical burden.

Sixth. It could possibly require these committee restrictions as suggested in 1, 2, 3, and 5 above even when the rights of the person testifying are not involved but rather the rights of third persons whom the witness has been asked to identify as in this case and even though it is well settled that one cannot invoke the constitutional rights of another;

Seventh. It raises doubt about the fact that a congressional committee is acting within the scope of its authority with reference to any given question upon which the first amendment is claimed on the basis that an insufficient foundation of relevency of the question involved has been laid unless it appears clear on the record or in the "charter" powers of the committee that the specific facet of the investigation being challenged is spelled out in the record and that it doesn't violate anyone's "private affairs."

Thus, a mere statement of some of the possible implications of the decision that, I am sure points up its dangers.

Also the court overlooked completely in its reasoning the fact that every contempt action by a committee must be ratified by the body of Congress under whose authority the committee operates, the facts fully debated, the relevancy of the question upon which the refusal to answer gives rise to the contempt, the pertinency of the question to the investigation involved and of the question asked as well as the validity of the grounds for refusing to answer the question—and only after the passage of a resolution by the respective House or Senate after full debate and determination if the committee was acting within its "charter" and preliminary (broad) authority can the committee acquire needed authority to bring a court action through the Attorney General for contempt of Congress. I fail to understand how the Court, under the separation-of-powers doctrine, can inject itself into this matter in this instance on the facts and overturn the findings and policy determinations as they relate to the previously determined relevancy and pertinency as made by the Congress. Although broad investigatory powers are often granted, many protections against the abuse of the contempt power of Congress are provided. It is interesting to me that this phase of practical legislative process apparently escaped the Court—and indicates further the impracticality—due to lack of understanding of some of the problems of Congress and its workings—of the proposals made by the Court in this case.

I trust the Court will reexamine its decision in the light of reason and more clearly define its decision in order that congressional activity in the field of investigations might go forward within constitutional limitations.

Violating the Law Without Penalty

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. MULTER. Mr. Speaker, the following article by George E. Sokolsky, which appeared in the New York Journal-American of June 17, 1957, is worthy of the attention of our colleagues:

VIOLATING THE LAW WITHOUT PENALTY

(By George E. Sokolsky)

The Securities Exchange Act was passed to prevent the unconscionable conduct which brought on the 1929 stock market failure from ever happening again. It may have been too great an ambition, as clever minds will always find a way to get around a law and they can always hire lawyers and accountants to aid and abet them. The Securities and Exchange Commission, generally referred to as SEC, does not have the appropriations or staff to police the entire business world and only catches up with transactions that have become notorious. If the public is swindled there is really little to do about it.

In a letter to Senator JAMES O. EASTLAND, J. Sinclair Armstrong, who in April headed SEC but is now in a more comfortable spot in the Navy, wrote:

"Swiss trusts and similar financial institutions and devices have created a serious problem for the Commission in the enforcement of a number of the provisions of the Securities Act of 1933 and the Securities Exchange Act of 1934. The problem arises from the fact that, as you realize, under the laws and customs of Switzerland, Swiss banks and similar institutions do not disclose the names of the persons for whom they are acting. Similar problems arise in connection with American securities held in the names of banks, brokers, or other institutions in other foreign countries, since such institutions are not subject to the jurisdiction of this Commission and there is no way in which we can require them to disclose the identities of their principals if they do not choose to, or are under instructions from their principals not to do so."

USE NUMBERS, NOT NAMES

But the fact is that thousands of dollars a day are deposited in American banks to be transferred immediately to numbered accounts in Switzerland or elsewhere. The assumption was, until investigation proved it untrue, that the depositor left his name and address. But it has been established that he may leave a fictitious name and address. Actually the depositor ceases to exist the moment he deposits the money in a perfectly reputable bank in any American city to be transferred to a numbered account in Switzerland or elsewhere. The American bank transfers the money. The alien bank knows who X98 is and has no interest in the fictitious name of the depositor. Thus a tax evasion may be practiced, and all trace of the evader has been removed.

Clever. Of course, it is clever. This transaction involves three minds—the owner of the money, a lawyer, and an accountant. But there is no evidence, aand there is not any agency of Government which has any means to discover what has happened and how much money is being siphoned out of the United States and for what reason.

Armstrong said: "Inability to ascertain the identity of the beneficial owners of securities of American corporations held by various foreign financial institutions makes it difficult, in some cases, to determine whether or not persons in fact subject to the requirements of section 16 (a) are complying with these requirements."

CAN AFFECT NATIONAL DEFENSE

Section 16 (a) is important, because it means that the beneficial owner of more than 10 percent of any class of any equity security sold in any American exchange and every officer and director of the issuer of such a security must file a record of his holdings. But suppose the holding is by a Swiss bank or an anonymous personage in Europe or Nassau or Canada, how does the law apply? In a word, a whole set of devices has been developed, the object of which is to violate the law without penalty. And the devices all work well.

In fact, studies show that about 10 percent of the shares of publicly held corporations in the United States are registered in the names of nominees, that an additional 10 percent are registered in the names of brokers and dealers, and about 15 percent more are held in the names of fiduciaries which are impersonal institutions. So who are the beneficial owners? In this 35 percent may rest the control of a public company. But who are they? And are they the same individual or group hiding behind a fictitious device?

This is a very serious matter, as it can affect the national defense, and it may influence depressed conditions during an inflationary period.

Martin Sweig, Ph. D., Stands Up for Georgetown Foreign Service School

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a very interesting article which appeared in the Tablet, Brooklyn, N. Y., on June 22, 1957:

STANDS UP FOR GEORGETOWN FOREIGN SERVICE SCHOOL

DEAR SIR: I am enclosing a copy of a letter which I have addressed to the editors of each of the daily papers here in Washington.

As one long familiar with Georgetown University, and especially with the School of Foreign Service, I welcome this opportunity to offer the unsolicited testimony of a non-Catholic as evidence of the biased falsification of the record which has resulted from the statement of Bishop Oxnam.

MARTIN SWEIG, Ph. D.
WASHINGTON, D. C.

MY DEAR SIR: At the commencement exercises of American University held on June 10, Bishop C. Bromley Oxnam, of the Methodist Church, made another of his irresponsible statements. This time he has attempted to impugn the motives of Catholic educators, and in the same breath he casts reflection on the intelligence of the graduates, Catholic and non-Catholic, of Catholic colleges. He has singled out in particular the world fa-

mous School of Foreign Service of Georgetown University, which is a university organized by and operated under the jurisdiction of the Society of Jesus.

I wonder if the good bishop has ever carefully examined the catalog of the School of Foreign Service of Georgetown University. If he has not, and from his remarks I assume he has not, I respectfully submit that he should and I would be delighted to have a copy sent to him. In the catalog he would notice that the history courses offered are not radically different from history courses offered at, for example, Harvard University, Yale University, or Boston University, or even at George Washington University here in the District of Columbia; the courses in political science are practically the same as offered in other universities; the courses in economics offered at Georgetown University are similar to like courses at other universities. The professors in charge of these courses are not in the habit of rearranging the courses to suit the policy of the Holy See, or any other State, for the simple reason that such a thought never enters their minds. Professors in every college, be they layman or cleric, have a moral obligation to teach their course with due regard to the high trust and responsibility entrusted to them to teach the truth without regard to any secular policy adhered to and followed by any one particular political state.

I am a graduate of Georgetown University, both of the School of Foreign Service and of the Graduate School. While in the School of Foreign Service all my professors were layman who were both Catholic and Protestant, and for the benefit of Bishop Oxnam, may I say that one of my professors was a man who belonged to the Jewish faith. Not one of these professors, Catholic, Protestant, or Jew, to my knowledge, ever tried to steer my thinking along lines of "Vatican world policy" as suggested by Bishop Oxnam. If the bishop feels that all graduates of Catholic colleges are brainwashed, may I say that he is greatly mistaken, and that his own education has been sadly neglected.

One would be led to believe from Bishop Oxnam's remarks that in the School of Foreign Service of Georgtown University and in the university itself there is a lack of religious liberty. Nothing could be further from the truth. Again I would counsel the good bishop to consult the lists of students at Georgetown University. He would be amazed to find quite a few Protestants and Jewish students therein.

To my knowledge, and I am a non-Catholic, I have never found any signs of discrimination at Georgetown, nor have I heard any rumors that such a situation existed. It seems to me that Bishop Oxnam likes to hear himself talk but he should, being a man of God and one who invokes the name of God in his sermons, be careful of making statements that are without foundation. His major premise is wrong and conceived in ill-feeling and bias; his conclusions, therefore, cannot be right nor should they be accepted by thoughtful and openminded people.

Canadian Family Allowances Act: A System Which Merits Study in the United States

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. PORTER. Mr. Speaker, last week I took great pride in introducing for the first time in this House a resolution which asks that a select committee be created to study the feasibility of our Nation's adopting the Family Allowances Act which has proven so successful in Canada for nearly 12 years. I am happy that my distinguished colleague, the Honorable JOHN BURNS, of Hawaii, introduced identical legislation.

These resolutions are like one which last week was introduced by Senator RICHARD NEUBERGER and several cosponsors. Senator NEUBERGER introduced it originally in the Senate during the 84th Congress. Since that time, this proposal has drawn support from many individuals and organizations. There is an ever-growing feeling on the part of many that this Nation should look further into this program.

The select committee we propose would have five members appointed by the Speaker. They would be authorized to investigate the Canadian plan with a view to determining if a similar system here would promote the health, development, and well-being of our children. The committee would be allowed as much as $26,000 for the study, and could meet outside the borders of the United States.

I am told by Canadians, familiar with the allowances act, that the system has improved the health and standard of living for their children. More boys and girls have the vegetables, meats, fruits, and milk needed in their diets. More youngsters have shoes. Many will have higher education because their parents are putting the money aside for that purpose. The allowance is paid to the mother or guardian and goes to all children, regardless of family income, race, color, or creed.

Happily I can tell you that misuse of allowances or fraud is negligible.

Canadians who were skeptical of the plan 12 years ago now proudly claim the program as a sample of their country's forward thinking. The major political parties there would each like to claim the idea as their own.

I respectfully call to your attention comments by Mr. Lawrence Burg, a Chicago businessman who is research director for a private company. He is one of 10 children, he votes independently, he is a World War II veteran. He and his wife have four children.

Mr. Burg is concerned with the cause of juvenile delinquency. He and his wife feel that the monetary cost of children may be a missing clue to the major cause of juvenile delinquency. I neither confirm nor deny their supposition, but tell you that the Burgs feel that lowered living standards "might have an adverse effect on some parents and older children." They say it costs them $729 per year to raise each child, despite frugalities.

As a sample of what the cost of child-rearing means, Burg points out that the couple with no children and earning $100 weekly takes home a spendable income of $4,504. The family with four children, on the other hand, has a spendable income of $2,484, after the cost of the children has been deducted. His solution is amending the tax laws to enable all adults to pay identically, and then giving a social security or child-support payment of $50 per month for each child. This would be given to the parents to aid them in rearing their children. Mr. Burg says payment for such a program could come from funds transferred from foreign aid and topheavy national defense. He terms his plan one of tax relief.

In introducing the resolution initially on June 14, 1955, the distinguished junior Senator from Oregon called the plan the next great step forward in social legislation. He said the program seeks a healthier, happier, and more secure life for the children of America.

He and his wife, Maurine, have had many occasions to discuss this program with Canadians and can say in all truthfulness that they found our neighbors to the north strongly in favor of the family allowances system. He, like Mr. BURNS and me, are convinced that the system is good, not only because of its help today to the children, but also because it is building a stronger nation for tomorrow.

This Canadian program has received caustic comments from persons unfamiliar with its worth and operation. These doubters call it a baby bonus. I must point out that this has not been the case in Canada. The birthrate there continues at a normal pace.

The Family Allowances Act was introduced in Canada in 1944. The first payments were made in July of 1945. The act was a basic social-security measure designed to assist in providing equal opportunity for all Canadian children.

Payments come out of the Federal consolidated revenue fund and are no part of taxable income, although persons with children eligible for family allowances obtain a smaller income-tax exemption for such children than for children not so eligible. Family allowances are administered by the Canadian Department of National Health and Welfare through regional offices. The annual cost is currently around $380 million. I am told the administrative cost has never exceeded 1.6 percent of the allowances amount. The allowances are paid at the monthly rate of $6 for each child under age of 10 and $8 for each child 10 to 16.

I know this brief summary of the program and the digest of the resolution my colleague and I have introduced does not tell this body all it may wish to know about family allowances. The full text of the Senate resolution, which is like the House version, appears with Senator NEUBERGER'S comments in the RECORD of June 21, 1957.

Postal Pay

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. MULTER. Mr. Speaker, the following is my statement before the House

Post Office and Civil Service Committee on June 21, 1957, regarding the necessity of an increase in the salaries of postal employees:

STATEMENT OF REPRESENTATIVE ABRAHAM J. MULTER OF NEW YORK, BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE, JUNE 21, 1957

Mr. Chairman and members of this distinguished committee, I appreciate the opportunity you have given me to present my views on the legislation now before you, H. R. 2474.

I appear before this committee to urge the immediate adoption of H. R. 2474, which provides for a salary increase to postal employees. This increase has been long overdue. It will merely allow postal offices to catch up with wage increases that employees in private industry, who have the benefit of collective bargaining, have received over recent years.

I will not reiterate the facts which you have already before the committee. It is well known that the efficiency of postal employees has increased over recent years and their rise in productivity compares favorably with the gains in efficiency of employees in manufacturing or other sectors of the economy where increases in wages for improved productivity are taken as a matter of course. Many employees in private industry also receive adjustments in wages when the cost of living increases, but postal employees have been subjected during the past year to a reduction in their real take-home pay, as the cost of living increased by more than 4 percent.

The arguments that a salary increase to postal employees would be inflationary appears to me spurious as well as callous. We cannot expect that postal employees will continue to subsidize the cost of Government by accept low wages which provide for less than a decent standard of living.

Self-interest would require us to improve the wages of postal employees. I do not have to belabor the point that the services of the post office are essential for the operations of the economy. Failure to provide for adequate wage increases for postal employees would have the effect of allowing the postal service to deteriorate through many resignations and the inability of the postal service to recruit new competent employees.

Having worked as a railway mail clerk in the Post Office Department, I know how hard these employees work. Never having lost my interest and contacts with them, I can personally attest to their loyalty and integrity.

Mr. Chairman, yes, adoption of H. R. 7474 is not good only for the postal employees, it is also good for the country. This proposed legislation can no longer be postponed. I repeat—I urge this distinguished Committee to consider this bill favorably.

Again, let me thank you for the privilege of presenting my views.

Chaos and the Court

EXTENSION OF REMARKS

OF

HON. WATKINS M. ABBITT

OF VIRGINIA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. ABBITT. Mr. Speaker, never before in the history of this great Nation has the Supreme Court been held in such low repute by our people. I am convinced that the great majority of our citizens have lost faith in the ability of the Court to dispense equal justice to all of our people. Many are alarmed at the trend of their decisions. The Court continues to depart from time-honored legal principles and precepts. They have thrown to the wind all legal precedent. No attorney can now advise his client with any degree of satisfaction as to what might be the ruling of the Court on any particular point of law.

Apparently, the Court has set out to make its own rules and write the law according to its own desires in each individual case. It has arrogated unto itself all necessary legislative power and authority to do just that without regard to the consequences that will follow.

On Friday, June 21, 1957, there appeared in the Richmond News Leader an editorial entitled "Chaos and the Court." This editorial points out very cogently the chaos that the Supreme Court has caused by its usurpation of authority in the legislative and executive fields of government.

The editorial is as follows:

CHAOS AND THE COURT

The Supreme Court of the United States now approaches the end of its 1956–57 term. For a few months at least, while Mr. Justice Douglas goes motoring through Nepal and the other justices have scattered to their homes, we may expect some slight measure of judicial stability. In the autumn, we may be grimly certain, chaos will resume—for chaos is all that Earl Warren's Court has brought to the law, and chaos is all it seems able to bring.

Readers of this newspaper will know how rarely we employ a superlative in these columns. We employ one now: Mr. Warren's Court is the poorest Court ever to occupy this country's highest bench. Taney's court suffered from mediocrities a century ago; Fuller had some Justices of less than surpassing brilliance in his day. But never since the Court was constituted in 1789 have its members, as a group, exhibited the gross dereliction of duty, the flagrant and willful disregard of judicial function, that is exhibited by the Court which now afflicts us.

That judgment has nothing to do with mere sectionalism; it is not predicated upon the Court's decision in the school segregation cases, however bitterly many of us in the South may assail that act of usurpation. It is predicated, rather, upon the Court's opinions over the past 4 years, and especially over the past 18 months, which together define an unmistakable trend toward judicial tyranny of a sort this Republic never has experienced.

The trend is marked by the Court's evident eagerness to usurp both executive and legislative powers from its presumably coequal branches of the Federal Government, and by its consuming ambition to destroy the States altogether. The trend is marked further by a contempt for judicial precedent, by a willingness to substitute the justices' own notions of desirable social policy for the clear intention of written law, and by a backbending, distorted desire to subordinate the security of society for the imagined rights of individuals.

CODDLE COMMUNISTS

A case 18 months ago typifies the trend. This was the Rea case, in which the Court, citing its own supervisory powers over Federal law enforcement agencies, refused to permit a Federal narcotics agent to testify in a State proceeding in New Mexico. Mr. Justice Harlan, in a startled dissenting opinion, remarked that it never before had been suggested that the Federal courts share with the executive branch of the Government responsibility for supervising law enforcement as such.

Three other cases, each of major importance, followed in short order—the Ullmann case, the Steve Nelson case, the Slochower case. The first of these spread an umbrella over suspected Communists in a fervent approval of the fifth-amendment privilege against self-incrimination. The second voided the antisedition laws of 42 States, and wrote into Federal law a preemption Congress had positively refused to adopt on its own. The third struck deep into the powers of the States to discharge teachers whose conduct fails to meet State standards of employment.

Then came the Griffin case from Illinois, in which Mr. Warren and his liberal bloc swept aside age-old principles of State authority over State judicial process. Ostensibly, all that was involved was Illinois' failure to provide a free transcript to a convicted thief who sought judicial review; actually, what was involved was the heart and soul of State judicial powers.

On April 30 of last year, a majority united in a weirdly legalistic opinion of great benefit to the Communist Party of the United States. The effect of this opinion was to prolong a proceeding against the party under the Subversive Activities Control Act. On the same date came another opinion, also based upon narrowly technical grounds, reversing a denaturalization order against a Communist, Zucca. It appeared that the Government, seeking to oust the man, had failed to file a particular form. Said a dissenting minority:

"The Court's ruling today seriously obstructs the Government in filing denaturalization proceedings in this type of case. * * * It reverses a long line of cases in the lower Federal courts and disregards a consistent administrative practice of over 30 years' standing."

In May of last year came the Hanson case, from Nebraska, in which that State's constitutional protection of a right to work was held to have no application to a railway employee. Piously the Court held that it was not passing upon the union shop as a policy, for "the judiciary has no concern" with policy; Congress has "the final say on policy issues."

But within 2 weeks, on June 11, all that had been forgotten. In deciding a fair-trade case affecting the McKesson and Robbins Co., in the view of dissenting members of the Court itself, the majority let a "lack of sympathy for an act of Congress" override its duty "to seek out the policy underlying the act and, if possible, to give effect to it."

It was on this same date that the Court, in the Cole case, again usurped a legislative function. Here the facts were that Cole, a food and drug inspector in New York, had been dismissed from Federal employment by reason of his Communist associations and background. A majority of the Court refused to sanction his dismissal. Justices Clark, Reed, and Minton, dissenting, said the opinion "frustrated the clear purpose of the Congress." It flew "directly in the face of the language of the act and the legislative history." Though the law plainly applied to "any civilian officer or employee," the Court simply rewrote it to read, "any civilian officer or employee in a sensitive position."

On June 11 of last year, too, a divided court upheld the conviction of two Army wives, by a court-martial, of the murder of their husbands. We will allude to this case again in a moment.

With the fall and winter months of last year, two highly significant events occurred, in the resignation of Justices Reed and Minton. Once they had been regarded as liberals on the Court; at the time of their departure, so far had the Court shifted to the left, they were bulwarks of conservatism.

with the confirmation of Mr. Justice Brennan, and later of Mr. Justice Whittaker (though he has not yet played a significant role), the center of ideological gravity has shifted still more. Now the cases that once were decided 5–4 or 6–3 are increasingly being decided 7–1 or 6–2, with only Mr. Justice Burton, sometimes joined by Harlan or Clark, attempting to hold some rational line.

INVADE STATES RIGHTS

The tendency to invade State prerogatives has continued unabated. Kansas was told in December that the State could not even prescribe its own law governing notice in State land condemnation proceedings. Alabama was rebuked for the conviction of a Negro rapist simply because police had questioned the defendant severely. There had been no brutality, no coercion—and Mr. Justice Harlan commented sharply that the majority's decision "oversteps the boundary" of State rights.

February was marked by the Court's fantastic decision in the Radovich case, involving a professional football player, in which the Court piously asserted its determination to abide by established law.

But in March, the Court was back at its more familiar habit of rewriting law and precedents to suit itself. It ruled, 5–3, that the Union Pacific Railroad had no title to minerals under its right-of-way. A baffled minority pointed out that this title, stemming from a land-grant law of 1862, had been upheld in a "body of opinions, written by members of the Court more steeped in public land law and more sensitive to the circumstances of the times that we can possibly be." The Court sought "to retrieve in 1957 what Congress granted in 1862." It read into a 95-year-old law its present-day notions of what the law should have been.

It was in March, also, that the Court, in the Roviaro case, directed that henceforth the Government must disclose the name of its informers in narcotics prosecutions. Mr. Justice Clark bitterly criticized "the destructive effect that conclusion will have on the enforcement of narcotics laws." Undeterred, the Court on June 3, in the Jencks case, directed that the Government, in prosecuting a suspected Communist, must make available to the defendant all reports of Government witnesses in the FBI's possession touching upon "events and activities to which they testify at the trial." Said Mr. Justice Clark:

"Unless the Congress changes the rule announced by the Court today, those intelligence agencies of our Government engaged in law enforcement may as well close up shop, for the Court has opened their files to the criminal and thus afforded him a Roman holiday for rummaging through confidential information as well as vital national secrets."

On the same day that the Jencks case came down, the Court abandoned all precedent and rewrote the Clayton Act in order to compel the du Pont Co. to sell its interest in General Motors. On June 10, 1957, the Court reversed its decision of June 11, 1956, in the matter of the Army wives, and thus not only set free two women who had brutally murdered their mates, but also created an incredible uncertainty as to the trials of other Army defendants on other offenses.

HAMSTRING CONGRESS

Winding up its term, this past Monday, the Court freed 5 California Communists outright, and in effect freed 9 others, with an opinion so highly legalistic that members of the bar are frankly aghast. Not content, the Court struck deep into executive prerogatives by reversing the dismissal of John Stewart Service of the State Department. It voided the conviction of John T. Watkins, charged with contempt of Congress, in an opinion that will hamstring the congressional power to investigate. Finally, it again invaded State powers to punish sedition by voiding the conviction of a New Hampshire professor for contempt of court.

This editorial review, long as it is, is regrettably brief. It does not touch upon the many decisions, of primary interest to lawyers, which have gravely altered long-established rules of judicial procedure. Neither does it offer examples of the cloudy and turgid style in which many of the Court's pronouncements have been phrased—a style so filled with ambiguities and high-flown dicta as to baffle laymen seeking to comprehend the Court's meaning.

These are our masters. Is it any wonder that rebellion grows against such arrogant incompetence? Surely it is possible to hope, at long last, that other States will begin to share the South's demand that an effective check be provided against a court which, lacking self-restraint, knows no restraint at all.

High Court Splits Hairs Freeing Convicted Reds

EXTENSION OF REMARKS
OF
HON. WILLIAM C. CRAMER
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. CRAMER. Mr. Speaker, the following editorial from the Tampa Daily Times of June 19 comments on the most recent ruling of the Supreme Court reversing the convictions of 14 United States Communist leaders. It points up continuously growing national consternation over many of the recent decisions emanating from the highest judicial tribunal in the land. The Communist Party won a major victory with this decision by weakening the Smith Act which was designed to fight subversive groups:

HIGH COURT SPLITS HAIRS FREEING CONVICTED REDS

There were probably many delighted chuckles in the Kremlin this week following the United States Supreme Court's action reversing convictions of 14 United States Communist leaders accused of plotting to teach violent overthrow of the United States Government.

Justice Tom Clark reflected the indignation felt by many Americans when he said in his dissent that the ruling "frustrates the purpose of the Congress * * * to curb the growing strength of the (Communist) Party."

Once again the Court is found in the position of reading its own philosophy into an act of Congress. Justice Clark was on sound ground when he protested:

"In its long history I find no case where an acquittal has been ordered by this Court on the facts. It is somewhat late to start now in usurping the function of the jury, especially where new trials are to be held covering the same charges."

The key word in this dissent is "usurp."

In many of its recent decisions the Supreme Court has been guilty of going beyond its purely judicial functions and usurping powers not assigned to it by the Constitution. The trend is continuing.

It is sheer folly to grant the convicted Communists succor and protection in the guise of guarding freedom of speech, press and assembly. It is no secret that the American Communist Party is dedicated to overthrowing the Constitution under which it is currently seeking protection. The FBI has demonstrated convincingly that the native Reds are merely an extension of the Russian espionage system. Their basic loyalty is to Moscow.

The Smith Act was passed to curb the activities of these American Reds. In subverting the principles of this legislation, Justice Harlan, who delivered the majority opinion, performed a remarkable feat of juggling the issues.

He said the Court was faced with the problem of deciding whether the Smith Act forbids advocating and teaching forcible overthrow as an abstract principle or is aimed at the advocacy and teaching of concrete action for the forcible overthrow of the Government.

The difference between the "abstract" and "concrete" in this instance is extremely difficult to find.

Under this interpretation, it is possible to advocate and teach overthrow of the Government as an "abstract principle."

The Court evidently does not take into consideration that concrete action frequently emerges from abstract principles.

These finely drawn points of law completely escape the average American who is concerned with the internal security of his country and preserving the democratic processes of government. Anger at the Court's decision is certain to be high.

The Court apparently has thrust aside all consideration of national security in giving the questionable benefit of doubt to the Communists. This decision is well designed to discourage law enforcement agencies concerned with the problem of keeping the Red menace under control.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U. S. Code, title 44, sec. 185, p. 1942).

Parsons College Seniors in the Service of God and State

SPEECH

OF

HON. THOS. E. MARTIN

OF IOWA

IN THE SENATE OF THE UNITED STATES

Monday, June 24, 1957

Mr. MARTIN of Iowa. Mr. President, on Sunday, June 2, I was accorded the honor of delivering the commencement address at the commencement exercises of Parsons College, Fairfield, Iowa. The baccalaureate sermon on that occasion was delivered by the Reverend Dr. Paul Silas Heath, of New York City. The Reverend Millard G. Roberts, president of Parsons College, conferred the doctor of divinity degree upon the Reverend Kenneth L. Hubler, minister of the Grace Presbyterian Church at Council Bluffs, Iowa, and the doctor of laws degree on John A. Fisher, president of Buena Vista College, Storm Lake, Iowa, the Reverend Dr. Paul S. Heath, of New York City, and me.

I ask unanimous consent that the baccalaureate sermon delivered by Dr. Heath and the commencement address delivered by me be printed in the body of the RECORD.

There being no objection, the addresses were ordered to be printed in the RECORD, as follows:

THE BIRTH STRUGGLE OF A NEW CHURCH, AND ITS NEED FOR LEADERSHIP—A BACCALAUREATE SERMON PREACHED BY THE REVEREND DR. PAUL SILAS HEATH, GENERAL PRESBYTER OF THE PRESBYTERY OF NEW YORK CITY, AT PARSONS COLLEGE, FAIRFIELD, IOWA, ON JUNE 1, 1957

Norman Cousins, the editor of the Saturday Review of Literature, on returning recently from a visit around the world, summed up some of his conclusions in this way:

"The world is wide open for a new and big idea. Communism no longer fills that role for millions of Asians and Africans. Only a short time ago communism seemed to many of these people to be a fast express to a better future * * * but no longer. Somewhere along the line the express has gone off the track.

"But neither is democracy as proposed by America this big idea. We do not do a very good job of translating what democracy means to us into foreign languages in a way that gives meaning to the hopes of the multitudes. The big idea, when it comes, will have something to do with giving reality to the great connections between people that exist independent of ideologies or national units."

In this same editorial, Mr. Cousins tells of an interview he had with Dr. Martin Buber, Jewish philosopher and theologian—one of the great minds of our time. "Year by year the things that separated men from one another have been hardening." Buber said, "year by year the price of such separation has been growing." Then the wise scholar added, "The burden on young people is especially large. They must comprehend what is needed and move toward it with all the resources at their command."

You young people are graduating from college and entering into new responsibilities at a crucial time in the history of the world. It is at one and the same time the winter of despair and the spring of hope—a time of crisis, but a time of opportunity. The nuclear age which has brought us to omnipotence in nature, is also a time of impotence in using these powers for the well-being of man.

This is also true with the church in America today. At a time when more and more people are turning to the church, we have the increasing crime and delinquency and the extraordinary callousness and indifference of people to the malfeasance of many leaders in politics, in labor unions, and in other fields.

You graduates may well ask, "How can we cope with such a day as ours?" I would like to speak to this point, beginning as we narrow down the complexity of our problem to at least one sore spot.

I believe the sickness of our world lies in "separation" and all that word implies. The new "big idea" for which the world is waiting will be one that gives reality to connections between people. We must learn through this idea to conquer separation and bring about acceptance.

THE SIN OF SEPARATION

It would be a mistake to presume this sin of separation and the need for acceptance is applicable just to relations between whole peoples and nations alone. Actually, this same sin and sickness of separation lies at the root of despair and breakdown and failure and defeat right here in our own land, and even right here on this campus.

Are there people here on this campus hurt by the sin of snobbery, by the pride of superiority, by the cruelties of ostracism and condescension? This is the sin and sickness of separation. Let us remember the 1 out of 10 Americans in institutions of mental health is there because of failure to conquer separation in oneself, between oneself and one's fellows, and between oneself and God.

In the city of New York the large numbers of young people in trouble, becoming involved in gang violence or the influence of drugs or alcohol, who become rootless and aimless, are the victims of our failure to bring down the walls of separation and achieve acceptance.

The actual taking of such drugs is to these young people a sacrament of the meaninglessness of life. When we remember what the Lord's Supper can mean to us, in the knowledge that we are forgiven and accepted by God and that separation within ourselves or with our fellows is ended by His grace, we begin to understand this. A life can be so riven from wholesome community with one's fellows that drug taking seems the only out.

OUR INNER SELVES

This finally narrows down to our own inner selves. Most of our personal problems and difficulties arise from this same inward division. The good that we would do we do not; the evil that we would not we do. We find it very difficult to accept ourselves. We become separated from ourselves, from our fellows, and isolated from God.

Certainly such a world as ours is wide open for a new big idea, one that will bring to an end the sickness of separation. This must give reality to the great connections which exist between people independent of nation or race or ideology, and lead to the greatest connection of all—the reality of our connection with God.

It is here that we preachers come along and say: "The Christian Church has the answer to all this. The Gospel of Jesus Christ is the idea big enough to win the world and conquer its ills." Just to say this doesn't really help in a world like ours. The plain truth is that the Christian Church as presently constituted does not persuade people that it is big enough to give reality to the great connections that exist between people, independent of one's nationality, the color of one's skin, the amount of money one has, or the side of the track one comes from.

THE CHURCHES PRACTICE SEPARATION

In America today, more than two-thirds of the people are listed as members of some church. Dr. Wilbur La Roe, a Presbyterian elder and former moderator of the general assembly, has made a tongue-in-cheek definition of the Presbyterian Church as:

"A fellowship of middle-class people who enjoy being affiliated with an organization of good standing in the community to which they can belong with comfort and without heavy expense; who believe in brotherhood within well-defined limits and in social progress if it is not carried too far; most of whom cast a conservative vote, and who find real satisfaction in listening to good sermons and tolerable church music and in being associated with respectable people of his own class."

Certainly the practitioners of such a faith do not have the big idea which can win and heal the world. D. T. Niles, the brilliant and able young church leader from Ceylon said recently in New York that "our sickness results from our failure to meet God at the places where God comes to meet us." This is profoundly true. Our failure in New York City, and in many another city, is that church people have been hanging around their own tree-lined suburban street corners, and not in the teeming cities where the problems of separation lie.

We are not meeting God at the spots where he comes to meet us, and so we miss him. Where are these spots? They are the spots where the sin of separation and alienation have erected barriers that wall off human beings from each other, where there can be no community, no sharing, no mutuality. These things never happen, because we never meet. Pride, superiority, and self-righteousness couple with fear and hatred, have made us strangers to each other.

ARE CHURCHMEN REALLY CONCERNED?

Dr. Paul Tiddich, of Harvard, has recently defined faith as the state of being ultimately, unconditionally, infinitely concerned. This is not the state of our Christian faith within the churches today.

Our church is so set in its ways; its patterns are so firmly fixed. Most of the men of my age preaching sermons are too old to bring about a revolution commensurate with the revolution going on in our world today. This makes the burden on you young people especially large.

I know young people today who are hearing this challenge and taking it seriously. Let me speak of just one such group. In the upper East Side of Manhattan there is an area known as East Harlem. It is an area of blighted slums with people crowded into filthy tenements.

If you have never been in a city slum with a 5- or 6-story walk-up, rat-infested, a cold water spigot in your crowded apartment where there is no privacy, and a water closet on the floor below you, you have no idea what it means to try to survive physically, mentally, spiritually. This is the area of greatest density of population, highest delinquency, and drug addiction. Every school is crowded, hopelessly old and inadequate. Family life is completely disorganized.

Into this area came a group of young ministers and their wives and other seminary students to live there and identify themselves with these people in all their problems. They have felt that if the Gospel of the Incarnation meant being ultimately concerned it should have the power for such a situation as this.

Into this group last fall came a young student and his wife to live and work. He was from Princeton University, president of his class. Speaking rather frankly, he was a good Christian who, like the rich young ruler, had consistently kept the law and been a fine leader of youth in a conventional way.

Let me read you some words he wrote after being there a few months, for he found out something about human separation:

"The following could be written about countless places. I write it about East Harlem where some things may be easier to see. East Harlem breaks my self-confidence—the first time I have known real breakage in my life. My life has been marked by one success piled atop another—the presidency of my class throughout high school and college, repeated academic and personal honors—

"Yet, neither dramatically nor suddenly, I have nevertheless been broken, broken by this place called East Harlem, and I am very thankful. Here I have dimly known what the New Testament calls rebirth. Truly to hear the cry from the Cross in our time, to know truly our guilty in the crucifixion this day."

Here is a young man actually facing the state of being unconditionally, ultimately concerned. With it, we can see a glimpse of the new "idea" big enough to give reality to the connections between people. He goes on:

"Let me try to explain why I believe the East Harlem Protestant Parish hears the muffled cry of a suffering world. Separation, alienation are the realities of human existence. Human separation cannot be overcome except by the grace of God in Jesus Christ. The grace of God alone can overcome separation within a man, between man and God. God's word of radical forgiveness and acceptance must undergird the form and the spirit of the churches' ministry."

Slowly, these young people are building a new kind of spiritual community, not just a new kind of church. It is not dominated by a ministry that does all the work, but the people become the ministers and the people themselves carry the gospel of acceptance into the community. They meet to carry on worship and prayer; to share problems and analyze personal and community needs and to accept assignments of ministry. Everyone becomes a witness.

AN APPEAL TO GRADUATES

I have taken some time in describing this particular situation because these young people are strongly convinced that their situation is not unique despite its more desperate character. As young Brown says, "It is easier to see things in East Harlem."

But the sin of separation and the need for acceptance are everywhere, and the need for the appearance in the church of an outburst of fresh dynamics for the "big idea" is everywhere—in rich suburbia, in Fairfield, as well as East Harlem.

For only as rich suburbia and Fairfield realize they are like East Harlem in its desperate need of God's forgiveness and in its need of meeting Him where He comes to meet us, is there any hope. Only then can the Church mediate the powerful healing force entrusted to it.

This is my appeal to you young people as you set out in your new life. Comprehend what is needed, and move toward it with all the resources at your command. Involve yourselves in the birth of a fresh creative expression of the gospel of the Incarnation in the Church, big enough for the healing of the separations that are threatening to destroy the spring of hope in the nuclear age.

ADDRESS BY SENATOR THOS. E. MARTIN AT THE COMMENCEMENT EXERCISES, PARSONS COLLEGE, FAIRFIELD, IOWA, JUNE 2, 1957, ENTITLED "THE FUTURE, OPPORTUNITY, AND RESPONSIBILITY OF THE EDUCATED AMERICAN"

The educated American is up against everything the free world is up against in this second half of the 20th century—only more so.

This makes the role of the graduates of Parsons College and the role of the graduates of other institutions of learning everywhere in our country one, that is touched with a proud but a fearful destiny.

There is a burden of responsibility upon your generation of Americans. This burden is balanced by the promise of a full and an ample life, rich in the realization—actually—of great dreams. No people in all the ages have ever had the state of well-being, the national and individual dignity, that cloak you as you leave this, your alma mater, for the great world in front of you.

And no previous generation in all the annals of history was ever confronted by a greater peril.

It is in this context that I ask you to evaluate your career that stands before you and relate these coming years to the story of man since the beginning of time.

Let us ask ourselves:

Is this generation really unique in terms of the problems that face it? Or is this term, this word—unique—merely the text that invests every commencement address?

As I see it the answer is that every age is of course unique in some form.

In the days of early Christianity the issue was between God and Caesar, an issue that has a strikingly identical parallel today.

In the days of Columbus there was the task of bringing whole new continents within the compass of contemporary civilization.

In the latter part of the 18th century there was the question of a small group of American colonies seeking freedom and independence from an oppressive tyranny.

We are the immediate beneficiaries of the incredible success of these incredible ventures.

The Civil War raised the question, and answered it, whether this Nation or any nation conceived in liberty and dedicated to the proposition that all men are created equal can long endure.

World War I and World War II presented supreme tests to mankind of certain fundamental tenets of civilization and of government.

Today the issue, I firmly believe, is clearer than it ever has been, for the world of this generation stands clearly divided between the slave and the free. It is the collateral issues that are complex.

There is nothing unique in this primary issue, except possibly its greater clarity, since the days of the Old Testament.

But there is this about your generation that is unique:

Our age is more extraordinary than any comparable period of the past, because what is done anywhere on earth engulfs the whole planet, whether it is the development and use of penicillin, nuclear fission, or the question of what ships may or may not pass through the Suez Canal.

This time in which we live presents the whole race of man on this earth and everywhere in it with certain basic questions.

The first question is whether man, under God, wants to be governed by himself, or whether, without God, he will submit to the tyranny of dictatorship and the erasure of his own personality and the elimination of the dignity of the individual.

The second question is whether man has the intelligence to recognize that a democracy or a republic sincerely means government by consent of the governed, or whether he can indeed be deceived into believing that a Soviet despotism is a people's democracy, and whether he can be blinded to the omnipresent fact that communism is a dictatorship of deceit.

Unless this generation of graduates of Parsons College and kindred institutions knows, recognizes, and acts upon its role in this unique crystallization of the issue of the centuries, then this much of the victory is lost to the free world.

The Napoleonic wars were fought without our participation.

The Civil War was fought without Europe's participation.

We know now that wars like these can never again be localized, or isolated, or contained.

Thus, your generation of Americans is unique in that your horizons, as of this moment, cover this entire planet and may—before long—be obliged to reach into stellar space.

All this represents uniqueness indeed on a canvas so sweeping, so enormous, so total—it engulfs not only all of mankind, but it carries with it the question of whether there is to be a future at all, the question of whether man is so limited in his capacity to manage himself that he will use the power that is now his to destroy forever all life on this planet.

Your generation is unique because until this hour man has never been presented with so vast and so final a decision.

The burden of my message to you today is that you are the recipients of the richest fruits our civilization has within its gift, and that, as the custodians of this intellectual and spiritual wealth, there rests upon you precisely a certain concentration of responsibility.

All Americans are involved in the issues, the educated, the near-educated, and the uneducated, and all—in a democracy—have a voice, but democracy has never denied the principle of leadership under law. The educated men and women of America constitute certainly a selected fragment of mankind toward whom, in the first instance, the mass of Americans will look for guidance, so that when the decision is made by all of us, we shall have taken counsel properly and duly with those among us who are presumably, the better trained and the best informed.

What I plead for is not a priesthood of the educated. What I plead for is the service of the dedicated.

The United States has a right to expect that its educated citizens will serve as an echelon of enlightenment on all local, State, National, and international issues that confront a government such as ours. This is not to be construed to mean that I expect that we shall have government by college graduates

per se. It is of the nature of the intellect to be controversial and probing. Men who think never conform to a single pattern. It is the contest of ideas that gives democracy its strength. But feeding the contest we want knowledge and not prejudice. It is at this juncture that education plays its most magnificent role.

Thomas Jefferson put it this way:

"I know of no safe depositary of the ultimate powers of society but the people themselves; and if we think them not enlightened enough to exercise their control with a wholesome discretion, the remedy is not to take it from them, but to inform their discretion by education."

Having quoted a distinguished Democrat permit me to quote an equally distinguished American whose thinking constitutes—I believe—the foundation of the Republican Party of today. Alexander Hamilton put it this way:

"A representative democracy, where the right of election is well secured and regulated, and the exercise of the legislative, executive, and judiciary authorities is vested in selected persons, chosen really and not nominally by the people, will, in my opinion, be most likely to be happy, regular, and durable."

Here are two men—among the greatest political scientists this Nation has produced—political opposites, yet agreed on the basic tenet that the best democracy is of course an informed democracy. Woodrow Wilson has insisted that "the informing function of Congress should be preferred even to its legislation function."

One of the dangers of our time and therefore pregnant with threats to the republican form of government and the free world is the weariness of the average voter with the problems of the day. This weariness may better be described as a boredom derived in the first instance from the complexity of the issues collateral to the struggle between the free and the Communist world. The weariness may have deep psychological roots in two world wars and Korea. If so, it is the youth now coming up and the educated youth more directly to which I am now addressing myself, that, it seems to me, must take up the slack.

The workload of knowledge about public affairs with which a self-governing people must burden itself is more considerable and more complicated in detail than it ever has been in the life of nations. It goes to the very heart of representative government and the effectiveness of its operation. In a republican form of government like our own we must have representatives of the people—not delegates. When I speak in the Senate of the United States my voice is only as good as the constituency I represent. Once a Senator or a Representative is obliged to think of himself as a delegate whose thinking bears no relation to the thinking back home, or whose constituency is too wearied or preoccupied to think of public affairs, then we have arrived at the beginning of the end of free government.

If we are to persist successfully in this extraordinary phenomenon of Government where 170 million people are actually governed by themselves—for civilization as we know it hangs upon our survival—then the duty for the electorate to be informed, to vote and act on their information and their convictions, is not only sacred in the most exalted meaning of the term, but it is indispensable. Either we know or we cease to be citizens. This means that the man in the street must have some understanding of a $71.8 billion budget. True, yesterday it was Korea, then Formosa, now the Middle East. But if we know, as we must, that civilization for a certainty, and perhaps all life on this planet rests in the balance, then how can we fail to participate in the Government which must make the decision and which is founded on the idea of the people's participation? It is not only up to us here in Iowa, to know the difference between fixed and flexible price support, but it is up to the agriculturally withdrawn folk in the canyons of Manhattan also to know their respective meanings. We are all citizens of the same Nation, and again unless we recognize our close interrelationship we stand on the doorstep of doom. It is not enough that we know the Monroe Doctrine, like something learned by rote in grammar school: We must know the Truman doctrine and what it did and we must know the Eisenhower doctrine in favor of which I voted. We should look to see what it is doing now to stop dead in its tracks a communism that has its Red tentacles over one-fourth of the world's surface and one-third of the earth's population.

Nor am I one of those who is altogether convinced that the brain of the electorate is too tired to be informed. We are gifted with an immense and an extremely competent system of private communication, instantaneous, free as communications have never been free in the history of civilization, and richly endowed not only with talent, but with resources and overwhelming technical proficiency. This communication comes to us by voice, in print, in pictorial form and by television and recordings: Newspapers, magazines, periodicals, trade journals, radio, television. It is of the very heart stuff that democracy and the republican form of government is made. Thus the educated men and women of today—the graduates of Parsons College—have at their hands, created for them, a vast arsenal of communication to be used by them as a tool for the dissemination of the ideas that make up the genius of America. In our regional arrangements, NATO or SEATO or the Baghdad Pact, call for clarification to the general public, is it too much to expect that—in the interest of representative government—you will help to inform your fellow citizens? Is it too much to expect that, your training having made you intellectually more accessible to understanding of the problems that shake the world, you will now serve as the interpreters and the explainers of the complex?

For we are living in an age when the function of the Congress to inform the people must have reinforcement. If the representative process is to work so that the liaison between the Members of the Senate and the House, and the people, is close and constant and fluidly informative, then our system of government under its present burdens must look to you for participation. I argue that this participation must of necessity be far more intense from your group—the educated American—than from any other, short of the Members of Congress themselves. My faith in the electorate's eagerness to know—as distinguished from their alleged weariness with public affairs—has its concrete testimony in a questionnaire I have composed and mailed from Washington each year for the past 8 years to people in this State.

My purpose in sending out a list of some 36 highly significant questions about contemporaneous events and trends, legislative propositions, and issues, was as much to widen the range of public interests in these issues, as to determine public reaction to them in Iowa. Out of more than 41,000 questionnaires this year, I got no less than 6,256 replies, many of them indicating the wealth of discussion the questionnaires precipitated among farmers, laboring people, businessmen, the professions, the white-collar category, women's groups, and others. More than half wrote me highly informative and illuminating letters along with their questionnaires. Nothing that I can recall in my public life has helped so much to establish the close contact I seek with the people of my State so that my action in Federal affairs may be invested with the thinking, the support, the cooperation of the people whose representative I am in the Senate of the United States.

That is how I see one function of my role in the Senate of the United States.

When I speak of the obligation of the educated American to the representative form of government, I am not speaking in merely ideological equations. I speak rather in terms of contractual commitments. Our universities and colleges are State supported, in many instances tax exempt, privately and publicly endowed. Parsons College, as you know, gets its financial backing from its endowment income, from gifts from the town of Fairfield, the alumni of the college, the Presbyterian Church of the United States and the Presbyterian Synod of Iowa, the trustees of the college, corporations, and other friends of the institution. Campaigns are now afoot to augment the facilities of this institution and I hope these efforts receive the wide and wholehearted support they certainly have earned for themselves. But my point is that all this combined communal effort to provide higher education for our youth must call forth a concomitant response wholly independent of one's concentration upon the advancement of one's own career.

I note from a survey of the council for financial aid to education, that present private giving falls $600 million short of meeting the rockbottom annual needs of the Nation's nearly 1,900 colleges and universities during the next decade. It has been estimated that it will cost the average American college and university $1,000 a year in the near future to educate each student. It is possible that enrollments will reach well beyond 6 million in 1970. I am informed that this will bring the total annual educational bill to $10 billion or more. These figures do not take into account the need for additional buildings. It is not my point here to go into the situation of privately controlled as against publicly controlled institutions of learning. The products or graduates of both owe something to the community whose substance provides them their training and their learning. Certainly in the case of Parsons College—it provides them the strengthening of their spiritual and moral background.

But consider what a force rests behind democratic and representative government in a Republic like ours if we could depend for our first line of intellectual defense, of missionary effort, of communication of the problems and ideals that concern us, upon the more than 3 million students enrolled in 1956–57 in our institutions of higher education in continental United States. Next year—1957–58 this enrollment will be 3,450,000. By 1970 it will, as I said, be well over six and a half million. We are, incidentally, proud that standards today are higher than in the past.

Ten billion dollars for the cost of higher education in the United States is no criterion by which to evaluate the inspirational and moral values instilled in the minds and and hearts of four, five, or six millions of American youth. But it does indicate in at least one concrete form the measure of the burden. There is the element of selection. Youth admitted to certain of our institutions of learning and receiving their benefits constitute a properly and correctly favored group in our society. Inherent in this fact is a reciprocal contract that has profound meaning both for the individual student and for the country. Here is the force upon which the Nation must depend to help overcome the appalling statistic that almost half of our citizens do not vote. In the light of the average the citizens of the State of Iowa emerge well ahead of the rest of the country in their sense of political responsibility. The figures show that while throughout the

Nation the average of citizens of voting age who went to the polls in the 1956 presidential year was only 60.4 percent, in Iowa it was 74.1 percent.

Iowa was sixth among the 48 States.

Our 74.1 percent was bested by Idaho with 77.3 percent; Connecticut with 76.6 percent, Utah with 76.1 percent, Massachusetts with 75.3 percent, and New Hampshire with 75.2 percent. What these figures prove is that Iowa might do better but it proves also that our State is well toward the top and this is something of which we may be reasonably proud. I like to think that the influence of institutions like Parsons College is a contributor to this exemplary record.

Finally, in seeking citizenship participation in representative government let us remember that election or appointment to office is perhaps the highest and the most direct of all forms of service. I do not hold the opinion by any manner of means that a college graduate is ipso facto an ideal legislator or the perfect public servant. But in a definitely preponderant number of cases it is surely an asset. Easily the heavier proportion of Members of Congress have been touched by the advantages of some kind of collegiate training. The technical age that confronts us with petrochemicals, plastics, antibiotics, radioisotopes, nuclear energy, electronics, nucleonics and automation, is reaching out for the trained mind with an almost savage desperation.

The geopolitical age that confronts us demands a new dimension in statesmanship. It is possible to travel now between New York and Paris faster than it was possible 30 years ago to travel between Boston and New York by motor. Overall the issue before mankind—whether the immediate problem is civil rights or Taft-Hartley, or Suez, or foreign aid, or aid to education, or Federal authority over the money structure—is a moral one. Your fellow citizens will, consciously or unconsciously, reevaluate you 5, 10, 20, 30 years from now. In the ultimate the tabulation of your contribution to yourself, your community, your nation, your family, your alma mater, will be a moral tabulation.

If you take away with you from Parsons College the powerful Presbyterian precepts that do so much to mold character, you will be found in the coming years, to the limit of your capacity, performing services in every aspect of life, that will keep your country strong and free and that will put the underpinnings of moral might and righteousness beneath what is today a badly shaken world.

I give you my salute and I wish you Godspeed.

Tight Money

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. McGOVERN. Mr. Speaker, one of the most serious problems confronting the American people today is the tightening credit squeeze. This is a manmade problem which stems directly from the so-called tight money policy of the present administration.

High interest rates have increased the cost of Government, hampered the building of schools, delayed business expansion, and aggravated the problems of farmers. The outlook is all the more disturbing in view of predicted additional increases in interest rates.

The damaging impact of tight money has recently been assessed by the Wall Street Journal in an article appearing in the June 24, 1957, issue of this paper. The article follows:

[From the Wall Street Journal of June 24, 1957]

TIGHTER MONEY—MORE FIRMS POSTPONE EXPANSION PLANS AS INTEREST COSTS SOAR—ONE DELAYS BOND SALE, CALLS MARKET DISORGANIZED—NEW RATE HIKES FORECAST—UNCLE SAM IS SQUEEZED, TOO

Tight money is twisting the plans of a growing number of American businessmen.

Some are postponing or canceling carefully laid expansion plans. Many are keeping a closer eye on inventories so as to limit costly borrowing. Others are reshaping financing plans in the hope of minimizing higher interest costs.

Those are the major facts turned up by a Wall Street Journal survey of businessmen and bankers in 13 major cities around the United States, as both bank borrowing and bond financing costs continue to mount. Other findings:

Bankers generally look for interest rates to go higher still.

High interest rates—and the scarcity of loanable funds—chiefly deter marginal projects; many companies are pushing ahead with expansion plans, convinced that the resulting profits will more than offset the higher cost of money.

WIDE RANGE OF BUSINESSES

Reports of stymied expansion plans come from a wide range of businesses, however.

"The recent rise in interest rates killed a $1 million expansion program we had planned," says Gilbert Schnitzer, president of Industrial Air Products Co., Portland, Oreg., supplier of oxygen for industrial and medical uses. "We had intended to open plants in other Northwest cities, but we simply can't afford to pay current bank rates."

"We're not bidding on some jobs we'd like to bid on, because if we got them we would have to have new facilities," says an official of a southern California aircraft company. "We think we'd have to pay too much for the money to finance the new facilities."

And the senior credit officer of a major Chicago bank reports, "Several of our customers have reduced or postponed expansion plans becaues of high interest rates. They hope to borrow later when rates are more favorable." A number of these companies, he says, were utilities; one was a railroad.

There's no question that interest rates are high by any recent standards, no matter where a businessman may turn. The banks' rate for their biggest borrowers with the best credit ratings—the prime rate—is 4 percent, the highest it has been since 1933. And that's only part of the story. As money has tightened, more and more borrowers have found that, in the banks' eyes, they no longer qualify for the minimum rate. Banks also have become more insistent that borrowers keep close to 20 percent of any money they borrow on deposit with the banks—a step that increases the actual cost of the loans.

A PRIME RATE BOOST?

More bad news for businessmen: Many bankers maintain that an increase in the prime rate itself is overdue. Any such increase sooner or later would affect all borrowers, since all bank rates are scaled upward from the prime rate.

When a businessman turns to the bond market for long-term loans to finance expansion programs the picture, if anything, is even more bleak. The yields on top-grade corporate bonds outstanding, as measured by Moody's Investors Service, have averaged 3.7 percent so far this year. As shown by the chart below, that's higher than the annual average for any year since 1934. And the average is sure to go higher, since the yields on new bond issues for several weeks have been running well above 3.7 percent.

Only last week, Southern Bell Telephone Co. had to pay 4.91 percent when it sold $70 million of 29-year debentures. That's the highest rate paid by any Bell System unit since 1930.

Michigan Consolidated Gas Co. last week paid 6.145 percent to borrow $30 million on 25-year first mortgage bonds. That's in sharp contrast to the 3.39 percent rate the Michigan utility paid on a $30 million 25-year bond issue less than 2 years ago—in November 1955.

Kerr-McGee Oil Industries, Inc., this week will offer $20 million of debentures. To make its securities more attractive in the current bond market, Kerr-McGee has coupled to each $1,000 debenture a warrant entitling the purchaser to buy 5 shares of the company's common stock at $80 a share during the period from April 1, 1958, to June 1, 1964.

The rise of bond market interest costs has been so swift that some companies have simply thrown up their hands. Associates Investment Co. last Tuesday postponed a $20 million debenture issue. The reason, according to E. Douglas Campbell, treasurer: "The disorganized condition of the market."

Higher interest rates, of course, are pinching governments as well as businesses. The Treasury last week had to pay 3.404 percent to raise $1.6 billion on its regular offering of 91-day bills—the highest rate it had paid on such securities in 24 years. State and local governments also are being forced to pay higher and higher interest rates to raise funds for schools, highways, and other facilities. The Dow-Jones municipal bond yield index last week rose to 3.48 percent, the highest level since October 1935.

Tighter money is helping to defeat one of the prime aims of the Eisenhower administration—to stretch out the average maturity of the Federal debt. One purpose of the proposed stretch-out was to cut down the size of the Government's future debt refunding chore. In addition, by offering longer-term securities, the administration hoped to place more of the debt in the hands of nonbank investors. Banks prefer short-term securities; such purchases set the stage for further inflation.

At the end of 1952, just before Ike took office, the average maturity of the Federal debt was 46 months. By mid-1955, the average had reached 55 months. But as money tightend, the Treasury decided it could not sell additional longer term securities at any interest rate that it cared to pay. So it has relied more and more on short-term issues.

The current interest-rate upsurge, with only minor interruptions, dates from early 1955. As business began to pull out of the inventory recession of late 1953 and 1954, demand for credit grew—for rebuilding depleted inventories and building new facilities. The Federal Reserve System, which during the recession period had supplied the banks with all the funds they needed and more, began to limit the funds the banks had available to lend. Interest rates rose steadily.

In late 1956, the Federal Reserve hesitated, somewhat uncertain as to the business future. But as business plowed ahead with record expansion programs (spending on new plant and equipment this year is forecast at $37.4 billion, an increase of 6 percent over the 1956 high), the Reserve System took heart and again grabbed the credit reins tightly.

BORROWED RESERVES

Just how strapped the banks are for funds showed up last week in the weekly statement issued by the Reserve System. The banks are

required to keep on deposit with the Reserve System funds equal to a specified percentage of the deposits on their own books; for the major New York City banks, for example, this percentage is 20 percent. To meet these requirements, the banks this past week had to borrow from the Reserve System a daily average of $1.1 billion.

When money began to tighten early in 1955, many businessmen decided to finance expansion programs temporarily—sometimes for several years—with bank loans. When money became more plentiful and interest rates eased, they expected to raise long-term funds in the bond market.

Despite the fact that more than 2 years has passed with no drop in interest rates, some companies persist on that course.

"There has been considerably more borrowing from banks lately by companies that do not want to commit themselves on long-term loans," reports E. E. Adams, president of San Francisco's Bank of California.

Under its normal financing pattern, Pittsburgh's Equitable Gas Co. this year would have sold debentures to provide the funds needed for a new $8.7 million petrochemical plant in Kentucky. But because of high interest rates, says C. J. Mulholland, vice president and treasurer, the company early last month arranged instead for an 11-month bank loan.

SHUN LONG COMMITMENTS

But a growing number of banks are turning away borrowers who want to arrange new loans for expansion purposes or to renew old ones. Several factors underlie this trend. For one thing, with the prospect of still higher interest rates, banks aren't eager to commit their funds for long periods at current interest rates.

"The money market still is uncertain," says John Hay, president of the Michigan Bank in Detroit. "Rates might go even higher, and we don't want to get locked in."

Another factor is that the Reserve System for some time has been gently pressuring the banks to avoid even temporary loans for capital purposes. The System argues, with considerable conviction, that such loans feed inflation. And with the demand for bank credit still outrunning the supply, more and more banks are finding it desirable to go along with the Reserve System.

Bankers, trying tactfully to shove customers into the bond market, emphasize that businessmen may have to wait a long time for rates to come down. Wentworth P. Johnson, a senior vice president of Fidelity-Philadelphia Trust Co., goes farther than most in that direction.

DROP IN 1961?

"Once interest rates begin rising," says Mr. Johnson, "they rise for a period of about 15 years before falling off again." He figures the most recent low point was 1946 (the downturn of 1953–54, he figures, was not sharp enough to interrupt the overall uptrend). He concludes: "It seems likely that rates should begin to drop by 1961, according to all historical data available."

Borrowers pushed out of banks have been largely responsible for the bond market squeeze. The squeeze has done more than send interest rates soaring. Many bond dealers have found it impossible to sell their securities without marking down prices—an action that in some cases has meant losses for the dealers.

To protect themselves to some extent, dealers are insisting that new bond issues be made more attractive—both with higher interest rates and in other ways. An example of the latter: When interest rates are high, some companies sell bonds fully expecting to refinance later when interest rates decline. Dealers now, however, are stipulating in some cases that new bonds cannot be called in and refunded for at least 5 years.

Unlike expansion loans, bankers find there's no strong upward pressure under inventory loans. Businessmen generally have been trying to hold their stocks in check. The high cost of money is only one reason for this. Most products and materials now are plentiful, so businessmen find it unnecessary to stockpile. But interest rates still are influencing a number of inventory planners.

FOWLER PLANS CUT

"We plan to cut inventories 15 percent in the next 6 months to reduce operating costs," says Paul Fowler, president of Fowler Manufacturing Co., Portland, Oreg., manufacturer of water heaters. "We use a great deal of steel, and if we can cut down the size of our orders and order at more frequent intervals, we won't have to obtain so many of these expensive loans."

Aluminum Company of America, while it says it is not directly affected by tight money, believes many of its customers are cutting inventories because of high interest rates.

Many companies concede they're concerned by tight money—but not enough to alter any plans or programs.

"High money rates won't affect our major expansion plans," says Laurence F. Whittemore, president of Brown Co., Berlin, N. H., paper and pulp maker. "Marginal projects wouldn't be started, but we have none in that category now."

Other companies unworried by tight money include those who finance operations largely by retaining earnings. "We generate enough cash within the company to take care of all our needs," says an official of a big Chicago-based manufacturing concern.

RATE INCREASES ASKED

A number of public utilities, while worried by higher interest costs, expect to offset them through higher charges for their services; a number of rate-increase requests already are pending before State regulatory agencies.

Many businessmen are philosophical about tight money. With the present top corporate tax rate of 52 percent, Uncle Sam pays about half of the higher interest costs, figures W. A. Parish, president of Houston Lighting & Power Co. Interest costs are deductible from income when a corporation figures its taxes.

Whatever the impact of high interest rates on business, one thing is sure: Tight money feeds on itself. As businessmen begin to fret about the availability and cost of credit, they rush to line up loans—sometimes months in advance of actual need.

"Even on the same interest rate, credit tends to get tighter on its own * * * tends to accumulate more pressure," says David M. Kennedy, president of Continental Illinois National Bank & Trust Co. of Chicago. "We're seeing no letup in the demand for borrowings."

Pay Increase for Postal Employees

EXTENSION OF REMARKS
OF
HON. VINCENT J. DELLAY
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. DELLAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and resolution adopted by the Board of Commissioners of the City of Jersey City:

OFFICE OF CITY CLERK,
CITY HALL,
Jersey City, N. J., June 21, 1957.

Hon. VINCENT J. DELLAY,
House of Representatives,
Washington, D. C.

DEAR CONGRESSMAN DELLAY: Certified copy of resolution, adopted by the Jersey City Board of Commissioners on June 18, 1957, is delivered; this, by direction of the Board.

Very truly yours,
JAMES A. TUMULTY, Jr.,
City Clerk.

Whereas postal employees are today are handling 20 percent more mail with less employees than in 1951, and the President of the United States has stated his approval of paying increases where increased production warrants them; and

Whereas it is recognized that it is a general policy of private industry to adjust wages upward, annually or biannually, to provide increased purchasing power and a better standard of living to sustain the national economy: Now, therefore, be it

Resolved, That the Board of Commissioners of the City of Jersey City memorialize the Congress of the United States, the office of Senator of the United States, and the office of Congressman of the United States, that the Board of Commissioners of the City of Jersey City go on record in favor of a justified increase in pay for postal employees as outlined in Senate bill S. 27 and House bill H. R. 2474 submitted by Senator JOHNSON and Congressman MORRISON, respectively; and be it further

Resolved, That copies of this resolution be sent to Senator OLIN D. JOHNSTON, chairman of the Senate Post Office and Civil Service Committee, and to Congressman THOMAS MURRAY, chairman of the House of Representatives Post Office and Civil Service Committee, and to Congressmen ALFRED D. SIEMINSKI and VINCENT J. DELLAY, also to Senators H. ALEXANDER SMITH and CLIFFORD CASE.

This is to certify that the foregoing is a true copy of resolution adopted by the Board of Commissioners of the City of Jersey City at a meeting held on June 18, 1957.

JAMES A. TUMULTY, Jr.,
City Clerk.

Vote of Board of Directors, Northern Textile Association, on Government Cotton Price Policy

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the vote of the board of directors of the Northern Textile Association, Boston, Mass., which calls for a one-price system for cotton, without any processing tax or similar device.

The vote follows:

VOTE OF THE BOARD OF DIRECTORS, NORTHERN TEXTILE ASSOCIATION, ON THE MATTER OF GOVERNMENT COTTON PRICE POLICY, JUNE 21, 1957

The Northern Textile Association urges elimination of the present costly and discriminatory Government system of pricing cotton, which penalizes American mills by

forcing them to pay a price for cotton substantially in excess of the world price at which American-grown cotton is sold to foreign mills, and reduces the market for cotton.

American mills are the largest and most stable customers of American cotton growers. Over 98 percent of the cotton we use is grown on United States soil. The mills are a vital link in the chain of processes which brings cotton to its customers. The prosperity of the textile industry is essential to farmers, intermediate processors, and fabricators of cotton. Together we number many millions and constitute a significant part of the Nation's economy.

Government cotton policy has resulted in a declining market for American cotton and cotton textiles, and current trends indicate further losses unless interferences with competitive pricing and marketing of cotton cease.

The present direct cost of Government cotton programs is estimated at over $800 million for the current year. Of this, the export program costs about $350 million. In addition, American mills are forced to contribute a minimum of $310 million more for the cotton they use than if purchased at world prices. This constitutes a tremendous handicap to an industry which must compete, not only with foreign fabrics but with many substitute products. Government policy holds the price of cotton high for domestic mills with one hand, and with the other disposes of American cotton to our foreign competitors at lower prices.

This system militates against mills, employees, farmers, investors, and all who are dependent upon the welfare of the cotton, cotton textile, apparel, and related industries.

The ultimate prosperity of the cotton farmer, textile worker, and investors depends upon a growing market for cotton textiles. A market made artificially noncompetitive, hampered, and restricted by Government manipulation and control ceases to grow.

Existing legislation should be changed to:

1. Permit the farmer to sell his cotton at a competitive price at home and abroad, to enlarge his market, his production, and his income.

2. Permit American mills to buy American cotton at world prices without hidden processing taxes or similar devices, and thereby improve their competitive position.

3. Permit cotton to move freely through the channels of trade without Government manipulation.

4. Reduce the excessive costs of the present program, eliminate the two-price system, and free the industry from carrying the heavy burden of an unsuccessful cotton program.

We recognize the problems of readjustment which beset cotton farmers and urge a program of direct marketing equalization payments designed to alleviate hardship consistent with a long-run solution of the problem.

Drummond, Lippmann, and Childs, and the Trentonian Look at the Supreme Court

---

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, because of the great interest in the Supreme Court engendered by some of its recent decisions, I include the following articles by three of the country's better known columnists, and an editorial from the Trentonian, a leading newspaper of my New Jersey district:

[From the New York Herald Tribune of June 21, 1957]

WHAT THE COURT REALLY RULED

(By Roscoe Drummond)

WASHINGTON.—There is an erroneous impression that the Supreme Court is undermining the authority of Congress to investigate communism and cutting the foundation free under the Smith Act to prosecute Communist leaders.

It is doing no such thing—or so it seems to me.

There is plenty of room for honest differences of opinion over the Court's latest rulings. The argument is already going on so furiously that one newspaper has remarked with relish how it would like to join a crusade to impeach the offending justices.

Obviously impeachment talk is just rhetoric. Franklin D. Roosevelt's roundly defeated Court-packing plan of 1937—to get a bench that would give him the kind of decisions he wanted—was a mild course of action compared to impeachment which would be a Court-unpacking plan. Of course, both are wrong and thoughtful critics of the Supreme Court's opinions do not bring impeachment into the discussion.

What I want to bring out is that public controversy, pro and con, over the latest decisions ought to rest on what the Court actually ruled, not on what some headlines say the Court ruled.

Take the Watkins decision. John T. Watkins, whose conviction for contempt of Congress was set aside by the Court, was required to answer and did answer all committee questions concerning his own pro-Communist activities. He was required to answer and did answer all questions concerning people he knew who were presently engaged in pro-Communist activities. He only declined to answer questions about those he knew had broken with the Communist Party several years ago.

It was at this point that the Supreme Court ruled 6 to 1 that Congress exceeded its investigatory power. The Court made these points:

That the congressional power to investigate stems from the congressional right to legislate and thus investigation must clearly serve the legislative function.

That while the congressional power to investigate is very large, it is not unlimited, it must not have the prodominant result of invading the private rights of individuals.

That the congressional power to investigate does not reach to exposure for the sake of exposure.

This means, it seems to me, a very careful and moderate limitation on congressional committee investigations and a requirement that the congressional committees clearly establish the relevance of their questions at the time of the hearings.

Take the Smith Act decision. Here the Court freed 5 California Communist leaders and ordered a new trial for 9 others—in both instances because of trial errors.

The Court again sustained the constitutionality of the Smith Act which forbids conspiracy to advocate the overthrow of the Government by force and violence.

The Court found the California trial judge in error because he failed to charge the jury, as Judge Medina had in New York, that advocacy of violence is illegal only when it is directed to inciting an act of violence, not just teaching the theory of violence. Judge Medina's charge did not prevent the New York jury from finding the Communist leaders guilty.

It does seem to me that Justice Harlan's majority opinion is overly semantic in defining the word "organize" as meaning only "to bring into being." The legislative history of the Smith Act suggests that Congress was referring to keeping the Communist Party in being as well as bringing it into being and this will undoubtedly have to be cleared up.

Congress' primary role is not to investigate; its primary role is to legislate and investigation must be faithfully used to serve that end.

Congress' primary role is not to punish and prosecute, and thus when its investigations reach to that end they must not be allowed, as the Court says, "to abridge protected freedoms." It is the role of the courts, not Congress, to prosecute and punish.

And when the Supreme Court surveys these precious constitutionally protected freedoms, it is not thinking merely of a few Communist leaders, it is thinking of 170 million Americans.

[From the New York Herald Tribune of June 25, 1957]

BACK TOWARD THE CONSTITUTION

(By Walter Lippmann)

In the Watkins case the Supreme Court, with Chief Justice Warren delivering the opinion of the majority, has tried to set down certain limits on the rights and powers of congressional investigating committees. We must, I think, describe the opinion in this tentative way. For the limitations are stated in general terms, and no one can know how they will in the future apply specifically in concrete cases. In practice, the application will depend on how much each particular committee is willing to accept, how much it is determined to stretch, the limitations, and whether the Court will be disposed to construe the limitations strictly or loosely.

However, we have in the Watkins decision a powerful assertion of a principle which will influence the conduct of committees, the attitude of witnesses, the actions of the Court, and the general posture of public opinion. The principle is that a witness, who believes that his constitutional rights are being abused, may appeal to the courts for protection. The question now before the country is whether this principle is constitutional and is in the public interest.

Those who are opposed to the decision must say that they do not think that a witness should be able to appeal from a congressional committee to the courts. This is, in substance, what Mr. Justice Clark, the lone dissenter, seems to think—that for the courts to intervene is a usurpation of power, and that, as a matter of fact, it is not in the public interest that the judiciary should supervise congressional investigations.

Mr. Justice Clark, who regards the decision as mischievous, comes very near to saying that congressional committees are a law unto themselves, and that there should be no appeal from them to the courts for the protection of the constitutional rights of the individual witnesses. "Perhaps," he says, "the rules of conduct placed upon the committees by the House admit of individual abuse and unfairness. But that is none of our (i. e., the Court's) affairs. So long as the object of the legislative inquiry is legitimate and the questions proposed are pertinent thereto, it is not for the Court to interfere with the committee's system of inquiry."

This is a masterpiece of confusion. For it begs the questions before the Court. In the Watkins case was there individual abuse and unfairness because a particular phase of the inquiry was not legitimate or because the questions put to Watkins were not pertinent? It is not entirely clear what Justice Clark really thinks. But, apparently, it is that the Court must assume that what a committee does is legitimate and that the

questions it puts are pertinent, and that if they produce individual abuse and unfairness, it is none of the Court's affair.

On the broad constitutional issue, Justice Clark holds that it is a trespass upon the fundamental American principle of separation of powers for the courts to concern themselves with such individual abuse and unfairness. But is it truly an American principle that the separation of powers is absolute, so absolute that a committee of Congress cannot be called to account for the lawfulness of what it does? Surely, the American principle is that Congress is not a sovereign body, accountable only to itself, but that it is under the law of the Constitution—of the Constitution as interpreted by the courts and as it may be amended by the people.

The ultimate issued raised by the Watkins case is not constitutional. It is, if we are quite candid, whether in order to combat the Communist movement, which would if it could destroy the American Government and the American social order, it is necessary to encourage or to permit congressional committees to proceed outside the Constitution. Can the Constitution be defended only by extraconstitutional means, or can it be defended within its own terms? It has been on the grounds that there was a desperate emergency that many sober and conservative men have supported or connived at McCarthyism.

The Watkins decision is addressed to this particular kind of extraconstitutional investigation, of which the object is to outlaw by exposure and pitiless publicity all behavior which might assist, might favor, might tolerate the spread of Communist propaganda. These investigations are not addressed primarily to illegal acts, to espionage and subversion. They are addressed to activities which are not, strictly speaking, against the law and could not be prosecuted in a court. These investigations are not carried on for the purpose of informing Congress how to make new laws. Quite the contrary. It is evident that laws prohibiting these activities would be in open conflict with the Constitution.

There being no legal way to suppress such activities as propaganda, infiltration, and fellow traveling, Congress, with the support of public opinion, has created committees which are designed, among other things, to suppress by intimidation what cannot be suppressed by due process of law.

The Supreme Court has waited a long time—some 10 years—before it has intervened in what is unconstitutional process, resorted to on the grounds that fire must be fought with fire, that the end, which is to stop the spread of communism, justifies any means. I do not think the long patience of the Court shows that the Eisenhower Court is more liberal than the Roosevelt-Truman Court, but rather that the times have changed. The emergency—if there was one which could not be met by lawful means—is over, and the presumption is now that investigating committees must work within the limits of the Constitution.

[From the Washington Post and Times Herald of June 25, 1957]

WARREN UNALTERED BY POMP OF OFFICE

(By Marquis Childs)

In the long perspective of history, the most distinguished act of President Eisenhower's administration—or, at any rate, of his first term—may well be the appointment of Earl Warren as Chief Justice of the United States. The influence Warren has wielded on the Supreme Court, on the body of law and on the Nation in less than 4 years merits that conjecture.

The sweep of the opinions which went so far toward restoring the balance of civil rights, together with the school desegregation opinion of 3 years ago, would in itself make the tenure of any Chief Justice memorable, however long that tenure.

But since he was sworn in as the 14th Chief Justice on October 5, 1953, Warren also has been able to bring a large measure of harmony to a Court torn by bitter factionalism and unhappy personal discord.

The root of his achievement is in a genius for politics, using the word in its best and truest meaning. This is joined in the Chief Justice with a deep dedication to the fundamental American freedoms embodied in the Bill of Rights.

As the Chief and the eight Associate Justices prepare for the long summer recess, when they have finally decided the Girard case, one thing about Warren is abundantly clear. Three and a half years of Washington and his high office have altered him outwardly little, if at all. He is the same plain, unassuming man who left the governorship of California in the midst of an unprecedented third term when, to his astonishment, Attorney General Brownell flew out to Sacramento to tell him the President wanted him to be Chief Justice.

While he has been generous in attending official occasions, he has stood aside from the fuss and feathers of official Washington. A large, unassuming figure, speaking in a somewhat high-pitched voice, he has a modest, commonsense bearing characteristic of his approach to the problems of the Court as he saw them when he took over.

Shortly Warren and his family will go to California for a rest. But then on July 17 the Chief Justice and Mrs. Warren will go to London for the meeting of the American Bar Association. For Warren, this will be both a pleasure and a duty. Afterward the Warrens will be leisurely tourists in Europe until the end of August.

His conscience is an important part of Warren's makeup. It explains why he went last summer on a good-will tour of India in the season of extreme heat and monsoon rains.

That same conscience has had a great deal to do with the conviction, slowly developed in the stresses and strains of the postwar era, that Warren has brought to one decision after another. Those decisions should have surprised no one, since he spoke out even after he took his place on the Court about the peril to basic freedoms in the obsessive fear of communism in America.

In November of 1955 he said that the "temptation to imitate totalitarian security methods is a subtle temptation that must be resisted day by day, for it will be with us as long as totalitarianism itself." That is the deep conviction behind Warren's opinion in the Watkins case, in which the right of conscience under the free-speech amendment was at issue.

When Warren became Chief, Justices Black and Douglas, appointees out of the New Deal, were usually in dissent. They often castigated the other Justices for their conservatism.

In the years that followed, the Chief Justice has sometimes joined Douglas and Black in dissent. But on the far-reaching civil liberties opinions, the Court was unanimous except for a new dissenter, Justice Clark, a Truman appointee.

When Warren was named to the Court, there were those who deplored the appointment because, they said, he was not a scholar of the law and had no judicial experience. Warren is not a scholar in the sense that Oliver Wendell Holmes and Louis D. Brandeis were scholars. But he has brought commonsense and conviction to a troubled Court and a troubled time.

[From the Trenton (N. J.) Trentonian of June 22, 1957]

THE PENDULUM SWINGS BACK

This week's United States Supreme Court decisions, tightening somewhat the conditions under which the Government can secure Smith Act convictions and imposing new curbs on the investigative powers and procedures of legislative committees where their purposes conflict with first-amendment rights, have been hailed in some quarters as far reaching and in others as an indication that the Communists have, in effect, now seized open control of the Court.

The latter assertion is, of course, ridiculous. But far reaching? We wonder.

It seems to us that the Supreme Court simply has pointed the way to a road which has always been there—the first words of the fifth amendment to the Constitution: "No person shall be held to answer for a capital or infamous crime unless on a presentment or indictment of a grand jury * * *."

The matters concerning which the Court spoke came before it because of the assumption of broad powers by the House Un-American Activities Committee. The decision cautioned Congress that while its investigatory powers were broad, they were not without limit. It also stressed that Congress is not a law enforcement or trial agency, and added that investigations conducted solely for the personal aggrandizement of the investigators or to punish those investigated are indefensible.

The high tribunal has thus pinpointed how legislative investigators have usurped functions which properly should repose in the historic American grand jury and court system. As is all to well known by now, most congressional investigations into Communist activities have wound up with a witness or two held in contempt of Congress for refusing to answer questions. The Court has made it clear that within proper bounds, witnesses cannot shield themselves from answering congressional inquiries. But at the same time, the Court struck at questioning undertaken merely for, as the Court put it, "exposure's sake."

We can hope that the Supreme Court has stemmed that rising tide, for it is a tide which has burdened the Nation's taxpayers with nonessential investigatory supercargo. As this newspaper has mentioned editorially on previous occasions, if all duly constituted law-enforcement agencies were to function as they should, there will be no need whatever for the type investigation with which we have become all too familiar.

The Constitution provides the manner in which the law is to be enforced, and the manner in which a criminal shall be made to answer for a capital or other infamous crime." But too often, on both State and National levels of government, the grand-jury system has been superseded by politically inspired legislative creations which recognize no bounds except the realm of political expediency.

That is not the American way. The Supreme Court has now directed our attention to the manner in which we can protect our Nation while at the same time protecting the civil rights and liberties of the inhabitants thereof.

H. R. 7125

EXTENSION OF REMARKS

OF

HON. A. FERNÓS-ISERN

RESIDENT COMMISSIONER FROM PUERTO RICO

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. FERNÓS-ISERN. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to clarify my position as the representative of and spokesman for the Commonwealth of Puerto Rico in the Congress of the United States, con-

cerning certain sections of H. R. 7125, which refer to Puerto Rico specifically.

First, I refer to section 5064 (d) of the bill, which makes the provisions of section 5064 applicable to Puerto Rico, with respect to distilled spirits, wines, rectified products and beer of Puerto Rican manufacture brought into the United States and lost or rendered unmarketable or condemned, as a result of a major disaster as determined by the President, under the act of September 30, 1950—42 United States Code, 1855. The Commonwealth of Puerto Rico is the recipient of the taxes paid on such distilled spirits, wines, rectified products and beer of Puerto Rican manufacture, and the Commonwealth of Puerto Rico evidently should be willing to reimburse the taxpayers in cases where the distilled spirits, wines, rectified products, and beer, upon which such taxes have been paid, are rendered unmarketable, or have been condemned as a result of a major disaster. The Commonwealth recognizes this obligation completely. As a matter of fact, the Commonwealth of Puerto Rico has recently adopted legislation to authorize the Secretary of the Treasury of Puerto Rico to make payments equivalent to the taxes paid on distilled spirits, wines, rectified products, and beer of Puerto Rican manufacture, shipped to the United States and lost, rendered unsalable, or condemned by reason of a major disaster, including disasters in 1954. Below I am including the text of that law.

May I suggest, then, that it is unnecessary that such taxpayers be reimbursed by the Federal Treasury, even though the Treasury be reimbursed from moneys collected for Puerto Rico by a delegate of the Federal Treasury stationed in Puerto Rico. For the taxes to be refunded are collected in Puerto Rico before shipment of the taxable merchandise to the mainland, and the collections are supposed to be covered into the Treasury of Puerto Rico. Under section 5064, the delegate of the United States Treasury is being directed to deduct from his collections in order to reimburse the United States Treasury.

Second, I refer to section 5314 of H. R. 7125, which makes applicable to Puerto Rico the provisions of chapter 51 of the Internal Revenue Code. The application to Puerto Rico of this chapter of the code appears to be in conflict with section 9 of the Puerto Rico Federal Relations Act, as continued by section 4 of Public Law 600 of the 81st Congress. Public Law 600, 81st Congress, was enacted in the nature of a compact with the people of Puerto Rico. Section 9 of the Puerto Rico Federal Relations Act provides that internal-revenue laws of the United States shall not apply in Puerto Rico.

It is true that the provisions of section 5314 of H. R. 7125 are intended to facilitate the shipment of denatured alcohol from Puerto Rico to the mainland. The expenses incurred by the Treasury of the United States, in the application of this part of the Internal Revenue Code to Puerto Rico, are to be reimbursed by the Treasury of Puerto Rico. I am most agreeable that Puerto Rico pay these expenses.

But because of the apparent conflict aforementioned, there is a strong possibility that undesirable lawsuits and other legal complications may arise. In order to dissolve such conflicts and, at the same time, attain the objectives which have motivated the extension of this part of the Internal Revenue Code to Puerto Rico, I have introduced H. R. 6043, which is now pending before the Ways and Means Committee and which may soon be reported on by the Treasury Department. I hope that when the time comes for this latter bill to be considered, there will be a meeting of the minds and a formula found for attaining the common objectives of all concerned in this matter without real or apparent legal conflict.

House Bill 274

An act to authorize the Secretary of the Treasury of Puerto Rico to make payments equivalent to the taxes paid on distilled spirits, wines, rectified products and beer of Puerto Rican manufacture shipped to the United States and lost, rendered unsalable, or seized, by reason of a major disaster, including disasters occurred in the United States in the year 1954.

Be it enacted, etc.—

SECTION 1. (a) When the President of the United States shall determine under Public Law 875 of the 81st Congress, approved September 30, 1950, that a major disaster, as defined in said act, has occurred in any area of the United States, the Secretary of the Treasury shall pay, without interest, a sum equivalent to the amount of the taxes paid or determined on distilled spirits, wines, rectified products and beer of Puerto Rican manufacture shipped to the United States and lost, rendered unsalable, or seized by a duly authorized officer by reason of a disaster occurred in said area in the United States, if said distilled spirits, wines, rectified products or beer were held for sale on the date of such disaster. The payments authorized by this section shall be made to the person possessing said distilled spirits, wines, rectified products or beer for sale at the time of such disaster.

(b) No claim shall be granted under this section unless (1) the same has been filed within 6 months from the date the President of the United States made the determination that the disaster referred to in subdivision (a) of this section occurred; and (2) the claimant furnishes evidence, to the satisfaction of the Secretary of the Treasury, to the effect that—

(A) he has not been compensated by insurance or otherwise for the tax paid on the distilled spirits, wines, rectified products, or beer covered by the claim; and

(B) he is entitled to the payment authorized by this section.

Claims made under the provisions of this section shall be processed according to the regulations the Secretary of the Treasury may prescribe.

(c) Whenever the Secretary of the Treasury shall make any payment within the scope of the powers vested on him by this section with regard to the tax on distilled spirits, wines, rectified products, or beer seized by a duly authorized officer, or rendered unsalable, said distilled spirits, wines, rectified products or beer shall be destroyed under the supervision required by the Secretary, unless said distilled spirits, wines, rectified products or beer have been already destroyed under supervision satisfactory to the Secretary.

SEC. 2. The provisions of this act shall also apply to those distilled spirits, wines, rectified products and beer of Puerto Rican manufacture shipped to the United States and lost, destroyed as unsalable, or seized, as a result of the hurricanes that swept part of the United States territory in the year 1954, and to which refers Public Law 363 of the 84th Congress, approved August 11, 1955, except that (1) claims made under the provisions of this section with regard to taxes paid or determined on distilled spirits, wines, rectified products or beer shall be filed with the Secretary of the Treasury within 90 days from the date of the taking effect of this act; and (2) the payments shall be made to (a) the person who held for sale the distilled spirits, wines, rectified products or beer at the time of the disaster; or (b) to any distiller, rectifier, manufacturer or dealer who has restored to the person holding for sale said products at the time of the disaster the complete equivalent of the distilled spirits, wines, rectified products, or beer so lost, rendered unsalable, or seized, without having received any compensation, payment or credit whatsoever with regard to the tax levied on said distilled spirits, wines, rectified products or beer.

SEC. 3. The Secretary of the Treasury is hereby authorized to prescribe the regulations necessary for the enforcement of this act.

SEC. 4. For the purposes of this act, the terms "Secretary" and "Secretary of the Treasury" shall mean the Secretary of the Treasury of the Commonwealth of Puerto Rico.

SEC. 5. This act shall take effect on the date of its approval.

National Lottery

EXTENSION OF REMARKS
OF
HON. PAUL A. FINO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. FINO. Mr. Speaker, I am happy to inform the Members of this Congress that my proposal for a national lottery is gaining more and more support every day.

Newspaper editorials and columnists are urging with greater frequency than heretofore, that serious consideration be given to a national lottery which now appears to be the most logical new source of Government revenue.

I respectfully invite my colleagues to read these two articles which I take pleasure in inserting in the RECORD.

The first article by E. F. Hutton entitled "Think it Through," appeared in the June 22 issue of the New York Herald Tribune, and the second one by Donald I. Rogers entitled "Lottery Bill Deserves Consideration," appeared in the June 23 issue of the same widely circulated and highly respected newspaper:

[From the New York Herald Tribune of June 22, 1957]

THINK IT THROUGH

(By E. F. Hutton)

Why not a lotery?

On May 14, 1956, I wrote an article suggesting a lottery to liquidate our national debt. It would benefit everybody as well as the winners. Stop and think of the billions of dollars gambled annually at roulette, faro, the numbers racket, slot machines, and scores of other games.

A Government lottery would divert hundreds of dollars from these rackets into a useful channel.

I realize objections will come and my head may roll in the basket. But be that as it may, there is a big difference between a Government lottery, conducted with complete honesty, and private lotteries and gambling generally.

A lottery was used to rebuild Faneuil Hall, the "birthplace of American liberty," after he old building had been destroyed by fire. A Government lottery was used to raise money to build the first Capitol in Washington, with the blessings of General Washington.

Now, will President Eisenhower and his Secretary of the Treasury give this idea their blessing? Or at least, study it?

WINNINGS TAX FREE

If our Government would run a Federal lottery with the proceeds to be used only for tax-free prizes and the reduction of our national debt, money would come in from all over the world becaues the winnings would be tax-free. Evidences of participation could be bought at all banks.

Readers of this suggestion who favor a tax-exempt Federal lottery to help our Government and themselves should write to their Congressmen and Senators and tell them so and ask them to use a lottery as a way to make payments on the national debt. This, in turn, would reduce huge income taxes, check inflation, and give our Government some working capital.

All men and women who work for their living, including union members, are shareowners in our Government. It's my thought that we have a moral obligation to Uncle Sam who is in a financial nutcracker. By helping Uncle Sam we also are helping ourselves to pay down on a debt of $280 billion, which is everybody's debt.

George Washington stated: "The mass of citizens of the United States mean well, and I firmly believe will always act well when they can obtain a right understanding of matters." People approved Government lotteries in Washington's time.

QUOTES FROM LINCOLN

In our day and age I find more "quotes of wisdom" from "Honest Abe" Lincoln than from others. He said: "I appeal to you to constantly bear in mind that not with politicians, not with Presidents, and not with officeholders, but with you rests the question—shall the Union and the liberties of this country be preserved to the latest generations."

Yes, it could be, but not if a predatory power to tax our people into insolvency runs its course. Reasonable taxes to support Government are acceptable, but "no government is sound which challenges in size the economy that is expected to sustain it."

Well, why not a Federal lottery? Try it for 1 year, one winning each month. All money the Government receives after payment of the tax-free awards will be applied to the Federal debt only. The incentive no-tax on awards will bring in untold millions each month.

It would be the only tax-free money of importance which anyone can hope to receive.

Well, Mr. President, may we have your blessing?

[From the New York Herald Tribune of June 23, 1957]

WALL STREET, U. S. A.

(By Donald I. Rogers)

LOTTERY BILL DESERVES CONSIDERATION

With the Senate Finance Committee in session studying the monetary system of the Nation, it might be as good a time as any to give consideration to new ways of raising Government income without increasing taxes. The most logical new source of Government revenue is with a national lottery.

It is safe to assume that the Government will need more money with each succeeding fiscal year. It always has. Soon it will be faced with the prospect of doing one of two things—either increase taxes to provide more revenue, or increase the Federal debt and add to the peril of inflation.

There are some who will say a lottery is "un-American," but as Mr. E. F. Hutton pointed out in his column in this newspaper yesterday, a lottery was used to build the first Capitol in Washington—with the help and blessings of President Washington. A lottery was used to rebuild Faneuil Hall in Boston—where American liberty was born—after the original building was destroyed by fire.

Recently the British Government adopted a "bond lottery," the first of its kind in Britain in 130 years. Participants can buy a certain new type of government bond and after holding it for 6 months are eligible for prizes in the lottery. The bond pays no interest. But if you don't win, you still have the bond, redeemable at face value.

Picked by "Ernie"

About 3 million Britons participated in that first lottery and $2,800,000 was paid out to 23,000 winners who were selected by one of those modern electronic devices which the British call "Ernie"—(stands for electronic random number indicator equipment).

Earlier this month when the English Derby was run at Epsom Downs, 23 holders of Irish Sweeps tickets in metropolitan New York won more than $1,876,000—and the money invested by thousands of other ticket holders went abroad.

Before the House Ways and Means Committee is a bill introduced by Representative PAUL A. FINO, Republican, New York, which provides for creation of a national lottery—in this instance the proceeds to be used specifically for Federal hospitals, care of the blind, recipients of old age assistance and disabled veterans.

Though limited in its intent, it provides the machinery, nevertheless, for a lottery of nationwide scope, prohibited only in those States, counties, or municipalities where lotteries are outlawed.

It has been estimated that a national lottery bill, patterned along the lines of the Fino bill would provide the Government with $10 billion annual revenue, painlessly extracted, which could be applied either to reduction of the Federal debt or to cut taxes.

The Fino bill would create a "Federal Lottery Act," and a Federal Lottery Commission. The Commission would be composed of five members to be appointed by the President, by and with the advice and consent of the Senate. Each would receive a salary at the rate of $15,000 a year and would hold office for a term of 5 years. One would be appointed chairman.

Sold by Post Office

It provides that from time to time the Commission will conduct a lottery by selling tickets of participation and awarding prizes to winning participants who shall be determined by drawings made by prominent persons designated by the Commission.

Tickets, engraved and printed by the Secretary of the Treasury, would be sold and distributed through the Post Office Department without cost to the lottery fund.

The bill also provides penalties, including fines and jail terms, for trafficking in tickets where it is forbidden by law and for counterfeiting tickets.

Increasingly it becomes apparent that this Fino bill, or one similar to it, merits serious congressional consideration.

Red Boss Makes Sucker of United States

EXTENSION OF REMARKS

OF

HON. LESLIE C. ARENDS

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. ARENDS. Mr. Speaker, when will we learn that Communist leaders of Russia are notorious distorters of the truth, and why are we so naive as to furnish them with a vehicle to propagandize, such as provided Dictator Khrushchev in the TV interview by CBS?

I call your attention to the following editorial entitled "Red Boss Makes Sucker of United States," which appeared in the Daily Pantagraph, of Bloomington, Ill., on June 21:

RED BOSS MAKES SUCKER OF UNITED STATES

Russia has been able to make full propaganda use of Dictator Khrushchev's TV interview released in this country by CBS.

The Soviets have been distributing selected parts of the interview to all parts of the world through press and radio. They have been supplementing what Khrushchev said with comment from America.

Tass quoted the New York Herald Tribune as saying that the interview itself was an encouraging indication of relaxed tensions between the United States and Russia.

Peter Edson reports that Tass quoted George Kennan, former United States Ambassador to Russia who was so hated by the Kremlin that he was ousted, as saying, "Khrushchev set forth many suppositions which were very correct."

Edson points out that Kennan's full review on the broadcast was highly critical of the Russians. But the one sentence quoted gave the impression that the author of the original policy of containment had swung over and was now pro-Khrushchev.

The Christian Science Monitor was quoted by Tass as having reported that Moscow's evident readiness to approach disarmament gradually and not to propose an all-embracing agreement was welcomed in Washington.

This stuff has been sent all over the world to give the impression that the United States is ready to follow Khrushchev.

As one radio Moscow commentator put it, "The clear-cut and frank expression of his (Khrushchev's) views cannot fail to impress large sections of American public opinion. * * * There has been a thaw in the cold war climate and American public opinion is no longer as willing as it used to be to swallow any fantastic canard or attack on the Soviet Union."

Khrushchev didn't scare or convert any Americans. That wasn't his intent. But he used his audience via American TV as a springboard to reach other people. He sought to convince them that all is well between the United States and the Russians—that he is a jolly old fellow who wants to spread peace and good will throughout the world.

Remember Hungary? Remember the satellite countries? Remember the broken international agreements? Remember the scores of U. N. vetoes which gave impetus to tension and chaos? Remember the Communist goal, which is to dominate the world? Remember the declaration of war to the death on our private-enterprise economy and our individual freedom?

CBS executed an enterprising scoop in staging the interview. But the United States has been taken for a propaganda ride as a result. We are the losers.

This is another example of the lack of morals or fairness—the utter disregard for truth—which characterizes the actions and the statements of those who run the Kremlin.

Spiritual Power Needed in United States

EXTENSION OF REMARKS
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. PHILBIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein a recent article from the Clinton Daily Item outlining a speech I made at the closing exercises of a 3-day celebration of the 10th anniversary of the Clinton Polish American veterans post.

The members of this post are to be congratulated for the outstanding success of their celebration, which included the dedication of a beautiful monument and plaque to the memory of their fallen comrade, Joseph J. Matiszewski, a huge, colorful parade that attracted an attendance of more than 10,000 people, and a well-attended impressive banquet and other events:

PAV BANQUET: PHILBIN SAYS SPIRITUAL POWER NEEDED IN UNITED STATES

United States Representative PHILIP J. PHILBIN urged Americans to build their spiritual strength along with their growing military and economic power, Sunday afternoon.

Speaking before 300 persons at the banquet in Polish Hall, which climaxed the 3-day celebration of the 10th anniversary of Clinton's Polish American veterans post, he praised the organization for their unexcelled civic spirit.

The speaker paid tribute to Joseph J. Matiszewski, Clinton's first World War II casualty and for whom the post is named. The square at the intersection of Chestnut, Green, and Nashua Streets was dedicated to his memory Saturday.

Representative PHILBIN said:

PHILBIN'S SPEECH

"The people of Clinton who highly value and appreciate the valor and unselfishness of your loyal war service, as well as your many contributions in peacetime, heartily approve and congratulate you upon your great patriotic service in dedicating a portion of our beloved town to the lasting memory of your gallant comrade and friend who in the very prime of his youth answered the call of his country, and laid down his precious young life in defense of our great free Nation.

"The stirring, patriotic example of this young man's heroic sacrifice exemplifies the real spirit and the truth strength of America, because it demonstrates, abundantly and eloquently beyond the power of words, the fierce determination of the American people to preserve our blessed heritage. So long as that spirit animates and gives vitality to the national purpose without regard to race, color, class, or national origin we need have no fears concerning our future security. This young man's noble sacrifice proves that there is a spirit here that rises far above material values, far above life itself, and it is that spirit that will keeep our Nation strong, vital, and unconquerable in a dangerous world.

"It is that spirit which generates independence of the mind, strength of character, and fellowship with our loyal countrymen and with humanity that will inspire us to face courageously and dauntlessly the great problems of protecting our freedom in a world torn with strife and insurrection and revolutionary movements."

PEACEFUL WORLD

"It is that spirit which will fortify us all in the imperative task of combating the forces of evil and disruption, and building a greater more prosperous Nation and a peaceful world.

"And it is that spirit which in the end—pray God it may be soon—that will spur us in these critical days to continue our fight for what is right, and what is just, among men and nations, and speed the day of liberation from cruel bondage of the noble Polish Nation and other peoples suffering under the yoke of Communist tyranny. We must assist them in every practicable way.

"Let us not falter in our chosen course. Let us not fear what lives ahead because in every way—militarily, economically, industrially, and financially—the Nation is getting stronger and more powerful day by day. If we will but endeavor to build our spiritual strength, our faith, and our loyalty to basic values alongside of our spiritual strength, our faith, and our loyalty to basic values alongside of our material progress, we can, in fact, in the atomic age, enter upon the greatest period of human history. The rest is up to us. We cannot—we must not—fail in this great endeavor so meaningful and crucial, not only for ourselves but for all mankind."

Edward L. Lepkowski of Gardner, State commander of the Polish Veterans, was the other guest speaker.

Stanley E. Nosek was toastmaster.

HEAD TABLE

Head table guests included State Representative Stanislaus G. Wondolowski, of Worcester; Selectmen Joseph M. Duffy and Raymond P. Naughton; the Reverend Joseph L. Niedzwiecki, of St. Mary's Church; Police Chief Michael E. Kelly, Deputy State Auditor T. Frank McDonald, Post Commander Stanley Starr, Frank Drinzyk of the post's anniversary celebration committee, Charles J. Wilson, a paraplegic veteran and member of the post.

Lepowski congratulated the post on being one of the most outstanding in the State.

The Supreme Court

EXTENSION OF REMARKS
OF
HON. TIMOTHY P. SHEEHAN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. SHEEHAN. Mr. Speaker, the current differences in the new philosophies of the present Supreme Court is well brought out in the editorials which appeared in the Chicago Tribune on June 22 and 23, 1957. They are as follows:

[From the Chicago Tribune of June 22, 1957]

JUSTICES WHO CHANGED THEIR MINDS—I

Associate Justice Felix Frankfurter concurred in the majority opinion of the United States Supreme Court which reversed conviction of John T. Watkins for contempt of Congress. Watkins, a union organizer, refused to answer certain questions put to him by the House Committee on Un-American Activities.

The opinion, written by Chief Justice Earl Warren, placed sharp restrictions on the procedures of the committee and may fatally impair its usefulness. The decision contended that investigations authorized by Congress can only be justified and pursued "by a specific legislative need," and that questions to witnesses must be limited according to "statutory pertinency."

It therefore decreed that Watkins' examination had not been proper, in that he had not been advised as to the pertinency of the questions addressed to him to the subject under inquiry. Mr. Justice Frankfurter, in a concurring opinion, added that such questions "must be defined with sufficient unambiguous clarity to safeguard a witness from the hazards of vagueness in the enforcement of the criminal process."

In his dissenting opinion, Justice Clark recalls that on May 21, 1924, Frankfurter, then a professor at Harvard Law School, disclosed a somewhat different outlook. He contributed an article entitled "Hands Off the Investigation" to the New Republic, a liberal weekly. A Senate inquiry, conducted principally by two Democrats, Senators Walsh and Wheeler, was then being made into the Teapot Dome oil lease scandal which embarrassed a Republican administration. Frankfurter was and is a Democrat.

Frankfurter then declared, "The power of investigation should be left untrammeled, and the methods and forms of each investigation should be left to Congress and its committees, as each situation arises." He inveighed against introducing technical limitations * * * where they are wholly out of place—namely: in the exercise of the informing function of Congress."

Congressional investigation, said Professor Frankfurter, "ought not to be fettered by advance rigidities, because in the light of experience there can be no reasonable doubt that such curtailment would make effective investigation almost impossible."

But as a member of the Supreme Court, Justice Frankfurter now assents to advance rigidities which may reduce congressional investigations to sterility, especially those pertaining to Communist activity. Furthermore, he has no disagreement with Chief Justice Warren's assertion that congressional committees have no warrant to expose for the sake of exposure, inasmuch as this process is productive of public stigma, scorn, and obloquy.

In 1924 Professor Frankfurter entertained a different view. He complained that, in the Walsh-Wheeler investigation, "the condemnation of the most powerful is reserved for the exposers and not for the exposed"—an attitude which the court itself now adopts. He held, again, that the power of congressional investigation must be "an effective instrument for ventilating issues for the information of Congress and the public," quoting approvingly a Democratic President, Woodrow Wilson, who had said:

"The informing function of Congress should be preferred even to its legislative function."

Professor Frankfurter held that "It is highly important that even innocent transactions in the general field of fraud and suspicion be explained in order to separate the sheep from the goats. The question is not whether people's feelings here and there may be hurt, or names dragged through the mud as it is called. The real issue is whether the danger af abuses and the actual harm done are so clear and substantial that the grave risks of fettering free congressional inquiry are to be incurred by artificial and technical limitations upon inquiry."

Justice Frankfurter is no longer interested in separating the sheep from the goats and has relegated his onetime views to the dustbin. Whether he is a political judge or a mere hyprocrite may be left to conjecture.

[From the Chicago Tribune of June 23, 1957]

JUSTICES WHO CHANGED THEIR MINDS—II

Associate Justice Hugo L. Black, former Senator from Alabama and erstwhile gold passport life member of Robert E. Lee Klan No. 1, was another member of the Supreme Court to concur in the majority decision written by Chief Justice Earl Warren in the Watkins case. In this opinion, the Court reversed the conviction of John T. Watkins, an Illinois CIO organizer, for contempt of Congress.

In his opinion, Chief Justice Warren contended that a congressional investigation must be directed toward a specific legislative purpose, and that any question addressed to a witness before a congressional committee must be justified as pertinent to contemplated legislation.

The committee chairman, at the Chicago hearing before which Watkins testified, offered an extended explanation to witnesses of the purpose of the inquiry, and coupled these purposes to specific pending legislation. Nevertheless, Warren and Black, with others of the Court majority, were not satisfied.

In 1936 Justice Black was still a Senator. He had made his reputation, such as it was, as the chairman of Senate investigating committees. In 1933 he had conducted an inquiry into merchant marine and airmail subsidies. In 1935, as chairman of the Senate Lobby Investigating Committee, he had rifled the files of telegraph agencies and private corporations to assemble more than 5 million wires and letters in search of evidence tending to establish lobbying activities.

In the February 1936 issue of Harper's magazine, as Justice Clark has reminded us in his minority opinion, Senator Black vigorously defended the blanket powers he had exercised against attempts to discredit [the investigation] by calling it a fishing expedition.

"It," he said of an investigation of this sort, "is not a trial based upon an indictment where the facts are already known and merely need presentation to a jury. It is a study by the Government of circumstances which seem to call for study in the public interest."

Senator Black explained "the enormous pains that investigators must go to to get at the facts. It would be quite simple," he said, "if the interests involved would come forward with a frank willingness to furnish the truth. But very often they dare not furnish the truth. It is too damning. Therefore every conceivable obstacle is put in the way of the investigators."

If Senator Black was aware of the possibility of such obstructionist tactics by private business interests and, therefore, was able to justify embarking on a fishing expedition, it is quite remarkable that he does not expect similar difficulties when Congress sets out to investigate the far more deceptive and obstructionist methods of the underground Communist conspiracy against American liberty.

In 1936 he said it was predictable that methods such as were employed by his investigating committee would provoke the cry that they were an outrageous invasion of the rights of private citizens. But now, with Chief Justice Warren, he holds in a case concerning an admitted accomplice of Communists that the House Un-American Activities Committee represents a new kind of congressional inquiry unknown in prior periods of American history. And, with Warren and others, he represents that this new phase of legislative inquiry involved a broadscale intrusion into the lives and affairs of private citizens which are protected by the first and fifth amendments.

Thus, as a justice, Black denies the very precepts which he espoused as a New Deal crusader.

It was all right with Black to hound a business man or a private corporation, but now he finds it all wrong to cause a crease of worry on the forehead of an agent or accomplice of Moscow.

Crusade for Freedom

EXTENSION OF REMARKS

OF

HON. FRANK THOMPSON, JR.

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. THOMPSON of New Jersey. Mr. Speaker, I include here a speech by M. F. J. Goedhart, of the Netherlands, at the Council of Europe Consultative Assembly on May 2, 1957. It is, I think, an effective presentation of the real role of Radio Free Europe in the Hungarian crisis of last fall:

COUNCIL OF EUROPE REPORT ON RADIO FREE EUROPE

(By M. Goedhart, of the Netherlands)

Mr. President, the Committee on non-Represented Nations has lately undertaken an investigation into the accusations made against Radio Free Europe, which have become very sharp since the time of the Hungarian revolution of October and November last year. The committee charged me with the honorable task of reporting to the Assembly on this investigation. I have risen to speak in the general debate in order to give the experience of our committee.

Radio Free Europe has been accused of having inspired the Hungarian revolution and having promised the Hungarian people military aid from the West. As the greater part of Radio Free Europe broadcasts are transmitted from Western Germany, the German Federal Republic has undertaken an investigation into the allegations. All tape recordings of Hungarian transmissions during October and November have been checked word for word. This check has proved that the allegations made are entirely unfounded. Dr. Adenauer, the German Federal Chancellor, made this statement at a press conference at Bonn on January 25, 1957.

A representative of the Government of the German Federal Republic went into the matter more closely at a session of your committee which was held in Munich on March 11, 12, and 13. He informed your committee of the way in which the investigation was conducted and of the correspondence exchanged about this between the German Government and Radio Free Europe. This further explanation from the German Government has also cleared Radio Free Europe from all blame. The allegations are completely unfounded.

It goes without saying that the information which our committee received from the German Federal Government was for us sufficient proof and relieved us from the necessity of checking the tape recordings. We did, however, pay several visits to Radio Free Europe, where we had the opportunity of exchanging views with the Radio Free Europe experts. I should like to take this occasion to thank the Radio Free Europe staff for their great kindness and courtesy to us in allowing us to see all we wanted. We saw at work Radio Free Europe's monitoring service, which makes verbatim reports of and analyzes the broadcasts from the Communist world. We also made acquaintance with Radio Free Europe's extensive work in the field of documentation. The most important Communist newspapers and magazines which appear in Eastern Europe are read and analyzed by Radio Free Europe. This work is being performed by experts, mainly highly skilled people of eastern European origin.

The Radio Free Europe programs are transmitted in six languages—Polish, Czech and Slovak, Hungarian, Rumanian, and Bulgarian. Radio Free Europe's 29 transmitters are practically continuously on the air. A staff of 1,400 persons are concerned in the work of Radio Free Europe. I have personally studied a program for 24 hours. A very important part of this program consists of news services in which telegrams from all the large news agencies are transmitted. It is, therefore, not propaganda but objective news. The news services also give reviews of the foremost American and European newspapers. Many broadcasts are devoted to refuting the lying campaigns in the Communist press. In this way Radio Free Europe daily provides the listeners behind the Iron Curtain with factual knowledge and arguments. Much attention is paid to cultural and artistic life in Europe and America. There are book reviews to acquaint the people behind the Iron Curtain with the most important publications of the free world. All of them are eagerly listened to, and there is much evidence for this.

Radio Free Europe also broadcasts warnings directed against certain persons in the Communist police and against commanders of Communist prisons and concentration camps who are known to be guilty of maltreatment and other crimes against prisoners.

Radio Free Europe has for years devoted much attention to the work of the Council of Europe, and rightly so, for behind the Iron Curtain there is a great and growing interest in the Council of Europe. About 100 million people, Europeans as we are, are living in the European Soviet colonies, and they eagerly look forward to every scrap of news from which it appears Europe is moving toward unification and is working hard to achieve it.

The population of the Soviet colonies are still expecting help from the free world and every report which tells them that the West is not forgetting the European victims of the Kremlin and not letting itself be deceived by the maneuvers of the Kremlin is hot news for them. All this information is furnished by Radio Free Europe.

Your committee has learned about this work with satisfaction and respect, and we are most anxious to give public and unanimous testimony of our feelings. These broadcasts of Radio Free Europe are a strong and important weapon in the struggle against Communist dictatorship.

To speak frankly, I must say that it is a rather astonishing situation that this useful and effective organization which is waging a daily battle for a free and united Europe is in fact an American institution. You will understand that I am not blaming the Americans who established Radio Free Europe. On the contrary, we are extremely grateful for this American initiative. A number of American citizens set up a private organization and they are raising millions of dollars to finance Radio Free Europe, but I feel a little embarrassed that we Europeans did not take this initiative ourselves and that in this respect we are neglecting our political tasks. The German Federal Republic granted Radio Free Europe a license to operate on German territory. Germany thereby rendered an important service to the people behind the Iron Curtain. But for the rest, Europe stands aside and does not concern itself with Radio Free Europe. This is an unsatisfactory situation.

Some people have suggested that Radio Free Europe should be put under German management and that the German Bundestag should gain control of Radio Free Eu-

rope. Your committee does not agree with these suggestions. The nature of the work of an organization like Radio Free Europe entails that it would be highly undesirable for a government or parliament to be responsible for it. Governments and parliaments can bear no responsibilities for newspapers; no more can they be directly responsible for radio broadcasts. It would put the United States of America in a very awkward position if they were held responsible for every word broadcast by Radio Free Europe. The same holds good for the German Government and for the Council of Europe. It is a good thing, I think, that Radio Free Europe is a private organization. I think it should remain so. What we consider wrong is that Radio Free Europe is a completely American private organization. I think it would be better if we Europeans could also take an interest in it and if the financial and moral responsibility for Radio Free Europe could be shared by some independent European personalities and supported by European public opinion.

I do not think it is this Assembly's business to make proposals in this field. Such proposals could come only from the Free Europe Committee in New York. Your committee has therefore confined itself to this suggestion.

Justice, Rights at Stake in Pair of Soldier Trials

EXTENSION OF REMARKS
OF
HON. J. CARLTON LOSER
OF TENNESSEE
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. LOSER. Mr. Speaker, under leave previously granted to extend my remarks in the CONGRESSIONAL RECORD, I wish to include an editorial entitled "Justice, Rights at Stake in Pair of Soldier Trials," which appeared in the Nashville Tennessean, Nashville, Tenn., on June 22, 1957.

I commend this editorial to the House membership as I know you are also interested in obtaining fair trials for our men in uniform as well as for all citizens of our great country:

JUSTICE, RIGHTS AT STAKE IN PAIR OF SOLDIER TRIALS

Judging from the latest developments in a pair of the most sensational servicemen's trials of this decade, a man in the uniform of his country is exempt from justice, in the usual American sense of the word.

The reference is to the forthcoming trials of a GI named William S. Girard, now stationed in Japan, and a high-ranking and brilliant guided missiles expert, Col. John C. Nickerson, Jr., currently stationed at Huntsville, Ala.

The two cases are different, of course. Specialist Girard, accused of manslaughter in the death of a Japanese woman, is fighting to be tried by a United States military court rather than in a Japanese tribunal. Colonel Nickerson's trial is already slated in a military court.

But, perforce, one must look at these new developments and conclude that, if the rules of evidence now to be followed in the Nickerson case are the same the military court in Japan would follow, Specialist Girard had best accept his chances with the Japanese.

For Colonel Nickerson has just been informed that five high-ranking officials his attorneys had requested as defense witnesses will not be allowed to testify. Irrelevant says the same United States Government which seeks to prosecute and judge him.

And earlier, the same answer—irrelevant—was given when his attorneys sought certain documents which they believed pertinent to the case.

What prosecuting attorney, bent upon convictions, would not like this set of circumstances? The prosecutors who have charged him have, in effect, selected the witnesses he is allowed in his own defense.

And now, in the Girard case, comes the United States Justice Department—charged with the responsibility of protecting justice—to demand that this soldier be turned over to the Japanese for trial on the grounds that Specialist Girard has no right to fight for himself. The United States Government will make his decisions for him.

"Under the international agreements with Japan, the right to exercise primary jurisdiction in particular cases is the right of the United States, not of the individual soldier," says the Justice Department.

And borrowing its arguments from the Department of State, it demands that the Supreme Court turn its attention immediately to this matter because "further delay will seriously aggravate an already unfortunate strain" on American-Japanese relations.

Where the State Department stands on this issue is already well known, for it was this Department which recently bartered Specialist Girard's constitutional rights for diplomatic expediency by waiving the United States Government's primary jurisdiction and turning him over to Japan for trial, although admitting he was on official duty when the alleged offense occurred.

In Colonel Nickerson's case, of course, we are unable to judge whether the documents and witnesses sought in his defense are relevant or not. For a stamp of "secret" has been placed upon everything surrounding it.

It would appear, however, that the relevancy of these witnesses and documents is a matter which addresses itself to the court about to try him and not to the Third Army commander. It was the commanding general who ruled out the witnesses and he is answerable to the Department of Defense, which brought the charges.

The irony in this whole affair is that the "trials" are sharing the headlines with the Eisenhower administration's version of civil rights, the most controversial portion of which involves trying people without a jury of their peers.

This Nation will be watching these trials with more than passing interest as they unfold. And asking itself two questions:

"What is justice?"

"What are individual rights?"

What, Tear Down Borglum's Studio?

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 14, 1957

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert an editorial from the Rapid City, S. Dak., Daily Journal, pointing out the urgency of appropriating funds to restore the sculptor's studio at Mount Rushmore National Memorial.

The artistic genius of Gutzon Borglum deserves this recognition, and it would be a tremendous loss to posterity if his studio were not restored. Editor Warren Morrell, of the Rapid City Journal, has, I believe, very effectively described the importance of this matter in the following editorial which I urge my colleagues to read with care:

WHAT, TEAR DOWN BORGLUM'S STUDIO?

In mission 66—the impressive plans for expansion and improvement of facilities in our national parks to be completed by 1966—there was a $25,000 item for restoration of the sculptor's studio at Mount Rushmore National Memorial.

In the latest mission 66 schedule, the appropriation for the sculptor's studio has been deleted. The National Park Service, it is reported, is considering demolishing the studio which the late Gutzon Borglum used during the carving of the heroic figures of the four American Presidents on Mount Rushmore.

This would be a terrible loss to South Dakota and America.

It would be a colossal mistake to tear down the studio, an act for which the National Park Service and those responsible would never be forgiven.

For the past several years Borglum's studio has been used as a cafeteria and souvenir shop. As such, it was unsatisfactory but the concessionaires at Rushmore Memorial have done a remarkably efficient job of accommodating the public in a building that never was intended to be the busiest restaurant in South Dakota.

As magnificent new concession building has been constructed. It is modern, large, and will win the acclamation of the crowds who enter it this summer during their pilgrimage to the shrine of democracy. It is expected the new building will be in public use by July 1.

Completion of the new building and other vast improvements at Rushmore has spotlighted attention on the old studio. Shall it stand to deteriorate or should it be demolished and moved away before it becomes an eyesore?

The Journal believes Gutzon Borglum's studio should be restored as much as possible to the same state it was when used by the great sculptor.

The fireplaces in the building, designed by Borglum, are a wonder to behold. Some of the rocks in Borglum's intricately designed fireplaces are no wider than a lead pencil. If it were possible to duplicate these fireplaces today, the cost would be prohibitive.

In the restored studios could be placed originals or duplicates of Borglum's work.

Even without the spectacular work he did at Mount Rushmore, Borglum's name will live among the great sculptors of all time. Among his notable works are an equestrian statute of General Sheridan in Washington, D. C.; the large bust of Abraham Lincoln in the Nation's Capitol, said to be the best Lincoln in the statuary world; statues of Beecher, Altgeld, Huntington, William Jennings Bryan, and figures of the Apostles which are in the Cathedral of St. John the Divine in New York City.

Visiting Borglum's studio would be a tremendous inspiration for young artists.

The studio would, of course, tell of Borglum, the genius, as well as Borglum, the patriot, whose Americanism and fervent love for his country was sometimes called "almost fanatical."

Reproductions of some of his pungent comments on the Nation would be in keeping with the patriotic interpretative theme carried on at Rushmore.

Borglum was scathing in his ridicule of American artists who went to Europe to study. He maintained that the greatest inspiration was in America and the finest any artist could portray were the founders of America.

He named his only son Lincoln.

If the place where Michelangelo worked could be found in Rome, what a priceless discovery that would be.

Henry Ford moved Stephen Foster's birthplace to Greenfield Village at Fort Dearborn, Mich., where he built a "Swanee River" to go with it. If Ford were alive today, he would be after Borglum's studio to be included with the outstanding assemblage of Americana at Greenfield Village.

Born in Idaho, Borglum always said South Dakota was his "adopted State."

South Dakota has preserved nothing historical that can compare with the historical possibilities of the restoration of Borglum's studio at Rushmore Memorial. There is a marker on a hill above Fort Pierre where Pierre de La Verendrye, discoverer of the Dakotas, buried a lead plate in 1742. The home of South Dakota's first governor, Arthur C. Mellette, has been restored in Watertown, an accomplishment much appreciated by South Dakotans.

Restoration of Borglum's studio would add much to the appeal of Rushmore Memorial. It is an opportunity which must be utilized. The cost of restoration, fortunately, is small but the studio is priceless.

This is the time for public opinion to unite to prevent the Park Service from destroying this American treasure.

Statement on Immigration Policy

EXTENSION OF REMARKS
OF
HON. EDWIN B. DOOLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. DOOLEY. Mr. Speaker, I have requested unanimous consent to extend my remarks in the Appendix of the RECORD and include therein a statement from the American Immigration Conference commending President Eisenhower on his message to Congress calling for immediate action on certain recommendations affecting America's immigration policy.

FURTHER STATEMENT ON IMMIGRATION POLICY

We, the undersigned organizations, issued the following joint statement on April 3 commending President Eisenhower for his message to Congress calling for prompt action on certain recommendations for improvement of American immigration policy and continuing a positive program for the admission of refugees:

"President Eisenhower is to be commended on his message to Congress calling for prompt action for revision and improvement of American immigration policy. Adoption of the President's recommendations would be in accord with a humane immigration policy consistent with our national tradition.

"We believe action without delay is imperative.

"The President proposes a reasonable increase in immigration quotas, a practical approach to the utilization of unused quotas, and the elimination of mortgages on future quotas. These proposals are, in our judgment, wise and represent an important step toward the elimination of discrimination from our immigration law.

"We recommend the President's proposal for a permanent plan for admitting escapees from communism. We hold that this, however, should be expanded to include any victims of religious or political persecution.

"We urge cooperation of both parties in Congress to bring about prompt action."

We note with deep concern that no action has been taken as yet by either House of Congress to implement the President's proposals. Since in our judgment the need for comprehensive legislation remains clear and urgent, we wish at this time strongly to reaffirm our hope that Congress will act decisively during its present session.

We, therefore, again respectfully urge the cooperation of both parties in Congress to bring about the prompt action so vitally important at this time to our national immigration policy, including our continuing assistance in meeting the desperate need of refugees and escapees from religious and political persecution.

Economy in the Air

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the June 1957 issue of the New York State Taxpayer, which presents a feasible way to save the taxpayers money and to promote private enterprise:

UNITED STATES OPERATES LUXURY AIR FLEET—TAXPAYER-SUPPORTED LUXURY PLANE

If you were a farmer and gave your daughter $5,000 to go out and buy the best kind of truck to haul farm machinery about in, you would probably rest assured that she would bring home the proper truck and not a plush Jaguar convertible. But, Congressman DANIEL J. FLOOD, of Pennsylvania, pointed out recently that some of the boys in the Pentagon would probably not be equal to such a task.

It seems that the Air Force was given $110 million during the first year of the Eisenhower administration to buy a fleet of planes capable of carrying Army tanks. Well, they didn't buy Jaguars, but in a sense purchased their air equivalent, 6 dozen "plushed up" DC–6 passenger planes instead of the tank-carrying cargo planes. They called it reprograming. Congressman FLOOD labeled the act "misappropriation."

Congressman FLOOD, in noting this, added that if "our hypothetical farmer's daughter made the mistake of blowing the $5,000 with which she was supposed to buy a farm truck * * * she probably would * * * have a feeling of guilt about it to make amends."

"Not so with the Air Force," the Pennsylvania lawmaker notes.

"They display no sense of shame whatsoever about this boondoggle," he lamented. "When confronted with the recommendations of the Hoover Commission, the directives of our congressional committee * * * inveighing against competition with the private enterprise and general wastefulness of the taxpayers' funds, these gentlemen in the Air Force say, 'Well, we have got them now, and we are stuck with them so we had best fill them up a little bit by taking business away from commercial airlines.'"

This is only one example of how the Military Air Transport Service, known affectionately as MATS, has mushroomed in size so that it now operates approximately 1,500 airplanes. This outstrips all of the United States domestic commercial airlines with their combined total of 1,212 planes in operation.

The really sad feature of this extravagance is that it costs the taxpayers an estimated $1 billion a year to operate the Government-owned airlines while defense hearings for fiscal 1958 indicated that commercial airlines would have more than $900 million in unused space available for military use for this same period of time.

It has been pointed out that while it cost the Government $795 per hour to operate the military equivalent of the DC–6 the taxpaying civilian airline cost for operating the same plane is $650 per hour. Use of commercial lines, where possible, would not only reduce the size and cost of this mammoth air fleet but also reduce the amount of subsidies required to maintain the private airlines.

The Government-operated airline, with total assets over $1.4 billion, provides service to practically every corner of the world regardless of the existing parallel routes of commercial airlines.

The Hoover Commission disclosed that an Air Force band was flown once a month from Westover, Mass., to Bermuda. The Air Force justified the flights for morale purposes, noting that there was no band in Bermuda.

Placing the morale issue aside, the Commission noted that two commercial airlines operated flights that could have carried the same band over the same route at less cost to the taxpayers.

The Hoover Commission has further noted that the $42.9 million airline subsidy for fiscal 1954 could have been reduced by 88

percent if the airlines had flown only 25 percent of the passengers and 50 percent of the mail moved by MATS over this same period.

The intent of Congress for fiscal 1958 that the Government should to the greatest extent practicable adjust its use of air transportation so as to use the existing, unutilized capacity of United States air carriers has been established. It remains now to be seen how the operators of military transportation will try to adhere to this established intent and refrain from trying to build up the plush operations of the military air fleet.

Strange Doings on the Bench

EXTENSION OF REMARKS
OF
HON. BENJAMIN F. JAMES
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. JAMES. Mr. Speaker, during the last weekend I visited in my district with more than the usual number of my neighbors and constituents.

I was somewhat amazed, but not greatly surprised to find that the current prime interest in government has shifted from the activities of the Congress to several recent decisions of the Supreme Court of the United States.

Understandably, some of the recent decisions of the High Court have disturbed Members of the Congress and on yesterday there was introduced in the other body a joint resolution proposing an amendment to the Constitution prescribing the term of office of members of the Supreme Court.

That some of these recent decisions have also disturbed wide areas of our citizenry cannot be gainsaid and a reflection of that disturbance is well cast in the editorial that follows, published in a decidedly pro-American community of the district I have the honor to represent in the Congress:

[From the Suburban and Wayne (Pa.) Times of June 21, 1957]

STRANGE DOINGS ON THE BENCH

Has the Supreme Court of the United States been captured by the leftwingers? Many thinking citizens are beginning to believe that such is the case, following the two incredible decisions made by that once august body during the past week.

The first case is the fantastic decision that Government attorneys now must turn over their files to defense counsel in any action taken by the Government against criminals or subversives.

The second is the frightening decision freeing the second-string Communists of California, on the specious ground that their teaching of the violent overthrow of the Constitution was not overt, but of an academic nature.

What the Supreme Court is now doing is making its own laws, contrary to the intent of Congress. It is much easier to name 4 or 5 pliant appointees to the Supreme Court, as has been done in the present administration, than to control over 500 Members of Congress.

It now appears that, if Khrushchev were to hold a pistol to the head of Eisenhower, he would not be committing a crime unless he pulled the trigger. Remember, the act must be overt. Is there to be no protection for the rights of our Nation, against gangsters and Communists?

Where is the outcry, in the liberal sheets, against the persecution of Dave Beck? Dave has pleaded the fifth, and is pilloried. Yet, he is accused only of stealing union funds. Others, accused of selling out their country, are held up as heroes for taking the fifth.

Are we now being put into a position where a dictatorship of the left will take over gradually and insidiously? Or where a dictatorship of the right, in order to forestall the first alternative, will take over to protect us?

Both are quite possible, in an atmosphere in which the Nation feels itself, sees itself stripped of its legal defenses against those who would destroy our way of life.

This is not law, but anarchy at the highest summit of Government. This is rule by fiat, rule by the judiciary, rule by a few, none of whom are elected by the people. If today the Court can upset the plain intent of Congress in the Smith Act, substituting its own brand of law for what Congress intended, then tomorrow it can decide that the Bill of Rights meant something besides what the plain words tell us.

The only member of the Supreme Court who talked like an American in the Smith Act decision this week was Justice Tom Clark. We congratulate him.

New Federal Communications Commission Permit for Operation of Television Channel 2 in San Francisco Bay Area

EXTENSION OF REMARKS
OF
HON. JOHN F. BALDWIN, JR.
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. BALDWIN. Mr. Speaker, a decision is now pending before the Federal Communications Commission for the granting of a license for the operation of television channel 2 in the San Francisco Bay area of northern California. It is my strong hope that no applicant will be granted this license or permit unless the applicant proposes to establish its transmission tower in the hills east of Berkeley and Oakland in California. I am summarizing below a letter I have dispatched to the Federal Communications Commission upon this subject. Proper television reception for at least 250,000 people in my congressional district is involved in this pending decision:

JUNE 21, 1957.

FEDERAL COMMUNICATIONS COMMISSION,
Washington, D. C.

GENTLEMEN: It is my understanding that a decision is now pending before your Commission for the granting of a license for the operation of television channel 2 in the San Francisco Bay area of northern California. It is my further understanding that this decision pertains to your docket Nos. 11049 and 11050.

I most strongly urge that no applicant be granted this license or permit unless the applicant proposes to establish its transmission tower in the hills east of Berkeley and Oakland. At the present time the four existing stations in the San Francisco Bay area are all located in San Francisco. Approximately 250,000 people in the central portion of Contra Costa County and Solano County in my congressional district are barred from receiving adequate or proper reception from these stations because of this intervening row of hills immediately east of Berkeley and Oakland.

If the pending license were granted to an applicant who proposed to put his transmission tower in San Francisco or in San Mateo County, this would mean that these 250,000 people would continue to be barred from proper television reception. Since it is my understanding this is the last channel to be authorized in the San Francisco Bay area, they would then be permanently barred from such reception.

I can speak from personal experience because I live in the city of Martinez in central Contra Costa County. This city has such poor reception from the existing four San Francisco television stations that a television cable company has had to come into the area and put a large reception tower on a nearby hill and practically everyone in the community of Martinez has had to pay rather extensive additional cost in order to have their television sets connected by cable to this tower for purposes of adequate reception.

This is a most urgent matter and a matter of great importance to these 250,000 people. I feel that the Federal Communications Commission should give great weight to this problem, and that the license granted for this last channel should be made available only to an applicant which will establish a tower on the hills east of Berkeley and Oakland. Will you please let me know what steps can be taken to give recognition to this problem in the granting of this license?

Sincerely yours,

JOHN F. BALDWIN,
Member of Congress.

Flag Day Celebration Sponsored by Williamsport (Pa.) Lodge, No. 173, Benevolent and Protective Order of Elks, Friday, June 14, 1957

EXTENSION OF REMARKS
OF
HON. JAMES E. VAN ZANDT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. VAN ZANDT. Mr. Speaker, over a period of years, Williamsport (Pa.) Lodge, No. 173, BPOE, has been one of the leading Elks lodges in the United States in the observance of Flag Day. Last year Lodge No. 173 was accorded second place in the nationwide contest sponsored by the exalted ruler of the Elks.

This year, in bidding for continued recognition, the observance of Flag Day was outstanding, and it was a high honor for me to be selected to deliver the principal speech on a varied and interesting Flag Day program. The address delivered on the occasion follows:

ADDRESS DELIVERED BY HON. JAMES E. VAN ZANDT, MEMBER OF CONGRESS, 20TH DISTRICT OF PENNSYLVANIA, AT THE FLAG DAY CELEBRATION SPONSORED BY WILLIAMSPORT LODGE, NO. 173, BENEVOLENT AND PROTECTIVE ORDER OF ELKS, WILLIAMSPORT, PA., FRIDAY, JUNE 14, 1957

It is an honor to join with my brother Elks of Williamsport Lodge, No. 173, on this memorable occasion in celebrating the 180th anniversary of the birth of Old Glory.

It is appropriate for the Benevolent and Protective Order of Elks to observe the celebration of Flag Day, and thus urge an awakening of the spirit of good old-fashioned Americanism.

It is likewise fitting and proper for the Elks to take leadership in such patriotic exercises, since the Elks is a typical American society, whose members believe in Almighty God and loyalty to the Stars and Stripes.

It is of no little significance that you will find on the altar of every Elks lodge the Holy Bible, the antlers of elkdom, and the American flag.

Collectively the Elks signify patriotism, love of country, brotherhood, devotion to God, tolerance, and good will.

Thus we may be proud of our membership in the Benevolent and Protective Order of Elks.

It was June 14, 1777, that the Continental Congress of the United States proclaimed the stars and stripes the official flag of the new nation.

On that day the Congress of the United States gave to the world a banner of liberty, a promise of justice and tolerance for all men who would yield it allegiance.

It has been truly said that the Declaration of Independence is the heart of America, the Constitution its backbone, and the flag the soul of America.

That banner of liberty—the American flag—has waved in greater glory with each succeeding year.

It has been a symbol of hope and promise not only to those who dwell under its protection, but to the downtrodden and oppressed in many lands.

Its meaning has grown dearer, its significance deeper to those who believe in freedom for all men.

What is this freedom about which we speak?

As youngsters in school we saw the word in history textbooks and heard it from our teachers.

The word became familiar to us but the meaning seemed vague.

Later on we read it in Fourth of July editorials and listened to orators talking about it.

Those of our younger generation, however, do not need to seek a definition for freedom.

The anguished cries of millions of enslaved people behind the Iron Curtain are publicized the world over and convey the real meaning of loss of freedom.

Freedom means a lot of things.

It means you can live the way you want to live and believe the things you want to believe as long as you do not interfere with the rights of your neighbor.

It means you can be a Democrat or a Republican or belong to no party at all.

It means you can go to church on Sunday morning or stay in bed.

And if you go to church you can attend any one you choose.

It means you can write a letter to the editor of your newspaper about what you think is wrong with the country, and he can print it without fear of being thrown into jail.

If you want to belong to an organization you are free to join.

You can stand up before people and express your opinions.

Freedom means the opportunity to create your own future, to be president of a multimillion-dollar corporation, or to occupy a humble position in life with equal dignity.

And in either job you can have pride in your work and the dignity of honest labor.

You can go to the college of your choice and study any subjects you like.

You can be a doctor, lawyer, merchant, or farmer.

Or, if you have discovered the secret which eludes the rest of us, you can spend most of your time just doing nothing.

Freedom means that you live in a country that is governed by laws, that you say you are the equal of your fellowman regardless of your religion, political creed, or the color of your skin.

It means you cannot be seized and thrown into jail without trial by jury.

It means that you have a voice in the Government and that you and your fellow citizens control both the laws of the land and the men who administer them.

As freemen we have all these rights and privileges and many more.

Because we have enjoyed them all our lives they seem ordinary; yes, just commonplace things.

But the rights and privileges we take for granted have been denied to the people in many other countries.

Some of them have enjoyed freedom only to have it snatched from their grasp.

Others have never had it.

Our flag symbolizes freedom purchased with blood and sacrifice and envied by oppressed peoples everywhere.

Old Glory is also a symbol of strength, the strength of brave men and self-sacrificing women.

It has been held high with courage on battlefields all over the world.

Many men have died for it.

Many others have lived for it, their whole existence devoted to the preservation of the ideals for which it stands.

What a remarkable thing it is that a piece of brightly colored cloth can mean so much to so many people.

Is there some magic in the pattern or color combination of our flag that has made it so glorious and so enduring?

Frankly it is not the pattern or the color that gives Old Glory its grandeur, for many of us have seen our flag on the battlefields torn by bullets and faded by the sun.

The pattern was distorted and the color was almost gone, but the glory was undimmed.

Our flag is glorious because generations of Americans have endeavored to glorify the principles for which it stands.

When the Continental Congress officially adopted the Stars and Stripes for the United States, our Nation was small and weak.

It could not match the European nations in wealth and power.

Its future appeared uncertain.

The Stars and Stripes was a mere upstart flag among the standards of the mighty.

Behind the American flag, however, was a new ideal; yes, new, but yet as old as the Ten Commandments.

The men who had the courage to raise it, by the side of flags of powerful nations, were inspired by a vision.

They looked into the future and beheld a land where liberty was triumphant and all men walked as equals.

They saw that the newborn America was destined to become the greatest and most powerful in the world, pointing the way toward a better and finer mode of life.

These heroic men, with their inspired vision, gave the American flag its first touch of glory.

That glory was increased in 1787 when the Constitutional Convention gave to the new Nation a constitution guaranteeing every citizen the right to life, liberty, and the pursuit of happiness.

Our flag thus became more than the symbol of an ideal, a dream, and a vision.

It told the world that here was a people with the courage to live by their ideals. A people who had secured for themselves and their descendants the blessings of freedom.

Before many years had passed, however, the struggling young nation with its new way of life was put to the acid test.

A civil war threatened its very existence.

How our Nation met that test and came forth triumphant we all know.

Out of the strife and chaos of civil war there emerged a union even stronger than before, because its strength had been tried and proved.

Old Glory became even more glorious and inspiring.

The years that followed brought still more trials and tribulations to the growing Nation, but from each crisis the United States came forth with its flag flying higher.

And all this time men were working, sacrificing, fighting, and dying to make the Nation great.

Our flag was challenged again in the Spanish-American War.

The call to defend it was answered by thousands of Americans willing to shed their blood to prevent desecration of the emblem they loved.

The gallant dead of the Spanish-American War, and the living veterans of that conflict, gave their touch of glory to our flag.

Thrice more in a generation—in World War I, World War II, and the Korean war—the finest young men of the Nation offered their lives for our flag.

Added to the sacrifice of the men who fought for Old Glory on the world's battlefields was the sacrifice and devotion of those who did what they could on the homefront.

Each of these groups contributed to the glory of the Stars and Stripes.

And so it has been down through the years.

Countless people have had a share in making the American flag what it is today.

Soldiers, statesmen, and plain everyday citizens, even as you and I, have fashioned our flag.

The great and the humble, rich and poor, men and women have had a hand in it.

Therefore, as we observe Flag Day we are paying tribute to the most honored and respected national symbol in the entire world.

It represents to us, and freedom-loving people everywhere, an ideal way of life made possible by the heroic efforts of millions of men to make that ideal a living reality.

Thus on this Flag Day of 1957 we are honoring not a bit of cloth of red, white, and blue, but the spirit of America.

As we salute our national emblem on the 180th anniversary of its birth, it behooves us to ponder and recall that throughout the history of the world mighty nations have risen and fallen.

Many nations at the peak of their power and prestige became careless, indifferent, and corrupt which led to their eventual downfall.

While America occupies an enviable position in the family of nations, to maintain it we should never forget the lessons of history and the fate of once mighty nations.

Therefore, to preserve our country and the American way of life, we must be eternally vigilant.

In short, we owe to our Nation and our flag the same ceaseless devotion and patriotic fervor that our forefathers regarded as their solemn obligations.

Yes; a devotion and patriotic fervor which enabled them to bequeath to us a nation described by Abraham Lincoln as "conceived in liberty and dedicated to the proposition that all men are created equal."

Ladies and gentlemen, it is easy to relax as a nation and be lulled to sleep by the idea that our freedom and peace are always secure.

If we adopt such a listless attitude and frame of mind we may awaken one day to find that while we were sleeping our enemies have been busy.

Yes; busy in carrying out their sinister plans to destroy our form of government.

We may find, to our dismay, that tyranny will have supplanted liberty and that injustice will reign in its place.

Make no mistake about it, our beloved Nation is facing the most critical period in its history during this hydrogen-atomic age.

While we as a nation sincerely pursue the elusive phantom of world peace, we find that the burning desire for tranquility among the family of nations has, because of the activities of Soviet Russia, become an almost hopeless goal.

Three years ago Adm. Robert B. Carney, then Chief of Naval Operations, confirmed that fact when he frankly stated that America is rapidly approaching the crossroad of a fight to the finish with Russia.

Admiral Carney, without any resort to high-sounding phrases, pointed the finger at Russia and identified her as our relentless foe.

In recalling his stern admonition we must realize that we, as a nation, would be playing into the hands of Soviet Russia if we accept her plans of world disarmament in the mistaken notion that we would be on the road to achieving universal peace.

The truth is that such Kremlin-inspired disarmament plans are a boobytrap designed to destroy our present military advantages by hoping to halt our progress in developing military power capable of defending our national security in this nuclear age.

The Soviet strategy is to have the Russian bear stand on the sidelines and gleefully watch as we as a nation weaken ourselves militarily while the free world yields mile by mile and nation by nation to Communist plans of world conquest.

Let us never forget that Moscow is calling the signals and piping the tune in freedom's dance of death.

The cold fact is that Russia is a clever enemy and her conquests are fought by her stooges in furtherance of the Soviet conspiracy for world conquest.

Frankly, we as a nation must face the truth.

We must realize that Russia is the real enemy at our gates.

There is no doubt that the average American and the citizens of the free world are sick and tired of Russia's traditional role as an enemy of world peace.

We are fed up with her intrigue, her lying, and her insults.

Surely we do not have to be convinced, after present and past experiences, that Russia is still our potent enemy.

We know this to be an undeniable fact and with such knowledge it is inviting national suicide to adopt a lukewarm attitude with respect to our duties and obligations as liberty-loving Americans.

The issue before us as a nation is clear cut. We must at all times maintain a firm attitude in dealing with Russia.

At the same time we must acknowledge the reality of the cold war by continuing to develop nuclear power so massive that the Kremlin will find it impossible to keep pace with its cost.

These weapons of the nuclear age are costly, and while we are paying billions of dollars annually to maintain our Armed Forces, in my opinion it is well worth the price in defending against Soviet treachery, our cherished principles of liberty and freedom.

Yes; the price of these nuclear weapons is costly, but the price is insignificant when it preserves the precious legacy of liberty and freedom bequeathed to us by those who died in defense of our flag.

One glance at the red, white, and blue of our national emblem should be enough to stir the blood of every loyal American citizen into a tight-fisted resolve that we are determined to remain free men forever.

Yes; it is well for us to repeat in 1957 the toast given by the American patriot, Stephen Decatur, 141 years ago when he declared "Our country in her intercourse with foreign nations may she always be in the right, but our country right or wrong."

What Stephen Decatur said should be the attitude of all redblooded Americans, and especially those of us who enjoy membership in the Benevolent and Protective Order of Elks.

On this Flag Day of 1957, I can think of no better means of rededicating ourselves to an awakening of the spirit of good old-fashioned Americanism than for us to say in unison:

"May our country always be right, but right or wrong, we shall defend forever this Nation and its glorious emblem, the Stars and Stripes of America."

George Meany's Answer to Khrushchev

EXTENSION OF REMARKS
OF

HON. THOMAS J. LANE

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 20, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a straightforward reply made to the Communist leader, Nikita Krushchev by that able, sincere, and conscientious labor leader and one of the outstanding Americans in this country, George Meany.

The address follows:

GEORGE MEANY'S ANSWER TO KHRUSHCHEV—TEXT OF AN ADDRESS OVER ABC BY PRESIDENT GEORGE MEANY, OF AFL–CIO

Recently Nikita Khrushchev, the Soviet Communist Party boss, appeared on an American television program. He skillfully used this occasion to promote the interests of Soviet imperialism and the aims of the world-wide Communist movement. He performed amiably and adroitly in combining persuasion, boasts, and outright lies to advance the current Soviet peace offensive.

Khrushchev painted a glowing picture of the Soviet economy, especially agriculture. He did not say a word about the low standards of life, the intense exploitation of labor, the denial of all democratic rights and forced labor which plague the Soviet peoples. He was completely silent about the discontent among the peoples behind the Iron Curtain, as evidenced by student unrest, criticism voiced by writers and the continued forced transfer of many thousands from their homes and jobs within the U. S. S. R.

Khrushchev declared that there had been and would be no other party in the Soviet Union than the Communist Party which, he stated, "reflects the desires and wishes of the people so much." This Khrushchev boast reminds one of the boast by Hitler that the Nazi Party regime would last for at least a thousand years in Germany. Actually, the Soviet people have been denied the chance to express through free elections their real desires and wishes. The last time the Russian people had an election which was at all free was more than 39 years ago.

In his television performance Khrushchev admitted that the Kremlin was jamming the Voice of America broadcasts to the Soviet Union. He admitted that his government was denying the Soviet peoples the right to listen to America. He tried to explain it away, or excuse it, by saying that Russia "is a very musical country." He went on to say that whether the Voice of America is jammed or not, therefore, depends on whether "it is a good voice" or "it's a voice which cuts on the ear." And, of course, it is Khrushchev and his ruling clique who decide what is a good voice and what is not a good voice for the Russian people to hear.

Khrushchev went even further when he said: "If the Voice of America does really become the Voice of America * * * it will not be jammed in our country." How nice of Mr. Khrushchev. He not only insists on deciding what the Soviet peoples shall hear or not hear; he also insists on determining what is and what should be the real voice of the American people and what shall be their national policies. To Khrushchev a real Voice of America would be the voice of an America dominated by a Communist puppet government controlled and manipulated by Moscow.

Such are the Communist blessings that Khrushchev would extend to the other nations, including the American people. In this spirit, he boldly announced that the grandchildren of present-day Americans will live under what he calls "socialism"—that is, Communist totalitarianism. He expressed the belief that communism would eventually triumph "because it is a younger system, the most healthy system." Mr. Khrushchev forgot that the young system of fascism had to yield to the much older system of democracy.

Actually, the young system of communism is the oldest existing system—namely, slavery. In regard to Khrushchev's claim that communism is the most healthy system, that might be so for the bosses who profit from it—but that is certainly not true for the millions of people who have perished under it or who are now being exploited and oppressed by it.

Khrushchev's grandfather tale was told in order to hide the Communist tyranny of today by talking about the grandchildren who are to live under some so-called benign socialism in the future.

I submit, the Soviet rulers are notoriously poor prophets. Foreseeing the victory of Hitler, the Soviets relied on him and signed the Nazi-Soviet Pact which was the signal for World War II. After World War II, Khrushchev joined other Kremlin leaders in prophesying that the American economy would collapse. In the nearly 40 years of their dictatorship, they have continually, but falsely, predicted and promised better conditions of life and labor for the Soviet people.

These grandfather tales and all their silly prophecies should not fool anyone. And, judging by the way the youth behind the Iron Curtain has been reacting, there is increasing reason to believe that the Soviet parents and their grandchildren will likewise take Khrushchev's bragging with a very big grain of salt.

Khrushchev hastened to assure us that communism in America will be the result of an ideological struggle between capitalism and socialism and not through a war. We were told that Moscow does not want to impose communism on anyone. Clearly, the Soviet dictator has only contempt for our memory. Less than 18 months ago, at the 20th Soviet Communist Congress, Khrushchev himself scornfully rejected the idea that communism could be achieved without a revolution. He then branded the idea of a peaceful transition to socialism as reformism and a betrayal of Leninst doctrine. In the Soviet domain this is treason and punishable by death.

Shrewdly attempting to exploit the abhorrence of war by the American people, Khrushchev posed as a man deeply devoted to the cause of peace. While accusing the United States of planning a war against the U. S. S. R. he made himself the advocate of the people of the world who want peace and want a normal life. But all the world knows that it is aggressionist Soviet imperialism which has prevented mankind from enjoying peace and leading a normal life.

Khrushchev could not hide the ugly truth that the Kremlin is interested in peace only to the extent that it advances Moscow's policies at home and abroad. He stated frankly that, under cover of its peace pro-

gram and propaganda, the Soviet Government seeks the lifting of all Western trade restrictions and the resumption of so-called cultural exchange programs. His plea for cultural exchanges is dishonest. At the conference of the Big Four Foreign Ministers in November, 1955, America, Britain, and France proposed a 17-point program for breaking down the barriers between the people under Communist domination and the free world. Molotov then denounced this program as a blueprint for espionage. Later on President Eisenhower again offered this program to the Kremlin rulers and was once more turned down.

Moscow is interested in trade agreements in order to obtain from the highly industrialized countries badly needed goods. Moscow wants "cultural exchanges" in order to acquire the scientific and technical know-how of the capitalist countries which it despises and seeks to destroy. Khrushchev realizes the vital contributions which the Western World can make and has already made to the upbuilding of the Soviet economic system. Moscow wants the free world—through trade, credits, and availability of its superior technique—to help bail the Communist rulers out of the difficulties into which the follies of Communist economy and intense militarizaton have led them.

Khrushchev's entire cultural-exchange program is completely one sided. America would derive no benefits from such contacts. These would not be contacts with the Russian people but only with individuals handpicked by the Kremlin and its police system. Khrushchev made that perfectly clear when he hedged even in regard to unconditional abolition of the existing travel restrictions for United States diplomats in Russia.

The current Soviet coexistence campaign is particularly designed to serve the expansionist aims of Soviet imperialism. What coexistence means to the present Kremlin rulers was demonstrated with painful clarity last November in Hungary. The Hungarian people and their democratic government offered to live in peace with Russia. They offered friendship to and trade and cultural relations with the Soviet Government, with all neighbors of Hungary and all the nations of the world.

What was the answer of the Kremlin to this Hungarian plea for coexistence? It rushed hundreds of thousands of troops and thousands of tanks and jets into Hungary to crush and kill defenseless men, women, and children. And what was the crime of this brave people? All they sought was national independence and democracy and the right to coexist peacefully alongside of Soviet Russia and other countries.

In recent years Soviet expansion has been blocked through the collective defense system of the West and through American superiority in the thermonuclear field. The primary purpose of Soviet foreign policy is to destroy these safeguards of world peace. This is the motivating force for the so-called positive participation by Moscow in the current London disarmament talks. Khrushchev stressed the advantages of disarmament from his domestic point of view. He even dangled, before an American public yearning for a tax cut, the possibility of reducing the armament burden.

But in repeating the Soviet position for banning atomic and hydrogen weapons and further test explosions, he made sure not to commit himself to a comprehensive system of international control of disarmament measures. He even belittled the proposals for announcing and registering all future nuclear tests. Certainly he knows better than to believe that there can be any guaranty that a disarmament agreement will be carried out unless its enforcement is assured through the establishment of a foolproof system of international inspection and control.

The Communist boss also tried to give the impression that only the Soviet Union had taken constructive measures in the disarmament field. He cited the reduction of Soviet armed forces by 1,800,000, but he refused to cast any light on the well-kept secret, the present military strength of the Red Army. He pretended not to have the exact figures at hand! But, even after this Kremlin-reported decrease of its armed forces, the truth of which no outsider has ever been permitted to check, Soviet Russia still has the strongest military machine in the world. Nor did Khrushchev mention that this was the first decrease reported by the U. S. S. R. since 1945. In contrast, the democratic powers had carried out almost total demobilization after the war. The free world started to rearm only after it was forced to do so in the face of continued Soviet military aggression, especially in the Korean war.

The most sensational part of the Khrushchev interview was his offer to pull back Soviet troops from Eastern Germany and the satellites in exchange for a withdrawal of American armed forces from Europe. In making this proposal, Khrushchev was fully aware of the fact that the American troops in Europe are the backbone of NATO, and that their return to the United States would mean the breakup of the western collective defense system.

When one of his American interviewers argued that this proposal would mean an American withdrawal over a distance of more than 3,000 miles in the face of a Russian pullback of only 2 hours away, he dismissed that argument by resorting to a rather shoddy trick. He compared the distance between New York and Western Europe with the distance between Vladivostok and Eastern Europe. He then concluded that "the distances are about the same." But the decisive point is not what is the farthest but what is the nearest distance between the United States and Western Europe and between Russia and Western Europe.

In spite of the obvious dangers involved, some people in Germany and in the satellites, being very anxious to get rid of Russian military occupation, might have some illusions about the Khrushchev proposal. When the American correspondents drew Khrushchev's attention to the possibility that the withdrawal of Soviet troops from Eastern Europe might mean the end of Communist rule in the satellites, he haughtily denied it. He waxed demagogic to the point of asserting that even the Kadar regime could continue to exist in Hungary without the presence of the Red army. He boldly exclaimed: "Let's have a test."

But Hungary has already furnished just such a test. In October 1956, the Hungarian people revolted not only against Soviet domination but against their own Communist bosses. For this they were crushed by Soviet might. After what happened in Hungary last fall, however, there can no longer be any illusions about the iron determination of the Kremlin to maintain its stranglehold of the captive nations.

Khrushchev's proposal for a mutual troop withdrawal was not made to bring about the liberation of the enslaved people. It was made solely for the purpose of propagandizing and promoting the withdrawal of America's Armed Forces from European soil. Such a withdrawal could only make final the enslavement of the captive peoples. In order to thwart this dangerous Soviet maneuver, the West should demand that Moscow should at least implement the Yalta accord on free elections in the satellites and should accept German reunification in freedom.

In his appearance, Khrushchev used the word "peace" rather freely and loosely. However, he did not speak of freedom in his entire television performance. Yet we know that without freedom there can be no real world peace today. The history of the turbulent postwar period, with its massive Soviet aggression and annexations, confirms the validity of this axiom. That is why the free world must stress and strengthen the link between peace and freedom—especially in view of the renewed hypocritical Soviet peace offensive.

The American people know what communism has done to the Russian people. We know the plight of the captive peoples in Europe and the Chinese mainland. We should never forget what Khrushchev, after he succeeded Stalin, did to the freedom-loving Hungarian people. None of us should have any doubts of what Moscow is up to in its newest campaign for so-called peaceful coexistence.

For the sake of our children and their children who come after us, we should always be fully conscious of the basic objective of communism for complete world domination. And then let us always remember—that this basic objective can only be attained by the complete destruction of our free American way of life.

Subversion of Americanism

EXTENSION OF REMARKS

OF

HON. BOB WILSON

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, June 25, 1957

Mr. WILSON of California. Mr. Speaker, a constituent and friend of mine, Mr. Hoyt E. Ray, has written an article, Subversion of Americanism, which was recently published in the National Republic. He has requested me to insert his article in the RECORD, and I ask unanimous consent that Mr. Ray's article be printed in the Appendix of the RECORD.

The article follows:

SUBVERSION OF AMERICANISM

(By Hoyt E. Ray)

The only nation in the world today which apparently has taken seriously the ideological repudiation of nationalism is the United States of America. Whether or not we like it, we are now practicing the internationalism of the one-world dreamers.

We have given freely of our substance to many other nations, from whom we may expect or will receive nothing in return. Iran, for example, has received $270 millions in United States aid during the last 5 years. Often we have rather suffered the nationalist jealousies of those nations we have attempted to help. And this despite the charity, measured in billions, our people have given to show the civilized world we are humanely concerned with the tragic plight of undeveloped areas.

Nationalism has in some parts of the world become an opprobrious word. National pride, and the self-respect that goes with it has, to many, become somehow a shameful thing. Hitler, Mussolini, and Stalin, by their distortion of nationalism, did much to sour the world on both the word and the connotation.

Nationalism, in historical truth, has been a great builder of the Western World. In the 19th century, the concept came to represent the highest and noblest of human aspirations. It was, in its beginnings, the projection of clan and tribal loyalties to larger spheres that sometimes became nations, then empires.

National pride, ambition, and patriotism compounded, were to a great extent the driving force of the amazing progress of the West during the 19th and 20th centuries, in politics, scholarship, industry, science, and the arts.

Unfortunately, nationalism was also a strong impetus to several less desirable trends of greed and possession, which led in part to the creation of colonial empires, burdensome military establishments and bitter international rivalries.

Yet whatever its faults, the fact remains that nationalism continues to be the strongest single force in the affairs of individual nations. The present enthusiasm for a Federation of Europe, a new alinement of political and economic institutions, has its roots deep in nationalism and is inseparable from patriotism. The real drive behind the search for peace is not internationalism, but a modern manifestation of nationalism, a deep patriotic yearning for order and development.

The marvel that is industry today is mighty, capitalistic America developed in an atmosphere of national independence and pride. Historically, every adult among us was free to fashion his life according to his own plans. He was not forced to live according to the plan of an economic general staff, enforced by the police, the social apparatus of compulsion and coercion. Here the free enterprise system grew to full flower. What here restricts the individual's freedom is not other people's violence or threat of violence, or socialist regimentation, but natural scarcity of the factors of production.

Man's discretion to shape his own future can never, of course, exceed the limits drawn by the laws of nature. Each man's biological make-up restricts the area in which he can go forward or serve. A wide abyss separates those who have the mental capacity to think their own thoughts, from those who do not.

The distinguishing characteristic of modern capitalism is the art of mass production of goods. The result is a tendency toward a continuous improvement in the average standard of living. From keen competition day by day, we have learned the hard fact that high productivity by labor is attained only by the use of better tools and machines. Efficiency is tied close to techniological development.

In the market of a capitalistic society such as developed in this country, the common man is the sovereign consumer whose buying or abstention from buying ultimately determines what shall be produced, and in what quantity and quality.

The masses who in all preceding ages of history formed the herds of slaves, serfs, and beggars, now are our buying public, for whose favor all businessmen strive. They are the customers, who have the final power to make poor suppliers big, and vice versa.

The profit system makes those men prosper who have succeeded in filling the wants of the people in the best possible and cheapest way. In a daily repeated plebiscite, our consumers determine who shall own and run the factories, shops, and farms. The control of the material means of production is a social function, subject to the favor of the sovereign consumers.

Under American capitalism the so-called common man, enjoys amenities which in ages gone by were unknown and therefore inaccessible to anyone. A television set does not necessarily make a man happy, though he may feel happier, but as soon as this urge to buy is satisfied, a new wish springs up.

Too often Americans fail to realize that their country enjoys the highest standard of living in the world, and that the way of life of the average American appears fabulous and out of the reach to the vast majority of people inhabiting all other countries.

Many people belittle what they have and could possibly acquire, and crave those things which they cannot obtain. This craving is precisely the impulse which leads man toward economic betterment. To content oneself with what one has already got or can easily get, and to abstain apathetically from any desire to improve one's own material conditions, is not a virtue. Such an attitude of abject resignation is more like animal behavior than conduct of a reasonable human being. The average American's distinguishing characteristic is that he never ceases striving to advance his well-being.

Man must increase the growth of capital accumulated as against the growth in population. The greater the capital invested per producer, the more and the better goods are offered in the market. What is wrong with many of our international contemporaries is, not that they are passionately longing for a richer supply of various goods, but that they choose ineffective means of attainment of this end. Too many Socialist countries favor policies which are contrary to their own rightly understood vital interests. Collectivists often are too dull to see the inevitable long-run consequences of their conduct. They advocate measures which are bound to result eventually in general impoverishment.

Capitalism, the much abused profit system, has accomplished, in America, an economic growth that is the envy of the world. The free enterprise economy has allowed science to handmade industry and produce a new world, yet certain political groups, of United World bent, today try to destroy this system, the Americans pride in it and will to further it. Why do factions enjoying the living standards that American capitalism bestows upon them, eagerly seek to bring about here the miserable conditions of the present-day Communist or Socialist workers?

Along with the growth of internationalism in our country socialism has eased its way into our Government. This foreign ideology in the last quarter century has gained advocates in various intellectual levels of society, has become a means among certain politicians of gaining favor, and has registered some legislative favor.

A rollback from some of the socialistic new deal legislation of the last quarter century will be difficult for the American people, as witness the annual Federal budget.

Government as conceived by the founding fathers does not contemplate guaranteeing an income to any economic group or segment of society. Welfare cleverly propagandized by advocates of socialism and its alter ego, communism, comprehends the Government tax dollar, or the product of forced labor, distributed to favored groups. That simple fact marks the poles apart, Communism in action and our traditional free enterprise system—a totalitarian government in contrast with our Republic of freemen.

The Kremlin type of pyramided totalitarianism cannot tolerate minority opinion or views, as the recent Hungarian tragedy so vividly illustrates.

For a Communist, nationalism and patriotism are not admissible virtues and, tragically, a true Marxist is a materialist solely, and hence devoid of the spiritual concept of Christianity. He is an internationalist for he strives for a world (Socialist) government.

A fundamental Socialist doctrine is that the real interests of the worker are injured by capitalism, and that socialism will improve their condition. Socialists say they trust experience, but they refuse to recognize the incontestible facts of experience, namely, that man's standard of living in capitalistic United States of America is enviously higher than in the workers paradise of the Soviets, or in any other Communist or Socialist country, and further that here the citizen enjoys freedom in fact and not merely ideologically.

Marx probably has corrupted the thinking of more people than any other writer in modern history.

Ludwig von Mises, a trained economist, says these frustrated Socialists still cannot close their eyes to the American standard of living.

"There exists today a sham anti-Communist front. What these people who call themselves anti-Communist liberals and whom sober men more correctly call anti-anti-Communists are aiming at, is communism without those inherent and necessary features of communism which are still unpalatable to Americans. • • • Whenever they raise some mild objection to communism, they are eager to abuse capitalism in terms borrowed from the objurgatory vocabulary of Marx and Lenin. They emphasize that they abhor capitalism much more passionately than communism, and they justify all the unsavory acts of the Communists by referring to the unspeakable horrors of capitalism.

"In short, they pretend to fight communism by trying to convert people to the ideas of the Communist Manifesto.

"What these self-styled anti-Communist liberals are fighting against is not communism as such, but a Communist system in which they themselves are not at the helm. What they are aiming at is a Socialist, i. e., Communist, system in which they themselves or their most intimate friends hold the reins of government. It would perhaps be too much to say that they are burning with a desire to liquidate other people. They simply do not wish to be liquidated. In a Socialist commonwealth, only the supreme autocrat and his abettors have this assurance."

How long will patriots in America remain silent and intimidated by this agitation? Will they remain silent and permit the internationalist to destroy this great country? America has survived many fronts and movements from religious agitation to the Know Nothing Party, to prohibition, to the Roosevelt New Deal Socialist cult, and her people will again return down the road to patriotic realism.

It now seems obvious from recent history abroad, that a joinder of economic and political power destroys capitalistic nationalism. Freemen, to engage in free enterprise, must have private capitalism.

We will always in Christian charity help the needy and provide a haven for the political refugee. The social cancer of communism and socialism will be recognized for what they are, both by their dupes and freemen alike, and government of freemen, based upon respect for the dignity of the individual, will prevail at last.

The dreamers or disgruntled groups may be misled by the corrupting guile of Marxism, urged upon them by those seeking power for themselves, but upon disillusionment the dreamer will turn again to nationalism wiser, firmer, and even more dedicated.

Is Tito Moscow's Trojan Horse?

EXTENSION OF REMARKS

OF

HON. ALBERT W. CRETELLA

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Friday, June 21, 1957

Mr. CRETELLA. Mr. Speaker, the reputation and high rating of the Georgetown University forum are well known to most Members of Congress. Under the able direction of the Reverend

Francis Heyden, S. J., and Rev. Daniel E. Power, S. J., this forum has consistently performed a solid public service in clarifying the foremost issues of the day.

Recently the forum considered the subject, Is Tito Moscow's Trojan Horse? This question has been troubling many thinking Americans. Indeed, one author, Dr. Slobodan K. Draskovich, entitled his recent work, "Tito, Moscow's Trojan Horse." Dr. Draskovich holds that Tito is Moscow's Trojan horse. If this is true, then, to all intents and purposes, our aid to Tito is really aid for Moscow.

The vital significance of this subject can scarcely be denied. The Georgetown forum saw fit to devote a program to it and has as its participants, Dr. Lev E. Dobriansky, professor of Soviet economics at Georgetown University; Dr. Karl H. Cerny, assistant professor of government, Georgetown University; and Mr. Stephen P. Gibert, instructor in government, of the same institution. Because of its timeliness and importance, I request that the transcript of this program be printed in the RECORD.

The transcript follows:

MR. WARREN. "Is Tito Moscow's Trojan Horse?" is the topic for the 547th consecutive broadcast of the Georgetown University Radio Forum, another in a series of educational and informative programs from Washington. The Georgetown Forum was founded in 1946.

This is Matthew Warren speaking by transcription from the Raymond Reiss studio, on the campus of Georgetown University, historic Jesuit seat of learning in the Nation's Capital.

To open our discussion, Dr. Dobriansky, would you geographically define the domain of Tito?

Dr. DOBRIANSKY. Mr. Warren, the geographical point is a most essential one for this kind of discussion. When one looks at the map of Europe, particularly southern Europe, and into the area called Yugoslavia, one finds a position of considerable strategy from a geographical point of view and reflected, of course, in the political and economic.

Yugoslavia itself, I should like to point out here, is not a nation, as many people misconstrue it to be. Yugoslavia is actually a federation of national units. Thus you have the Serbs, the Croats, the Montenegrins, and numerous others within this federal entity.

Yugoslavia is situated off the Adriatic Sea, which, of course, is close to the Mediterranean. Below it, to the south, you have Albania. Then there is Greece. Then circling it to the east, Bulgaria, Rumania, Above you have Hungary and Austria. These are significant areas. First you can see by virtue of its location on the Adriatic and close to the Mediterranean, Yugoslavia can exert its influence through Tito and Titoism in the Mediterranean area and in the Middle East. By virtue of its position close to Greece, it can exert an influence there, and has done so in the past. Then bordering the satellite countries, Yugoslavia, through Tito, can affect the politics and even the economics of those areas. And through Austria, through Hungary, into Czechoslovakia, farther to the north, and even East Germany and all the way into Poland. So that Titoism as a political force, if one construes it as an expression, as they say, national communism or Communist deviationism, certainly from a geographic point of view is in a focal position to manifest and radiate such an influence. I think that with this geographical item in mind, then one is prepared to investigate this general question which Dr. Cerny is most competent to handle, "Is Tito Moscow's Trojan Horse?"

Dr. CERNY. I would like to add, Dr. Dobriansky, to the points that you have just made that not only is Titoism in an excellent geographical position, but in point of view of the author whom we are discussing today, Titoism is in an excellent ideological position. Indeed, this is his fundamental point, it seems to me, in his book. The impact of Titoism on communism, and then further, the possible impact of Titoism on the ideals, goals, and objectives of the West. In trying to deal with this point, Dr. Draskovich, first of all, made this following conclusion, that Titoism, regardless of what it calls itself, is nevertheless concerned with carrying on Communist objectives. This is true both with respect to the internal policies of Tito and his external policies. Briefly, as far as his internal policies are concerned, Tito has never given up the idea that the monopoly of political power must remain in the hands of the Communist Party. Thus, regardless of all efforts at reform, whether one talks about the lack of bureaucratization in Yugoslavia, or whether one mentions efforts at decentralization, the fundamental thing is that political power remains in the hands of one monopolistic party.

As far as foreign policy is concerned, the author again is at pains to point out that Tito in his policies has pursued fundamental Communist objectives, and that these can be seen in terms of the more specific policies at the present moment.

To give some examples, Tito has consistently refused to join NATO. Indeed, Tito is opposed to the entire concept of bloc politics. He opposes NATO. He opposes SEATO in southeast Asia. He opposes the Baghdad Pact. All three of which the United States Government has been actively supporting. Beyond that, Tito has been of fundamental significance in pursuing a policy of neutralism, with all the impact that this has had in southeast Asia.

In conclusion, then, one of the points that I think warrants some consideration is the essential conclusion of the author, that Titoism, whatever it calls itself, is nevertheless fundamentally in keeping with basic Communist objectives.

Mr. GIBERT. I think, Dr. Cerny, that one question that the author is at pains to discuss very carefully is the problem of national communism, whether or not, in fact, there can be such a thing as national communism or whether communism is by its very nature an international movement which would preclude genuine nationalistic deviations. Hence, the author concludes that Titoism is Communist strategy, designed by Moscow with the aid of Tito to confuse the West, to make it appear that communism is now reverting to its original goals of a genuine international movement, that communism is a discredited movement at the present time and has to be rejuvenated morally by returning to a genuine international ideal. And, hence, Tito serves this purpose of making it appear that communism once again is not simply an instrument of the foreign policy of the Soviet Union, but is an international idea.

Dr. DOBRIANSKY. From what you have said here, it strikes me there are two points that are of importance and should be elaborated upon. You have given the observations of the author on these two points, and I wondered if you could explain it to me, and certainly to the listening audience. The first point is this: Namely, the title of the book, "Tito, Moscow's Trojan Horse?" What is meant by "Trojan horse"? I recall from my classical studies that Trojan horse had some significance and has been used down to the present day.

The second point is on the matter of national communism. But, taking the first, I would like to ask you, Dr. Cerny, what is "Trojan horse" and, after the definition, is Tito truly a Trojan horse?

Dr. CERNY. As to the first part of your question, Dr. Dobriansky, what is a Trojan horse, I would interpret it to mean the following: An instrument, or it could be a person or whatever it may be, an instrument, nevertheless, that seems to be one thing but in fact is another. This is certainly based on the Greek classical meaning of the term, where the horse had been rolled inside the gates of Troy as a present, and it turned out that within the horse were various soldiers who were able by getting out during the night to overcome what had up to that point been an impregnable fortress. If we take that example of the Greek classical meaning and apply it to the problem of Tito, it would seem to me the notion of the Trojan horse would be that Tito seems to be a national Communist, seems to be different from the international Communist movement, whereas, in point of fact he is not. In point of fact, the author is arguing he is a Trojan horse because he is pursuing basically Communist objectives. And thus, as with the famous horse in the Greek clasics, Tito is an excellent instrument of confusion. He comes under one set of auspices, whereas in point his aims and policies are quite different.

Mr. GIBERT. I think, Dr. Cerny, we should make the point clear here that Dr. Draskovich did not say that this was all a gigantic hoax, plot, that Tito from the very beginning was a Moscow instrument. What he says in essence is that in the beginning it was a revolt by Tito against Stalinism. But that since 1953 the rapprochement between the two has revealed that the fundamental aims and goals of Tito and Moscow remain the same, and that from a liability Titoism has become an asset.

Dr. DOBRIANSKY. On these points, there are several questions that come to mind, and I think with very perilous ramifications. One example is this: Is Tito aware that he is a Trojan horse? Or, put it this way: Is he passively willing to serve the role of a Trojan horse? What I have in mind there is, is he in communion with Moscow? They work out a plan. They have a project. Each knows its role. It is all premeditated, and then Tito undertakes the role. Moscow is aware of what he is going to do. They will even quarrel about it for worldwide publicity. Is that the conception of Trojan horse here?

Dr. CERNY. Dr. Dobriansky, as far as the premeditated policy of using Tito as a Trojan horse is concerned, I think that Dr. Gibert has already given a partial answer, namely, that in the initial stages of the break between Tito and Moscow there was no premeditation to use Tito as a Trojan horse. Up to 1953, at least according to the evidence presented by the author, the two centers of government followed largely independent policies. But the author is arguing that by 1953 Moscow was able to see the immense value of Tito. And then during the period of rapprochement the two are beginning to agree on the value of Titoism as a policy in the free West.

Dr. DOBRIANSKY. If I understand you correctly ther,, from 1953 right down to the present time, Tito is in close union with Khrushchev in terms of implementation of policy. Khrushchev is always aware of what Titio is going to do. He was aware of what Tito was going to do during the Hungarian revolution. And despite the play, the comedy that you had in the U. N. and elsehere, Yugoslavia presumably opposing Moscow; is that correct?

Dr. CERNY. I think we have make a distinction, Dr. Dobriansky. As far as the author's point of view is concerned, the author does

suggest since 1953 Tito and Moscow have been constantly in connection with one another and do know what they have been doing.

In an epilog to his book, the author suggests that both the Hungarian and Polish resolutions were not at all that much of a surprise to Moscow. He suggests again that this was in many ways a connection in policy between Tito and Moscow. That is the author's point of view. In my own way of looking at the problem, I am not at all sure that the author has given us a completely satisfactory explanation for the events of Hungary and Poland.

At this point I would raise the question whether Moscow did know what Tito was going to do, that Tito knew what Moscow was going to do. As far as the author is concerned, he does imply that is a fact.

Dr. DOBRIANSKY. I, myself, question seriously the characterization of Tito as a Trojan horse. I will go along, to be sure, with the observation that you have made, the author makes, namely, that Tito is part and parcel of the entire Communist enterprise. But that raises another question which I would like to direct to Professor Gibert. I know, Dr. Gibert, you are an expert in American foreign policy. And on this score, if it is true, if it can be shown that Tito is truly a Trojan horse, then it would seem to me that all the aid that we have been giving to Yugoslavia, and notably the jetplanes that we contemplate sending there in the next few weeks, is really a contribution to not only Yugoslavia in its presumed animosity or disunion with Moscow, but on the contrary, to the very solidity, the strength, the power, of the entire Communist empire. Would that be a correct observation?

Mr. GIBERT. I think so, Dr. Dobriansky. I think the problem here is whether or not American policy should be willing to aid a commonwealth of communism, if in fact communism now is an empire which has many centers of power and no longer simply an empire directed solely and exclusively by Moscow. I think the American point of view should be: Is this an advantage or, with the previous situation, perhaps limited aid with conditions attached would be acceptable. If in fact, however, we regard, as Dr. Draskovich does, a possible commonwealth of communism as a more dangerous force, because it captures more of the moral idealism of communism, then perhaps no aid at all should be our answer to this problem. I think as far as conditional aid is concerned, this is not an American alternative. Tito has said repeatedly, as late again as last fall, that he will not accept aid under conditions, that it will be aid without strings or no aid at all.

Dr. CERNY. Mr. Gibert, if I might pose a question here. As you understand our present policy toward Yugoslavia, is the assumption on which it is based the assumption that we are dealing here with a commonwealth of Communist countries, or is it based on the assumption that the break of Tito with Moscow was of great advantage for United States' foreign policy?

To make clear the point of the question, which may not be too obvious, it seems to me if we look at the break with Moscow as such to be of advantage to the United States, we may be overlooking the fact that the differences between the Communist states, although real, are nevertheless differences among professed Communists who never have any intention of breaking with their Communist ideology.

Mr. GIBERT. Yes; I think that is a good point. It seems to me that what we are doing, attempting to do here, is to find out if there are any advantages to American aid to Tito without fundamentally examining the problem of whether or not this is a genuine deviation from Moscow's control or or whether, in fact, it simply represents a new stage in the Communist world revolution.

It seems to me that we are hoping that there will be certain specific advantages to aiding Tito. We recall in 1949 Tito closed the border between Yugoslavia and Greece, and thus aided the American project of defeating Greek communism. I think we have in mind that there may arise other occasions by which using American aid as a bargaining point we may get Tito to perform similar services to the American cause.

Dr. DOBRIANSKY. If I may, gentlemen, there is another question I alluded to, and that is the question of national communism. Professor Gibert brought that out. I think this is fundamental in relation not only to our aid to Tito but also to Gomulka, possibly later on to Peiping, and other subordinate centers of the Communist enterprise.

As you know, I have held to the theory for the past 7 months or so that there is the potentiality within the Communist empire for the emanation, formation of a commonwealth of Communist nations. This isn't strictly Titoism, but I am not going to go into that issue at the moment, but I would like to interrelate all of this. We are contemplating about $100 million worth of economic aid to Communist Poland. The assumption there is similar to the one that has guided our policy with regard to Tito, simply if we can have these subordinate centers assert more independence of Moscow, then perhaps certain rivalries might be cultivated and perhaps in time the entire empire would be weakened and finally collapse without a third world war, without any devastating incident that might cause a war. This will be in the area of evolution. So our economic aid to these particular subordinate centers would be a contribution to peace in the last analysis. That is the assumption, as I understand it.

Now the fact is that within the Soviet Union itself you have Moscow attempting, for example, in the current period to achieve an economic decentralization. There are nations within the Soviet Union, Byelorussia, Ukraine, Georgia, Armenia, and this present program seems to indicate that Moscow wishes to distribute power in other areas. Take just the Soviet Union. And perhaps it will allow for a distribution of power to Warsaw, to Belgrade. In a few words, then, perhaps Moscow in time will be amenable to having the subordinate or puppet regimes, the Gomulkas, the Titos, the Maos, and others, assume seats of directorship on the general board of directors of the world Communist enterprise. There hasn't been any indication of that as yet. The Hungarian revolution, I think, the main and highly creditable aspect of it, once and for all it has shown the issue perhaps is more the powerful issue of Russianism as against communism. By that I mean communism as an ideology was shown to be clearly bankrupt. It couldn't even hold the youth of Hungary. You might find that in Poland and elsewhere. And yet the slogans that you had in the Hungarian revolution were along the line, "Ruskie, go home." Now, if Moscow should in time retreat and give way, be more liberal toward Tito, toward Gomulka, give them more power in policymaking, in decisionmaking, do you feel then the Communist commonwealth would come into being and perhaps Dr. Draskovich's thesis would be correct?

Dr. CERNY. I would say yes, I think the Communist commonwealth of nations might come into being. But I would immediately pose another issue here which, I think, warrants some serious consideration: We in the West would have a tendency by hearing the word "commonwealth" to assume that this is a hopeful development. Again, when we hear the word "decentralization" we think this is a hopeful development. But I think the fundamental question to constantly keep in mind is it is always decentralization within an admittedly, indeed, professedly Communist environment.

So let us even assume that the various members of the Communist empire do achieve a greater degree of freedom. This might mean something with respect to intra-Communist relationships, that is, relationships among Communist nations. But would it necessarily mean that the policy of the Communist countries vis-a-vis the free West would alter in any meaningful sense of the term. By meaningful here I mean to the advantage, let us say, to American strategic and foreign-policy interests.

Mr. GIBERT. It would seem to me, Dr. Cerny, that indeed it is highly possible that a development of the commonwealth of communism might be in fact the most dangerous aspect of the Communist movement, that it might, in fact, then recapture some of the idealism of the early days, and that it might not be bankrupt among the youth of Eastern Europe. It also seems to me that we face the problem here of whether or not we want to help stabilize and perpetuate a regime, such as the Tito regime, without regard to its external policy as such. Do we in fact wish to support a Communist regime with all that this implies, the one-party state, complete socialization of industry, collectivization of agriculture, the use of the secret police, even though this might help decentralize the Communist empire? Or are we in fact opposed to communism even if it takes a turn of national deviationism from Moscow itself?

Dr. DOBRIANSKY. You have raised a number of issues there. In my own mind I feel there is a ground of validity for the assumption held by our Government, namely, that certainly the interests of the peace in the world is more important than the maintenance of a tyrannical form of government in Yugoslavia or elsewhere. I mean, it is not an issue of black and white. It is one of shades of gray. And in this case, if it is true that Tito is Moscow's Trojan horse and we continue giving aid, well then, it follows necessarily that we are contributing to the Communist enterprise. On the other hand, as I believe this to be correct, if Tito is not entirely a Trojan horse, that he is, as indeed I believe him to be, an opportunist, a very skillful individual, trained in Moscow, knows Russian methods, techniques, that have always characterized Russian diplomacy, and is a very affable person, makes his way into Asia, into the Middle East, talks with Nasser, in other words, has a finger in each of these areas, I believe then that Tito feels that he should be given a position of equality. Of course, that is not justified by the military and economic power of Yugoslavia. No more so than Gomulka's position is in Poland. You have to recognize the center, economically, politically, must of necessity continue to be Moscow. The question is, will Khrushchev, Bulganin, and others allow, make allowances for these individuals to attain to such equality. That is a gamble. I believe that in this case we could have at least an area to exploit for the benefit of our own American foreign policy.

Mr. WARREN. Thank you, gentlemen, for your discussion of the question, "Is Tito Moscow's Trojan horse?"; Dr. Lev. E. Dobriansky, professor of economics, Georgetown University; Dr. Karl H. Cerney, assistant professor of government, Georgetown University; Mr. Stephen P. Gibert, instructor in government, Georgetown University.

Humane Slaughter

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DORN of South Carolina. Mr. Speaker, it seems to me that there is a good deal of misinformation being bandied about on the subject of humane slaughter. If you will permit me, I should like to convey a few facts on the issue.

As you may know, on March 11 I introduced a bill, H. R. 5820, dealing with slaughter. The bill is designed to promote the development and use of improved methods for the humane handling, transporting, and slaughtering of livestock and poultry in interstate and foreign commerce. It authorizes the Secretary of Agriculture to conduct, assist, and foster research, investigation, and experimentation to develop and encourage the adoption of improved techniques for the humane handling of food animals. The bill authorizes the Secretary to appoint an advisory committee composed of nine members who would make recommendations to him. The Secretary, in turn, would report to the Congress annually commencing January 1, 1959, concerning his activities in connection with the legislation.

The final framing of H. R. 5820 was the result of the experience and work of many experts in the field. In the opinion of growers of livestock, processors of meat, and many people in allied businesses, my bill is considered a practical approach to the solution, if there is one. I have heard many idealistic, and unworkable, proposals advanced to deal with more humane slaughter.

I can assure you, being a small producer myself, that I am searching eagerly to find the most humane and practical way in which to slaughter animals for the market. My discussions with people in the meat industry indicate they are equally eager, not only for humane reasons, but for economical reasons.

I have personal knowledge that the meatpacking business has been striving for many, many years to develop their slaughtering processes along the lines of more efficiency, because the most efficient method naturally will be the most humane method. I am told that processors are perfectly willing to change their already improved methods if they are shown a good reason why they should be changed. One must keep in mind the fact that wholesale changes in techniques of slaughter would necessitate substantial employment readjustments, new construction, and new machinery. It is possible that hasty, mandatory legislation might even result in more inhumane treatment of animals. I say advisedly that, up to date, all of the methods, no matter how promising, have fallen short of the answer and require more test by trial and error.

I believe that my bill, if passed, most certainly will establish a public policy on more humane slaughter. In addition, it will make it possible for competent experts in the Government, the meat industry, and in the humane societies, to develop their ideas to the fullest. I am confident the result will be a vast improvement in the transportation, handling, and slaughtering of food animals.

The Supreme Court

SPEECH
OF
HON. CRAIG HOSMER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, June 13, 1957

Mr. HOSMER. Mr. Speaker, an increasing number of recent Supreme Court decisions have created turmoil in the lower courts, amongst the States, and within the legislative and executive branches of Government.

These decisions include: Limiting congressional power to ferret out subversion, racketeering, and crime; opening FBI files to criminal case defendants; emasculating State antisubversion laws; restrictions on firing security risks; making it lawful to advocate overthrow of the Government.

This freewheeling disregard of precedents and procedures, developed during the almost 1¾ centuries of the Nation's history, has aroused a storm of protest mail to Congress and the White House. Legislation is being written to overcome the effects of some of these decisions and constitutional amendments offered to overcome others.

Proposals to limit the Supreme Court's decisionmaking power in the future also have been made. One means would be legislative implementation of certain obscure constitutional provisions permitting Congress to limit what cases the Court can hear. Another is that Congress refuse to appropriate money for the Court to operate, or to have its judges elected. One wag has even suggested a 10th member to be added to the Court—a psychiatrist for the other 9.

But before radical measures are adopted to spike radical opinions, perhaps more moderate remedies should be tested. Complete independence of the judiciary is one-third the keystone of our constitutional separation of powers between legislative, executive, and judicial branches of Government. This division of authority has protected the freedoms of each generation of Americans and fostered the tremendous growth of our country.

It has worked best when the Supreme Court has not regarded its complete independence as a license to invade the constitutional prerogatives of the executive and legislative branches, but exercised a strict responsibility to stick to its own business. That business is using past decisions and precedents to determine what the law is, what the Constitution says, and applying it to the facts before it.

Storms of public protest have arisen whenever the Court has not stuck to business: that is, when its decisions say the law is something different than the meaning of the language in which it is written, or that provisions of the Constitution mean something other than what they generally have been conceded to mean.

When the Court does that, its majority is made up of men who conceive their duty to be not primarily judicial, but in the fields of social science, economies, human relations, and a host of other places. They simply do not understand the Constitution which says these fields are the provinces of the executive and legislative branch, not the Court.

Thus the answer lies in carefully determining what a man thinks about the Constitution and the duties of the Court before appointing him to it for a lifetime. That means the President, who appoints him, and the Senators, who confirm him, must only permit a man to occupy the bench who convincingly demonstrates his fundamental understanding of the Constitution and an unswerving concept of the true nature of a judge's duty.

If this caution is heeded, deaths and retirements will soon remand the Supreme Court to such hands.

We're Proud of Petrak

EXTENSION OF REMARKS
OF
HON. ALBERT P. MORANO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. MORANO. Mr. Speaker, under leave to extend my remarks I wish to include a newspaper review of a performance of Aida which was given at the Carter Barron Amphitheater last evening. The review by music critic Constance Mellon, appeared in the Washington Evening Star of today's date.

I had the good fortune to attend the performance of ,Aida along with our senior Senator PRESCOTT BUSH and a group of Connecticut people, all of whom rapturously listened to the excellent performance of an extremely talented cast in a beautiful sylvan setting.

A record crowd of nearly 5,000 attended the performance, but I am sure that none were more pleased than the Connecticut contingent which thrilled at the beautiful tenor voice and subdued dramatics of Rudolph Petrak in the role of Rhadames.

Mr. Petrak, a native of Czechoslovakia, now a resident of Greenwich, Conn., sang with verve and inspiration, for he was fulfilling his life's dream—singing to an audience in the Capital of the United States.

I have become acquainted with many artists who have emigrated to America, but I know of no one more possessed of a deep love for his adopted country than Rudolph Petrak.

I think the happiest day of his life was the day he became an American citizen. His favorite song in his large repertoire

is, appropriately enough, God Bless America.

Mr. Petrak is comparatively new in American opera, but it is apparent that within him are the qualities of greatness which should, in time, elevate him to the heights of the great tenors of all time.

We are proud of Mr. Petrak, and we are very pleased that we were able to attend his Washington debut. We are only sorry it could not have been on the Capitol steps.

The review follows:

STIRRING PERFORMANCE GIVEN VERDI'S AIDA

(By Constance Mellen)

Long Island Opera Co. presents Aida by Giuseppe Verdi. At Carter Barron Amphitheater.

THE CAST

Aida	Herva Nelli
The King of Egypt	Roy Urhausen
Amneris	Regina Resnik
Rhadames	Rudolf Petrak
Amonasro	Cesare Bardelli
Ramfis	Louis Sgarro
A Messenger	Adrien La Chance
A Priestess	Maria Candida
Premiere Danseuse	Lydia Arlova
Premier Danseur	Lucien Prideaux
Conductor	Anton Rocco Guadagno
Stage director	Fausto Bozza

A stirring performance of Verdi's Aida at the Carter Barron Amphitheater last night brought the banks of the Nile closer to Rock Creek Park than anyone would have imagined possible.

The temperature was right for summertime in Egypt, and the capacity audience had every reason to enjoy a colorful spectacle, which contained a great deal of good singing.

Herva Nelli, as Aida, showed her voice to best effect in the less strenuous moments of her role. Despite the white quality of her upper register, the Numi Pieta of the first act was very moving and conveyed the poignancy that other passages lacked.

Rudolf Petrak, completely recovered from his hoarseness of Saturday, sang Radames with vocal gusto, and a rich and appealing tone quality. He avoided any histrionic pitfalls. Radames is a pasteboard figure who ironically comes to life only as he is about to die, and Petrak, with Madame Nelli, did full justice to the duet in the tomb.

To some, the most appealing figure in Aida is the imperious Ethiopian, Amonasro, and the music of the third act, where he and his luckless daughter meet, the most consistently beautiful in the whole score. Cesare Bardelli made an excellent showing in the part, although his voice had some edginess.

Again Louis Sgarro demonstrated the splendid quality of his voice in the part of Ramfis—much too brief a part, for he is a fine singer. But it was Regina Resnik, in the role of Amneris, who dominated the performance. Miss Resnik's powerful tone and the dark bloom of her voice, shared the spotlight with her vital dramatic sense. A fine actress, she surpassed the rest of the singers in the projection of her part and thus, rightly or wrongly, she made Amneris the central figure of the opera.

The chorus of the Long Island Opera Co. has excited comment from the first. Though its members are heterogeneous in size, shape, and vocal ability, they are united in a kind of professionalism one seldom sees any more.

Anton Guadagno, who conducted, not only had the feeling for Verdi's idiom at his fingertips, but he was able to gather up the threads of this complex work with complete authority; no small task when the performance is out of doors.

The amplification system at Carter Barron is not the equal of the lovely natural setting. The microphones on stage distort the voice when a singer comes too close on a high or loud note, and there are other imperfections in the blending of vocal and orchestra sound.

Our Opportunity To Strengthen Polish Independence

EXTENSION OF REMARKS
OF
HON. EDWARD A. GARMATZ
OF MARYLAND
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. GARMATZ. Mr. Speaker, each year on May 3, we are given an opportunity to speak on the floor on the anniversary of the enactment of the Polish constitution, a constitution patterned after our own, and the first of its kind to be adopted by a European country. In commemorating this anniversary, we cannot do much more than sympathize with the Polish people at the loss of their freedom, and to let them know that they have our strong moral support.

Now, however, we have an opportunity to prove that we are willing and eager to help them. Approval by Congress of the Agricultural Trade Development and Assistance Act will enable our Government to fulfill the agreement recently made to provide $95 million worth of economic assistance. This would include wheat, cotton, soy beans, fats and oils, and mining machinery, some of the greatest needs of Poland at the present time.

But this help does not come to them in the form of a gift. It includes a pledge to lend $30 million at 4½ percent through the Export-Import Bank for purchases in the United States, and $65 million worth of surplus cotton, fats, oils, and wheat through the Commodity Credit Corporation, for Polish zlotys.

There has been some objection to this assistance on the grounds that we are helping a Communist government and thus relieving Russia of her responsibility to her satellites. That is true as far as it goes, but it does not cover the entire situation by any means.

In the hearts of the Polish people the desire and struggle for freedom burns fiercely, and we have seen from the uprisings in Poland since their enslavement by the Russians, and more recently by the Poznan uprising last June and the events last October, that this thirst for freedom has not been quenched.

The uprisings are remarkable because it was the workers who were responsible for the rebellions, thus giving the lie to the Communist statements that the Communist-governed countries are the workers' paradise. Their demands for food, freedom and the withdrawal of the Soviet Army from Poland, show that their subjection to Communist rule is not a voluntary one, and is not being borne meekly and with indifference. Her demands for freedom prove that she does not desire to be a part of the Soviet bloc, but a free and independent nation.

We need have no fear that the people will believe that the economic assistance mentioned above is coming from or through the generosity of Russia. They know only too well that it has been the Communist mismanagement that has made Poland, at one time one of Europe's graneries, unable to feed her own people. They know that representatives of Gomulka's government have been in the United States negotiating for assistance, and they are hoping for cooperation by the United States Government in the form of generous assistance.

In turning to the West for help, instead of to Russia, the Polish people are taking a far greater risk than we are in granting them this assistance. They know they are facing possible Russian reprisals, but they are willing to take this calculated risk. In doing so, they prove that they want to return to the western family of nations, where they rightfully belong.

I consider it a privilege to vote for this bill and was gratified when it was approved by the House. I sincerely hope that the Senate also will approve it, as I consider this the first opportunity we have had to prove our friendship for the Polish people since their Russian enslavement; and to back up our many expressions of sympathy and moral support with real economic assistance.

Eisenhower and the Press

EXTENSION OF REMARKS
OF
HON. J. FLOYD BREEDING
OF KANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. BREEDING. Mr. Speaker, under leave to extend my remarks in the RECORD, I would like to include an article by John McCormally which appeared in the Hutchinson News of June 14, 1957. An energetic free press is the lifeblood of any country, and we have always prided ourselves on having such a press in these United States. I believe that this article clearly points out how the press of our great country can easily slip into dangerous lethargy and because of this how the reader's right to know can seriously suffer:

When the history of the Eisenhower era is written, one of its weirdest chapters will concern Eisenhower and the press.

During the Roosevelt and Truman administrations, the majority of the press was antagonistic to the man in the White House. Its reporters reported fairly and accurately on Truman and Roosevelt while, editorially, the press was ever alert to the foibles and mistakes of the President.

That arrangement was good for the press. Certainly any effort by the administration to restrain or weaken the press was met by such an editorial barrage that the effort was quickly abandoned.

Roosevelt nor Truman could have had no real objection to the arrangement. Certainly the press, to the chagrin of many of its members, never succeeded in defeating either in an election.

But now, things are different. The reporters still report fairly and accurately and for that reason I don't subscribe to the argument about a one-party press. But the editors, far from sharpening their editorial

shears explain away his blunders, excuse his golfing, minimize his bellyaches, and laud his good works.

None of which, I submit, is done primarily because the editors are all Republicans. Such an argument is beside the point because there are a lot of Republicans who don't think Ike is a Republican. No; the editors just recognize in Ike, as in dogs, children, mothers, Marilyn Monroe, apple pie, and Fourth of July, something that everyone likes and therefore it's a good thing to be for.

For whatever reason, we have this happy love affair between the man in the White House and the man at the editorial typewriter. As a result, this should be the heyday of the press.

SERIOUS ATTACK

But, instead, the press in this country is faced with the most serious official attack from Government since the trial of Peter Zenger.

Having captured the press' affection, the Eisenhower administration has adopted a superior, father-knows-best attitude which is a grave danger, not only for publishers, but for every newspaper reader, radio listener, and television watcher in the land.

Two items will suffice to make the point. The Government won't let American reporters cover China. This is the first time in history, in peacetime, such a restriction has been placed on our supposedly free press.

And to support this position, John Foster Dulles has advanced an entirely new concept of the responsibility of the free press in America. He argues that the press has an obligation to conduct itself in such a way as to support Government policy, even though they think the policy wrong.

Can you imagine newspapers swallowing such a policy during the Roosevelt administrations? A lot of them are swallowing it today.

Further, Dulles has submitted that freedom of the press, as guaranteed in the Constitution, is a guarantee only of freedom to publish and not a license for free gathering of the news. Such a theory flies in the face of all efforts by newspapers to guarantee their readers a right to know.

Latest example of the way the Eisenhower-press honeymoon has degenerated into simple seduction, is Ike's remarks about the CBS television interview with Russia's Khrushchev.

"It was a matter," said the President, "of a commercial firm trying to improve its own commercial standing."

"His attitude," wrote Scotty Reston, of the New York Times, "was that it was an annoying stunt by a commercial company. He did not see it as a typical and dramatic exercise of the free-enterprise system that provided him with an opportunity for counterpropaganda with the Soviet people."

Every wife knows that having been wooed and won, she risks being treated like an old shoe by a man who takes her for granted. This administration takes the press for granted. The press is suffering as a result.

James Edward King

EXTENSION OF REMARKS
OF
HON. WALTER ROGERS
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. ROGERS. Mr. Speaker, it is my sad duty to advise this body of the passing of a great man and my dear friend. It is my firm conviction that the greatness of our country lies in the devotion to service of the community leaders throughout the land. I have always contended there are no finer examples of unselfish public service than can be found in the small communities all over our country, when men develop their fullest capacities in discharge of duty to their neighbors with no thought of reward except their own satisfaction.

Such a man was James Edward (Jim) King, of Memphis, Tex., an eternal servant to everyone with whom he came in contact. His list of accomplishments would fill the page. Suffice it to say that he gave fully of himself in Hall County for 65 years as teacher, sheriff, businessman, and friend. There are countless monuments to his life in almost every facet of the community and area where he lived and served. His presence will be sorely missed, but his influence will be felt and realized in the Texas Panhandle for generations to come.

The House Chooses Black Pottage

EXTENSION OF REMARKS
OF
HON. ROBERT T. ASHMORE
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. ASHMORE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial entitled "The House Chooses Black Pottage," published in the Greenville (S. C.) News of June 19, 1957:

THE HOUSE CHOOSES BLACK POTTAGE

From the beginning of the current Congress there has been only thin hope that the so-called civil rights bill could be stifled in the lower House. About all the southern Representatives and a small coterie of independent followers from other section could expect to accomplish was to delay the bill reaching the Senate. They have spun the time wheel past mid-June, with 90 degree weather in the capital and vacation on many minds.

Although final action came yesterday, the supreme test came a day earlier on the amendment to provide jury trials in contempt cases. That was the heart of the bill. Aside from the race question, how many Members from outside the South would vote to preserve one of the basic rights of our citizens: the right to trial by jury? There were some, but not enough. The amendment was supported by 167 Members, including Representatives from Michigan, Illinois, Iowa, Ohio, and New York, but they were out voted by the 199 who would swallow anything to keep their record black enough to woo the Negro vote. When the final vote came, those 199 were joined by 87 others (many of whom voted for the jury amendment) to pass the bill by 286 to 126.

One may prophesy that in explaining why they voted for the jury amendment (called crippling by ADAM POWELL and the NAACP) these Representatives when they appear on the stump next fall will answer hecklers: "Yes; but we voted for the original bill on the final rollcall."

It is sickening to reflect what would have been the result of this legislation if (1) the Negro did not hold the balance of political power in many large northern and western States; and (2) the merits of the bill, and only the merits of the bill, were up for consideration. Some of those who were most adamant in supporting the bill would have been screaming that a devious effort was underway to give to Federal judges the right to put people in jail for reasons considered sufficient to themselves, or, indeed for no reasons at all.

But the political overcast put justice and reason to rout. It is as clear as the June sun that both parties have been jockeyed into a position of selling their patriotic birthright for a political mess of black pottage. Roosevelt won them away from a long lineage in 1932, turned them over to Truman in 1948. Eisenhower got some of them back in 1952 and a lot more of them (though not a majority) in 1956. The Democrats want them back in 1958 and the Republicans hope to hold what they have and gain many more.

All this "I'm doing more for you than the other fellow" is an appeal to less than 10 percent of the American voters. As for the South, the Yankee hucksters reason that it has nowhere to go and will therefore stick with the party that gives its Congressmen chairmanships and seniority.

We shall now see what happens in the Senate, the last citadel of southern defense, since the Supreme Court and the White House have joined hands to mow us down. If the rule is changed so that 64 Senators do not have to vote to invoke cloture then the last resort will be gone. And that could happen. We have faced the issue before, several times, but due to the skill of Senator RUSSELL and other southern Senators have kept Federal marshals away from our doors. Our prayers are for them once more.

Pastepot Paradise

EXTENSION OF REMARKS
OF
HON. ROBERT HALE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. HALE. Mr. Speaker, we seem to have a waiting game now in progress in Congress on legislation to control billboards on our Interstate Highway System.

The House Public Works Committee is awaiting action in the other body. I frankly do not know the cause of the delay there. However, I do know that the billboards will not wait on anyone including the Congress of the United States.

As soon as the concrete for our interstate highways goes down, the billboards will go up. Once up, they will never come down. Therefore, unless legislation is passed this session, the public will have to reconcile itself to the prospect of 41,000 miles of highways fenced in by unsightly outdoor advertising.

I should like to point out that the Public Roads Subcommittee in the other body approved an antibillboard measure on May 24, exactly 1 month ago today. But the Public Works Committee has neither taken nor scheduled any action thereon.

And yet, the bill has been so watered down it certainly would not be 100 percent effective. It merely provides that States agreeing to control outdoor advertising would get an additional three-

quarters of 1 percent in Federal highway funds.

Personally, I favor the provisions of my bill, introduced last January, which would withhold funds from those States which failed to ban billboards on the interstate roads. I feel that this would be the only effective method of controlling this menace. However, I would be quite willing to accept a weak measure, rather than none at all.

As it looks now, the outdoor advertising interests will emerge victorious in their battle to prevent passage of any legislation whatsoever. Although these interests are small in number, they can exert a powerful influence. I learned this from experience while working for billboard control 30 years ago in the Maine Legislature.

Congress should be allowed to express its will on this legislation, which I believe has the support of an overwhelming majority of the people. I sincerely hope it will be given that opportunity before it is too late.

I call attention to an editorial appearing in the Washington Post of June 23, which I append to these remarks:

PASTEPOT PARADISE

It is becoming painfully obvious that the billboard lobby may win its battle by default. A moderate bill to limit roadside eyesores on the new 41,000-mile Federal highway system is currently bottled up in the Senate Public Works Committee and may never emerge for a vote. The bill provides that States agreeing to place some controls on billboards would get an additional three-quarters of 1 percent in Federal highway funds; participation would be optional. Clearly the voters have a right to know which Senators approve this sensible bill, and which Senators are indifferent to opening the highways to an endless ribbon of honkey-tonk and hucksterism. If the committee fails to report out a billboard bill, it will be interpreted, rightly or wrongly, as a shameful surrender to a lobby with a vested interest in glutting the roadway with toothpaste and hair oil signs.

Economy, Congress Style

EXTENSION OF REMARKS
OF
HON. JOHN E. HENDERSON
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. HENDERSON. Mr. Speaker, if the Congress practices economy in the management of its own affairs, its example might have a significant effect upon the various Federal agencies which we expect to operate more efficiently and with less cost to the taxpayers. On June 21, the Marietta Daily Times, of Marietta, Ohio, published a thoughtful editorial criticizing Economy, Congress Style. This editorial comment is justified, in my opinion. The simple axiom of practicing what we preach certainly applies here.

I also want to direct the attention of the House of Representatives to the compliment which this newspaper pays to my friend and colleague from Ohio, Congressman J. HARRY MCGREGOR, for his contribution to the debate on new office facilities on both sides of Capitol Hill. The editorial is as follows:

ECONOMY, CONGRESS STYLE

Americans in general might feel more sympathy for the economy block in Congress, which to date, for all its shouting and protesting, has little more than dented the record appropriation bill, if they didn't learn occasionally how the legislators spend for themselves. Some of the shocking recklessness with which they raid the Treasury in providing for their own offices, furnishings and services came to light recently in discussion of the measure.

"A lot of things were dragged into the open in that discussion," says George Rothwell Brown, in an article published in the New York Journal-American, "that the people never even suspected before." He gives credit for baring the facts to Representative HARRY MCGREGOR, an Ohio Member of the House. Continuing he writes:

"But for Representative MCGREGOR, of Ohio, ranking Republican member of the Public Works Committee, we taxpayers might never have known that some of the chairs of the new multi-million-dollar Senate Office Building are going to cost $600 each, and that one of the doors on this wholly unnecessary added office space for Senators—with swimming pool and gyms complete—is going to nick Secretary Humphrey to the tune of $8,000.

"It was Mr. MCGREGOR who reminded the House that for years his committee had turned down a recommendation for a third House Office Building. Finally, in the 80th Congress, Congress authorized an appropriation of $25,000 for planning and surevy only.

" 'That $25,000 planning and survey project,' said MCGREGOR, 'has grown like Topsy, until now it is over $20 million, without any further authorization of the appropriate authorizing committee of Congress. I am telling you that something needs investigating.'

"It certainly does. That $20 million is only part of the story. The total cost of this third and wholly unnecessary House Office Building is going to be from $64 million to $100 million before this grandiose Treasury raid is finished."

States Could Follow Congress in Passing Rights Legislation

EXTENSION OF REMARKS
OF
HON. W. J. BRYAN DORN
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DORN of South Carolina. Mr. Speaker, if the Eisenhower civil rights bill, which passed the House, passes the Senate and becomes law, it will create much discord in our country at a time when unity is needed most. The splendid relationship between local, State, and Federal law-enforcement agencies will be jeopardized. Sheriffs and State law-enforcement agencies who are close to the people will not cooperate with representatives from the Attorney General's office in the persecution of our citizens. Local officials will not be a party to destroying the right of trial by jury. The discord created by this bill will flow over into other fields and there will not be as much cooperation from local officials with Federal agencies in apprehending crimes in all categories and this will be disastrous at a time when crime is on the increase.

Mr. Speaker, I am happy to call to the attention of the House the following splendid article by my friend, W. D. Workman, which appeared in the Greenville, S. C., News:

STATES COULD FOLLOW CONGRESS IN PASSING RIGHTS LEGISLATION

(By W. D. Workman, Jr.)

COLUMBIA, June 15.—Southern States should give serious thought to the possibility of taking a page from the congressional integrationists' book and enacting statutes on States rights modeled after those proposed on civil rights.

If the Federal Government can dispense with the right of jury trial for persons charged with Federal offenses, then State governments can likewise dispense with jury trials for persons charged with violation of certain State laws.

For example, any given Southern State might logically use H. R. 6127 (the civil-rights bill most actively pushed in Congress these days) as a guide for the enactment of legislation aimed at protecting the rights of the State.

There could be established within the particular State a Commission on States Rights, charged with determining whether additional legislation is needed on the subject.

This Commission could concern itself particularly with the matter of public-school education as a function of the State, and could conduct hearings and subpena witnesses in instances where there existed any threat to the educational system of the State.

To implement such investigations, and to conduct prosecutions where necessary, there could be established in the State attorney general's office a special assistant attorney general for States rights, with specially trained personnel. Whenever and wherever it would be determined that persons were conspiring against the State's public-school system, or were about to conspire against it, this special legal section could step into the picture with civil action against the suspects.

Borrowing still from H. R. 6127, legal arrangements could be made through the State courts to cite such persons for contempt without the necessity of resorting to trial by jury. Since it is argued in Congress that there should be no trial afforded persons who run afoul of a Federal court order, then the same logic should carry over for persons who run afoul of a State court order.

To get down to brass tacks, suppose an agitator of the National Association for the Advancement of Colored People seeks to initiate a lawsuit against a properly constituted school district or its officials who are conducting school business in conformity with State law. Or suppose some Negro parent presents his children for enrollment at a school other than that assigned by the proper school officials. Or suppose, on the other side of the coin, that some white submissionist presents his children for admission at a Negro school to which they have not been assigned.

These things might well be found to be in violation of the State's right to operate the public-school system according to legally adopted rules and regulations. Whereupon the violators, or those suspected of intending to violate such regulations, could be hauled before a State court, cited for contempt, and promptly sentenced.

If this seems harsh and oppressive, as perhaps it would be, then the State need only refer complaints to the Eisenhower administration and to Congress, saying, "They showed us the way."

Legislators of the Southern States might file that idea away in their heads for possible

future reference, just in case Congress decides to go all the way with its so-called civil-rights crusade. What is sauce for the goose is sauce for the gander.

Pan American's 705 Data Processing Center in Action

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. WILSON of California. Mr. Speaker, on April 24, 1957, Mr. John S. Woodbridge, comptroller, Pan American World Airways, Inc., delivered an address to the seventh region conference of the industrial radio engineers at San Diego, Calif. The address was entitled "Pan American's 705 Data Processing Center in Action." Unanimous consent is requested for this speech to be printed in the Appendix of the CONGRESSIONAL RECORD:

PAN AMERICAN'S 705 DATA PROCESSING CENTER IN ACTION

(Address to the seventh region conference of the industrial radio engineers, San Diego, Calif., by John S. Woodbridge, comptroller, Pan American World Airways, Inc., April 24, 1957)

I fully expect to rouse the IRE, the ire of the industrial radio engineers here, but militantly, so that you, in teamwork and close collaboration with industry, may help solve many of the problems hindering our search for better living conditions throughout the world.

I will outline here a few of the many corporate desires for specific relief from the kind of clerical drudgery decried by both capital and labor, relief that we expect from you in this technical audience and from your brilliant and restless colleagues in advanced thinking.

Much of industry needs discussed here is already in existence, in various degrees of perfection, but we need it in practical and economical form, and now, useful in coordination with other useful technical units.

Although much of industry is skeptical still, afraid of getting its feet wet, business electronics is here, and here to stay. There are too many small but essential molecules in our intricate business life to keep on grinding them out manually, but with wasteful usage and attritioning of grey matter which should be dedicated to a fairer life.

Industry is hard to persuade, insisting on balancing the debits and credits of business electronics before taking the plunge into its depths, the pros and cons, the dollars for and the dollars against, the alleged shifting of authorities, the specter of diminution of individual executive values. Sometimes the scales are not too conclusive, and here is where you must help by developing shortcuts, acceleration of procedures, shrinkage in cost, both of machines and of lower-grade manual activity. On the success of your endeavors depends much of the success of customer acceptance.

We have been fortunate in the Pan American World Airways, for our board of directors enthusiastically accepted our recommendations and permitted us to forge ahead with the installation of our data processing center in New York, employing the great IBM 705 apparatus and peripheral equipment. Installed almost a year ago, it commenced paying for itself within a few weeks and is now on the verge of new horizons, with applications under review which should make us wonder why we had ever been so bashful about getting into business electronics.

Sheer volume, aided and abetted by shortage of personnel trained in the technicalities of the volume and by the persistent gadflies of devoted technical colleagues, drove us into this type of activity, without which we would presently be in an unsavory and unholy morass of detail.

Let me tell you a little bit about the background which forced our hand. For this, you need to know something about Pan American World Airways, of which I am the comptroller, its chief accounting officer.

We have a fleet of 132 four-engined transoceanic type aircraft, and a great fleet of 44 Boeing and Douglas jet aircraft reaching us in a couple of years. Our assets then will approximate $650 million, and we will need many hundreds of millions of dollars of passenger and cargo revenue each year in order to keep the position of the United States in international air transportation where it belongs.

Our 25,000 employees are fulfilling this tremendous assignment admirably, and our 40,000 stockholders, many of them employees, realize that they also are commercial ambassadors of our country in demonstrating its values and hopes to all nations.

Let us now descend from the sublime to the workhorse of our thesis, the passenger ticket, the primary vehicle for financing this aerial and global missionary work. This topic has been selected as one of the many applications which we have already placed in our electronics activity, which topic alone has already reduced company cost sufficiently to compensate for higher machine rental. The complexity of handling the tickets and their overpowering volume will help illustrate and dramatize the electronic work that is being done and that we expect to do.

A passenger ticket is a fragile thing and rough treatment of it can be distressing. Passenger tickets must keep moving steadily and surely through the arteries of a transportation company, from sale to usage, for the very framework of the company and of its members and of its organs depends on this healthy and active blood-stream.

Ten thousand times every working day a Pan American World Airways ticket is sold, somewhere in the world, for travel from somewhere in the world to somewhere else in the world. These tickets are not ordinary little stubs covering travel over a relatively short distance over the lines of a single carrier, but contain intricate flight coupons, frequently with multiple legs and including travel over the lines of many other air carriers, each of which flight coupons must be kept under rigid control. In some cases, there have been as many as fifty flight coupons within a single ticket.

A passenger ticket must be nurtured and coddled to produce the desired results. Granted an efficient sales staff and adequate carriage and on-line and in-flight service, there still remains the handling of the paperwork, which can be a fiendish job. Bear in mind that a passenger ticket is generally a negotiable instrument, carrying value within itself, so that it must be kept constantly controlled, from printer to consumption.

It goes, unused and blank, to the point of sale, be it a company sales office or an agent or another airline. It is sold or voided. The passenger uses it or does not. If he does not, he recoups the unused portion or does not. Coming in several parts, the passenger uses one coupon part for each leg of his journey and the sales part follows the accounting for the sale. Revenue is created by the voyage itself and not by the sale.

To control this million-dollar-a-day volume in an orderly and inexpensive manner, Pan American credits all sales to a control account known as unearned transportation revenue, the detail being maintained on magnetic tape, one area on the tape for each ticket.

Usage of the flight coupons anywhere in the world is reported to headquarters through the passenger flight envelopes and the accompanying lifted flight coupons, through the billings from other air carriers and the accompanying flight coupons flown by those carriers, and through the refund reports and the accompanying refunded flight coupons. This usage relieves the inventory of unearned transportation revenue, the usage being translated to magnetic tape and used to reflect the earned revenue and to attrition the inventory, the remainder being constantly under magnetic-tape control.

Let us peer through the 20-foot-wide observation window of our electronic data processing center in New York and see what this is all about. We will look first at the input of an oversimplified illustration within passenger revenue accounting.

* * * * *

The total passenger revenue job now requires 140 hours of machine time each month as against 4,000 hours. The present work for the month, including the inventory of unearned transportation revenue, is contained on 12 reels of magnetic tape; it used to be carried in 400 tightly packed trays, each containing 3,500 tabulating-machine cards.

The principal duties of our passenger revenue accounting embrace the control of the tickets, the development of revenue figures with allocation of revenue to our operating divisions, the production of vital statistics, the billing to others for carriage of passengers, and the control of travel which has been sold and which has not yet been used by our passengers. With the volume of our sales for a recent and typical month reaching $32 million, our inventory of paid for but unused tickets coming to $50 million, with 1,150,000 individual parts of tickets related to those dollar amounts, you will readily understand the corporate value of controlling and using this rich mine of vital management information, now so easily susceptible of being interrogated.

Related to this highly significant application of passenger accounting and control is the electronic handling of passenger reservations. This is of immense importance to Pan American, as it is to all other air carriers, because of the inherent fluidity of reservations, the intricate network of the company's routes and the staggering volume. Pan American is flying the Atlantic Ocean 22 times every day of the week, and across the Pacific Ocean 12 times every day, with high-capacity 4-engined transports and heavy passenger lists. All available seats must be sold if at all possible; the company dare not let its record-keeping of reservations flag for a moment, or else prospective passengers will be improperly denied passage when space was actually there for them. In the airline industry, an empty seat is the most perishable of commodities; the revenue lost thereby is practically net loss.

Manual handling of these reservation intricacies is frequently believed to be the cause of "no-shows," the bane of the airline business, whereas they should often be classified actually as incorrect recording. Passenger tempers will blossom when human clerical error reaches a sensitive spot in the cycle between booking and sailing and the passenger is incommoded for no good reason.

Bona fide "no-shows" must be studied to determine and to correct patterns of passenger behavior for the future. Protective duplication of bookings made by passengers must be discouraged, as this will deny passage to others desiring space but who cannot and will not afford to gamble on the standby chance for a transoceanic flight. There is just too much volume for our clerks to undertake studies on duplication of reserva-

tions, and such studies would be valueless after the fact.

Electronic controls record the passenger from the moment he books until he embarks on his flight or decides not to travel. The arrangement shows the names of passengers booked and pertinent related information on each flight for each day far into the future. It alphabetizes the names with related flight numbers and dates and other direct information, thereby making practicable the ready identification of duplicate bookings, with remedial action possible long before the flight. It gives a history of each flight from the date the flight is opened, as to all movement of bookings into and out of it, with explanatory data enabling sales personnel to pursue troublesome areas and to build up patterns for protection thereafter, particularly as to the minimizing of "no-shows."

Payrolls are recurring and intricate and of considerable volume, so the handling and accounting for payrolls is being accorded the inventory treatment so admirably executed by the electronic data processing machines. Under the so-called inventory treatment, we start out with the opening inventory of our people and of their salaries and payroll deductions and accumulations, add people put on the payroll, subtract those who leave, adjust for other changes in payroll and related information, multiply and divide through the application of rates of pay and of relatcd information, and end up with the closing inventory of our people and of their salaries and of their payroll deductions and accumulations. The important products include the mechanical issue of paychecks and corresponding notices to the employees, the calculation and distribution of costs, and the preparation of managerial statistics and the innumerable reports called for by those agencies interested in payroll and payroll deduction information.

• • • • •

The accounting for the acquisition, disposition and location of spare parts, materials, and supplies is another of our most pervasive accounting elements which are recurring and of immense volume. The electronic data processing machines are hungry for this type of activity; through their speed and uncanny capacity for exposing other facets of information not hitherto economically available to produce, they create a direct savings in amounts purchased through disclosing numerical and geographical saturation areas, with reorder periods lengthened accordingly. Immensely fast and accurately prepared selections of explosive inventory data with concurrent ignoring of the vast majority of immaterial data is substituted by the machines for the inordinate and unrewarding use of semi-manual motions and squirrel-cage activities of the lower medulla. We delve into the fascinating field of management by exception, and immediately the vista of the better life opens up, with newly granted freedom from racking, grubby detail.

One of the greatest gifts made to industry by business electronics is this management by exception. Never before have we been able to have machines trained to the point where they decline to present us with trivial information, the deadening kind of soggy data that we have previously skimmed over in irritating disgust. Heretofore we have had to wade through and mentally dismiss oceans of material, to single out an occasional pearl that we cannot afford to overlook. Now we set our electronic programs in such a way that they filter out the overwhelming mass of unwanted data, while pouncing on and displaying data which require thoughtful review and possibly rapid action. Managerial time is thus freed from laborious and stultifying review of endless tabulations, most of which material is passed over anyway as being inconsequential. At the same time, data on action material is produced ever so much sooner, with the value of such earlier reporting completely obvious. Commitment accounting becomes far more facile to arrange and delivery schedules can be more readily displayed to interested technicians.

• • • • •

This is also one of the major problems of the air materiel command and one which it is meeting head on by intelligent use of basic and peripheral and satellite electronics machines.

From time to time, interesting but non-time-consuming diversions from business applications are presented to the company's electronic data processing center. A recent one has resulted in highly valuable studies of the performance over the company's routes of "paper jets," those still on the drawing board or still in the early stages of production. Given the operating specifications of the particular aircraft, basic costs, length and altitude of runways at each end of the trip, average temperatures and wind-speeds there, the program produces, among other vital data, the cost per revenue ton-mile at different cruising aspects, such as varying altitude and speeds related to the speed of sound. It goes so far as to tell how much longer the destination runway should be if it is not presently long enough to accommodate a full revenue load. This would normally take a month per aircraft type for a skilled engineer to calculate, for even a few illustrative legs of a trip; now that this electronic program has been perfected, it can be accomplished on the computer in half an hour for an entire route, with the print-out time taking a few minutes longer.

• • • • •

Let us now return to the scales, which can and must be influenced materially by you scientists and forward planners.

You must help demonstrate that centralization of clerical drudgery into a highly mechanized but unintelligent computer does not necessarily imply giving up decentralization in management, but should actually implement and foster it.

You must mechanize further the areas presently handled by monotonous and unrewarding use of lesser brain cells.

You must hurry the introduction of data into the electronics machines.

You must cause to be condensed the activities within the machines.

You must cause to be made more readily available and even instantaneously the vital data imprisoned on magnetic tape and within the memories.

You must perfect adequate selectivity of such data.

You must increase economically the print-out speed.

First of all, let me implore the members of this distinguished audience, and all other scientists and consultants of the equipment manufacturers, to press forward relentlessly and with unflagging zeal on your studies looking toward the complete abandoning of tabulating-machine cards. They keep us earthbound because they are still a compulsory link in the data-processing cycle. Data must be coded manually before the punchcard machine operators will deign to look at it; then it must be laboriously hand driven into the cumbersome and bulky cards; then the cards must be verified on another hand-operated keyboard; then they must be hand assembled. We are imprisoned within 80 columns in a single card, which causes the retention of a staggering number of files of cards relating to similar identifications. To add the crowning blow, the cards must be translated slowly, ever so slowly, into tape.

• • • • •

One of the most abominable and least-rewarding of all processes in electric accounting machine work and in electronic data processing machine work is the sorting of data into some form of serialization. This will be by strict arithmetical sequence or by rigid alphabetization or by a combination of both types of series or by ascending or descending sets of numbers. We cannot get away from this leech, Sinbad's old man of the sea, for the brilliant speed of the electronic machines is contingent upon having the racetrack in perfect straightaway condition. Look at the fantastic waste of time in conducting this ignoble pursuit. Take, for example, the sorting into arithmetical sequence of 100,000 tabulating-machine cards each bearing an identifying number of 10 integers, such numbers just as random as can be; this calls for 1 million card sorts. The old-style sorters (EAM), working 2 at a time with 1 operator, will turn out the job in 50 machine-hours with 25 man-hours. The procedure which Pan American now considers conventional (via EDPM) takes 3 machine-hours and 3 man-hours. Even that is too slow, for the central processing unit, the main frame, the really expensive part of the apparatus, is tied up for this work and its time is therefore denied to other demanding activities. This is particularly vital when we realize again how many massive sorts are always being needed.

The remedy appears obvious. You technicians and your fellow geniuses throughout the land must develop a far simpler sorter which will work independently from and concurrently with the central processing unit, slower if necessary, but constantly readying raw data for productive processing. After all, sorting should be one of the simplest of all EDPM jobs, and it is a shame to have the high-strung main frame racehorse doing donkey-engine work.

• • • • •

Now we are looking for a resourceful technical dreamer to come up with a method of having the high-speed printer tell its story in metallic ink or otherwise, so that it can serve not only as a written record but as a conduit for high-speed reconversion into magnetic type if that were required. Think what this would do to the rapidly growing libraries of reels of tape, costly to buy and costly to maintain. Just wash out previous tapes and use them again, never worrying about the possible failure of continuity. Like the monkey, you would not let go with your hand until you had hold with your tail.

• • • • •

Pan American World Airways has been described for many years as the "world's most experienced airline," not in a vainglorious theme but because we all sincerely believe that the description is correct. We feel that our successful introduction of the electronic data-processing machines and their limitless potentiality which we are actively and progressively exploring will help us continue in the same tradition, of trying to be of utmost service to those using the airlines, for the experience of our airline is certainly a part and parcel of the experience and heritage of our own country.

There is the story, a serial, to be continued rapidly as we all progress. Commercial electronics are here, and here to stay. Wherever you and your associates can make improvements along the lines which have just been touched on and along the many other lines being developed and being considered, you are helping industry, the military, and the welfare of the citizens of our own United States of America.

A Trend to Leniency for the Criminal

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DAVIS of Georgia. Mr. Speaker, before coming to Congress I practiced law actively for 15 years and then served as judge of the superior courts for 13 years.

In each capacity I was in position to closely observe the activities of law-breakers and criminals of all kinds and to observe the effects of court action on law violators.

There is no escaping the fact that inadequate punishment encourages criminals. Adequate punishment is one of the most effective crime deterrents. Vigilant policing, plus vigorous prosecution, plus adequate sentences for guilty criminals, will afford in great measure that protection to which good law-abiding citizens are entitled. However vigilant the police may be and however vigorous the prosecuting officer may be, all this can be nullified if the case is tried before a judge who refuses to impose adequate sentences. And the efforts of all three can be nullified if the appellate courts make it a rule to get on the side of the criminal instead of standing for law enforcement.

Recently I had the privilege of hearing Chief Edgar E. Scott, chief of detectives of the District of Columbia Metropolitan Police Department, speak over one of the local television stations on the subject "A Trend to Leniency for the Criminal."

His statements were so sound and his conclusions so correct that I feel that his talk should have as wide a distribution as possible. Under unanimous consent previously granted, I insert the same herewith as a part of my remarks.

This article points up the fact that appellate courts can tie the hands of law-enforcement agencies and thus leave law-abiding men, women, and children at the mercy of the conscienceless dope peddler, murderer, rapist, or robber.

I recommend Chief Scott's article to all who are interested in law enforcement.

The article follows:

A TREND TO LENIENCY FOR THE CRIMINAL

It is true that there has been a trend toward leniency for the criminal. This has been especially true in the rulings handed down by the higher courts. By these rulings, the justices of the trial courts, the United States Attorney's office, the police and other law enforcement agencies have been restricted more and more in their efforts to get the necessary evidence to the juries to convict guilty criminals. We have many outstanding trial justices, well-experienced in the law, who have always safeguarded the rights of the defendants; who also have given some thought to the rights of the law-abiding public, the families of the deceased and the victim of the rapist. They are bound by these decisions and hampered thereby from the rendering of justice.

Investigation of the record will show that some members of the higher courts have fought against this trend toward leniency. For these men, your police department is grateful.

The trend has been in the further restriction of law enforcement as to the admissibility of voluntary confessions, and of evidence obtained through the use of confessions obtained after the arrest and prior to arraignment. This is the ruling that has hurt law enforcement most. There are others regarding search and seizure, the speedy trial of persons serving time for other offenses in other jurisdictions, the defense of insanity, and so forth.

It seems that there are those who believe that confessions should be excluded entirely. Some justices have stated that the defendant should be brought directly from the place of arrest to the court without any opportunity for fingerprinting, photographing or investigation before arraignment. Law enforcement agencies are already restricted by these rulings to the point where there is great pressure on the officers who must work many overtime hours through the night trying to get evidence before the court is in session.

At one time the law was that defendants must be arraigned without unnecessary delay, but now the door is being gradually closed to any investigation before arraignment. And I must say, there is little chance of getting any evidence after arraignment. What is unnecessary delay? Does the law-abiding public have any rights in this? We think they do.

The result of further restrictions of this kind will be more protection, not for the novice or beginner, but for the professional criminal who carefully plans to commit these fiendish crimes of murder, rape, robbery, and so forth, without eyewitnesses, and will encourage them to kill their victims so that there will be no witnesses. Also it will prevent the clearing of innocent persons by investigation, as has been done in the past in many, many cases. The persons cleared had, in many cases, been implicated through mistaken identity, grudge identification, frame-up, and so forth. In fact, in most of our important cases, more persons are cleared than are charged. This, of necessity, takes time.

The percentage of crimes committed by these professional criminals, which can be cleared under these restrictions must, of necessity, be much smaller. Leniency in the District of Columbia will draw the criminal element from the States who operate under laws more favorable to law enforcement.

The law-abiding public has a right to know of this situation and to decide how far it should go.

Light on Hells Canyon

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. ULLMAN. Mr. Speaker, the June 22 edition of the Washington Post and Times Herald carried the text of an excellent letter written to the editor by Senator ESTES KEFAUVER.

Senator KEFAUVER has been doing an excellent job in exposing the true nature of the fast tax writeoffs granted by this administration. I want to take this opportunity to commend him for the fine job he has been doing in bringing to light some of the shady dealings surrounding the issuance of tax certificates to the Idaho Power Co. Senator KEFAUVER'S letter to the editor of the Washington Post is characteristic of his calm and sensible approach to a matter of national importance. I am certain it will be of interest to all Members of this Chamber and I ask that it be included in the Appendix of the RECORD.

The letter follows:

LIGHT ON HELLS CANYON

I want to congratulate you on your fine June 9 editorial, "Light on Hells Canyon," to which Senator WATKINS took exception in his letter which you printed on June 18.

Like Senator WATKINS, I represent a State which has no great direct interest in the Columbia River Basin, and which will feel no immediate impact from the development of Hells Canyon. But I do feel qualified to recognize a scheme to waste a great natural resource when I see it, and I don't need a set of distorted figures to understand that the effect of such a scheme can only be to weaken the entire Nation.

What I find shocking is the attempt of the opponents of Hells Canyon to justify their position by the use of incredibly confused statistics.

For example, in his letter which you published Tuesday, June 18, Senator WATKINS came up with $398 million as his figure for the cost to the Government of the high dam at the end of 50 years. He then performed the truly remarkable accounting gyration of carrying his own ultimate figure back through history from the end to the start of the 50-year period, and proceeded to compound it annually throughout that period to arrive at his utterly ridicuous $2.2 billion figure.

Either Senator WATKINS' accountant is extremely confused, or he has a very low opinion of the intelligence of your readership. In any event this sort of figure-juggling hardly lends credence to his conclusions.

Lest I appear to be in complete disagreement with Senator WATKINS' letter, I hasten to praise two separate points in it. The first is his candid admission, so rare among opponents of Hells Canyon, that a large part of the cost of the high dam will be repaid with interest. In fact, the total of the nonreimbursable costs is only $48.8 million; all the rest of the project's costs will be repaid with interest.

I should like to emphasize also that after this repayment has been completed the high dam would belong to the people of the United States, while the low dams, complete with subsidy, would be the property of the private company.

In addition Senator WATKINS referred to the business and industrial expansion made possible by the new power and the additional millions of dollars this would mean to the Treasury in increased personal and corporation taxes. Here, of course, is the heart of the entire issue, and I am glad it is at long last being conceded by the opponents of Hells Canyon.

According to the most expert estimates available, based upon years of experience in the Northwest, the amount of power the high dam would produce in excess of the low-dam plan would result in the creation of about 35,000 new jobs in industry and $45 million annually in Federal taxes.

I do not intend to indulge my imagination in the calculation of what this latter figure might amount to with compound interest over 50 years, but I can hardly resist pointing out that in less than 9 years all of Senator WATKINS' claimed 50-year losses resulting to the Government from the construction of the high dam would be completely paid off, using only the excess power benefits of the high dam over the low-dam scheme.

I think it is most doubtful that there would even be much broadening of the economic base of the Northwest based on power from the private company dams. In order to locate in the Northwest industry needs

low-cost power to compensate for the high cost of shipping its products to the market centers of the East, and even the FPC examiner referred to power from the Idaho Power Co. dams as being fancy-priced power.

Senator WATKINS referred to the cost of compensating the Idaho Power Co. for its expenditures to date, using a figure of $48 million. Actually the Senator is confusing expenditures with cancelable commitments, and the correct figure would be under $30 million, which would of course be a reimbursable cost of power production, contrary to the assumptions of his letter which included it in the nonreimbursable total.

But this raises another intriguing question. By letter of May 6 to Congressman ULLMAN, Chairman Kuykendall, of the Federal Power Commission, admitted that the power company in its construction to date had not complied with its own design plans as approved by the FPC.

If this is true it may be that the company cannot claim to have been proceeding under the FPC license in claiming damages if Hells Canyon Dam is authorized by Congress. Is it possible that here, as in the infamous Dixon-Yates deal, we shall see the Attorney General in court opposing the company's claims for reimbursement?

Senator WATKINS' letter cited the FPC as deciding that the three-dam plan (the FPC admitted the third dam may never be built) was the best plan for comprehensive development of the river. It neglected to point out that the FPC's own technical hearing examiner found the high dam would produce almost twice as much power at less than half the cost as the low dams, and provide almost four times as much active storage usable for flood control.

It offered no allusion to what the examiner called "the inescapable conclusion that * * * the high dam would be the better investment and the more nearly ideal development of the Middle Snake."

It omitted mention of the fact that it was the FPC's own chief accountant who estimated the cost of the low dams to the taxpayer at $83.5 million some $34 million more than the net nonreimbursable costs of the high dam. It ignored the recent brief of the FPC's own staff in the Mountain Sheep-Pleasant Valley proceeding urging that 4 million acre-feet of storage are needed in the Snake Basin for flood control, almost the exact capacity of Hells Canyon Dam.

ESTES KEFAUVER,
Senator from Tennessee.

WASHINGTON.

Statement of Representative Leonard Farbstein, of New York, Before the House Post Office and Civil Service Committee Relative to H. R. 2474

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. FARBSTEIN. Mr. Speaker, following is the statement which I submitted on June 18, 1957, to the Committee on Post Office and Civil Service in connection with the hearings on salary increases to postal employees.

STATEMENT OF REPRESENTATIVE LEONARD FARBSTEIN, OF NEW YORK, BEFORE THE HOUSE POST OFFICE AND CIVIL SERVICE COMMITTEE RELATIVE TO H. R. 2474

On behalf of the postal clerks, I desire to advise the members of this honorable committee that I feel very strongly about the situation of the postal employees in my district, the 19th Congressional District of New York. I further believe that the postal employees have been underpaid for a number of years and that it is high time that their request for sufficient earnings to decently support their families be recognized.

In New York City the low wages of the postal employees has compelled more than 60 percent of that number to seek outside employment in order to maintain a decent living standard.

Because of the low pay the morale of postal employees is so poor it has become difficult for the postal service to attract qualified employees and retain the skill necessary for the efficient functioning of the service. I know that it has become necessary to hire hundreds of temporary employees in the postal service in New York City. This action has become imperative because of the inability of the service to secure men who are willing to take the examination in order to obtain civil service status. This is undoubtedly due to the low rate of earnings of the regular postal employees.

I therefore submit to this honorable committee that in the interest of the employees and in the interest of better service that the enactment of H. R. 2474 would be very salutary.

A Message for Our College Graduates

EXTENSION OF REMARKS
OF
HON. LEONARD FARBSTEIN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. FARBSTEIN. Mr. Speaker, under leave to extend my remarks I wish to include the following editorial which appeared in the East Side News, a weekly publication with wide circulation in my congressional district:

A MESSAGE FOR OUR COLLEGE GRADUATES

(By Harry H. Schlacht)

We salute the college graduates of the Nation who are the hope of tomororw to keep alive the democracy of today. We say to you—this is a great commencement for you. This is a great time in your lives. You are the hope of America. You are the promise of America.

The destiny of democracy is in your keeping. You must guard it well. You must nourish it constantly. You must cherish it forever. The spirit of democracy is as changeless and immutable as the soul of man.

Democracy faces the threat of communism. It is freedom or tyranny, it is peace or war, it is life or death. Liberty is freedom, but freedom is not free. It is the most expensive thing in the world because it is the most desired thing in the world.

In times of grave crisis, there are some—who fall prey to doubt and unreasoning fear; who seek refuge in cynicism and narrow self-interest; who wrap themselves in treacherous cloaks of complacency. All these are dangers that lie within us. All these are dangers that impair the faith and weaken the determination without which freedom cannot prevail.

God gave man intelligence,
Man will not use it.
God gave man freedom,
Man exchanges it for tyranny.
God gave man the capacity of love,
Man stifled it in his heart.
God does not cast misery upon man,
Man creates his own misery.

The greatest force is moral force. The greatest power is spiritual power. These are the great untapped sources of energy that can save civilization from self-destruction. These are the unseen spiritual atoms hidden deep in the hearts of men.

Your work and your example are the tiny miraculous ingredients, out of which must be forged the mighty instruments of the world's salvation. In your hearts and in the hearts of millions of other Americans like you, there beats and throbs the desire for peace on earth and good will. We must protect our democracy. We must have citizens strong in will and the determination to preserve it.

We must ever have an immutable determination to give all, if need me, for the preservation of our American way of life. Without that faith and determination no material means of defense will suffice. With them, we need fear no enemy, inside or outside our borders. We must ever keep ourselves conscious of the realization that our security as a nation is assured as long as we stand together united under the bond of "One Nation under God indivisible with liberty and justice for all."

Go forth, O young Americans from your colleges and universities. Our country has need of you. Our country cries out for individuals like you. You are our noble youth. You are our noble heritage.

You will be true to the generations that went before you. You will be true to the generations that will come after you. You will be true to mankind. You will be true to God.

At certain times and places, under the spur of necessity, and faith, man has fortified his spirit, beaten down his fears, and stepped forth as the master of his destiny. At such times and in such places the human race has known its highest dignity. Courage, character, and intelligence have worked their miracles and life has become an adventure rich and fine.

So on this, your happy graduation day, we congratulate you. We wish you Godspeed, have faith in God. You are safe in God. He abides forever.

Emergency Creates a Spending Necessity

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, under leave to extend my remarks, I present herewith a timely editorial from the Shreveport Times of June 21, regarding the present urgency of needed appropriation increases for bank construction work along the Red River below Denison Dam in Texas, Arkansas, and Louisiana. It is as follows:

EMERGENCY CREATES A SPENDING NECESSITY

A Congress which gives friendly consideration to the spending of billions for foreign aid should certainly give the same consideration to the need for urgent flood control work here in the United States.

This particularly relates to a condition existing in our own region, and the current response to that condition in Washington.

As everyone along the Red River knows, the high waters and floods on the Red this year have in many instances eroded banks and flood control works, with the result that much of the protection system stands in need of repair during the months immediately ahead.

Inadequate construction would leave a high risk of damage should another period of high water and inundation strike.

Yet the House Appropriations Committee last week provided only $300,000 for bank work along the Red below Denison Dam in Texas, Arkansas, and Louisiana. This figure was set up in the budget long before the heavy rains came this spring and early summer. It perhaps was a suitable figure then; it is a woefully deficient figure now.

Louisiana's Representatives and Senators can be relied upon to put forward effectively the case for more funds for work on the Red in this State. Presumably Texas and Arkansas will do the same. In both Houses of Congress the facts should be examined, for if they are examined the allocation for bank construction will surely be increased.

Deserving a review, too, is the committee's action in dropping from the flood control bill an item of $300,000 for continued planning of the Overton-Red River Waterway. While this does not present the urgency found in the needed appropriation increase for bank construction, it does represent necessary progress on an inland improvement of the type which ought to be a normal year-to-year activity of the Federal Government.

If

EXTENSION OF REMARKS
OF
HON. USHER L. BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. BURDICK. Mr. Speaker, I have here a short poem which was sent in by one of my correspondents, which I believe will be read with appreciation by my colleagues—or at least some of them. It states some self-evident truths which we all might do well to consider seriously, even while we chuckle at the cleverness of the "takeoff":

IF

If you can keep your head when all about you
UNESCO seeks to muddle and deceive;
If you can trust yourself when "pinkies"
doubt you
Because you love your country and believe
Its Constitution is the best that ever
Was drawn to guard the liberties of man,
And that Americans must all endeavor
To keep it safe and solid of the can—
If you won't let the U. N. be your master.

If you won't make world government your
aim
If you can fight the sinister disaster
Of letting spies and traitors win the game—
If you are loyal to the land that gave you
Your freedom and the chance to fight and
win,
And count upon its Bill of Rights to save
you
From tyranny and slavery and sin—
If you respect your flag and love your
Maker
And pray that he will guide you to do right,
And do not let the first high-sounding
faker
Convince you white is black and black is
white—
If you stand up and say you love Old Glory
And show that you're an American with
guts—

Baby, you'd better get yourself a lawyer,
For "mental health" is out to prove you're
nuts!!

(Author unknown, with apologies to Rudyard Kipling.)

Protests FCC Action

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Friday, June 21, 1957

Mr. ENGLE. Mr. Speaker, I wish to insert in the RECORD several articles regarding the charges by State Senator George Miller that the Federal Communications Commission has discriminated against Contra Costa and Solano Counties in California in its tentative decision favoring an applicant for a television license in the area. In addition, I wish to insert a copy of State Senator Miller's letter, in which he carefully outlines the basis of his charges of discrimination against the people of the area he represents. From time to time there has been congressional criticism of the arbitrary manner in which the FCC hands out these valuable TV channels. I call this further complaint to the attention of both the House Committee on Interstate and Foreign Commerce and the House Committee on the Judiciary for consideration when those committees take up the problem of the operations of the FCC:

CALIFORNIA LEGISLATURE,
June 15, 1957

The Honorable CLAIR ENGLE,
Representative in Congress,
House of Representatives,
Washington, D. C.

DEAR CLAIR: I am greatly concerned by a tentative decision of the Federal Communications Commission which, if it stands unchallenged, will discriminate against the residents of Contra Costa and Solano Counties.

The FCC has indicated that it intends to grant a license for the operation of channel 2—the last available television channel that could adequately serve the vast East Bay area—to a San Francisco applicant whose transmitter would serve the same area as the other San Francisco stations.

This means that the last available television channel in this area—supposedly reserved for the fast growing East Bay—is going to be turned over to San Francisco interests.

By this action the FCC has destroyed our hopes of seeing the construction of a transmitter in the hills east of the bay so that its signals would be clearly received in all parts of Contra Costa and Solano Counties.

I have reviewed the technical reports on the proposed coverage of the three applicants who seek to operate a station on channel 2. Of the 3, only 1—television East Bay—has proposed a solution to our television problems. This applicant would locate its transmitter high in the hills east of Berkeley and consequently would provide grade A reception, not only to San Francisco and Oakland, but to the entire East Bay region. Its studios would be located in Oakland. I am extremely disturbed to discover that the applicant favored by the FCC in its tentative decision plans to construct its transmitter at San Bruno Mountain, south of San Francisco—the site of the existing San Francisco television transmitters.

If this situation remains unchanged, Contra Costa County, particularly the central part of the county, will receive little or no benefit from the new station.

In view of the poor reception of television programs originating out of San Francisco now, and the absence of a television station designed to primarily serve the East Bay, we in Contra Costa County and our neighbors in Solano County have a deep concern with this whole matter.

If the Federal Communications Commission's decision is affirmed, it will mean that San Francisco will have five television stations while Contra Costa County will continue to suffer the annoyances of fringe reception. I cannot see the justice in such a decision.

We have an urgent need for adequate television service in this area, particularly in the field of local public service programs, the programing of which has been hampered by our lack of access to the San Francisco stations.

I believe there is a real possibility that the FCC will act abruptly to confirm its tentative action without considering the needs of 250,000 residents of Contra Costa and Solano Counties (nearly half the entire population of the two counties) affected by the Commission action.

In my estimation the strongest possible representations should be made to the Federal Communications Commission in an effort to persuade them not to act hastily, but give due consideration to the television reception problem of the people of Contra Costa and Solano Counties.

Any assistance that you may give us in this matter will be deeply appreciated.

Sincerely,

GEORGE MILLER, Jr.,
Senator, 17th Senatorial District.

[From the Contra Costa (Calif.) Times of June 17, 1957]

FCC DECISION MAY DOOM CONTRA COSTA TO FRINGE RECEPTION

State Senator George Miller, Jr., Democrat, of Richmond, said today that he was greatly concerned over a tentative decision of the Federal Communications Commission which, if it stands unchallenged, will discriminate against the residents of Contra Costa and Solano Counties.

CHANNEL 2

According to Miller, the FCC has indicated that it will grant a license for the operation of channel 2 to a San Francisco applicant. Miller pointed out that this is the last available television channel that could adequately serve the east bay area.

"By this action," the senator said, "the FCC has destroyed our hopes of seeing the construction of a transmitter in the hills east of the bay so that its signal would be clearly received in all parts of Contra Costa and Solano Counties."

SAN BRUNO SITES

Miller said that the applicant favored by the FCC plans to construct its transmitter at San Bruno Mountain, south of San Francisco.

"If this situation remains unchanged," Miller stated, "Contra Costa County—particularly the central part of the county—will receive little or no benefit from this new station.

If the FCC decision is affirmed, Miller maintained, it would mean that San Francisco would have five television stations while Contra Costa County will continue to suffer the annoyance of fringe reception.

WRITE, URGES MILLER

Miller urged Contra Costa and Solano County residents to make their protests known to the Federal Communications Commission, Washington, D. C. He noted that the FCC is expected to make its final decision and grant a license within a matter of a week or less.

"I sincerely hope that our representatives in Washington will take note of this situation and act to protect the best interests of the people in Contra Costa and Solano Coun-

ties," said Miller. "I appeal to the FCC to give due consideration to our television reception problem and not act hastily.

[From the Contra Costa Gazette, Martinez, Calif., of June 18, 1957]

MILLER PROTESTS TO FCC AGAINST RECOMMENDATIONS ON CHANNEL 2

State Senator George Miller, Jr., today, charged the Federal Communications Commission with discriminating against Contra Costa and Solano Counties. The charge is based upon a tentative FCC decision favoring an applicant for television channel 2 who plans to construct a transmitter on San Bruno Mountain, south of San Francisco, rather than atop the East Bay Hills.

In a strongly worded statement sent both to local legislators and the chairmen of concerned congressional committees, Miller declared that in view of the poor local reception of television programs transmitted from the San Bruno location, the FCC action—"if it stands unchallenged"—will in fact discriminate against some 250,000 residents of the 2 counties.

"A quarter of a million of our people," says Miller, "would be better served by a television station with a transmitter high in the Berkeley hills than by a station with another transmitter in the vicinity of existing San Francisco installations."

Miller states that he has reviewed technical reports on the proposed coverage of the 3 applicants who seek to operate a station on channel 2 and has learned that 1 applicant does propose an East Bay transmitter location. "In view of this fact I cannot see the justice in the present FCC decision," Miller said.

Warning that final FCC action is scheduled for next week, Miller urged local citizens to immediately protest the present decision by writing to the Federal Communications Commission, Washington, D. C., stressing the television reception problem in Contra Costa and Solano Counties, and pointing out the injustice that will occur if San Francisco is permitted to have five television stations while Contra Costa and Solano counties are compelled to continue to suffer the annoyances of fringe reception.

TV PERMIT DRAWS FIRE—MILLER POINTS TO BETTER LOCATION

State Senator George Miller, Jr., today charged the Federal Communications Commission with discrimination against Contra Costa and Solano Counties. The charge is based upon a tentative FCC decision favoring an application for television channel 2 and plans to construct a transmitter on San Bruno Mountain, south of San Francisco, rather than atop the East Bay hills.

Miller declared that in view of the poor reception of television programs transmitted from the San Bruno location, the FCC action—if it stands unchallenged—will in fact discriminate against some 250,000 residents of the 2 counties.

A quarter of a million of our people, says Miller, would be better served by a television station with a transmitter high in the Berkeley hills than by a station with another transmitter in the vicinity of existing San Francisco installations.

[From the Richmond (Calif.) Independent of June 18, 1957]

MILLER RAPS FCC ON TV SITE RULING

MARTINEZ.—Contra Costa County's State Senator George Miller, Jr., today charged the Federal Communications Commission with discrimination against Contra Costa and Solano Counties. The charge is based upon a tentative FCC decision favoring an applicant for television channel 2 who plans to construct a transmitter on San Bruno Mountain, south of San Francisco, rather than atop the East Bay Hills.

In a strongly worded statement sent both to local legislators and the chairmen of concerned congressional committees, Miller declared that in view of the poor local reception of television programs transmitted from the San Bruno location, the FCC action—"if it stands unchallenged"—will in fact discriminate against some 250,000 residents of the two counties.

"A quarter of a million of our people," says Miller, "would be better served by a television station with a transmitter high in the Berkeley hills than by a station with another transmitter in the vicinity of existing San Francisco installations."

Miller states that he has reviewed technical reports on the proposed coverage of the three applicants who seek to operate a station on channel 2 and has learned that one applicant does propose an East Bay transmitter location. "In view of this fact I cannot see the justice in the present FCC decision," Miller said.

Warning that final FCC action is scheduled for next week, Miller urged local citizens to immediately protest the present decision by writing to the Federal Communications Commission, Washington, D. C., stressing the television reception problem in Contra Costa and Solano Counties, and pointing out the injustice that will occur if San Francisco is permitted to have five television stations while Contra Costa and Solano counties are compelled to continue to suffer the annoyances of fringe reception.

Resolution of Blue Star Mothers on Girard Case

EXTENSION OF REMARKS
OF
HON. HENRY S. REUSS
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES

Friday, June 14, 1957

Mr. REUSS. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following resolution adopted by the Blue Star Mothers of Milwaukee, Wis., objecting to the decision of the United States Government to allow American soldier William S. Girard to be tried in the Japanese civilian courts:

From: Blue Star Mothers of America, Inc., Milwaukee, Wis.

Subject: The United States Government's decision to permit William S. Girard, of the State of Illinois, United States of America, an American citizen, serving in the United States Armed Forces and stationed in Camp Whittington, Japan, to be tried for murder in the Japanese civilian court.

Whereas we believe that this American serviceman was performing the duties assigned to him, which was to guard a given area against any and all interlopers; and

Whereas we believe our Government has made a grave error in judgment in entering into this agreement with the Japanese Government; and

Whereas we also believe this decision to be discriminatory and that it denies to William S. Girard the right of every American to be given a fair trial under American laws, in American courts, and by Americans, a right and privilege that thousands of American servicemen and women have fought and died to protect and preserve; and

Whereas we firmly believe that, should our Government find that diplomatic appeasements or agreements are necessary, that they should not be made or entered into at the expense of sacrificing any individual American's rights, privileges, or welfare; and

Whereas we also firmly believe that the United States Government's first obligation of responsibility must be to protect the servicemen and women that we send to a foreign country to serve our Nation, and not to the citizenry of the country to which they are sent: Therefore be it

Resolved, That the members of Milwaukee, Wis., State department, Blue Star Mothers of America, Inc., mothers of sons and daughters who served in World War II and the Korean conflict, go on record as strongly opposing and objecting to the decision of our United States Government to allow American GI William S. Girard to be tried in the Japanese civilian courts rather than by an Army court-martial; and be it also

Resolved, That all members of Milwaukee, Wis., State department, and 22 chapters, Blue Star Mothers of America, Inc., be urged to write to their Congressmen and Senators, asking them to exert every effort and use their influence, as our elected Representatives, to have this agreement nullified, in favor of a more acceptable and just means of disposing of the case of William S. Girard, American serviceman versus the citizenry of Japan.

ANN BURTON GALE,
Past Vice President, National Legislative Chairman.
MARGARET E. MUELLER,
President.
EVELYN BEDNAR,
Senior Vice President.
ESTHER BOEHLES,
Junior Vice President.
EMMA MAIKOWSKI,
HELEN BIGELOW,
NETTIE E. LUDWIG,
Third National Vice President.

Character Building for Our Youth

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. ANFUSO. Mr. Speaker, we have been hearing and reading so much adverse comment about our teen-agers that one stops to wonder at times whether there are any good, civic-minded, and responsible young people left in our schools and communities. Unfortunately, we uphold to public criticism the wrongdoers, but we tend to overlook those who perform good work and pursue wholesome activities.

Perhaps if we emphasized more of the latter type it would serve as an example and an inducement to all teen-agers. The overwhelming majority of our young people are cooperative with the community, are law-abiding, civic-minded, and assume responsibility when the time is ripe for them to do so. It is therefore important that we get a true picture of these youngsters, their problems, their activities, their character-building efforts, and so forth.

I am glad to call attention at this time to one of the finest character-building programs for our citizens of tomorrow conducted by Eastern District High School, located in my congressional dis-

trict in Brooklyn, N. Y. The school organized a neighbhorhood youth council whose purpose it it is to promote cooperation among organizations and citizens interested in making the community a more wholesome place in which to live. It also sponsors the study of social resources, seeks to advance the education of the general public regarding conditions which need to be improved, to secure democratic action in meeting local needs, expand youth activities, and foster human relations.

This is quite a tall order, and even if this group is only partially successful it will have accomplished a great deal and will have contributed much to the community. The following are some of the activities sponsored by the Eastern District High School Neighborhood Youth Council in its efforts to achieve the above goals:

(a) Conduct annual block-by-block surveys of the area to check on needed improvements.

(b) Picture story exhibits, highlighting sore spots in the community are displayed in public places.

(c) Spearhead rallies for modernization and improvement of school in cooperation with parents association and civic council.

(d) Organize and produce annual Keen Teen shows to spotlight local talent.

(e) Encourage teen-agers to participate in activities sponsored by local YMCA, YM and WHA, Williamsburgh Settlement and Williamsburgh Health Center.

(f) Community on Trial, a round-table forum, dramatized the need for coping with teen-age gang problems and led to initial work with Neighborhood Youth Council youth board.

(g) Organized the first pilot project in conducting community dances sponsored by Neighborhood Youth Council youth board.

(h) Annual Arbor Day tree planting program adds a tree each year to the first 50 trees planted in 1950.

(i) Actively participate in the work of the Citizens Committee To Keep New York City Clean.

(j) Conduct annual civic awards ceremony and dance to recognize and reward a graduate of Eastern District High School for outstanding community service and achievement.

(k) Initiate the "Easternite of the year" contest among the students of Eastern District High School to stimulate more active participation in school and community affairs and award achievement trophies to the "teen-agers of the year."

(l) Acts as a cooperating agency for its original parent group, the Williamsburgh Neighborhood Council.

Mr. Speaker, the activities described above are supervised by Mrs. Harriet S. Zucker, who is faculty adviser. The principal of Eastern District High School is Louis K. Wechsler, a noted educator. On May 29, 1957, the Neighborhood Youth Council held its eighth anniversary civic awards ceremony in the Biltmore Hotel in Brooklyn at which many awards were made to the young people, whose cooperation and services to the community were thus recognized.

I believe that many of our large and medium-sized communities throughout the country would benefit from the experiences and the activities of Eastern District High School Neighborhood Youth Council. By adapting these activities to their local needs, they would help shape the lives and thoughts of American youth, building character, and giving them the opportunity to absorb lessons in citizenship which would be of inestimable value in later life and help keep juvenile delinquency to a minimum. I am very proud of the achievements of this group in my district.

Everyone Talks About the Weather, but the Economy Must Deal With It

EXTENSION OF REMARKS

OF

HON. OVERTON BROOKS

OF LOUISIANA

IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, when the rains are over and the water begins to recede in the flooded areas of the country, our people tend to forget the terrific devastation and destruction which may have been caused by flood waters. We return to our normal ways of life, and in the struggle to keep ahead we are inclined to overlook the program for preventing again such catastrophes. The Congress is merely a cross-section of the people of the country, and when our people return to their normal pursuits and try to overcome the handicap which has been placed upon them by such serious catastrophes, Congress, too, is inclined to settle back, relax, and forget the disaster which has just occurred.

William M. Freeman, able writer for the New York Times, again points out in the Sunday, June 23, 1957, edition of this newspaper the wide area covered by the recent floods in the Southwest, and reviews the damage done to great areas of the country by these recent catastrophes. The article is ably written, and I think the country should remember that, although we no longer read of the torrential rains and following devastation, the damage is there and will remain with our people for a long time to come. Perhaps members of the Appropriations Committees of the House and Senate may read this article and be stimulated to push forward on a program which will help prevent the recurrence in the Southwest of these disasters. The article is as follows:

EVERYONE TALKS ABOUT THE WEATHER, BUT THE ECONOMY MUST DEAL WITH IT—WEATHER OF LATE HAS BEEN COSTLY—DROUGHT COUNTRY GETS RAIN AT LAST, BUT IT DOESN'T KNOW WHEN TO STOP—EFFECTS WIDELY FELT—TENNESSEE MINES SELL LESS COAL, PENNSYLVANIA MORE FOR CLIMATIC REASONS

(By William M. Freeman)

Nature has been putting on an expensive show lately.

It's been acting up, hail, torrential downpour, tornado, flood, high wind, fog, excessive heat, and the accountants are raising the damage figures. So, too, are the economists, who must reckon with inflated costs of what the weather does today and may do tomorrow.

Heavy rains have been slowing railroads in the Southwest, and here and there flash floods have necessitated extensive rebuilding.

The strawberry, cherry, and other small fruit crops in the Far West are in grave danger as a result of repeated soakings.

In many areas of the Midwest, tornadoes not only have leveled factories and houses, but have made it difficult for workers, trying to reestablish their homes, to get to work in plants that have escaped the high winds. Production in such plants consequently has been sharply reduced.

Power supply over a wide area has been affected by the run of unusual weather, although it is difficult to assay the damage in dollars.

Utility companies throughout the country annually measure the depth of the snow and its moisture content to forecast the volume of the runoffs. When the snow on a watershed is heavy, electric energy is stored up, in effect, to be transformed into power when warmer weather melts the snow and it runs off to turn turbines that make electric power.

LABOR FLOODED OUT

In the Southwest, oil fields have been hampered by flood conditions in some areas not only directly but by the movement of labor to other sections as a result.

In many areas the destruction or reduction of fruit and vegetable crops has cut the need for labor to handle the harvest.

The effects of weather disturbances are widespread, though often slow to be recorded. Coal-mining areas around Pittsburgh have noted an upsurge in demand as a result of weather thousands of miles away. When drought cuts water power, utilities are forced to import coal or other fuel, at higher costs, from distant fields.

Sometimes this involves the use of extra or emergency equipment. Also, in drought arers, irrigation is made necessary, and this at times puts heavy burdens on commercial farmers, long after the headline drama of the drought has been forgotten.

The great drought of the last 7 years in the Great Plains has been broken, but some of the crops that were suffocating from the dust now are in trouble from such heavy soaking that new diseases, born of moisture and mildew, are adding worries estimated to run into the hundreds of millions.

Along the Mississippi River, heavy crop damage has been caused by excessive rainfall. There has been flooding of lowlands, with occasional slowing of transportation, but no disruption of business or industry, although there have been minor inconveniences.

But it's an ill wind, etc. Agriculture Department officials say the rains are likely to produce unusually good hay and vegetable crops later in the season.

One of the major concerns, however, is an expected exodus of farm workers from areas of the Mississippi Valley where the cotton crop has been flooded out. Cotton requires a lot of farm labor. Because of the flooding, farmers have been forced to substitute corn, soybeans, and sorghum cane, and these crops offer smaller benefits and less employment for farm workers.

Recently, fields have been so wet that farmers have been uable to work more than 1 or 2 days a week. Heavy losses from boll weevil and other plant diseases are feared.

Much of the damage involves cotton acreage and there have been requests from some sections for the Government to let planters put the flooded lands into the soil bank in exchange for hilly acreage that might be planted to late crops.

WINDFALL FOR TVA

In much of the area rainfall has damaged hay that already had been cut. While no reliable figures are available on the damage, there are indications that it is severe.

The Tennessee Valley Authority reservoirs are overflowing, and the agency consequently has reduced its coal-buying program in the Tennessee mining areas. Losses in mine

payrolls affect merchants in small mining communities, lead to layoffs in stores and present problems to finance companies interested in (among other matters) coal trucks used by independent miners and haulers.

Dealers in farm equipment are beginning to feel the pinch. In some areas, too, equipment used in road construction and other heavy work is idle as a result of washouts.

Reports from San Francisco indicate that the unseasonable weather has not made major inroads. On the contrary, heavy late-season rains were helpful. Although rough downpours damaged some crops, such as cherries, strawberries, lettuce, and hay, they indicated a good year for wheat and barley in areas that had been worried about a water shortage.

BERRIES WILL COST MORE

There was some unhappy news for consumers, however. Prices were considerably higher in the Northwest. While growers were reluctant to assess increases in terms of dollars, it was apparent that, so far as strawberries weer concerned, the drop from the May 1 estimate of 165,000 tons to the June 1 figure of 155,250 tons would make a sharp price upturn likely. The cherry crop loss alone was put at $3 million to $5 million.

In the Midwest, there was reluctance to downgrade forecasts, although planting has been delayed. In the extreme southeastern section of Illinois, planting was below 10 percent of normal for the date. However, this was regarded as exceptional.

In New England, pastures were reported drying up earlier than usual, forcing dairy farmers to resort to barn feeding. However, mot poultrymen purchase their feed, and so far there are no figures on losses.

The Midwest and nearby Illinois were hit hard by recent high winds and rainstorms, with damage in excess of $4 million. However, the long-term effect was not great.

Free World Must Be Alert to Moscow-Cairo Axis

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, May 15, 1957

Mr. CELLER. Mr. Speaker, it can easily be recalled how in 1955, when sweetness and "might," the so-called Geneva spirit, was the topic of the day, the world witnessed but ignored the beginning of Soviet penetration of the Middle East. Today we witness again a dismaying parallel. While the powers are engaged in disarmament negotiations, the Soviet Union has moved decisively to gain control of that same region. There is the display of Soviet naval power in the Eastern Mediterranean, the Suez Canal and the Red Sea. There is the sale of Soviet submarines to Egypt and there is the interference by Egypt, backed by the Soviet Union, in the affairs of anti-Communist Arab countries.

This is, no doubt, the beginning of a new Egyptian attempt to close the Gulf of Aqaba against Israel and thereby provide a rallying point for all the Arab people.

But the target is not Israel alone. The target is the free world as well. The elements of a tragic explosion are present which could easily erupt into war. The Soviet design is obvious. The desperation of Nasser to regain some of his control over the Arab world plays beautifully into the Soviet objective. The significance of the latest of the Soviet-Egyptian maneuvers must not be obscured by the seemingly hopeful disarmament negotiations.

Hells Canyon: Symbol of Socialism

EXTENSION OF REMARKS
OF
HON. PAUL B. DAGUE
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. DAGUE. Mr. Speaker, speaking as a citizen of Pennsylvania, I can only contemplate with apprehension and alarm the political maneuvering which has given the public power proponents a leg up on the socialistic Hells Canyon project.

Mr. favorite columnist, David Lawrence, writing in yesterday's Evening Star, has pointed out that all but 6 of the Democrats voted for this monstrosity while 39 out of 49 Republicans opposed it, thereby giving the GOP a firm talking point in its fight against State socialism.

As a Pennsylvania taxpayer, however, I am not so much interested in the political aspects of this controversy as I am in its economic implications. Paying, as Pennsylvanians do, nearly 8 percent of the total Federal tax bill, it is plain to be seen that we will pay through the nose and pay vastly more than our share of the cost of this monstrosity from which not one cent of return can possibly accrue to the citizens of the Keystone State.

In his usual able fashion Mr. Lawrence cites the Tennessee Valley project as the classical example of what we can expect from such socialistic adventures and emphasizes the subterfuge inherent in all subsidized public-power planning. Taken in the light of what we already know with regard to TVA, his observations could be prophetic in relation to Hells Canyon. These are his words:

The advocates of Government ownership always start off with some benevolent and high-sounding objectives. In the Tenessee Valley project just after World War I they promised flood control and navigation advantages in the Tennessee River and benefits to the farmer. Electric power, they insisted, was to be incidental. Today it is the main business of TVA, and the Government has been compelled to appropriate money for steam plants since about half of the power generated at TVA comes from coal and not dams. Private utilities in the area have been weakened and some put out of business altogether.

Hells Canyon sounds the tocsin of the renewal of the fight against creeping socialism in the guise of public power. The House has yet to work its will, and we can only hope the issue will be decided here on its merits without the intervention of civil rights or some other irrelevant issue. In addition, for which we are grateful, there is a wide gap between authorization and appropriation. And in the end we should be able to count on a Presidential veto if all other resistance proves unavailing. Assuredly, however, we must gird ourselves and stay on the firing line if we are not to be overrun by these sycophants of socialism.

The complete article by Columnist Lawrence follows:

PRESIDENT'S CHANCE OF A LIFETIME—VOTE ON HELLS CANYON VIEWED AS PROVING DEMOCRATS ARE PARTY OF STATE SOCIALISM

(By David Lawrence)

President Eisenhower has the chance of a lifetime in the political arena—to make a fight for private enterprise and brand the Democratic Party as the party of state socialism in America today.

For the President can cite the latest vote in the Senate on the Hells Canyon project. This shows that 43 out of 49 Democrats were recorded as willing to use taxpayers' money to put the Government further into the electric light and power business at a cost which Senator WATKINS, of Utah, has estimated would run up to about $2,225,000,000 in the next 50 years. All this spending is voted at a time when budget-cutting and tax reduction are supposed to be popular.

The Republican Party, on the other hand, mobilized against Government ownership and state socialism 39 out of its 46 Members in the Senate.

If the bill is passed by the House—and the state socialism advocates seem confident it will get the support of the Democratic Party there, too—President Eisenhower will most surely veto the measure. There are not enough votes to override a veto. The President has inveighed before against "creeping socialism" but now the Nation faces galloping socialism. Mr. Eisenhower's action would demonstrate conclusively that the present administration is not "socialistic" as some uninformed critics in the Republican Party have been erroneously claiming of late.

It means, of course, a lively issue for the 1958 and 1960 political campaigns. For if it is desirable that the Federal Government knock private enterprise out of the electric light and power business in America, it is just as logical for the Federal Government to take over and operate the steel, copper, coal, oil, aluminum, and other natural resource industries as well as automobiles, food, and retail stores, railroads, buslines, airlines, and all the other businesses now handled by private enterprise and private investors.

A statistical case doubtless can be made for Government ownership and operation in each instance on the ground that the Government could do it all more cheaply—since no taxes, local or otherwise, would have to be paid directly out of income. The taxpayers generally would be asked to foot the bill. Private incentive would be destroyed. Millions of workers, moreover, on becoming Government employees, would have to give up their labor-union privilege of using economic power in negotiations for wages. The postal employees could give some idea from their experience as to what that means to the workers.

The advocates of Government ownership always start off with some benevolent and high-sounding objective. In the Tennessee Valley project just after World War I they promised flood control and navigation advantages in the Tennessee River and benefits to the farmer. Electric power, they insisted, was to be incidental. Today it is the main business of TVA and the Government has been compelled to appropriate money for steam plants since about half of the power generated at TVA comes from coal and not dams. Private utilities in the area

have been weakened and some put out of business altogether.

The Federal Power Commission surveyed the whole Hells Canyon project and found that the three smaller dams which the private companies have been granted a license to build would furnish all the electric power required and do all the flood control work that is needed. Private investors would supply the money. Now this opportunity would be taken away.

The public power advocates won the fight because of some new-found allies from the southern part of the United States. Republican Senators are saying openly that the Democratic leadership manipulated a deal whereby some northern Democrats agreed to support the South in a parliamentary maneuver the other day to keep the civil rights bill in the Judiciary Committee. In exchange for this—which turned out to be futile anyway as the northern liberals had enough votes to beat the maneuver—several southerners agreed to vote for the Hells Canyon project. In five instances this meant a reversal of Democratic votes recorded a year ago—enough to beat the measure if they had stood firm against state socialism.

These are not happy days in Washington for those who believe in the historic American system of private enterprise. This system built our unrivaled industrial capacity and today is the Nation's real defense against a powerful enemy, Khrushchev, the Communist spokesman, predicted 3 weeks ago in his television interview that the grandchildren of the present generation in the United States would be living under socialism. Maybe he is away off in his dates but some form of Government ownership of key industries in America may be nearer than anyone nowadays thinks if the Democratic Party—numerically the majority party in the Nation today—continues to embrace state socialism.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U. S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U. S. Code, title 44, sec. 133, p. 1937).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD is located in Statuary Hall, House wing, where Mr. Frank Brodie is in attendance during the sessions of Congress to receive orders for subscriptions to the RECORD at $1.50 per month, and where single copies may also be purchased. Orders are also accepted for the printing of speeches in pamphlet form.

LAWS AND RULES FOR PUBLICATION OF THE CONGRESSIONAL RECORD

CODE OF LAWS OF THE UNITED STATES

TITLE 44, SECTION 181. CONGRESSIONAL RECORD; ARRANGEMENT, STYLE, CONTENTS, AND INDEXES.—The Joint Committee on Printing shall have control of the arrangement and style of the CONGRESSIONAL RECORD, and while providing that it shall be substantially a verbatim report of proceedings shall take all needed action for the reduction of unnecessary bulk, and shall provide for the publication of an index of the CONGRESSIONAL RECORD semimonthly during the sessions of Congress and at the close thereof. (Jan. 12, 1895, c. 23, § 13, 28 Stat. 603.)

TITLE 44, SECTION 182b. SAME; ILLUSTRATIONS, MAPS, DIAGRAMS.—No maps, diagrams, or illustrations may be inserted in the RECORD without the approval of the Joint Committee on Printing. (June 20, 1936, c. 630, § 2, 49 Stat. 1546.)

Pursuant to the foregoing statute and in order to provide for the prompt publication and delivery of the CONGRESSIONAL RECORD the Joint Committee on Printing has adopted the following rules, to which the attention of Senators, Representatives, and Delegates is respectfully invited:

1. *Arrangement of the daily Record.*—The Public Printer will arrange the contents of the daily RECORD as follows: First, the Senate proceedings; second, the House proceedings; third, the Appendix: *Provided,* That when the proceedings of the Senate are not received in time to follow this arrangement, the Public Printer may begin the RECORD with the House proceedings. The proceedings of each House and the Appendix shall each begin a new page, with appropriate headings centered thereon.

2. *Type and style.*—The Public Printer shall print the report of the proceedings and debates of the Senate and House of Representatives, as furnished by the Official Reporters of the CONGRESSIONAL RECORD, in 7½-point type; and all matter included in the remarks or speeches of Members of Congress, other than their own words, and all reports, documents, and other matter authorized to be inserted in the RECORD shall be printed in 6½-point type; and all rollcalls shall be printed in 6-point type. No italic or black type nor words in capitals or small capitals shall be used for emphasis or prominence; nor will unusual indentions be permitted. These restrictions do not apply to the printing of or quotations from historical, official, or legal documents or papers of which a literal reproduction is necessary.

3. *Return of manuscript.*—When manuscript is submitted to Members for revision it should be returned to the Government Printing Office not later than 9 o'clock p. m. in order to insure publication in the RECORD issued on the following morning; and if all of said manuscript is not furnished at the time specified, the Public Printer is authorized to withhold it from the RECORD for 1 day. In no case will a speech be printed in the RECORD of the day of its delivery if the manuscript is furnished later than 12 o'clock midnight.

4. *Tabular matter.*—The manuscript of speeches containing tabular statements to be published in the RECORD shall be in the hands of the Public Printer not later than 7 o'clock p. m., to insure publication the following morning.

5. *Proof furnished.*—Proofs of "leave to print" and advance speeches will not be furnished the day the manuscript is received but will be submitted the following day, whenever possible to do so without causing delay in the publication of the regular proceedings of Congress. Advance speeches shall be set in the RECORD style of type, and not more than six sets of proofs may be furnished to Members without charge.

6. *Notation of withheld remarks.*—If manuscript or proofs have not been returned in time for publication in the proceedings, the Public Printer will insert the words "Mr. ——— addressed the Senate (House or Committee). His remarks will appear hereafter in the Appendix," and proceed with the printing of the RECORD.

7. *Thirty-day limit.*—The Public Printer shall not publish in the CONGRESSIONAL RECORD any speech or extension of remarks which has been withheld for a period exceeding 30 calendar days from the date when its printing was authorized: *Provided,* That at the expiration of each session of Congress the time limit herein fixed shall be 10 days, unless otherwise ordered by the committee.

8. *Corrections.*—The permanent RECORD is made up for printing and binding 30 days after each daily publication is issued; therefore all corrections must be sent to the Public Printer within that time: *Provided,* That upon the final adjournment of each session of Congress the time limit shall be 10 days, unless otherwise ordered by the committee: *Provided further,* That no Member of Congress shall be entitled to make more than one revision. Any revision shall consist only of corrections of the original copy and shall not include deletions of correct material, substitutions for correct material, or additions of new subject matter.

9. The Public Printer shall not publish in the CONGRESSIONAL RECORD the full report or print of any committee or subcommittee when said report or print has been previously printed. This rule shall not be construed to apply to conference reports.

10. *Appendix to daily Record.*—When either House has granted leave to print (1) a speech not delivered in either House, (2) a newspaper or magazine article, or (3) any other matter not germane to the proceedings, the same shall be published in the Appendix except in cases of duplication. In such cases only the first item received in the Government Printing Office will be printed. This rule shall not apply to quotations which form part of a speech of a Member, or to an authorized extension of his own remarks: *Provided,* That no address, speech, or article delivered or released subsequently to the final adjournment of a session of Congress may be printed in the CONGRESSIONAL RECORD.

11. *Estimate of cost.*—No extraneous matter in excess of two pages in any one instance may be printed in the CONGRESSIONAL RECORD by a Member under leave to print or to extend his remarks unless the manuscript is accompanied by an estimate in writing from the Public Printer of the probable cost of publishing the same, which estimate of cost must be announced by the Member when such leave is requested; but this rule shall not apply to excerpts from letters, telegrams, or articles presented in connection with a speech delivered in the course of debate or to communications from State legislatures, addresses or articles by the President and the members of his Cabinet, the Vice President, or a Member of Congress. For the purposes of this regulation, any one article printed in two or more parts, with or without individual headings, shall be considered as a single extension and the two-page rule shall apply. The Public Printer or the Official Reporters of the House or Senate shall return to the Member of the respective House any matter submitted for the CONGRESSIONAL RECORD which is in contravention of this paragraph.

12. *Official Reporters.*—The Official Reporters of each House shall indicate on the manuscript and prepare headings for all matter to be printed in the Appendix, and shall make suitable reference thereto at the proper place in the proceedings.

EXTENSION OF REMARKS
OF

HON. JOHN W. McCORMACK

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. McCORMACK. Mr. Speaker, under leave to extend and revise my remarks, I am placing in the RECORD a letter of June 12, 1957, from the Honorable Gordon Gray, Director of the Office of Defense Mobilization, Executive Office of the President.

This letter is in response to my letter of April 3, 1957—see CONGRESSIONAL RECORD of April 18, 1957—to Mr. Gray concerning the allocation of nickel with particular reference to the disposition of the nickel sinter from the Government's Nicaro operation.

Mr. Gray's letter reads, in part, as follows:

5. There is no written agreement between the Department of Commerce or the Office of Defense Mobilization and the International Nickel Co. with respect to the allocation of nickel. As noted above when decontrol of nickel was being considered in 1953 the Department of Commerce obtained from the principal producers and suppliers an understanding that in the event the supply of nickel was inadequate for all purposes they would distribute the supply equitably among all nondefense consumers. They agreed to do this and the International Nickel Co. confirmed its intent in this matter in a letter to the Secretary of Commerce dated August 20, 1953 (copy attached).

The letter of August 20, 1953, from Mr. L. R. Larson, assistant vice president, International Nickel Co. is in confirmation of the understanding of arrangement as it is sometimes referred to by administration officials. It is difficult to understand how this informal arrangement between the Commerce Department and the International Nickel Co., though tacitly approved by the Office of Defense Mobilization, Executive Office of the President, binds other producers and suppliers or consumers.

Responsible officials in the administration have assured me and others that the system of allocation developed by INCO and approved by the Commerce Department and ODM, though based upon nickel consumption in the period prior to the Korean incident, is flexible in that it takes into consideration expanded or contracted requirements, new industries, new uses, and so forth.

Despite these assurances, I am informed that the situation has not been corrected insofar as some of the steel mills are concerned. Further, it is submitted that the reason for this is because there has been no change in the allocation formulas since 1951, and production volumes have changed radically since the quotas were established.

I am, therefore, addressing a letter to Secretary Weeks today asking if he or his staff is willing to confer with members of the industry who are seriously affected by the current system of allocations and will give consideration to their problems and recommendations. Mr. Gray's letter follows:

EXECUTIVE OFFICE OF THE PRESIDENT,
OFFICE OF DEFENSE MOBILIZATION,
Washington, D. C., June 12, 1957.

Hon. JOHN W. McCORMACK,
House of Representatives,
Washington, D. C.

DEAR MR. McCORMACK: This is in further reply to your letter of April 3 and the April 15 acknowledgment of my staff. I regret the delay in replying but felt it was desirable to await the preparation of certain statistical data by the Commerce Department with respect to the amount of new nickel made available to the Eastern Stainless Steel Corp. over the past several years.

The Eastern Stainless Steel Corp. prior to 1950 was essentially a converter and as such purchased sheet bar from the steel mills for conversion to semifinished products. In 1950 the company became an active melter and producer of steel and a direct consumer of nickel. The statistics furnished me by the Commerce Department show that the company has substantially increased its production of nickel alloy steels and it is felt that the corresponding increases in the amounts of new nickel made available to the company during the recent shortage years have been fair and equitable. These data are classified as "company confidential" by the Commerce Department and are not included herewith as it would reveal operating figures of the corporation.

Other information in the letter I have received from Mr. H. B. McCoy, Administrator, Business and Defense Services Administration, is quoted below:

"Our comments on the specific questions by Congressman McCORMACK, which follow, are enumerated to correspond with the questions in his letter.

"1. When nickel for nondefense purposes was decontrolled in 1953, Government received assurances from the major producers and suppliers of this metal that they would endeavor to maintain an equitable distribution of the nickel available for industry after all defense requirements were fully satisfied. Accordingly, the suppliers of nickel have provided each consumer with his fair share of all nickel available for nondefense uses in accordance with the policies and procedures given in detail in the enclosed report on the "Study of Supply and Distribution of Nickel," dated December 31, 1956, page 25. It is essential, therefore, that the Government make every effort toward an equitable redistribution of Nicaro nickel to avoid compromising the system by permitting free distribution of the Nicaro product.

"As Mr. Curley points out the steel industry is limited in its consumption of nickel oxide sinter by the availability of electrolytic nickel which for technical reasons must be available in a certain ratio with sinter. In order to increase the availability of electrolytic nickel for industry and thereby increase the capacity to use sinter arrangements are being discussed with nickel plating suppliers to replace a substantial portion of electrolytic nickel normally used for the manufacture of nickel anodes and plating salts with Nicaro nickel oxide sinter and powder. The premium price (diverted from Government shipments) and market price electrolytic nickel so released will be redistributed on an equitable basis to all other consumers, including the steel industry.

"The nickel sinter offered to the steel industry, which Mr. Curley referred to as being unsalable within the normal distribution pattern, in actuality, amounted to 1 million pounds (not 1.5 million pounds) and will total 2 million pounds with the receipt of further shipments. This quantity is being set aside for sale to the plating-supply houses in initiating the program mentioned above and therefore none of this material will be available for sale outside the usual distribution pattern.

"2. Disposition of the additional 1 million pounds of nickel sinter referred to by Mr. Curley is covered in the reply to question 1.

"3. Government is not aware of any mills which are receiving more nickel than they require. To the best of our knowledge all mills are receiving less than their requirements and many have operating inventories reported to be less than 10 days, which is far below their normal requirements.

"4. Recent changes have been brought about in the distribution system as it affected the plating consumers through modifications of customer entitlement bases by the plating distributors. These changes have been described in the attached copies of reports to Congress by the Department of Commerce. The system as it affected all other consumers appears to be reasonably satisfactory and under these circumstances no recommendations for further changes are being contemplated at this time.

"5. There is no written agreement between the Department of Commerce or the Office of Defense Mobilization and the International Nickel Co. with respect to the allocation of nickel. As noted above when decontrol of nickel was being considered in 1953 the Department of Commerce obtained from the principal producers and suppliers an understanding that in the event the supply of nickel was inadequate for all purposes they would distribute the supply equitably among all nondefense consumers. They agreed to do this and the International Nickel Co. confirmed its intent in this matter in a letter to the Secretary of Commerce dated August 20, 1953 (copy attached).

"I believe the above covers the substantive questions raised by Congressman McCORMACK and Mr. Curley. However, Mr. Curley's remark that there is a tie-in of information between various suppliers of nickel with regard to distribution may deserve comment. As far as we know this does not exist. Those who wish to buy nickel from the International Nickel Co. report the total nickel they expect to receive from all sources without identification. This information then is used by the company in developing the individual's entitlement for the period. Other producers provide BDSA with information on their shipments which with information obtained from an inspection of the INCO books, enables us to ascertain if an equitable distribution is generally being maintained. All this information is received and retained in confidence by BDSA."

I believe the preceding information covers all the questions raised in your letter, as

well as those in Mr. Curley's letter, except for his comments as to the movement of nickel into the stockpile. In that connection, we have not directed any of the Nicaro production into the stockpile for more than a year, and for the past three quarters have diverted the nickel under all Government contracts to industry use to the greatest extent possible. The maximum diversion of Government nickel scheduled for shipment to the stockpile is being continued. Calendar year 1957 diversions will reach approximately 115 million pounds. During 1956 there were 79.3 million pounds diverted.

I hope this information will be helpful to you and that you will call on us whenever we can be of service.

Sincerely yours,

GORDON GRAY, *Director.*

AUGUST 20, 1953.

The Honorable SINCLAIR WEEKS,
Secretary of Commerce,
Washington, D. C.

DEAR MR. SECRETARY: We understand that in considering the decontrol of nickel there are a number of questions on which you want our opinion.

In the event of decontrol of nickel it is our understanding that the Department of Commerce would advise us in advance on a quarterly basis of the military and AEC requirements for nickel. We would honor all of these requirements with preferential delivery. Furthermore, it is our plan to advise the Secretary of Commerce quarterly of our nickel deliveries for military and AEC requirements.

It is our intention to advise the Secretary of Commerce in advance and on a quartrely basis of our expected nickel deliveries to the United States including stockpile. In the event such deliveries exceed the present amount of 42,500,000 pounds, exclusive of stockpile which we are currently delivering quarterly, to the American industrial economy we will at such time discuss with the Secretary of Commerce whether the excess should be distributed to this economy or offered to the stockpile for immediate acceptance.

After taking care preferentially of the military and AEC requirements the balance of our nickel as reported quarterly will be distributed to the civilian economy in a fair and equitable manner.

It is also our understanding that you are concerned whether the decontrol of nickel will result in inflationary prices. We can assure you that our method of distribution is such that any of the nickel we distribute to the civilian economy would have great difficulty in reaching the black market. This is best illustrated by the fact that we are in normal commercial contact with users of nickel who buy at little as 100 pounds. As far as our own prices are concerned, the record speaks for itself.

Sincerely yours,

L. R. LARSON,
Assistant Vice President,
International Nickel Co.

Address by Hon. Clifford P. Case, of New Jersey, Before New York Young Republican Club

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by my colleague, the Senator from New Jersey [Mr. CASE], before the New York Young Republican Club, at the Mayflower Hotel, Washington, D. C., on June 22, 1957.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

REMARKS BY SENATOR CASE OF NEW JERSEY PREPARED FOR DELIVERY AT BREAKFAST MEETING, NEW YORK YOUNG REPUBLICAN CLUB, MAYFLOWER HOTEL, WASHINGTON, D. C.

I am glad to report that things have been going well on Capitol Hill. The President's legislative program is really starting to roll. So much so that I am confident this Congress will enact a meaningful civil-rights bill—the first since the Civil War era. We can see the end of the road, even though the struggle for the right-to-vote bill will be long. Although the Senate heard the threat of two filibusters from the southern side, the parliamentary success of this week is encouraging. I now believe we can get the 64 votes necessary to shut off the filibusters.

This was not the only achievement on the President's legislative list. The victories disprove the wishful thinking of some political theorists that the President's leadership has declined to the point where his legislative program is doomed. Let me cite the President's box score for the past week.

On Tuesday the House beat off all attempts to water down the administration's civil-rights bill, and by a vote of 286 to 126 finally passed the bill virtually intact. Of these 286 affirmative votes, 168 were Republican, while only 19 Republicans voted in the negative. By contrast, the Democratic split was 118 in favor to 107 against the bill.

Thursday night, as you all know, we won the important first round in our effort to get consideration of a right-to-vote measure. By a vote of 45 to 39, the Senate voted, in effect, to place the House bill on the Senate Calendar, bypassing the Judiciary Committee, which has bottled up the Senate's own version of this important bill for more than 5 months. Thirty-four Republican Senators, joined by 11 Democrats, voted to overrule a point of order against sending the bill to the calendar. Only five Republican Senators voted to send the bill to the Judiciary Committee.

Within the past week the Senate also approved the mutual security authorization bill, with 31 Republicans and 26 Democrats voting for the measure. On Tuesday the Senate ratified United States participation in the International Atomic Energy Agency—the realization of a bold and courageous proposal to harness the atom for peace made by President Eisenhower in his appearance before the United Nations in 1953. Thirty-two Republicans and 35 Democrats supported the President on this issue.

These votes speak for themselves. Support for President Eisenhower's program has been growing steadily since he made his two nationwide radio and television addresses to the American people, the first explaining his budget recommendations in general, and the second, his mutual-security program specifically. The effect of these talks was substantial. The strong bipartisan support for the mutual security authorization bill demonstrated that the erosion of the President's program had been stopped.

The fight is far from over. The mutual security and defense appropriation bills must be passed without crippling cuts. And as I indicated earlier, referral of the civil-rights bill to the calendar is only the beginning of the struggle on that issue. Only the virtually solid support of Republicans in the Senate can assure passage of this vital legislation. The votes in the House and Senate this week show that the Democrats are hopelessly split on civil rights. Incidentally, I think we will hear less and less about a Republican split from our friends across the aisle as the civil-rights bill is debated in the Senate. They will have enough fences of their own to mend.

I think there is a conclusion to be drawn from these recent legislative events. It is that we must put aside all talk about splits in the Republican Party. There is too much of the President's program still at stake to engage in any further divisiveness. The splendid showing of congressional Republicans in the past week was highly encouraging. But we still have a big job before us, if we are to enact the legislative program that President Eisenhower has recommended—a program that the American people have clearly demonstrated they will support.

Washington Report by Congressman Bruce Alger, of Texas

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. ALGER. Mr. Speaker, it is obvious to me that our form of government is successful to the degree that citizens participate and are well informed concerning the issues of the day. My weekly newsletter of June 22 is here included for those who are interested in reading one Congressman's report to his constituents:

WASHINGTON REPORT

(By Congressman BRUCE ALGER, Fifth District, Texas)

JUNE 22, 1957.—The House civil-rights bill conclusion was tense, dramatic, and disappointing. The bill passed 286 to 126 (almost same vote as last year, few changed their views despite long debate—see last two newsletters). The jury-trial amendment was beaten 251 to 158, a bitter disappointment and cause for alarm to many Members. In my last of three floor speeches, I summarized it this way—"After long debate no one has yet defined 'civil rights.' Are we jeopardizing, through new Federal jurisdiction, the rights outlined in the first 10 constitutional amendments? Unless and until we define just what the civil rights are that we seek to protect, other than the right to vote, which is perfectly clear to us, there should at least be the right of trial by jury." These brief final remarks I've sent to each Senator (and already have received 22 replies) in the hope that the bill can be improved in Senate debate, or better still, defeated. In cart-before-horse fashion we have seriously threatened the very freedom of all citizens, including those the bill seeks to protect, it seems to me. This fact will be learned to the consternation and surprise of many, I predict, if it becomes law.

The third supplemental appropriation bill, 1957 (title self-explanatory as to how budget cuts later can be reinstated) brought back to us two very controversial issues, flood insurance and tungsten stockpiling. Flood insurance (May 11 newsletter) was defeated again 218 to 186, too close a margin. Once again it was considered the "political" thing to do by many to prove they were against floods by voting on this fantastically expensive new Government program. Apparently 186 are still unmoved by nationwide pleas for economy and "cut the budget", as well as by the specific facts showing the impracticality of such a program. Again we see the camel trying to poke his nose under the tent. Tungsten purchase for de-

fense stockpiling debate produced these startling facts: (1) tungsten purchase authorized by Congress has resulted in Government paying $63 per ton while market price was $43 (ultimate loss of $138 million); (2) a 7-year wartime supply on hand, or 26 years at normal rate; (3) surplus tungsten beyond long-term strategic need equals 192-year supply for jet engines manufacture. Shouldn't Congressmen protest? We did, so no more money in this bill for tungsten.

Agricultural Trade Development and Assistance Act of 1954 extension of Public Law 480 was the week's real shocker to me. And I ended up as one of only seven who voted against it. The bill purports to dispose of our agricultural surpluses through sales and gifts. The obvious need to get rid of our surpluses is the underlying logic. As to sales (now up $4 billion), 87 agreements with 30 countries has resulted in disposal of $3 billion of food for foreign currency, which money United States spends in these countries for military bases, strategic materials, economic assistance, gifts and loans, military housing, residences for agricultural attaché, school aid, libraries, community centers, books and periodicals, formation and promotion of 4–H agricultural clubs for better rural living. Then the gift food goes for refugee relief, for flood relief and needy persons, etc., etc. "Uncle Sugar"? In sales, we don't get dollars; we give food and when we get the foreign currency, we spend it within each country. Isn't this foreign aid? Of course, but we don't call it that. It's called an emergency program (going into its fourth year) to develop new markets. Does it? Even the Agriculture Committee states only 1.6 percent of the products and funds went to this purpose, the reason for the law in the first place.

In the outright gift phase ($300 million more, total $800 million) 1,287 million pounds of food were given away overseas and 789 million pounds in the United States. At this point, I took the floor to protest the entire bill, to point out that many others than the needy in 39 States get food now from Uncle Sam, that local agencies solicit people to get theirs. Is it Uncle Sam's responsibility to feed, clothe, and house us? How does this differ from socialism? It doesn't. Unions on strike are distribution centers—must taxpayers support strikers? Sure, we must dispose of our surpluses, and we must and can help the needy. An attempt to add cotton to the giveaways was narrowly defeated, with most southern conservatives for it. Are we helpless to solve our problems or are we just spineless and political? If we feed people, will they vote for us? Only seven of us voted against this monstrosity. Where now are the States righters? (The anticivil rights orators). Again, who's for economy?

The Prime Minister of Japan spoke to us in the House Chamber Thursday. His moving and friendly speech (through a translator), sprinkled with beliefs in democracy, made me remember that only 12 years ago this month we bombed Osaka, Kobe and Tokyo. I could never then have anticipated my future work, nor that Germany and Japan, our enemies, would be prospering beyond other nations.

Attacks Foreign Aid

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include therein the following editorial taken from the Gaffney Ledger (S. C.) of June 22, 1957:

ATTACKS FOREIGN AID

Former Assistant Secretary of State for Inter-American Affairs W. Spruille Braden has condemned the foreign-aid program of the United States as one of national suicide.

Braden, who served as Ambassador to Argentina during the Truman administration, told the House Foreign Affairs Committee recently that our foreign-aid program had cost the United States $600 billion by the end of this current fiscal year, June 30, and should have brought about spectacular results.

Instead, he said, it must be admitted that no nation has ever given away so much to so many for such meager rewards. Braden charged that the program had not only failed to produce security for the United States but that in some cases it had actually created enemies.

Braden said the main results of the program, which had been backed by misguided idealists and sentimentalists, was to establish soft jobs for thousands of bureaucrats and waste the taxpayers' money.

We do not entirely agree with Braden. American generosity immediately after World War II probably saved Western Europe from communism. At least, the aid program backed up by the United States monopoly on the atom bomb probably prevented the nations of Western Europe from turning to bolshevism. And in some cases, such as that of England, the aid program played a vital role in restoring that country to a more normal and stable economic way of life.

However, we do agree that in many cases the United States aid program has been conducted in a wasteful manner and too hastily organized to produce results. Therefore, we agree that whatever aid the United States furnishes in future years should be in the form of loans, to be repaid, and not in the form of grants.

There have been outstanding examples of success in the big foreign-aid program, and one of them is the story in Turkey, and another is that in Greece. So the foreign-aid program cannot be condemned in wholesale fashion and declared an absolute failure. However, Braden is in tune with the sentiment of the times, and it seems that Congress and the American people are ready for the aid program to be put on a practical basis.

Small Business Act

SPEECH
OF
HON. JOHN A. BURNS
DELEGATE FROM HAWAII
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

The House in Committee of the Whole House on the State of the Union had under consideration the bill (H. R. 7963) to amend the Small Business Act of 1958, as amended.

Mr. BURNS of Hawaii. Mr. Chairman, the Banking and Currency Committee fully deserves the wholehearted expressions of sincere appreciation accorded to them by Members of this House from both sides of the aisle. The Small Business Act is of great importance to the future of our country. Its importance cannot be overestimated.

The Committee on Banking and Currency, whose chairman is the renowned and distinguished gentleman from Kentucky [Mr. SPENCE], whose many outstanding contributions to the greatness of America are a matter of record, has reported in H. R. 7963 a bill the need for which is evident. It is a bill which shall be of increasing value in the preservation of the American way of life in the future.

As our Nation has developed its economy and expanded its population, the opportunities for the entrepreneur—like a Henry Ford—decrease almost in ratio to the growth of larger industries. The demands of these larger industries for capital and credit foreclose this source to small business. The need for Government to keep open the avenue from which we obtain those who bring initiative, vision, and courage and develop new ideas, new ways, and new industries, is clearly apparent and vital. The small-business man is the source from which we draw our strength.

I take advantage of this opportunity to express the deep appreciation of the people of Hawaii to the very able and dedicated gentleman from New York, [Mr. MULTER]. Due to his vision and broad interest in the economy of the United States and in every part of the United States, Hawaii has today a Small Business Administration. That Small Business Administration is today giving hope in a most needed area in Hawaii.

Due to the continuing interest and most capable attention of the outstanding chairman of Subcommittee No. 2, Mr. MULTER, who visited Hawaii during the Easter recess with the able and distinguished gentleman from Oklahoma [Mr. STEED], the people of Hawaii have great expectations that in the Small Business Administration, whose branch office in Hawaii has recently been given additional authority, they will find the assistance needed to develop the small business so needed in the Hawaiian economy.

It is my understanding from members of the Committee on Banking and Currency that the Administrator of the Small Business Administration has given the branch manager of the Hawaiian office substantial authority with respect to the handling of loans and other matters so that to all intents and purposes it will operate as a regional office. The designation of a regional office was not insisted on in view of this commitment from the Administrator since administrative expenses would be unduly increased if it were a regional office. I commend the Committee on Banking and Currency and extend our sincere thanks and appreciation for their gracious consideration.

Resolution on Airman Girard from City Council, Lynn, Mass.

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 17, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a resolution offered by the city council of Lynn, Mass., on June 11, 1957,

requesting the President to order the Department of Defense to keep custody of Airman Girard.

The resolution follows:

CITY OF LYNN IN CITY COUNCIL, JUNE 11, 1957

Whereas Airman Third Class Girard of the United States Air Force, allegedly committed an offense on a Military Reservation in Japan; and

Whereas the alleged offense was committed on a Military Reservation under the control of the Armed Forces of the United States; and

Whereas trial of said Airman Girard has been set down for a Japanese criminal court: Now, therefore, be it

Resolved by the Lynn City Council, That the President of the United States be requested to order the Department of Defense to keep custody of Airman Girard and give him a court martial under the Uniform Code of Military Justice of the United States and that a copy of this resolution be forwarded to Senators KENNEDY and SALTONSTALL and Congressmen LANE and BATES.

Thailand Celebrates 25th Anniversary of National Day, June 24th

EXTENSION OF REMARKS

OF

HON. ADAM C. POWELL, JR.

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. POWELL. Mr. Speaker, when I returned from the Bandung Conference at Indonesia, I announced that I would address the House of Representatives on the occasion of the national holiday of each one of the participating nations on friendly terms with the United States. I wish to send greetings to the people of Thailand, His Majesty King Phumiphon Adundet, and His Excellency Pote Sarasin, Ambassador of Thailand, on the occasion of the celebration of the 25th anniversary of National Day, June 24, 1957.

Thailand enjoys the proud distinction of being the only nation in southeast Asia, and one of the few on the continent of Asia, which has been independent throughout its history. Although from the beginning of her history Thailand had been governed by a progressive monarchy, the people threw off the yoke of absolutism on June 24, 1932, and proclaimed a constitutional monarchy with the hopes that the new government might better meet the needs of the times. Thailand enjoys all the principal features of democratic government including elections, a constitution, and a legislative body. In general, democracy is the established practice in Thailand's political institutions.

In this world so often beset by turmoils, Thailand has had the good fortune of being governed by farsighted, wise, and firm statesmen. She has thus known an era of unprecedented development, without disregard to her internal and external security. The leaders of the nation have as their primary aim the development of the resources of the country in order to attain a better standard of living for the benefit of all its people.

About 85 percent of the gainfully employed Thais are engaged in agriculture. Agricultural products earn over 60 percent of the national revenue. Farsighted governmental policies are providing research stations and the facilities to experiment with mechanization of rice production, Thailand's chief crop and mainstay, as well as the development of large irrigation projects to increase the yield per acre and the overall harvest. Although much remains to be done, notable progress has been made in industry and transportation. The Government's medical and health officials many of whom have been trained in American medical schools, recognize the great need for health improvement and the shortage of adequately trained medical personnel. United Nations antimalaria teams are cooperating with the Thai health officials. Success has also been achieved in the antiyaw campaign, launched through joint UNICEF and WHO action. Hospitals and clinics are being established and health education is being carried on throughout the land. Mobile health units travel both on land and water for the welfare of rural communities. The importance of education has been greatly stressed in the country. Keenly aware of the fact that a great number of the people are illiterate, the Thai Government has arranged for assistance by educational specialists through UNESCO and the United States Government.

The Thai people along with the rest of the free world know that a free and prosperous people is communism's most formidable foe. Every well-founded and happy home is a fortress against tyranny, while poverty and wretchedness are its breeding ground.

It is Thai policy to maintain friendly relations with other nations. In amplification of this policy she has taken her place with the free nations in United Nations sessions, and has benefited greatly from membership. Thailand was the first nation which responded to the appeal of the United Nations and sent troops, naval and air forces to fight side by side with other free nations in Korea, and actively participates in the councils of the United Nations.

The United States enjoys a historical friendship with Thailand. The United States is well represented in Thailand, where Americans are held in high regard. The Thais have welcomed American assistance in improving its economic well-being and keeping its political freedom. As examples of the projects which had added much to United States prestige are the highway construction, education and health programs.

Southeast Asia is undergoing a period of phenomenally rapid change. Much has been achieved. The free world can count itself fortunate that that incident and upheavals in the area, serious though some have been, have been markedly fewer and less widespread than the Communist agitators had hoped to achieve. Thailand in particular has given us an impressive demonstration that when people are contented and happy, communism makes but little progress.

Thailand's strategic position, its tradition as a free nation in southeast Asia, and its opposition to communism, give the country an important place in international affairs. It is an example and inspiration to other countries in the region who are engaged in the conflict with totalitarian aggression. As a bulwark against communism, the influence of the Thai may be beyond measure.

Again I salute Thailand and pray for continued mutual loyalty and respect between our countries and a continued strong purpose toward our peaceful aims.

Sixty-First Anniversary of Twin Shaft Mine Disaster at Pittston, Pa.

EXTENSION OF REMARKS

OF

HON. DANIEL J. FLOOD

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Mr. John C. Kehoe, Sr., columnist for the Sunday Dispatch of Pittston, Pa., and an outstanding businessman and civic leader, in which Mr. Kehoe graphically presents the terrible mine disaster which befell the mine employees and their families at the Twin Shaft located at Pittston Junction 61 years ago this coming Friday:

VIVID MEMORIES OF LOCAL AREA'S WORST DISASTER

(By John C. Kehoe, Sr.)

Friday, June 28, is the 61st anniversary of the Twin Shaft disaster, a catastrophe such as rarely hits any town and the like of which I hope never occurs again in the anthracite region. At about 3 a. m. on that awful day in 1896 residents of Pittson and West Pittson were aroused by what was thought to be three terrific explosions which shook houses and furniture like an earthquake. Soon the fire gongs sounded and the colliery whistles blew and the word spread like wildfire that a cave-in had occurred deep in the workings at Twin Shaft, located at Pittston Junction and operated at that time by a mining firm called the Newton Coal Mining Co.

As soon as I heard the colliery whistles blowing I instantly knew that they must be the signal of disaster at the Twin for I had known that a bad squeeze was on in the Twin mines and that my father and brother and uncle, and many of my friends had been working a night shift trying to stop it and so save a large pump in the section affected. I was one of the first to go down in the Twin Shaft to help in the rescue efforts. Billie Lee of Prospect Street, Pittston, who is still living, was also one of the rescue party and as far as I know the two of us are the only ones in that rescue party still living. We were mule drivers at the time we went into the mines as rescuers. It was a hopeless task which went on for days and which ended shortly after July 24, on which date nearly all the mine superintendents and mining engineers in the valley met at Twin Shaft and decided that in their estimation the obstructions were so insurmountable that the bodies of the entombed could not be found.

My father, my brother Frank and my Uncle Thomas Barrett were among those who had been entombed. It was a difficult task to discover the identity of all the men who were lost because the only person having the names of all the men and boys who reported for work and entered the mine that night was one of the victims of the disaster. After several days of canvassing homes and the boarding houses where the mineworkers who had lately arrived from European countries lived, the Newton Coal Mining Co. announced that 58 men and boys had perished, leaving widows, orphans and dependents to the number of 150.

The Newton Coal Mining Co. went out of business some time after the Twin Shaft disaster and the Lehigh Valley Coal Co. then operated that colliery until Kehoe-Berge Coal Co. took it over about 25 years ago. The Twin Shaft is a Kehoe-Berge Coal Co. operation in which my early years were entwined long before there was a Kehoe-Berge Coal Co.—indeed, long before I had even begun to get near the first rung of the ladder upward toward success in business.

ADVOCATES SAFETY

Learning firsthand as I did the agony of losing loved ones in a mine disaster, there is no more ardent advocate of mine safety than I am. Thank God the anthracite industry has come a long way in safety practices since that June day in 1896 when the Twin Shaft disaster occurred, and in addition to the good safety records good mine operators have nowadays is a more humane method of taking care of mine accident victims.

When mine accidents do occur today workmen's compensation and social security aid the victims, and if a disaster should occur the American Red Cross would help and while none of these forms of assistance, or all of them together, can make up for injury or death, they are a big improvement over the era when the Twin Shaft disaster occurred. In those days there was no organized assistance and the victim of a mine accident was simply brought home and dumped on his family whether he be dead or badly injured. In the case of the Twin Shaft disaster the bodies were never found.

The Twin Shaft disaster, creating as it did 150 widows, orphans, and dependents, moved the community so deeply that civic leaders of the day organized their own plan to bring relief to the dependents of the disaster's victims. The Pittston Board of Trade called a special meeting for Monday evening, June 29, the day following the disaster, to consider means of helping the bereaved families. A committee was appointed to draw up an appeal and to solicit funds and the board of trade itself headed the subscription list with a gift of $1,000. The Newton Coal Mining Co. gave $2,500 in merchandise from the company store to those left dependent—a far cry from the modern anthracite mining companies' elaborate system of workmen's compensation payments.

PUBLIC MEETING

A public meeting was held on the evening of June 30 at Music Hall on Water Street, Pittston, where the Masonic Temple is now located. It was presided over by Benjamin Harding, the President of the Board of Trade. A sum of several thousand dollars was pledged at that meeting. On July 2 another meeting was held at Music Hall with not only Pittstonians in attendance, but many prominent people from nearby towns. The late Attorney Peter A. O'Boyle, who later became a Luzerne County judge, was chairman of that meeting, and the late C. C. Bowman, of William Street, Pittston, was the secretary. A permanent organization was formed to handle the relief funds with a group of prominent citizens of Pittston, Scranton, and Wilkes-Barre as incorporators. Later the following officers were elected for this Twin Shaft Relief Association: K. J. Ross, president; Charles C. Bowman, secretary; M. W. O'Boyle, treasurer; Very Rev. John Finnen, V. G.; Rev. N. G. Parke, D. D., and Andrew Bryden, vice presidents. The following served as members of the executive committee: K. J. Ross, president; Charles C. Bowman, secretary; Andrew Bryden, Joseph Langford, Stephen B. Bennett, John H. Foy, and C. Frank Bohan, Esq.

Appeals for help were made not only locally but railroad companies, coal companies and many other prominent corporations and individuals were asked to help and committees visited New York and Philadelphia to personally solicit funds. Within 60 days nearly $70,000 was subscribed to the fund and within 9 months the total had risen to almost $77,000.

HELPED WIDOWS

The Twin Shaft Relief Association set up a plan whereby $60 a year was paid to each male child until he reached the age of 12 (note that a boy in those days was considered old enough to go to work for himself at the age of 12); each female child got $60 per year until she reached the age of 13; each widow got $120 per year; there were also benefits for other dependents.

What a contrast those modest benefits from a fund raised by generous citizens solely to cover Twin Shaft disaster victims is to today's costs of things and today's organized workmen's compensation fund and social security payments and Red Cross disaster work. I can tell you, though, that the poor victims of the disaster at the Twin Shaft appreciated the generosity of those who raised and contributed to that relief fund, and that fund meant an awful lot to the disaster's victims. I know how they felt because they were my people, though I was old enough at the time to earn my own living and was not a dependent of my father when he met his death.

For many years I have had the parish priest at St. Mary's Help of Christians Church at the junction say a mass for the 58 men and boys who were entombed in the Twin Shaft disaster, and I have a trust fund set aside to have a mass said for them as long as there is a Catholic Church at the Junction.

I always wanted to have a movie picture made of the Twin Shaft disaster but I could never get any person to help me out as I'm not a playwright.

One time I saw a movie entitled "How Green Was My Valley." It was a story of a coal mine disaster which occurred either in England or Wales. I being one of the first rescue workers to go down into the Twin Shaft trying to rescue the entombed men and boys, always felt that I could write a better play than the one How Green Was My Valley.

Whatever money would be made on the movie picture part of it could be used to erect a monument at the Twin Shaft for the 58 men and boys. Then whatever money is left after building the monument it could be given to St. Mary Help of Christians Church.

Federal-State Responsibilities

SPEECH
OF
HON. ALFRED D. SIEMINSKI
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

(Mr. SIEMINSKI asked and was given permission to address the House for 1 minute.)

Mr. SIEMINSKI. Mr. Speaker, I call to the attention of the Members that on pages A4949 and A4950 of the Appendix of the RECORD there is a very good exposition of the inconsistencies in our tax policies, local, State, and Federal.

Unless we go after the tax structure to cut out the unfair and the antiquated in it, we are going to get immersed in words.

I commend the article to the gentleman from Washington [Mr. PELLY], who has just spoken, and do now give him a copy of it.

Speech of the Vice President of the United States, Richard Nixon, Before the United States Junior Chamber of Commerce Convention, Milwaukee, Wis., June 25, 1957

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, June 25, 1957

Mr. FULTON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address:

SPEECH OF THE VICE PRESIDENT OF THE UNITED STATES, RICHARD NIXON, BEFORE THE UNITED STATES JUNIOR CHAMBER OF COMMERCE CONVENTION, MILWAUKEE, WIS., JUNE 25, 1957

There is no subject in which young Americans are more interested today than the maintenance of peace in the world. In my opinion there has been too much pessimistic, defeatist talk in recent months about America's leadership in this field.

We have heard that our diplomacy has been stupid and inept, our foreign-aid program is a wasteful giveaway, our economy is too weak to support the defenses we need, and that the President has failed in his leadership in both international and domestic affairs.

I say that as we consider our failures, we should not lose sight of our successes. Although I admit that I am not an unbiased observer, I think it is time we should remind ourselves that under President Eisenhower's leadership we have had 4 years of peace, 4 years of unprecedented prosperity, and 4 years of honest government.

And I think it is time for us to discuss our responsibilities in the world, not in terms of what we can't do, but in terms of what America should do as a great Nation welcoming the opportunity which is presented to us to make a mighty contribution to the cause of peace and freedom.

We can all agree that American and the free world must maintain military strength sufficient to meet and defeat any aggressor. We do this not because we want war but because we want peace and because history tells us that where a potential aggressor is on the loose, weakness invites attack and strength discourages it.

We can disagree as to what the level of our strength should be. But where the decisions as to the character and quantity of our defense were made after months of study of facts available from all over the world, by a man with the experience and background of the President of the United States, I say that anyone who would make substantial cuts in the defense budget below the amounts recommended is taking a risk with

America's security which the American people will not and should not support.

I know there are those who suggest that we can make reductions in our Defense Establishment because of the prospects for disarmament. But while negotiations for disarmament are taking place is the very time when we should not reduce our defenses.

Our primary objective and motivation in such negotiations must not be to reduce a burden of armaments we are unable or unwilling to maintain but to reduce the danger of war which our armed strength is designed to prevent.

The road to war is paved with agreements based solely on mutual trust. That is why we serve the cause of peace when we insist that any disarmament agreement must be accompanied by an inspection system which will enable all the parties concerned to know whether the agreement is being carried out.

We have heard a great deal of criticism in recent weeks of our foreign-aid programs. There are some who would have us believe that these programs amount to nothing more than a great philanthropic giveaway to undeserving and unappreciative foreigners. If this were the case the Congress would not be justified in appropriating a dollar for their continuance.

Let us examine our aid programs solely in terms of one question. Are the interests of the United States being served by them?

Approximately three-fourths of the foreign-aid appropriation is for military assistance. Among the countries which are receiving military assistance are: Korea, Formosa, South Vietnam, Pakistan, and Turkey. All of these countries have common borders with Communist nations. We know from what happened in Korea that if these countries are not strong enough to defend themselves they run the risk of attack. If they are attacked we would inevitably become involved.

The question then is not whether they should have adequate defense forces, but how it can be done most economically and effectively.

On the average it costs five times as much to maintain an American soldier abroad as it does for the fighting men of the Allies we are aiding. By conservative estimates, our expenditure of $2.8 billion in foreign military-aid results directly in at least $15 billion worth of defense for ourselves and the free world. Spending less for military aid abroad would simply mean spending more for defense at homes and more American boys in uniform.

I submit that on the basis of these facts those who would substantially cut or eliminate our military foreign-aid programs are in fact the spendthrifts and not the economizers.

The President has asked for a billion dollars for the purpose of providing economic assistance to nations abroad. This money does not for the most part go to nations allied with the United States militarily. Most of it goes to countries in Africa, the Near East and Asia which are uncommitted or neutral in the struggle.

How then does this help us?

The Communists know that if they can win a substantial part of the 700 million people who live in the uncommitted areas of Asia and Africa they will not have to fight a war in order to achieve world domination. If we allow the Communists to win the uncommitted areas of the world, the balance of power and resources and men will be such that the free world will be strangled into submission by the Communist world.

The billion dollars we are spending for economic assistance to these uncommitted countries, therefore, is an investment in our freedom and independence.

I have visited most of the countries involved. I have seen our economic assistance programs in operation. There has been some waste and inefficiency in their administration. But when we consider the tremendous stakes involved, we can only conclude that the remedy for these difficulties and errors is to try to do a more effective job, and not to give up and let the Soviet Union start taking over the world.

We should never make the mistake, however, of assuming that economic assistance alone is the answer to the problem involved in winning the friendship and allegiance of the peoples of the uncommitted nations.

The people of these countries above all else want and deserve recognition of their dignity as individuals and as nations. In my opinion, the major reason for the opposition to colonialism in Asia and Africa was not economic exploitation or even the denial of independence but the age-old resentments engendered by the notion of white superiority.

We must avoid any American action that seems to imply that we feel we are a superior breed. If we cannot treat the newly independent nations of Asia and Africa, or for that matter any sovereign people, as our moral equals we had better abandon our struggle against communism and be prepared for ultimate conquest. The greatest sin we can be guilty of in the international field is that of arrogance, of false pride, and failure to recognize and respect human dignity.

It has been my privilege during the past few weeks to attend ceremonies commemorating the first landing at Jamestown 350 years ago and the landing of the *Mayflower* at Plymouth 13 years later. It is well today we be reminded of the risks and sacrifices of those who founded this Nation. We need the courage, the vision, and the idealism which characterized the first settlers of this land.

The unprecedented prosperity we enjoy today brings with it a moral challenge that we cannot overlook. It is the challenge to sustain in prosperity the high qualities of character that we perfected in adversity. We know from history that great nations became corrupt, soft, and decadent under the influence of prosperity. We know that the Roman Empire fell, not primarily because of the barbarian attacks from without, but rather because of the apathy and indifference of a prosperous citizenry. Rome fell when its own people lost the will to fight for their native land.

I raise this point because there are some in our Nation today who say that we cannot afford the sacrifices needed to maintain our national security. They oppose foreign-aid programs or even some of our direct costs of defense solely because the budget is too high. They say that we cannot continue to carry the burden imposed by the common effort of free nations to keep alive in the world the spirit of freedom and the recognition of the dignity of man.

Let me make my position clear. We should vigorously oppose any waste or any unnecessary expenditure of Government funds. I respect the integrity of any man who may disagree with any specific program and hold that it does not really contribute to world peace.

But I cannot understand the attitude of those who refuse to examine the arguments, but simply say we cannot afford it. No price is too great to pay for freedom. If we were a poor nation, instead of the most prosperous in the history of the world, I would still say that we can afford every dollar that is truly necessary to protect our liberty and to help bring peace to the world.

We today face a challenge to show the same courage and devotion in fighting for peace as we have always shown in fighting to win a war. We need today the qualities of greatness that were given to us by our forefathers.

I believe that the young Americans so well represented by this great convention can provide that kind of leadership. I ask you to go back to your communities and to help develop the enlightened public opinion which will support—not grudgingly but enthusiastically—American policies which are designed not just to avoid war in our time but to win and keep the peace for all time to come.

I would hope that you could give your support to policies which will keep our defenses strong enough to deter a hot war, to provide for an economic and information program designed not just to maintain the status quo but to win the cold war, and to help build in America the kind of society which will be the full realization of the dream our fathers had when they came to these shores 350 years ago.

Jordan Celebrates 29th Anniversary of Independence

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL, JR.
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. POWELL. Mr. Speaker, when I returned from the Asian-African conference at Bandung, I announced that I would address from the floor of the House of Representatives each one of the participating nations on friendly terms with the United States on the occasion of a national holiday. May 25, 1957, marks the 29th anniversary of the independence of Jordan. In observance of that event, I wish to send greetings to the people of Jordan, His Majesty, King Hussein and the Honorable Mahmoud A. Rousan, Chargé d'Affairs ad interim, of Jordan.

Our keen concern for the preservation of the independence of other nations arises naturally from our own traditions of freedom and independence and from a deep awareness of the consequences to other nations, to the free world, and to ourselves of the loss of true sovereignty by any nation. King Hussein is to be commended for his forthright stand against antidemocratic elements in his country. The influence of the mob has been successfully challenged in Jordan. King Hussein's vigor has set an example to other Arab governments which prefer to settle policy by means other than submission to subversively agitated mobs.

In his plea for national unity, King Hussein aimed his words at those dreaming of dismemberment of his country:

> I am hostile to those who portray things wrongly to you and those inspired from outside their own country and those disloyal to their country. I am also hostile to those who try to drive a wedge between me and you. * * * We meant it when we said we would resist anyone trying to belittle our sovereignty and our security.

Jordan is more independent today than in a very long time past. King Hussein is methodically cleaning up those people who would have returned the country to the status of a dependency.

To read the decrees King Hussein has promulgated as part of his fight in Jordan does not warm the heart of a

believer in democracy except as they may be the necessary and we hope temporary means of averting a worse dictatorship. A stable state must be built essentially on public consent.

Democracy, since it must rest on literacy, education, and tolerant political traditions, is a plant of slow growth. The stability which King Hussein has preserved in Jordan must justify itself by works. The example of a victory over economic difficulties there would have great effect elsewhere in the Middle East. Such a victory will require substantial aid and wise friendship from the United States.

Let us hope that these problems plus the Israeli problem can be solved for the good of all men of good will.

An American Speaks

EXTENSION OF REMARKS
OF
HON. MORGAN M. MOULDER
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, June 24, 1957

Mr. MOULDER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from J. George Robinson, of Jefferson City, Mo.:

JEFFERSON CITY, MO., *May 29, 1957.*
The Honorable MORGAN M. MOULDER,
House of Representatives,
Washington, D. C.

DEAR MORGAN: In reply to your letter of May 24, please permit me to say that I think all thanks are due you for allowing me and your other constituents the opportunity of expressing ourselves through the medium of the questionnaire you sent out.

I read with a great deal of interest your excellent speech of July 11, 1956, relative to the American taxpayers' inability to forever support the foreign countries. It seems to me that recent developments have more than ever conclusively shown that we purchase for ourselves only contempt, hatred, and trouble when we continue to spend our money among supposedly friendly foreign peoples.

The uprisings in Formosa and the tense feelings in the Philippines and other Asiatic countries which we have supported for so long indicate that, and the continued betrayals of American citizens and other freedom-loving peoples of the world by Tito of Yugoslavia while enjoying so much of America's foreign dollars should point up to any right-thinking man the ridiculousness of continuing extensive foreign aid of that kind.

It also comes to my mind that when this Nation of ours was on the threshold of real trouble in 1933 and when President Roosevelt proposed a program of $4,800,000,000 in public works to furnish a bare living for many of our citizens, the Republican Party and the Republican press in this country hurled all manner of vile epithets at the suggestion and continue to ridicule it even to this day.

Again, I feel that our own people deserve whatever consideration we can give them in the way of an opportunity to earn an honest living and an opportunity to be rid of confiscatory taxation.

The appeals that President Eisenhower has recently made on the radio and television and which are constantly being echoed not only by his Cabinet members and high appointees but by columnists who are apparently subsidized by the foreign nations with the very same moneys now being sent in the form of foreign aid to such countries in a desperate move to propagandize the people of our country to support a continuation of it, is nothing short of reprehensible.

It is my sincere hope that all of the people who have demanded a sincere effort to curb Federal spending and reduce Federal taxations will continue to make their position known so that the Congress may do an adequate job of keeping such matters in proper balance.

During the past few months the American people have been represented in Congress more completely and sincerely than at any other period in the history of this Nation, and I feel that you and most of your fellow members of both the House and Senate deserve the undying gratitude and praise of your constituents for such representation.

Sincerely yours,

J. GEO. ROBINSON.

Tribute Paid to Mr. Cherry—Governor Hodges Distressed at News of Ex-Governor's Death

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mr. WHITENER. Mr. Speaker, on Tuesday, June 25, 1957, the Gastonia Gazette, Gastonia, N. C., published an Associated Press story giving the comments of some of the leading public officials upon the death of Hon. R. Gregg Cherry, former Governor of North Carolina.

I believe that these comments with reference to the life and works of my close personal friend, Governor Cherry, will be of interest to our colleagues in the House of Representatives and the public generally.

TRIBUTE PAID TO MR. CHERRY—GOVERNOR HODGES DISTRESSED AT NEWS OF EX-GOVERNOR'S DEATH

Leaders of State government and others commented today on the death of former Gov. Gregg Cherry.

Gov. Luther Hodges said in Williamsburg, Va., where he is attending the National Governors' Conference:

"I am terribly distressed at hearing the news of Governor Cherry's death. He was a warm, personal friend of mine. One of the first things I did upon coming into office was to counsel with him because he had a reputation for integrity and good government. North Carolina will miss him greatly."

Dr. J. W. R. Norton, State health officer, summed up the expressions of several State officials when he said Cherry was certainly one of the most vigorous and colorful public officials we've ever had in North Carolina.

Dr. Norton, who was appointed by Cherry in 1948, said "he was one of the frankest and most lovable men I've ever known. He always had the best interests of all the citizens at heart at all times. He was particularly interested in mental health and led the way to great improvement on the care of those suffering from mental disorders."

Highway Chairman A. H. Graham, who served the 4 years of Cherry's administration, said: "In his passing we've lost another one of the outstanding servants of public welfare of our State. North Carolina never had a Governor who was more careful of the properties of honesty and fair dealing with all of the people."

State Auditor Henry L. Bridges, who was first appointed to his State job by Cherry in 1947, commented that the Cherry administration was one of the soundest the State has had in a long time and we are still today reaping benefits of his progressive policies.

Secretary of State Thad Eure described Cherry as truly an unswerving Democrat. He said Cherry was a close personal friend and I'm deeply saddened.

State Treasurer Edwin Gill, who served under Cherry as revenue commissioner, said Cherry was a rugged courageous leader who never hesitated to do what he thought was best for the people of North Carolina. He was a faithful public servant in the great tradition of the governorship.

Dr. Ellen Winston, State welfare commission, said it was a great privilege to serve under Cherry. She added that Cherry gave strong support as Governor to the development of a constructive program of public welfare, being deeply interested in all child welfare services.

Associate Justice E. B. Denny, who knew Cherry when they were both lawyers in Gastonia, said Cherry was an able and outstanding lawyer, Governor, and a fine citizen.

Deportation by Communists

EXTENSION OF REMARKS
OF
HON. MARTHA W. GRIFFITHS
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, June 26, 1957

Mrs. GRIFFITHS. Mr. Speaker, on June 16, 1957, the Estonians, Latvians, and Lithuanians of Detroit held their 16th annual concert meeting in commemoration of the mass deportation by the Communists from Estonia, Latvia, and Lithuania, and unanimously adopted the following resolution:

Whereas in June 1940 the sovereign and independent republics of Estonia, Latvia, and Lithuania were illegally occupied through treachery and deception by Soviet Russia and in June 1941 many thousands of Estonians, Latvians, and Lithuanans were seized and deported to the tundras of Siberia for torturous death, thus beginning a series of acts of systematical genocide carried out by the Kremlin since; and

Whereas the same Soviet forces brutally crushed the Hungarian revolt against communism in 1956, and the aim of the international communism still is the world domination, thus being a menace to the free world and to the world peace; and

Whereas the United States of America "will never make a political settlement at the expense of the captive nations, condemns and opposes the Soviet imperialism," and still "seeks the liberation of the captive nations, because peace is in jeopardy and freedom a word of mockery until the divided nations are reunited and the captive nations are set free," as officially stated by the Honorable Secretary of State in New York City, on April 22, 1957: Therefore, be it

Resolved, That hereby we, who have assembled today to commemorate this tragic anniversary, once again express our deep gratitude to the United States Government for not recognizing the fabricated incorporation of the Baltic States into Soviet Union and allowing many thousands of refugees to find new homes in this land of liberty; and be it further

Resolved, That this meeting unconditionally denounces and condemns the Soviet crimes of treacherous aggression, destructive occupation, and brutal genocide of the Baltic States and all the other enslaved countries and respectfully recommends and urges the United States Government, as a member of the United Nations, to take the Soviet Union to the United Nations International Court of Justice for aggression and mass murder, and if necessary to follow the recommendations made by the Honorable Senator WILLIAM F. KNOWLAND on November 26, 1956, to bring Russia into line:

1. Expel Russia from United Nations until the Soviets agree to obey the United Nations.

2. Apply economic sanctions against Russia until she withdraws troops from Hungary.

3. Withdraw recognition from the Soviet Union until she conforms to the United Nations resolutions.

4. Establish a United Nations emergency force ready to help if another enslaved country appeals for it while fighting for freedom; and be it further

Resolved, That if this should fail the United States should go it alone and establish a realistic, affirmative policy of tangible aid to these countries that revolt against Communist tyranny; and be it further

Resolved, That this is the unanimous opinion of this meeting that the principles listed in article 21 of declaration of human rights of the United Nations must also cover the peoples of Albania, Armenia, Bulgaria, Byelorussia, Czechoslovakia, East Germany, Estonia, Hungary, Latvia, Lithuania, Poland, Ukraine, Rumania, and Yugoslavia. That only free elections in the U. S. S. R. and the captive countries would bring world peace; and be it finally

Resolved, That this resolution be forwarded to the President, Vice President, Secretary of State, majority leader of the United States Senate, minority leader of United States Senate, chairman of United States Senate Foreign Relations Committee, chairman of United States Senate Foreign Relations Subcommittee on Disarmament, chairman of United States Senate Committee on the Judiciary's Subcommittee of the Internal Security, chairman of United States Senate Commerce Special Subcommittee, Speaker of the House of Representatives, majority leader of the House of Representatives, minority leader of the House of Representatives, chairman of the House Committee on Foreign Affairs, chairman of the House Committee on Un-American Activities, United States delegate to the United Nations, all Members of United States Congress of the State of Michigan, the Governor of the State of Michigan and the mayor of the city of Detroit.

Adopted in Detroit, Mich., this 16th day of June A. D. 1957.

THE BALTIC NATIONS COMMITTEE OF DETROIT.

Onward Dispatch or California Here I Come—Again

EXTENSION OF REMARKS

OF

HON. CHARLES O. PORTER

OF OREGON

IN THE HOUSE OF REPRESENTATIVES

Thursday, June 13, 1957

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following excerpt from Herb Caen's column in the San Francisco Examiner. This item struck a sympathetic note with me because earlier this year I found that Portland patrons who drove all the way out to the airport to deposit their airmail letters were really wasting their time, since there was no sorting done at the airport and the letters they took out there were sent back into the city for sorting before they went out. The result of this was that you lost time by taking your letters to the airport. I am glad to say I was able to have this situation corrected. I hope we have as much luck in San Francisco. Here is the item:

AIR AGE

The American Airlines people here have been having trouble getting company mail from their Oakland Airport office—regular mail takes more than a day sometimes—so they've worked out this little plan. Every night, the Oakland AA'ers put their mail, in a pouch, aboard a New York-bound plane, which goes to LaGuardia, then Idlewild and arrives in San Francisco the next day—ahead of the regular mail service.

TVA—The Work of Plain, Honest Men

EXTENSION OF REMARKS

OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. EVINS. Mr. Speaker, recently the University of Alabama Press and the University of Tennessee Press have jointly published a book entitled, "TVA, the First 20 Years," by Roscoe C. Martin and 16 members or former members of the TVA staff. An excellent review of this work appeared in the June 1957 issue of Public Power magazine and under unanimous consent I insert it in the RECORD because it can contribute a great deal toward a better understanding of the TVA—its purposes, and achievements of a great agency of Congress serving the public interest.

The article, which concludes that TVA, like the Constitution, is the work of plain, honest men, follows:

WORK OF PLAIN, HONEST MEN—TENNESSEE VALLEY AUTHORITY'S FIRST TWO DECADES OF ACHIEVEMENT ARE DESCRIBED

(TVA, The First Twenty Years, edited by Roscoe C. Martin, the University of Alabama Press and the University of Tennessee Press, 282 pp., 1956, $4.50.)

This book, as the introduction says, "is not an impartial on-the-one-hand-but-then-again-on-the-other account of the Tennessee Valley Authority."

Except for one chapter, it was written for the most part by persons long associated with TVA. It is, then, an analysis of TVA's program by 16 TVA staff members, each writing about his own special field of activity.

Essentially this is a compilation of a series of lectures delivered by TVA staff members at Florida State University in 1953. And as Dr. Harry A. Curtis, recently retired as a member of the TVA Board of Directors, says in the introduction, this lecture series "afforded TVA officials the occasion for an inventory" of TVA "at an important point in its history."

These chapters, Dr. Curtis says, are not official statements of policy; they "delineate the TVA as it appears to a group of responsible public servants who must be reckoned as among the agency's chief architects."

And chief architects, there are among the 16 TVA staff members, architects such as Gordon Clapp, then chairman of the TVA board; Joseph C. Swidler, a TVA attorney since 1933 and general counsel since 1945; John Oliver, former general manager; and other men who have devoted a major part of their lives to working for TVA.

Editor of the edition is Roscoe Martin, former political science professor at the University of Alabama and now at Syracuse University, who served as a TVA consultant for several years. Professor Martin also contributes a concluding chapter headed "Retrospect and prospect."

This book is important as a historical document. For anyone interested in the whats and whys of TVA's multipurpose program, this is a volume to be read and kept on the shelf for future reference.

It reflects the many-faceted nature of TVA's operations, dealing with fertilizer, forestry, health, recreation, reservoir-land management, river transportation, the river-control system, and power. And there are chapters on broader questions, such as economic development of the valley, TVA's relations with State and local governments, and TVA as a national and international symbol. Other sections deal with the basic framework for operations—the legal and administrative foundations of TVA, the handling of personnel and fiscal matters.

But running through this volume is the theme set by Mr. Clapp, who writes about the meaning of TVA.

This "frankly experimental program," he says, "begins with a river, a river languid in one season but wild and destructive in another."

The former TVA chairman cites three characteristic features of the TVA:

1. TVA, though Federal in origin and in legal authorization, is essentially a regional agency.

2. Another special feature is TVA's responsibility for the development and optimum utilization of natural resources.

3. TVA's special preoccupation with energy.

Lest the furor over TVA's power program confuse the picture, Mr. Clapp reminds us that "TVA represented the first attempt on any sizable scale to apply the theories of multiple-purpose engineering to a whole river system."

And he points out that "in the long run, the social engineering processes which brought the TVA program into the aspirations and actions of the people of the valley will prove more important than the physical engineering structures the TVA built so efficiently. The dams are more spectacular, but the ideas may be more enduring."

Mr. Clapp sums up TVA's basic principles in the field of natural resources:

First, resources must be looked at whole, not piecemeal;

Second, a regional emphasis "offers more promise of fruitful results than one cast in the more traditional mold of nationwide, specialized, and centralized Federal agencies";

Third, conservation alone is not enough; "what is sought is not merely the preservation of natural resources, but their optimum utilization for the improvement of the well-being of the people."

Mr. Swidler, TVA general counsel, has a fascinating chapter on TVA's legal foundations, which amounts to a concise history of TVA from 1899, 34 years before the TVA Act, up to the present day.

Edward A. Ackerman, former assistant general manager, tells of TVA's international significance, pointing out that "more than a dozen river control projects in other countries on four continents have drawn in some degree on TVA experience."

And so it goes, this story of a Federal corporation which, as Dr. Martin says, "does not fit into the standard pattern of thought about our Federal system." Indeed it does not fit, because TVA is unique, and many of its problems arise from the constant efforts of people who try to bend TVA to fit it into a more traditional mold. But if TVA simply followed the path of other Federal agencies, it would at once lose both its unusual effectiveness and its peculiar significance.

The reader who thinks of TVA as just a big Federal power system will be surprised to find that, while there is one excellent chapter on the power system, it is only one of many chapters dealing with special parts of the overall TVA program.

"Few agencies," say Dr. Martin, "have been so widely discussed and debated in public print."

But it may well be, he says, that TVA deserves the same comment that Robert Morris made about the Constitution of the United States just before its adoption: "This paper has been the subject of infinite investigation, disputation, and declamation. While some have boasted it as a work from heaven, others have given it a less righteous origin. I have many reasons to believe that it is the work of plain honest men, and such, I think, it will appear."

The Future of Our Supreme Court

EXTENSION OF REMARKS
OF
HON. OVERTON BROOKS
OF LOUISIANA
IN THE HOUSE OF REPRESENTATIVES

Monday, June 24, 1957

Mr. BROOKS of Louisiana. Mr. Speaker, the Constitution says that the United States Supreme Court Justices shall be appointed during good behavior by the President of the United States. They are removable only by impeachment and they serve for life, unless they retire earlier. This gives these judges a tenure during their active lives.

As a matter of practice, these judges are formally nominated by the President of the United States. In actual practice, however, the President is a very busy man and he leaves, and I suppose must leave, the details of selection of a justice up to the operation of the Justice Department, headed by the Attorney General. Very often, the Attorney General has some political friend, or some especial favorite—and this seems to be the case more frequently in recent years—whom he maneuvers into the position of being nominated. These appointments, in other words, are largely made on the recommendation of and with the advice of the Attorney General. This is the way it works out in actual practice.

Increasingly, in recent years, cases involving one of the sovereign States—I hesitate to use this word "sovereign" because of the tremendous loss of power by the States in recent years—is handled by this tribunal; and the sovereign State must suppliently present its petition for redress before this High Court. It places the attorneys general of the various States at a distinct disadvantage, I am sure, to be compelled to come up against this sort of arrangement. They are required to present their cases before judges who are nominated on the recommendation of the same official who may be presenting the case of the United States before the tribunal.

Judges are human, whether they be members of the United States Supreme Court, appointed for life, or whether they be members of lesser courts. It is human to think kindly of your friends, and to be influenced by their judgment and their recommendations. Now, then, can the attorneys general from the various so-called sovereign States throughout the Union hope to get a fair break in the presentation of the cases of their States before this august tribunal which holds the unchecked power of decision in its hands and from which there is no appeal?

More important than this: In the light of this appointing process, how can we, who believe in States rights and who steadfastly oppose the constant encroach of power on the part of the United States Government over the several States, under this arrangement expect or hope to check the growing tendency of the United States to take away from the States their very sovereignty itself?

My own State has before the United States Supreme Court at this time litigation of vast importance to the people of our State and, I think, also to the Union. I do not wish to comment upon this litigation at this time. Other States will in the future have more and more litigation before this Court. Can judges, even after years of experience on the bench, throw aside their own petty likes and dislikes and throw aside their feeling of gratitude for the office and to the man—the Attorney General—who nominated and recommended them and render decisions which will give the States a fair break? The more so, we ask, can judges without prior judicial experience, accustomed to the point of view of the advocate and accustomed to rewarding others for favors and for help, forget all of these things and, in the cloistered sanctum of the judicial study, render a judgment with the wisdom of a Solomon and the vision of a prophet?

I rather think that some other method should be created for the recommendation to the President of names of suitable persons for Federal judges. Perhaps this should be done by recommendation from the Congress, or by recommendations from a judicial council, or from the States, or in some other manner. This matter should be given careful study, and out of the thought and care given to a grave problem—for it is the problem of preserving the States—should come a plan created under which judges can be recommended by some other authority than the one—the Attorney General of the United States—who argues and presents the case for the Federal Government.

I read more and more of decisions of the supreme courts which upset settled law and jurisprudence and which do not seem to be tempered with the spirit of the Constitution. There is criticism of the Court as being arbitrary and capricious. The national commander of the American Legion, an organization which personifies patriotism and loyalty to country, suggests that these judges—perhaps all Federal judges—be elected, and that the appointive method be abandoned. Is he right? This is something to think about in these present times, and his suggestion is worthy of careful consideration.

Address by Judge Maurice Simmons at Memorial Day Observance

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. JAVITS. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the address delivered by the Honorable Maurice Simmons, a justice of the court of special session of New York, and a leader of veterans in the State of New York, on the occasion of the Memorial Day service before the Soldiers and Sailors Monument in New York City.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEMORIAL DAY OBSERVANCE

(Address by Maurice Simmons, justice of the court of special session of New York City, retired, past commander in chief, United Spanish War Veterans, the first national commander of the Jewish War Veterans of the United States, honorary chairman of the United War Veterans Committee of New York County, at Soldiers and Sailors Monument, 89th Street and Riverside Drive, New York City, Memorial Day, 1957)

Again we muster in annual reunion to pay the dues of reverence to the hallowed dead. This is All Saints Day on the calendar of American patriotism. In memoriam it cloaks the departed comrades of all our wars. This is the day above all others that the Government has selected to entomb the bodies of the Unknown Soldiers of World War II and the Korean conflict alongside their unknown comrades of World War I. Throughout the land it is dedicated to reverential remembrance. What about it in this community? Not so long ago, the Stars and Stripes bedecked every building, particularly along the line of parade. Now only 2 or 3 flags are visible. Where are the National Guard regiments that marched with the war veterans and other patriotic contigents? Today only a token squad with regimental colors participates. Prominent State and Federal officials are always seen on the reviewing stands of the parades sponsored by our fellow citizens of varied racial ancestry. At our Memorial Day parades they are conspicuous by their absence. The day was established by statute as a day of dedication to the immortal dead. Instead it has degenerated into a holiday for sports and amusements. Not even a hypocritical pretense of observance. Faced with this fradulent perversion, the only honorable course is to repeal the statute. Statute or no statute, we war veterans will continue to commemorate the day.

PRESERVATION OF SOLDIERS AND SAILORS MONUMENT

This monument is our historic heritage. It was erected by our municipality in 1892.

Entrusted to the city authorities for the patriotic inspiration of our population what fate has enshrouded it? After decades of neglect it is now proposed to tear it down. Instead, for that breach of trust it is the duty of the city to make amends by renovation, not destruction. To the million war veterans in our city and their families, this monument is a holy shrine. To them its demolition would be an act of unpardonable vandalism. The cost of its preservation cannot be counted in dollars. Its symbolic value to the younger generation is priceless. The pleas of patriots for its retention are met by stony silence. But to appease the clamor of frenzied fans for a baseball stadium, the city authorities are ready to spare neither labor nor funds.

A WAR VETERANS MEMORIAL BUILDING

In most large cities, as the cherished project of a grateful people, stands for a War Veterans Memorial Building. Why not such an edifice in our dominant metropolis, the financial heart of the continent, the capital of the world? Has corroding materialism crept into our bloodstream? Have we turned our backs on the moral, spiritual and patriotic ideals of the Founding Fathers, to become pagan worshippers of the golden calf? Small wonder that outlanders stigmatize our beloved city as an alien incrustation on the body politic. It is not too late to rekindle in the hearts of the masses of Manhattan the flame of gratitude for the men who have made and kept our Nation the free world's foremost bulwark of freedom.

Address by Julian B. Baird Before Rotary Club of St. Paul Relative to Our Monetary System

EXTENSION OF REMARKS

OF

HON. EDWARD J. THYE

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. THYE. Mr. President, I should like to invite the attention of my colleagues to a statement made by Mr. Julian B. Baird, chairman of the board of the First National Bank of St. Paul, before the Rotary Club of St. Paul on June 18, 1957. The speech is very timely since the fiscal policies of the Secretary of the Treasury and Mr. Martin, Chairman of the Federal Reserve Board, are being investigated by the Senate Committee on Finance. Mr. Baird's speech is a concise statement of the policy of Secretary Humphrey. It also describes the operation of our monetary system and the methods through which the Federal Reserve Board has been curtailing inflation.

Mr. President, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TALK GIVEN BEFORE THE ROTARY CLUB OF ST. PAUL ON JUNE 18, 1957, BY JULIAN B. BAIRD, CHAIRMAN OF THE BOARD, THE FIRST NATIONAL BANK OF ST. PAUL

Let me start by saying that we all must be conscious of the fact that we have in our relatively free capitalistic economy in this country a mechanism that is the marvel and envy of the rest of the world. With wide freedom of choice on the part of the individual and an amazing technology, we have raised the standard of living of our people beyond the wildest dreams of 50 years ago, and the process seems to be accelerating. Barring a global war, it would be hard to define the limits of what we can accomplish in the next 2 or 3 decades, provided always that we have the wisdom and forbearance to manage our monetary affairs properly.

Bad monetary structure and management have worked havoc with many economies over the world in modern times. The history of this country is replete with booms and depressions, in many instances caused directly by a faulty monetary and banking structure, and in other instances, if not the direct cause of our troubles, the difficulties were accentuated by defects in our monetary and banking system.

Fortunately we have learned something from these experiences. The Federal Reserve Act, passed in 1913, came into being because of the money panic of 1907. The amendments to the Federal Reserve Act, passed from 1933 to 1935, and the Federal Deposit Insurance Act corrected certain weaknesses in our banking structure which came to light in the great depression. Had that legislaton been in effect in 1929, the depression would never have achieved such depths and the futile attempt of everyone to find liquidity at once could have been in large measure avoided.

Yes, we have, by and large, a very good central banking system, the Federal Reserve System, ably and courageously managed, and it is the greatest force we have in this country working in the direction of a sustained prosperity. Unfortunately, the operation of a central banking system is still a good deal of a mystery to the great mass of our population and, I am sorry to say, even to many businessmen, labor leaders, and politicians. Therein lies a certain peril.

With that preamble, I will now get to the subject of my talk, Tight Money. Is money tight and, if so, why is it tight? Perhaps we should first define what we mean by money. The money supply is the currency in circulation plus demand deposits of banks. The latter is included for the reason that nearly 90 percent of all transactions in this country are settled by the use of bank checks which serve in lieu of currency. It is the primary function of the Federal Reserve System to regulate the supply of money to fit the needs of the economy. To have an excess supply of money at a time when there is relatively full employment and relatively full utilization of our resources is to invite inflation. To have an inadequate supply of money to serve the needs of the business community is to bring on a deflation. The manner in which the Federal Reserve System operates to increase or decrease the money supply is a rather technical subject which the time allotted me here does not permit me to go into. Suffice it to say that by the use of certain mechanisms the Federal Reserve System can shrink or expand the reserve position of the member banks and thus affect the ability of member banks to make loans and by the same token to create deposits. Taking the banking system as a whole, the banks do not first get deposits out of which they make loans and investments. The process is initiated by making loans and investments which create deposits. That ability to create money is the unique function and characteristic of commercial banks, and that function is one of the hardest things for the layman to understand. This money-creating ability is not possessed by other types of financial institutions.

Fundamentally the so-called tight-money situation which has evoked so much comment in recent months has not been brought about by a reduction in the money supply. Actually the money supply has increased 1 percent in the past year and the velocity or turnover of demand deposits has increased 8 percent in the same period. It is the physical volume times the velocity that measures the effectiveness of the money supply in serving the economy. Therefore, credit has not been tightened by an insufficiency of money; rather, a tightening effect has been produced by the magnitude and intensity of demands for credit from practically all quarters. All of the demands could have been satisfied only by the creation of more bank credit—that is, the creation of more money—and that, of course, would have been inflationary.

Judged by historical standards, money is not particularly tight even today, although it is tight by comparison with standards we have known from 1933 to 1952. The artificially low rates created by the Federal Reserve authorities were proper to aid in fighting first a depression and then a world war. They were not appropriate to fighting inflationary forces that followed and hence had to be reversed in 1952 and free-market forces again permitted to operate. To say that money is tight, of course, means that interest rates have risen sharply, which is the market's way of adjusting supply and demand. The free market applies to money as it does to wheat, cattle, or any other commodity in a free economy. The rise in interest rates is intended and does tend to dampen down demand on the one hand and to stimulate increased savings on the other hand.

Let's ask the question why should the expansion of credit be restrained at this time? The answer to that is that the productive resources of this country, labor, and materials, have for all practical purposes been fully employed for a period of over 2 years. To expand credit, and hence the money supply under these conditions, is only to create more dollars to chase the same supply of goods and services. As you all know, this is certain to raise the price of goods and services and that is inflation which serves no good end and several evil ones.

Some of you may question whether our resources are to all intents and purposes fully employed. In a complex economy, such as ours, there will always be segments that are experiencing an adjustment for reasons peculiar to themselves, and to the industries affected it does not look like prosperity and full employment. For example, residential building in this area and the country generally is sharply off from what it was 1 or 2 years ago. True, but it is also a fact that overall building construction is actually up in volume. What has been lost in the building of homes has been made up in the building of plants, commercial buildings, schools, hospitals, churches, highways, etc. From what I can learn there is relatively little unemployment in the building trades and an actual scarcity in a number of these trades, and it is by the test of full employment at good wages that we measure our economic well-being. It must be admitted that this is small consolation to the contractor whose primary job is to build homes, and the same can be said for some of the building material industries that are dependent on residential building, the textile industry and some others. In a free economy where the buyer by his selection is the master, we cannot and should not try to avoid the rolling adjustments that are occasioned by the public's shift in demand. I don't know why this year the public is more inclined to buy soft goods and services than certain durable goods, such as cars and appliances. Nor do I know why car buyers this year prefer those with extreme tail fins rather than equally good cars with more modest lines. So long as the public does vary its choices, we will have those rough spots that have to be ironed out. So long as more people are gainfully employed than ever before and both the gross national product and expendable incomes are at recordbreaking levels, we should be well

satisfied and glad that the corrections come as rolling corrections and not all at once. Business seems generally to be moving sideways on a high plateau.

As I said before, there has been an unprecedented demand for credit both long and short. The long-term credit, that usually connected with capital expenditures, should for the most part be supplied by the generation of savings which accumulate in savings departments of commercial banks, savings banks, savings and loan associations, insurance companies, pension funds, etc. When the savings from these sources are insufficient to meet demands, there is a tendency for the demand to spill over on the commercial banks where essentially it does not belong except to the extent that the commercial banks themselves hold savings deposits. Considerable of this long-term demand has in fact been descending on the commercial banks in the past year and had they not offered some resistance much more would have come their way.

This restraint on the part of the banks has been necessary because the Federal Reserve has supplied only enough reserves in the banks to permit a very small increase in commercial-bank credit. Nevertheless the banks have made and are making a strenuous, and I believe successful effort, to take care of all necessary requirements of their customers in the ordinary course of business.

And why hasn't the Federal Reserve System provided the reserves which would allow the commercial banks to take care of all demands on them for both long- and short-term requirements and to keep interest rates from rising? As we have seen, the primary function of the Federal Reserve System is to regulate the supply of bank credit, and hence the money supply, so as to avoid, so far as possible, booms followed by inevitable busts. In other words, it uses its powers in the direction of a sustained prosperity.

Thus the Federal Reserve System regulates the total quantity of bank credit available and leaves to the market place, in this case the 14,000 commercial banks, the allocation of that credit. The only alternative is that goods and credit be rationed by government edict which is abhorrent to the American people except as a temporary measure in war or other grave national emergency. It has yet to be shown that government officials can identify borrowers who are more deserving of credit than those who get the credit in a free market. The same reasons which exist for allowing the free price mechanism to operate in other areas of our economy apply to credit as well.

All of this regulation then, as we have seen, is to avoid, so far as possible, booms and the subsequent busts. Most of us have too vivid a memory of the last big bust to want to experience another. But some people are saying, including some of my good friends, that of course we don't want a big and rapid inflation but isn't a little inflation every year a good thing as a kind of insurance against depression? In my opinion, here is where the great danger lies. Here is where it is so important to mobilize public opinion to see and understand these dangers. I suppose that is essentially why I am here today.

Let's see where a little creeping inflation leads us. From 1952 to 1955 we did have reasonable price stability but what was really happening was that a sharp decline in the price of agricultural products tended to offset a small increase in the price of other goods and services. In 1956 the cost of living went up 3.6 percent. In the past 12 months it has gone up over 4 percent and further advances are predicted in the months ahead. Suppose the cost of living continues to advance at the rate of 3 percent a year compounded. This would double the price level in 23 years. If it should increase at only the modest rate of 2 percent compounded, the price level would double in 34½ years. The erosion of the purchasing power of those who must depend on fixed dollar incomes, such as those from pensions, insurance policies, etc., is manifest.

But that isn't the worst of a creeping inflation. There is no historical precedent for a creeping inflation extending over very many years. It always ceases to creep and begins to run, for understandable reasons, some of which I will mention:

1. It brings a demand for labor escalator clauses that automatically build in more inflation.

2. It warps business decisions by causing managers to accumulate inventories because they think they are going to advance in price and to enlarge physical facilities faster than really needed because they will cost more to build later.

3. It tends to raise a distrust of foreigners in the stability of our currency and to distort our foreign trade. For the last generation the American dollar has been one of the most stable currencies in the world and as a result we hold much of the liquid reserves of foreign central banks and others. The aggregate is about $12.5 billion, all of which has to be settled in gold if necessary. If we cannot control our price level, foreigners will think that we may have to again devalue the dollar sometime and, if they do, the drain on us could be heavy and come quickly. That could not help but cause concern in this country and could start a flight from the dollar into goods, for we are a volatile people.

4. The most serious effect of all to my mind is the effect on savings. If over a period of a very few years the people who put their money in the various types of savings institutions and in life insurance see, and believe there will continue to be, erosion of the purchasing power of their principal that exceeds the interest rate they are currently obtaining, it is bound to have a depressing effect on total savings and, as I have indicated, savings furnish the necessary basis for our expenditures for capital goods. Not only can savings cease but we can have negative savings, for it has happened in other countries, and could happen here, that individuals would withdraw their savings from the savings institutions and cash in their Government bonds, which are payable on demand, and put the proceeds in real estate and other tangible goods that they think will not depreciate in value.

The forces I have mentioned tend to become cumulative. We are dealing with psychological factors and no one can predict the chain of events accurately. However, there is a good deal of evidence from the experience of other countries that once a creeping inflation reaches a point where the price level goes up 8 percent or 10 percent a year, the flight from the currency is on and the boom becomes uncontrollable by conventional methods. Such an event would create a demand for governmental intervention in the control of the economy and later huge Federal expenditures to sustain employment when the collapse came. We could expect to end up with a far greater degree of socialization than we have now.

I would not want to give the impression that I believe that monetary factors alone create inflation, nor that monetary measures alone can regulate the economy. Demands of organized labor for wage increases that exceed average increased productivity per man-hour are definitely inflationary. It would appear that the wage increases granted in recent years have in many instances been greater than the increased productivity of labor taken as a whole. It will not work to grant large increases to labor in a particular industry that may have made great technological advances in the utilization of labor and then fail to raise wages in service or other industries where there has been little technological advance. It has to be the overall increase in efficiency of labor that essentially controls, and that increase has been running at a rate estimated to be not much over 2 percent a year in recent years. I am told that union leaders in Germany have stated publicly that they will never ask for wage increases not warranted by average increased productivity of labor. They have experienced two drastic inflations and do not want to experience another. Our labor leaders still have something to learn in that respect. Labor is the greatest sufferer from a depression.

Union demands cannot be blamed for all of the increase in labor rates exceeding increased productivity. In a short labor market, such as we have been experiencing, businessmen and housewives bid up the market for unorganized labor as well.

Neither have businessmen all shown restraint in marking up the price of their products and services, although they usually allege, and often with justice, that they are only passing on increased labor costs forced on them.

The advancing wage price spiral cannot be prevented by monetary management alone except at the risk of measures so drastic as to risk the creation of a sharp recession, although monetary measures remain the single most effective measure of fighting inflation, and they deserve our hearty support.

I have painted what you may think is a gloomy and alarming picture. I want to make it perfectly clear that I am not predicting, nor is anyone else so far as I know, that the sequence of events I have listed will happen. It is unthinkable to me that this great country of ours that has solved so many of the economic problems that have beset mankind from the beginning of time will let our free enterprise system be wrecked because of a failure to recognize sound and proven monetary principles. If the American people become aware of the dangers, we need not have fear.

There is an increasing demand from cheap-money advocates in the Congress, growing out of either ignorance or political motives, to attempt to interfere with the independence of those who direct the Federal Reserve System. If they should succeed in hamstringing the Federal Reserve authorities, it will be a tragedy and have an adverse effect on our lives and on the lives of our children.

In conclusion, I would agree with Mr. Martin, Chairman of the Board of Governors of the Federal Reserve System, when he says, as he has repeatedly, that the control of a creeping inflation is the greatest domestic problem that faces the American people in the years immediately ahead.

Alcoholic Beverage Advertising

EXTENSION OF REMARKS

OF

HON. HORACE SEELY-BROWN, JR.

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Wednesday, June 26, 1957

Mr. SEELY-BROWN. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I include herewith, by request, a petition signed by residents of my congressional district in support of S. 582 and H. R. 4835:

To Our Senators and Congressmen:

We, the citizens of your districts, again urge upon you action to remove alcoholic beverage advertising from our homes.

Through your inaction this advertising has become worse, our youth problem more pressing. We ask for speedy action to remedy this injustice to us by passage of the Langer bill, S. 582, and the Siler bill, H. R. 4835.

Mrs. Evelyn A. Rasmussen, Rasmus Rasmussen, Pawcatuck, Conn.; Mrs. M. C. Studd, Westerly, R. I.; Gertrude N. Saunders, Mystic, Conn.; H. J. Peckham, Mrs. H. J. Peckham, Gales Ferry, Conn.; Mrs. Marcella R. Miller, Groton, Conn.; Mrs. Hattie Allard, Mystic, Conn.; Mrs. Lucy B. Porter, Ira E. Porter, Clara L. Kenyon, Westerly, R. I.; William E. E. Loughborough, Ashaway, R. I.; Miss Carolyn T. Henry, Vera M. Henry, Stonington, Conn.; Lillian Morgan, Westerly, R. I.; Ernest Lamb, Lower Pawcatuck; Mabel Henderson, Mystic, Conn.; Mrs. Rose De Costa, Groton, Conn.; Mrs. Marion M. Loughborough, Ashaway, R. I.; G. W. Muller, New London, Conn.

Inter-American Military Defense

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. WILEY. Mr. President, I have been pleased to note an important address on Inter-American defense. It was delivered last Friday by the distinguished Chairman of the Inter-American Defense Board, Gen. Lemuel C. Shepherd, Jr., at a press luncheon. Coincidentally enough, I was speaking on the same basic theme in comments on the Senate floor almost at the same time.

We of the United States are not perhaps as familiar as we should be with the Inter-American Defense Board, but it very significantly affects our destiny as a people and the destiny of our 20 sister republics.

In war and in peace, the board has helped serve as a shield for the Western Hemisphere.

General Shepherd's present service is a logical continuation of his long and able work—40 honored years—in the elite fighting arm of the United States—the United States Marine Corps.

It is most appropriate that the man who led the great organization which is first to fight our country's battles on the land and on the sea should now occupy a top position in seeking the military security of an area which is our natural first line of defense. That is, of course, the Western Hemisphere itself.

General Shepherd's lifelong interest has, of course, been the protection of this Republic. That is my own interest—our self-preservation. That is why it is so important that we strengthen inter-American ties, so that we may survive in this atomic age.

If there are differences with some of our Latin friends, as there occasionally are, let us frankly work out these differences. But always let us do so within the framework of Pan-American unity, to the greatest possible extent.

I believe that General Shepherd's remarks will be of interest to my colleagues. I ask unanimous consent that they be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS BY GEN. LEMUEL C. SHEPHERD, JR., UNITED STATES MARINE CORPS, CHAIRMAN, INTER-AMERICAN DEFENSE BOARD, AT LUNCHEON HONORING THE PRESS, MAYFLOWER HOTEL, JUNE 21, 1957

Gentlemen, as Chairman of the Inter-American Defense Board I welcome this occasion to break bread with you representatives of the press and various news agencies, and for you to have the opportunity to meet the Chairman and members of the public relations committee and staff officers of the organization over which it is my honor to preside.

Since taking over my present duties upon my retirement from the Marine Corps, I have felt that there was a definite need for closer public relations between the Inter-American Defense Board and the press here in Washington.

It is my intention in the brief remarks I intend to make to outline the aims and purposes of the Inter-American Defense Board—to tell you something about our accomplishments and to make a few comments on my observations during the various visits I have made to our South and Central American sister Republics.

If your time permits, I will be glad to endeavor to answer any questions that are not of a confidential nor political nature.

As you are probably aware, the Inter-American Defense Board was created in January 1942, at Rio de Janeiro, at the third meeting of consultation of the Ministers of Foreign Affairs of the American Republics.

Our organization is composed of military representatives of the 21 Republics of this Hemisphere, and is assigned the mission of preparing plans for the defense of the continent and the promotion of solidarity among the military forces of our respective countries.

During World War II, the Board became an effective agency for coordinating defense measures and contributed materially toward the defense of the American continent, especially in matters dealing with security against sabotage, production of stratigic materials, naval and airbases, antisubmarine defense, standardization of material, training and organization, and the promotion of close collaboration between the military, naval, and air forces of the American Republics.

Under its present charter, the Inter-American Defense Board is charged with preparing and keeping up to date, in close liaison with the governments of the member nations through the respective delegations, the military planning for the common defense of the hemisphere.

This is the mission the members of the Inter-American Defense Board are engaged in carrying out today.

Now a word about its actual functioning.

The Board consists, in addition to the Chairman, of a council of delegates representing each member nation and a technical staff which functions as a daily working body to draw up plans and studies as directed by the council.

As Chairman, I preside at the assemblies in an international capacity and through the secretariat I direct and coordinate the activities of the board and staff.

The studies and plans prepared by the staff are presented to the council, which approves, disapproves or modifies the documents and sends them as resolutions to the governments of each delegation.

It should be made clear that the Board has no armed forces under its direct control; its mission is defense planning only.

The Board has its headquarters in its own building at 2600 16th Street, Washington, D. C.

The procedures and discussions conducted at the Board's meetings are simultaneously transmitted by interpreters in four languages—English, Spanish, Portugese, and French—to the members of each delegation by use of headphones and each chief of delegation has his own microphone for speaking.

The operating funds required by the Board are appropriated by the Organization of American States and made available through the Pan American Union.

Its total budget amounts to only $235,000 a year.

This, in general, covers the functioning and operation of the Inter-American Defense Board.

During the past year, I have made official visits to the various Central and South American countries and discussed the problems of the Board with the Presidents, Ministers, and Chiefs of Staff of each nation.

I am happy to state that in all cases I was warmly received and the government officials with whom I met were universally enthusiastic about the operations of the Inter-American Defense Board and indicated to me their wholehearted support of our organization.

The thing that impressed me most is that our Central and South American neighbors look to the United States for leadership in military matters in the hemisphere.

I detected no anti-United States feeling. Our good-neighbor policy has indeed borne fruit.

I have become firmly convinced that the United States should exert every effort in the direction of our foreign policy toward Latin America to promote cordial relations with the Republics of this hemisphere, not only by military leadership in our fight against international communism, but in economic and cultural activities as well.

In the uncertain and troubled world of today, the future security of the United States may well depend upon maintaining a solid front in the defense of the American Continent. In other words, it is not beyond the realm of possibility that this continent may form an island of democracy in the Western Hemisphere in the event Europe should fall under Communist influence as a large part of Asia has done.

In discussing the countries I have visited, I will begin with Argentina.

Now that Peron has been deposed, the present leaders of the Argentine Government are earnestly endeavoring to establish a democratic form of government and to promote cordial relations with the United States.

Because of the similarity in terrain and climate between Argentina and the United States, our two countries are very much alike.

I found the Argentine people most cordial and friendly. There was freedom in the air, a different feeling than I had experienced 2 years ago when I first visited this country.

It was most gratifying to note during the recent South Atlantic Defense Conference I attended, that the Argentine Government is taking the initiative, together with Brazil, Uruguay, and Paraguay, in the implementation of our general military defense plan for the protection of maritime traffic in the South Atlantic area. It is the first such regional agreement that has been formulated and I trust other South American nations will follow the example that has been set by these four countries in working out details for mutual defense of strategic areas.

Passing on to Brazil, the largest country in South America, it was gratifying to note the progress this country has made in recent years. Brazil, as you know, has always been our friend and its eastern coastline is strategically important in the defense of the continent.

The future of this country is indeed bright. It is filled with opportunities for economic development of untold resources yet undiscovered.

I was especially impressed with São Paulo, which is fast becoming one of the greatest cities in this hemisphere. It can be likened to Chicago in the 19th century as the gateway to the West. The citizens of this thriving community inspired in me a feeling of confidence by their determination to make Brazil the foremost country in South America.

On my visits to some of the smaller countries, such as Bolivia, Ecuador, and Paraguay, I found they are having economic difficulties and require United States support to maintain a stable currency.

Bolivia's principal source of revenue was from its tin mines. With the fall of prices of this commodity, the Government has financial troubles, which has required the United States to subsidize to a great extent, the economy of the country.

Paraguay is a country of rolling pastures and jungle areas which are called the Chaco. Its people are proud and have a great military tradition and its President is endeavoring to give this country a good progressive government.

The principal trouble with the majority of the South American countries is the great difference between the wealthy, educated class, and the laboring masses, for there are few countries in which there is a so-called middle class, as we have in the United States.

Our Government, through its point 4 program and other economic aid activities fostered by the State Department, together with the loans from the Export-Import Bank, is rendering valuable assistance to all of the countries of Central and South America in the development of their resources.

Our Defense Department is also contributing to the stability of the governments of South America by providing military missions and equipment for their armed forces.

Chile and Peru, which I have also visited, are further advanced in their development than some of the smaller countries.

Although less endowed with natural resources than their neighbors, these two countries are making forward strides toward economic stability under the able leadership of their respective Presidents.

In Colombia, I found the people intensely enthusiastic about the United States. Although recently involved in political troubles this country is endeavoring to locate and develop its potential oil reserves in the Magdalena Basin in order to share the prosperity Venezuela is enjoying from its natural resources. The excellent coffee raised in Colombia is one of its principal sources of revenue.

In Uruguay, I found a Socialist state whose President and Government Council have patterned their Republic after Switzerland.

The Government controls and operates all public utilities, schools, universities, and a great many of its economic resources, and its people enjoy a political freedom equal to our own.

Mexico is a nation that has a great potential—this country is moving rapidly ahead in its industrial and agricultural development.

The Unversity of Mexico is an inspiring institution and provides educational facilities for some 35,000 students, including many from foreign countries.

The people of Mexico are intensely nationalistic, which requires considerable diplomacy in our relations with this Government.

Although there have been controversial problems between our two Governments in the past, from my brief visit, I gained the impression that the present Mexican regime is endeavoring to extend the hand of neighborly friendship to the United States.

The Central American countries—Guatemala, Honduras, El Salvador, Nicaragua, and Costa Rica—which I recently visited, may be lumped together insofar as their military, economic, and cultural conditions exist.

Here again, there exist a few rich families controlling the wealth, principally acquired from the export of coffee and fruit.

In my description of the impressions I have gained during my visits to the countries of Central and South America, I have strayed from the topic of my talk, the Inter-American Defense Board.

In conclusion, I would like to state that I have great faith in the potential of our South American neighbors. The majority of these countries are just beginning their economic and cultural development.

The population of South America at present exceeds that of the United States. It is estimated that by 2000, the population will be half a billion persons.

The South American countries look to us for leadership in world affairs. They also seek our aid in the development of their resources. We must continue to support them and cultivate their friendship if we wish to have them as our allies.

So far the Latin American nations have been able to keep Communist infiltration at a minimum, but Russia is becoming increasingly aware of the fruitful field that exists in this area and is endeavoring to promote subversive activities among the uneducated masses. It is therefore readily apparent that every effort be made to promote hemispheric solidarity if the freedom and democratic institutions the peoples of this continent enjoy are to be maintained.

In regard to the military forces of our South American neighbors, it is my opinion that they have a definite poential in the defense of this hemisphere. Especially in their growing pool of manpower.

In evaluating the military potential of South America, I believe that with proper indoctrination, military support, and guidance of the armed forces of the nations composing the Inter-American Defense Board, each country can be made capable of self-defense against a foreign aggressor.

This would relieve the United States of the requirement of sending large reinforcements to strategic areas as was necessary during World War II.

It is imperative that our country maintain friendly political, economic, and military relations with our South American neighbors. By so doing, we will be able to lessen the danger of Communist infiltration and forestall the possible establishment of enemy bases in this hemisphere in the event of war.

It is toward these objectives that the delegates of the Inter-American Defense Board are continually striving. By the fulfillment of the mission set forth in our charter, I am confident that the solidarity and peace of the Americas can be maintained.

This, gentlemen, is why the Inter-American Defense Board is of vital importance to the defense of this hemisphere.

Stevenson Trophy Cup Awarded to Massachusetts North Shore Chapter, National Association of Accountants

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, June 10, 1957

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include a resolution regarding the 1957 winner of the Stevenson Trophy Cup.

The resolution follows:

Whereas during the year ended May 31, 1957, in a nationwide interchapter trophy competition carried on in the United States and its possessions by the National Association of Accountants, formerly known as the National Association of Cost Accountants; and

Whereas because this competition is carried on between 131 chapters in as many separate locations in the country and its possessions, having an aggregate membership of over 40,000 individual members; and

Whereas because the competition, known as the Stevenson Trophy Competition, measures the relative achievements of the various chapters in their effort to carry out activities which further the advancement of knowledge and education in the science and practice of accountancy; that

Therefore we recognise and know the outstanding achievement of the Massachusetts North Shore Chapter of the National Association of Accountants being the 1957 winner of this aforementioned interchapter competition and awarded the Stevenson Trophy Cup by the president of the National Association of Accountants on June 27 at the 38th annual conference of the association held at the Sheraton Park Hotel in Washington, D. C.

Ratings of the 48 States in Army Educational Tests

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter dated June 24, 1957, from Mr. William R. Ming, Jr., national chairman of the American Veterans' Committee, which was addressed to all Members of the Senate and the House. Mr. Ming's letter includes the statistics released by the Surgeon General of the Army concerning the educational test given to all inductees for military service during the Korean emergency.

In addition to the national interest afforded by this table, which includes the period from 1950 through 1953, I am particularly proud of the rating made by my own State of Oregon. Members of the Senate will note that Oregon rates second among all the States of the Nation in the percentage of its inductees passing the Army educational test.

Ninety-seven percent of all Oregon inductees passed the test. Only Minnesota was higher, with 97.4 percent. All other 46 States were lower.

This achievement by the sons of Oregon parents, who were educated in Oregon schools, provides some measure of the generous and unselfish degree to which the taxpayers of our State have made sacrifices in supporting and maintaining an outstanding school system. It also is a tribute to the caliber of Oregon teachers and school administrators.

This achievement is made particularly notable because Oregon, in recent years, has been suffering an economic slump which has made it even more difficult and trying for its people to pay high State and local taxes which contribute to the maintenance of education.

Mr. President, I ask unanimous consent to include in the Appendix of the RECORD the letter and statistics presented by the American Veterans Committee, along with an excerpt from the July 1 weekly news column, prepared by Mrs. Neuberger and myself, which discusses this particular question. As a former schoolteacher in the Oregon school system, Mrs. Neuberger especially shares by pride in the record of our State.

There being no objection, the letter, table, and excerpts from the article were ordered to be printed in the RECORD, as follows:

AMERICAN VETERANS COMMITTEE,
Washington, D. C., June 24, 1957.

To the Members of the 85th Congress:

In the last emergency this Nation faced, at the time of Korea, figures compiled by the Office of the Surgeon General, Department of the Army, revealed that the percentage of rejection of inductees and enlistees for failure to pass the education test was highest in the Southern States of the Nation.

The attached table, based on the figures released by the Surgeon General, illustrate this fact. Parity on the attached chart is based on the national average wihch was 84.6.

The inductees and enlistees from Northern and Western States established a much better record as shown in the attached table.

In a special study done by the Selective Service System, Special Monograph No. 10, volume 1, "Special Groups," 1953, page 166, it was stated:

"The high rate of rejection of selectees, both white and Negro, for educational deficiency and failure to meet minimum intelligence standards calls attention to a problem which affects the Nation in time of peace as well as war. In peacetime, it prevents the effective participation of large numbers of citizens at a productive level. In war, it is even more impossible for these same individuals to make their full contribution to both production and security.

"This leads to the conclusion that the inability of large numbers of citizens to meet minimum standards of education or intelligence has broad significance. The failure of one State to be able to make its proportionate share of manpower available for national defense causes other States to assume a disproportionate share of the responsibility.

"The question as to whether or not one community, county, or State provides adequate educational opportunities is a matter of concern for all of the citizens in all of the States. Communities, counties, and States with high educational standards are compelled to absorb the manpower procurement deficiencies of States with poor educational programs. In the final analysis, the former actually pay in lives for the education deficiencies of the latter. The safety of the Nation depends in a large measure upon citizens in every State and section having a reasonable minimum of education."

It is obvious from these facts that the problem of the educational deficiency in Southern States is a national rather than a local problem since in this particular instance it affects the people of all of the States.

The States that the chart shows lagging behind the rest of the Nation are in nearly every instance the very States in which segregated schools exist. Certainly, this would justify the conclusion that "segregated State educational systems do not produce results equal to the nonsegregated public educational systems."

The American Veterans Committee urges that Congress give consideration to these facts as it continues its consideration of the Federal aid to school-construction program and the proposals that this Federal aid should not be provided to those schools which continue to practice segregation.

Our Nation should not be in the position of facing in any future emergency a condition in which patriotic young men and women of the South cannot share equally with their fellow Americans from other sections the burdens of our defense because of an inadequate educational system in their section of the country.

Sincerely yours,

WILLIAM R. MING, Jr.,
National Chairman.

States ranked in order of rejection for failure of education test July 1950–December 1953

State	Percent rejected [1]	Percent passed	Percent passed on parity basis
Minnesota	2.6	97.4	115
Oregon	3.0	97.0	115

[1] Medical Statistics of the U. S. Army. Annual report of the Surgeon General for calendar year 1953. Office of the Surgeon General, Department of the Army, Washington, D. C., 1955, p. 329.

[From Washington Calling for July 1, 1957]

OREGON'S SCHOOLS NEAR THE VERY TOP

(By Richard and Maurine Neuberger)

Everyone associated with education in Oregon—teachers, administrators, students, parents—have a right to be gloriously proud over a report which has just reached my desk.

Oregon ranks second among all the States of the Nation in the percentage of its inductees passing the Army educational test, according to an announcement just released by the Surgeon-General. This was for the period from 1950 through 1953.

Ninety-seven percent of Oregon lads passed the test. Only Minnesota was higher with 97.4 percent. All other 46 States were lower. Iowa, Nebraska, Idaho, Utah, and Washington ranked next in order. (Hurrah for our western teachers and pupils.)

At the very bottom, incidentally, were three Southern States: South Carolina, Mississippi, and Louisiana. Only 53 percent of South Carolina inductees made the educational grade.

Oregon's achievement affords some measure of the generous sacrifice made by our taxpayers—at a time of great economic adversity for the State—to give adequate support to a sound and adequate school system.

Address by Harry A. Bullis Before Conference on Foreign Trade and Related Economic Policies of the Committee for a National Trade Policy

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. THYE. Mr. President, expansion of world trade is a subject which is receiving a great deal of attention not only in the United States, but also in most of the countries abroad. I ask unanimous consent to have printed in the Appendix of the RECORD a speech by the chairman of the board of General Mills, Inc., Mr. Harry A. Bullis, before the conference on foreign trade and related economic policies of the Committee for a National Trade Policy, which met in Washington, D. C., on June 14, 1957. Mr. Bullis points out the increase in our own exports and the importance of this foreign trade to the prosperity of our own economy. The statements of Mr. Bullis represent the forward type of thinking which has put the United States in the foreground of world trade and economic development.

Mr. President, I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

FOREIGN TRADE POLICY AND STOCKHOLDERS RELATIONS—CONFERENCE ON FOREIGN TRADE AND RELATED ECONOMIC POLICIES OF THE COMMITTEE FOR A NATIONAL TRADE POLICY, WASHINGTON, D. C., JUNE 14, 1957

(By Harry A. Bullis, Chairman of the Board, General Mills, Inc.)

In the best interests of both the general public and stockholders, what kind of national trade policies should we have? We all want peace and the political, military, and economic programs which will insure peace. One type of insurance is our program for defense and military aid. Another is the program of economic assistance to help other countries bolster their independence, raise their standards of living and create a more favorable climate for friendship with our country. And very important is our program to enlarge our trade with the rest of the world.

Businessmen, as well as others who watch our economic affairs, should be greatly impressed by the trend of our foreign trade. Last year our exports reached $17 billion—19 percent over 1955 and 37 percent over 1954. And during the first few months of 1957 our exports are well above 1956. Our imports also are running at record high levels.

The increase in our foreign trade is almost phenomenal. It reveals two important facts.

The first is that our foreign trade is assisting to maintain the economy at increasingly high levels at a time when there is a tendency toward decline in some sectors.

The second fact is that the large amounts of foreign aid which we have given have resulted in substantial gains in foreign trade.

I doubt if the American people, or even a substantial proportion of businessmen, appreciate the gains which we are now actually receiving from the administration's enlightened policies for foreign aid and foreign trade. These gains are substantial and they are helping to keep our economy strong, while at the same time assisting other countries of the free world to build more strength into their economies.

DEVELOPMENTS IN FRANCE AND GERMANY

Developments in France and Germany should carry an important lesson for us. On the basis of recent reports, Germany has accumulated $4.8 billion in gold and dollar reserves. France, in contrast, is in a difficult reserve position. The spectacular element about these facts is that Germany is prepared to make a loan to France to assist in stabilizing the franc.

Germany is the land which was defeated and laid prostrate in the Second World War. How it has the strongest currency in Europe, excepting only the Swiss franc. It is prepared to lend money to France, which was on the winning side in the war.

This situation is significant because it reveals that sound internationalist policies have done more than just keep Germany's trade free. They have kept her entire economy free and competitive.

On the other hand, France has been very protective and restrictive in her foreign-trade policies. Germany has freed her trade more and more as a matter of policy. The exposure to competition and putting her economy in a competitive position has made Germany strong financially.

POLICY OF JOB PROTECTION

France has endeavored to shelter many of her industries and give too much protection to the jobs of her workers. Britain has also followed a policy of job protection to an extreme. In fact, if unemployment in the United States were in proportion to Great Britain, we would have only 670,000 unemployed instead of our 2,670,000 average unemployment. Our unemployment figure is about 4 percent of our labor force, and it is the price we pay for mobility in our labor force, so that we can start new enterprises, close those which are inefficient, and have some leeway for expansion of our various industries. The low unemployment in England is purchased for the price of stickiness in industry and sluggishness to change. The net result is that weekly wages there average a fourth to a third of ours.

POLICY OF PROTECTIONISM

Great nations do not slip from efficiency or recede from a place of importance and power in one big swoop. Rather they weaken their will to remain efficient by small doses. Little capsules of added protection, merely to reduce temporarily the pain of competition, reduces also the incentive and the ability to compete. Those who feel impelled to ask for some consideration in a tariff case should state their case honestly, and just as honestly accept the verdict. This is a free-enterprise system, and it is a profit-and-loss system. The industry which still leans upon protectionism should accept society's ultimate verdict that if it cannot survive without protection in these prosperous times, it should shift over to lines in which it can survive. In this competitive world we cannot afford to be less efficient than our competitors abroad.

RELATIONS WITH STOCKHOLDERS

I do not see how it is possible for any industry to justify to its stockholders requests for protection on some of its products, while at the same time it is seeking concessions to exploit foreign markets.

There are millions of stockholders who have shares in corporations which have considerable stake in export trade. There are more millions whose companies are dependent, either directly or indirectly, upon the imports of materials which go into their products. In such companies, management should tell the stockholders that increased foreign trade is in their interests.

We should tell our stockholders that expanding foreign trade is vital to an expanding economy. We should explain that in the long run imports plus capital investments abroad must balance our exports. Trade is a two-way street. Therefore imports are as important as exports in keeping our economy strong and aggressive.

Both the public and corporation shareholders should know that the United States needs foreign trade, that we are not self-sufficient. For instance, we are dependent upon other countries for all of our tin, industrial diamonds, natural rubber, coffee, tea, and cocoa. We import nearly all of our nickel, chromite, asbestos, cobalt, and magnesium, half of our tungsten and lead and a third of our copper and zinc.

We should explain the economic aspects of foreign trade, both as to exports and imports, how foreign aid has been a stimulant to trade and how the administration's program for increased trade will be beneficial both at home and abroad, so that aid may be reduced.

We should impress upon our stockholders the significance of foreign trade in a sound foreign policy. A stronger position in world trade will enable us to compete more effectively with the Communist bloc. Increased trade, especially trade through private channels, will gain the understanding, respect and friendship of the people with whom we do business abroad.

Cheese Production and Consumption in the United States

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. WILEY. Mr. President, I was pleased to note in the Friday, June 21 issue of the Milwaukee Journal the reprint of an article from Coronet magazine which reports the interesting story of cheese production and consumption in America. Since Wisconsin is the No. 1 cheese-producing State in the Nation, naturally it is always a pleasure for me to note such an article.

The fact is that cheese is a vitamin-rich, nutritious food which, for a comparatively small price, gives the body nutrients which can be obtained from few, if any, other sources in so tasty and economical a way.

Unfortunately, we Americans consume on the average only approximately 8 pounds of cheese per person per year, which is but a fraction of the average consumption in some of the European countries.

This month of June has been celebrated as the traditional June Dairy Month. Consumption of dairy items during this month invariably increases greatly. It is my hope that the rest of the year will be dairy year, as well, and that consumption will continue on the upswing. Not only shall we thereby be assuring the health of a great industry, but we shall be assuring the health of the American people.

I ask unanimous consent that the text of the Coronet magazine article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

CHEESE-HAPPY AMERICA—PRODUCT FOR WHICH WISCONSIN IS FAMOUS BEING CONSUMED AT RECORD RATE—NOW SOLD IN MORE THAN 400 DIFFERENT FLAVORS

(By Norman and Madelyn Carlisle, in Coronet magazine)

One day a Polish refugee walked into a New York cheese store. "Do you sell Warshawski Syr?" he asked.

The proprietor shook his head. The shop offered 366 kinds of cheese, but not this one.

As the disappointed visitor turned away, the owner said, "Wait a minute. You don't happen to know how to make Warshawski Syr, do you?"

The refugee nodded—and a few days later was on his way to a job in a Wisconsin cheese factory which was happy to add to its output a little known cheese that had never been available in the United States before.

TEN POUNDS OF MILK TO POUND OF CHEESE

Any variety of cheese, new or old, exotic or commonplace, is sure of finding a ready market, for America has become the biggest cheese-eating country on earth. We have doubled our per capita use of it in the past 25 years, and the rate is still spiraling, with some 2,000 factories and scores of importers barely keeping up with the demand. Many supermarkets that 5 years ago offered cheese in a dozen flavor varieties now display 100.

"Americans," says a cheese expert, "are cheese happy."

And well they may be, for no other food offers such a dazzling variety of blandishments for both the gourmet and the everyday eater. While there are just 28 basic types of cheese, flavor variations total more than 400, each with its own claim to individuality.

Varied though they may be in color, shape, consistency, age, and taste, cheeses share one quality—they are the most highly concentrated of all protein foods. This is understandable when you consider that the making of a single pound of cheddar cheese takes 10 pounds (4½ quarts) of milk. A tiny 1¼-ounce portion of cheese contains as much protein and essential nourishment as an 8-ounce glass of milk.

While its caloric count is quite high, a large percentage of the calories are those of proteins. The carbohydrate content is low because most of the lactose, the milk sugar, is drawn off in the form of whey during the cheesemaking process. Cheese rates as a good source of vitamin B2, and an excellent source of vitamin A. A family of four, eating a main dish using just a half a pound of Cheddar, will receive all the protein necessary for that meal.

No one can be sure just how long men have been smacking their lips over cheese, but it is certain it has as long a record as any man-made food. References to cheese were found on clay tablets in the Temple of Ur, dating from around 3000 B. C. Homer speaks of caves filled with cheese, and the Bible has a number of references to cheese.

It is a food both so simple that primitive nomadic peoples could make it, and so complex that today big food laboratories spend millions probing its mysteries. However, it is made, the principle is the same: Liquid milk coagulated into a solid.

POWERFUL ENZYME SETTLES SOLIDS

Take, for instance, Cheddar, the cheese Americans eat the most of. Into a vat of milk which has been pasteurized by bringing it to 163 degrees, and holding it at precisely that temperature for 20 seconds, is placed exactly 3 ounces of rennet for every 1,000 pounds of milk. This powerful enzyme settles the milk solids into the spongy mass known as the curd.

Cut into three-eighths-inch cubes, drained of whey (the liquid they contain), formed into larger blocks, cut up again, agitated, salted, again pressed into larger blocks and shaped, these curds emerge as cheese ready for curing.

What makes one cheese different from another? So many factors that it is no wonder there are hundreds of varieties. The kind of milk plays a big part. Most cheeses are made principally from cow's milk; some, like Roquefort and feta, are made principally from sheep's milk; latticini is sometimes made from buffalo milk.

The way milk is handled in the cheesemaking process has an effect also, as do the substances added. Sap sago, the green cheese from Switzerland, for example, gets its color and sharp flavor from ground up clover leaves. Viterbo, an Italian cheese, is made from milk curdled by the wild artichoke. Noekkelost from Scandinavia is given zip by the addition of spices.

The most important flavor changers, however, are microscopic organisms—bacteria and molds. Cheeses contain staggering numbers of them; a single gram of limburger has been found to have as many as 6,300 million tiny mold plants, as well as 360 billion bacteria. In Swiss cheese, a particular kind of bacteria forms a gas which explodes, creating the holes. Cheese factories jealously guard the particular strains of bacteria used in their cheeses.

THE SHEPHERD BOY'S LUNCH

One of the important molds is a cousin of that from which we make penicillin. Its use in cheese making was discovered, according to legend, more than a thousand years ago, when a French shepherd boy left his lunch of cheese in a cave. Several days later he returned and found strange blue-green veins running through it.

He tasted it, and rushed home with a sample of the first cheese of its kind, which was later named after his home village, Roquefort.

His rather ordinary cheese had been transformed by the growth of a mold, a method no one has improved upon for making this aristocrat of cheeses.

Today, penicillium roqueforti, grown on ordinary bread which is ground into a powder, is added during the making of such other cheeses as gorgonzola, stilton and blue (or Bleu) cheese.

During the aging period, bacteria and molds multiply at a fantastic rate. A half inch piece of cheese may have as few as 150,000 when freshly made; 6 million a few days later.

ULTRASONIC WAVES AND CHEESE

Every kind of cheese has its own period of ripening. A cheddar can be ripened for from 3 to 4 months to 1 or 2 years, depending on the flavor desired. Blue cheese takes 2 to 3 months; parmesan at least 14 months The grand old man of cheeses, saanen, requires 3 to 8 years.

Scientists at the University of Wisconsin have been working on a device that may put the tang in cheddar with sound instead of time. Bacteria in cheese stimulated by bombardment by ultrasonic waves have produced ripe cheddar in half to a third the usual time.

Though Americans are credited with the discovery of only 5 completely new cheeses—cream, liederkranz, brick, monterey and nuworld—American food technologists are the world's champion cheese jugglers, combining and adapting standard varieties in that basic American development, "process" cheese.

Although process cheese is the form in which most cheddar is eaten, many people don't really know what it is. Actually, process cheese is cheese which has been melted, mixed with milk solids and pasteurized. The organisms in the cheese are destroyed, and the result is a cheese that keeps indefinitely without refrigeration.

Midwest Soil Erosion Exceeds Storm Damage

EXTENSION OF REMARKS
OF
HON. EDWARD J. THYE
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. THYE. Mr. President, there appeared in the St. Paul Sunday Pioneer Press of June 23, 1957, an excellent article on the Midwest soil-erosion problem because of the terrific storms that hit western Minnesota. It is timely. It points up the devastation which floods bring to the good earth of our land. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

MIDWEST SOIL EROSION EXCEEDS STORM DAMAGE

(By Alfred D. Stedman)

The worst soil erosion destruction of recent times in Minnesota and the Nation's midlands was reported by conservationists Saturday as a result of widespread cloudbursts, tornadoes, and floods.

Swollen rivers loaded with silt from a vast network of washouts are sweeping the midland's topsoil to the sea. At least 100 million tons of Minnesota's finest remaining earth cover are estimated to have been moved, much of it "down the drain."

The destruction is appalling and irreparable, conservationists declared. The damage extends afar from the Minnesota flood area beyond Fargo on the north and beyond the Twin Cities on the east. The trail of soil loss reaches into Wisconsin, Iowa, South Dakota, Illinois, Missouri, Nebraska, and Kansas. The rivers of Oklahoma and Texas are running red with the soil fertility of that land.

SOIL LOSS GREATEST

In total lasting loss, the destruction of soil far exceeds many times over all other forms of flood and tornado damage combined, conservationists say. Pending real analysis, they only whisper their efforts to measure totals in money. Some say any estimate up to a billion dollars might be subject to challenge as being too low.

But salvaged from this disaster are these two things:

1. The Nation has a shocking lesson as to the urgency of stepping up erosion control and small watershed flood-control programs, and of strengthening the Federal soil bank so as effectively to serve soil conservation; and

2. The starting point for protection is shown to be the farm itself, and the enormous protective value of the soil-conservation districts' work is proved. There's no way to avert a flood when 8 or 10 inches of rain falls in a day; but the minority of farms that have in operation complete soil district plans of terracing, contour stripping, and grassing of danger spots are coming through with little damage.

SHORT SEASON CROPS

Though ruinous to many individual farmers and creating an acute problem of getting seed of short-season soybeans, sorghums or other crops suitable for replanting so late, the losses to crops are offset by good growing conditions elsewhere and are dwarfed by the widespread permanent destruction of soil, conservationists said.

This damage is described as worse outside the rather flat country of the main flooded areas on more rolling lands such as those in the Dassel, Darwin, Willmar areas, for instance, and east and south of St. Paul.

This year's soil losses are the worst in any year since he came here in 1934, Herbert A. Flueck of St. Paul, State conservationist of the United States Soil Conservation Service said Saturday. Even in the great St. Paul flood of 1952, when rains lashed a thawed-out topsoil, the destruction wasn't as bad. Mr. Flueck based his estimate on personal surveys by himself and associated soil scientists, including Roy E. Bennett, St. Paul, of his staff.

Between rows of freshly cultivated soybeans or corn, many fields are riddled to subsoil. "Some of the slopes," commented Minnesota's top crop reporter, Roy A. Bodin of St. Paul, "look as if only about one more such a beating would complete their destruction."

LAND DAMAGE HEAVY

Said William A. Benitt of Hastings, chairman of the Minnesota Soil Conservation committee: "The news stories rarely make any mention of the damage to the land. But it is this loss that's irreparable. And it is so much greater than the damage to buildings, roads and bridges. The damage done to farm lands near Lake Elmo in Washington County recently can never be repaired. Fields planted in rows running up-and-down on slopes were gutted, from plow-furrow depth to several feet."

But from Washington County clear to the southwestern border of Minnesota and beyond, the farms in soil conservation districts that have complete soil conservation plans in operation are saving their soil. The terraces and contour strips lead the waters gently around the slopes, averting erosion. The grassed knolls and water runways held well. The alfalfa-brome grass cover for strips are showing close to zero erosion. The detention dams are doing their job. The new farm stock water ponds are described as an outstanding success, especially in the Lake Benton area.

NO QUICK PROGRAM

But a deep trouble is that there is no cheap, easy, quick way to get a conservation plan worked out and in operation on each of 150,000 farms in Minnesota or on 4 million or so in the Nation. It takes soil scientists, and although the SCS now has 45 on-farm trainees in Minnesota alone, there are never enough of these soil technicians to keep anywhere near farmers' demands for plans. It takes public money, and never enough is provided. It takes time for many farmers to convince themselves they must go ahead.

Then it takes more time for them one by one to get his own farm plan into complete operation.

Now almost 80 percent of Minnesota farmers are within soil conservation districts. Probably 30,000, or 1 in 5 of our 150,000 farms, are enrolled as cooperators. But not one in each dozen farmers has a complete soil-conservation plan in operation on his own farm in this State, and many others.

The 1957 soil erosion disaster bristles with lessons, conservationists say, including several "don'ts": Don't delay getting conservation plans in operation a bit longer than necessary. Southeastern Minnesota, which started setting up soil districts far ahead of the rest of the State, is fighting off erosion damage better. Don't plant soybeans especially, or corn or other row crops, up-and-down slopes. Farmers of southeastern Minnesota where soybeans entered the State, learned long ago about this crop whose roots fluff up the soil and expose the land to water erosion.

CULTIVATE LESS OFTEN

Don't believe any longer that the more cultivating of the soil the better—the methods that rely on chemical weed killing or on tractor-track planting which minimize cultivation look better now. And besides the great lesson of speeding up soil conservation districts' farm plans, farming people have mentioned at least three others:

First, the new Federal soil bank isn't working as it should to conserve soil. Sure, it is fine farm income insurance for those farmers who now are signed up to get $20 to $40 an acre rental for soil bank lands that are suddenly cropless or deep under water. But if instead of just annual surplus cutting the long-time (conservation reserve) side of the soil bank were more widely used to keep knolls and potholes in permanent conservation uses, the soil bank would be doing a far better soil-saving job than now. Next, the Government's conservation practice (ASC) payments could put greatly increased money incentives behind the effective types of soil district and soil bank work. Finally, the small-watersheds program of upstream flood control under Public Law 566 (Representative H. CARL ANDERSEN was one of the sponsors) which is just in the blueprint stage for the Hawk Creek-Shakopee Creek-Mud Creek-Chippewa River area that is now hit so hard, should be speeded up. This helps communities that, after the farm itself, are the focal points for attacking soil erosion at its source.

As it is now, in this year of high frequency tornadoes and floods, the soil is going down the streams to silt up the big dams that will need costly dredging, or else is being swept to the sea.

Army Engineers Report on Floods in Southwestern States

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. YARBOROUGH. Mr. President, on last Friday, June 21, 1957, the United States Army Corps of Engineers issued a preliminary report on floods in the Southwestern States, together with a status report on the flood-control program for these States.

I wish to call attention to two facts contained in this report:

1. Flood-control projects already authorized by the Congress for the Southwestern States are but 26 percent completed.

2. Damage of about $142 million was prevented by existing flood-control works, and the Corps of Engineers estimates that damage of an additional $56.5 million could have been prevented if all authorized works were completed.

I believe the lesson in these figures is plain for all to read: Flood control pays for itself—many times over.

I ask unanimous consent to have this report printed in the Appendix of the RECORD.

There being no objection, the report was ordered to be printed in the RECORD, as follows:

PRELIMINARY REPORT OF FLOODS IN THE SOUTHWESTERN STATES, OFFICE, CHIEF OF ENGINEERS, UNITED STATES ARMY

The prolonged drought in the southwestern area has been broken by what is the maximum flood period of record in some parts of the area and may, in volume of flood waters, be the greatest experienced to date for the area as a whole.

The area of heavy rainfall embraces the eastern half of Texas; roughly the eastern two-thirds of Oklahoma, the southeastern tip of Kansas; the southwestern corner of Missouri and the western parts of Arkansas and Louisiana.

Since mid-April heavy rainfall has been almost a daily occurrence, and flash floods have occurred at various points even prior to that time. As a result of this rainfall, flooding has continued up to the present time, and major floods are now underway on a number of the rivers.

In view of this continuous flood situation over the past 2 months, and the necessity for day by day project operations and emergency flood fighting, it has not yet been possible to prepare a complete record of this flood, of the effectiveness of Federal flood control work and of damages prevented by them; and of the damages that have occurred. It is possible, however, to present a current picture of this situation on the basis of the best available estimates and with the caution that they are tentative and subject to change when it is possible to make a complete review.

STATUS OF FLOOD-CONTROL PROGRAM

The Corps of Engineers has been engaged in the planning and construction of flood control improvements in this area for about 30 years—or since the 308 river basin studies were initiated in 1927, although major flood control activity dates from about 1938 when works were first undertaken under the authority of the Flood Control Act of 1936. As a result of this planning and of recommendations by the Corps, the Congress has authorized a large program for flood control and water resource development in 8 of the 10 major river basins subject to the present flood.

Cost and status: The status of the part of this authorized program within the present flood area, or effective upon the present flood, may be summarized as follows in terms of estimated cost:

Works completed or in operation (26 percent)	$407,300,000
Works under construction (39 percent)	619,900,000
Works authorized—not started (35 percent)	547,100,000
Total (100 percent)	1,574,300,000

Thus in terms of cost the authorized flood control program which has had to cope with this major flood is now about 26 percent complete.

The flood-control works under construction in the flood area have been funded by congressional appropriations to the extent og $113.1 million through fiscal year 1957, or about 18 percent of their estimated cost. Many of these have just been started. The budget under consideration for fiscal year 1958 includes $46.6 million for continuation of these projects, and $1.1 million for preconstruction planning of additional authorized projects in the flood area.

Flood storage: The greater part of the cost of this program lies in the construction of large reservoirs for flood control, power development and water conservation. The present status of this major element of the progrem is as follows in terms of flood-storage capacity:

	Acre-feet
Works complete or in operation (50 percent)	17,090,000
Works under construction (23 percent)	7,950,000
Works authorized—not started (27 percent)	9,470,000
Total (100 percent)	34,510,000

It is thus evident that while substantial progress has been made toward control and use of the waters of these rivers, the plan now in operation provides only 50 percent of the flood storage presently authorized.

The attached tabulation summarizes the cost of the program and the flood-storage capacity by major river basins. It should be understood that the program for flood control and water conservation as now authorized, even if completed, would not afford this southwestern area complete flood protection, or an adequate water supply during long periods of drought such as that experienced in recent years. Development of the area has been rapid and constant review of plans is necessary to keep them up to date and adequate to meet the needs of the area.

FLOOD DAMAGES AND EFFECT OF WORKS

During the current flood, with its record or near record volumes of flow, the reservoirs in place have been called on to do a job which about twice as much storage was intended to perform. In the face of this situation the system has functioned effectively. For the entire area it is estimated that the works in operation have prevented damages of $142 million. Damages in unprotected river valleys, and in unprotected areas, and those resulting from excess waters which the reservoirs could not store, have amounted to an estimated $125 million. There is no intention of minimizing the seriousness of the flood damage that has occured in this area but it should be recognized that damages would have ben more than doubled but for the Federal works.

Very preliminary estimates indicate that works now authorized but not yet constructed would have prevented about $56 million, or 45 percent of the damage that has occurred.

The following tabulation gives these damage figures broken down by major river basins. In presenting these estimates an effort has been made to lean on the conservative side as there is always a tendency to overestimate such effects during the stress of a major flood. The figures are not final and are given at this time essentially as indications of the overall scope of this flood disaster:

Estimated damages

[In millions of dollars]

River basin	Experienced	Prevented by existing works	Could have been prevented by authorized works
White River	6.0	7.0	2.0
Arkansas River	38.0	20.0	13.0
Red River	11.0	8.0	4.0
Sabine River	2.2	0	[1] 0
Neches-Angelina	.1	0	0
Trinity River	17.0	81.0	1.0
Brazos River	38.0	26.0	28.0
Colorado	2.7	[2] 5.0	0
Guadalope-San Antonio	10.3	0	8.5
Nueces	.2	0	[1] 0
Total	125.5	142.0	56.5

[1] No Federal works in this basin.
[2] Damage prevented by dam of lower Colorado River authority and not included in Federal total.

The preliminary estimates given above are of direct property damage, including urban and agricultural losses. They do not include associated economic losses such as loss of business and wages, shutdowns of industry, transportation delays and many indirect losses which result from a major flood and cannot be estimated until the full impact of the flood is determined. There has been some loss of life but exact figures are not available to us.

The estimated damages prevented by existing works as given above do not include the effects of the main line levee systems of the lower Arkansas and Red Rivers, which have operated successfully to protect the lower valleys of those rivers in Arkansas and Louisiana. It is difficult to estimate the damages these works have prevented, but failure of these levee lines would undoubtedly have caused damages running into the hundreds of millions.

At the present time flood stages are receding over most of the flood area, although some tributary streams such as the Verdigris in Oklahoma are now experiencing major floods and heavy rains continue over the lower Canadian.

Reservoirs of the Corps of Engineers throughout this flood area now have over 15 million acre-feet of flood water in storage, which must be released over subsequent months as downstream conditions permit. Thus, relatively high river stages must continue for some time during the release of this enormous volume of water. This volume of stored water would cover the State of Connecticut to a depth of almost 5 feet or the State of West Virginia to a depth of about 1 foot. These waters are in addition to those which will be retained in the reservoirs to replenish power and water conservation storage.

One favorable aspect of the flood is that storage for power development and water supply has been replenished. Just prior to this flood the area was still suffering from the severe drought generally of 5 or 6 years duration. At the beginning of this year the water available in power pools of seven multiple purpose projects had been reduced to 6.9 million acre-feet. This storage for generation of power has now been increased by 3.7 million acre-feet to completely fill the power pools.

Water supplies for municipalities, industry and agriculture had become critically low. In a number of cases it had not been possible because of the drought to fill the permanent pools of the Federal reservoirs. Filling of these reservoirs had made available about 1.3 million acre-feet of additional water in storage for water supply and in conservation pools. The city of Dallas, Texas, for example, which was critically short of water just a few months ago will now have an assured supply for many years.

Separate brief discussions of each major river basin accompany this statement.

Evolution of American Citizenship

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. CARLSON. Mr. President, I have just received a copy of an address entitled "Evolution of American Citizenship," which was delivered by Mr. Donald C. Little, of Kansas City, Kans., at the naturalization proceedings in the United States District Court for the District of Kansas on May 28, 1957, before Hon. Arthur J. Mellott, chief judge.

This is an excellent statement in regard to the privileges that we have as American citizens and a worthy charge to those who were naturalized.

I ask unanimous consent that the address be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

EVOLUTION OF AMERICAN CITIZENSHIP

(Address by Donald C. Little)

Your Honor, Judge Mellott, and fellow citizens, "a wonderful thing is the river of time as it flows through this vale of years." Less than 400 years ago our America was a wilderness, without a single European settlement. Yet everywhere you go today your eyes see a new form of civilization and new culture for the welfare and comfort of the individual which surpasses anything in the history of this world.

All this has been accomplished by immigrants and the sons of other immigrants who have lived here an even shorter peroid of time than Britain and Western Europe were occupied and governed by the armies and officials of Rome. Yet what you see in America today are material things—modern cities, railroads, supermarkets, superhighways, universities, automobiles.

These things are actually unimportant—cities, buildings, superhighways—because time will bring countless new builders, new engineers, new architects into the world to build even better material things.

So cities and buildings die. They serve their purpose and they die.

But the desire of the individual for freedom from want and from fear and for liberty and the right to the pursuit of happiness never dies. As history shows and commonsense approves, "your old men shall dream dreams, and your young men shall see visions," Joel promises. In parts of the world today men are tossing on prison beds, dreaming of deliverance; women are praying throughout the night. It is a strange devise which men have to seek power and lose liberty. And yet here in America for 300 years the sons of immigrants have been creating a Republic where all men are free and equal.

You will miss the whole message of America if you fail to perceive tht our way of life is built on the theory that the state exists for the people, not the people for the state; that in America the human dignity of the individual has always been fiercely protected by our courts and juries from governmental oppression and from every form of tyranny over the mind of man.

We have in our tradition certain invaluable beliefs about man and society and history and human beings—about our forms of government and the relation between man and the economic process. We practice these, but we don't export them or teach them to others very well—they are more or less unconscious with us—these basic principles of our American lives, our values of freedom which include respect for the dignity of the individual, high regard for personal integrity, and faith in reason and discussion.

Let me tell you something of how our forebears obtained these values. We Americans were the first colony to break away from colonialism and the first to free our only colony, the Philippine Islands, which action set the pattern for the rest of the world.

Our forefathers, inhabitants of Western Europe, left their native lands to seek on these shores a residence for civil and religious liberty and economic freedom because a man living in the wilderness can do largely as he chooses, and less than 400 years ago America was a wilderness, inhabited only by Indian tribes.

At the very commencement of the settlement of America, the English Crown and the Dutch Republic claimed the land now in our Thirteen Original States. These two countries made land grants to various companies, controlled chiefly by members of their national cabinets.

These political promoters of Britain and Holland, in order to induce settlers to go to the American wilderness made written concessions and agreements to prospective settlers in Britain and Europe, promising them free land, freedom of religion, the right to elect their own civil magistrates and to local self-government.

As a result of these promises and inducements, several settlements were made along our eastern seaboard, all of which allowed to these colonists economic freedom and civil and religious liberty above and beyond anything then existing in Europe and the rest of the world.

Many different peoples were to make their confluence in America and contribute to the manifold character of the future United States. From the beginning of their immigration, the leaders of the colonists were out of sympathy with their governments at home. The creation of settlements from the wilderness, the warfare with the Indians, and the remoteness from Europe widened the breach with the Old World.

Meanwhile, the mother country was paralyzed with internal civil war so that when the English state again achieved stability it was confronted with self-sufficient, self-reliant American colonists already governing themselves according to ideas of their own.

The Puritans in Massachusetts had left England to obtain civil and religious liberty for themselves and having obtained it for themselves, they refused to accord it to others. Criticisms of their church and magistrates were still not tolerated.

To escape from these restrictions, thousands of their settlers moved to Connecticut and Rhode Island, and then to the Dutch colony on Long Island, and later to New Jersey and Pennsylvania.

Thus Roger Williams of Rhode Island was the first to put into practice our complete American separation of church and State, and Rhode Island was the only State in the world at that time where there was complete religious tolerance.

Also, the fundamental orders adopted 300 years ago at Hartford, Conn., by popular assemblies of freeholders from three towns, was the first written constitution in the modern sense of the term, as a permanent limitation on governmental power, known in history. It is here that we draw the first

breath of that America which is now so familiar to us.

Three hundred years ago Dutch New York had already become a cosmopolitan town. The immigrants from Holland were themselves of the most varied lineage; for Holland had long been the gathering place of the unfortunate. Its settlers were refugees from Belgium, Bohemia, France, and the valley of the Alps; fugitive sectarians from New England, Baptist, Quakers, Jews, and some Catholics were to be found there. Eighteen dialects were spoken in New York in 1657.

Then in 1680 the news spread abroad that William Penn, the Quaker, had opened an asylum to the good and oppressed of every nation. From England and Wales, Scotland and Ireland, the Low Countries, and western Europe, immigrants crowded to the land of promise.

And so we follow the slow evolution in America of civil and religious liberty where, step by step, and migration by migration, more and more civil and religious liberty was being obtained. "The mills of the gods grind slowly, but they grind exceedingly fine;" slowly but surely, the counties and colonies by 1757 had acquired and enjoyed a sort of local home rule, entrenched and established by the passage of time and by 100 years of neglect by the English home government. They had done this chiefly through the county courts, composed usually of five judges who exercised a semifeudal authority in their districts.

During this period, these county judges were vested with both judicial and administrative powers. They were the only government their people knew or came in contact with.

These county judges had to exercise their power in such a manner as not to antagonize local public opinion. Whenever local opinion was solidly opposed to the King's policy that policy could not be carried out.

The British home government had unwittingly granted a gradual delegation of authority to the county courts which had now become a real limitation on the royal authority.

The real revolution occurred in the minds of the people in 1760 before the clash of arms. The Americans would not have sought freedom if they had not previously enjoyed a large degree of personal and political liberty and had not already become accustomed to local self-government. Colonial Americans had grown accustomed to managing their own affairs.

The fateful quarrel began when the British officers attempted to gain better enforcement of the trade laws, then, to tax the colonists, meeting resistance at every turn until the British finally attacked the colonial governments themselves.

Franklin, Adams, Jefferson proposed what amounted to dominion status, but the British refused and tried coercion, and the colonists rebelled.

The Americans simply wanted to regulate their own internal affairs and the British Government didn't want them to.

Therefore, the American Revolution, unlike most revolutions, was not a revolution to gain liberty—it was a revolution to preserve the liberty they already had.

If you want to truly understand the American formula then read and carefully study first, our Declaration of Independence, the second, the first 10 amendments to our Constitution called the Bill of Rights. The Declaration of Independence tells you what Old World customs America wanted to do away with—the Bill of Rights tells you what kind of a new government the rebellious colonists wanted to establish and did establish in the New World.

This great inheritance of self-government is the product of untold sacrifices by little people from Europe who came to America to become big people. We have no class distinctions in America because no self-respecting American will ever admit he belongs to a class. In America no intelligent person hates a proprietor because every American wants to become a proprietor himself, or see that his son becomes one.

When President Eisenhower, in speaking of his home life in Kansas, said, "We were very poor in those days, but the beautiful thing was—we didn't know it," he was expressing the spirit that makes this country different from all other countries in the world.

Today most Americans don't realize how many people all over Europe would like to become American citizens because of the economic opportunity we have to offer.

I remember during July of 1943 when we took over the little town of Lentini in Sicily, a dozen Sicilians who had previously lived in America were there to meet us. One, proud of being from Omaha, Nebr., was very disappointed when he learned that the people of Sicily could not have an election and all immediately become American citizens.

America is truly the great international country. Our armies in Europe had Germans and French, Italians, and Austrians, Czechs and Norwegians, Danes and Arabs, Yugoslavs and Greeks—and everywhere our armies went in those days I noted that we could always turn to a soldier standing by and say, "Hey, Mac—how much do these people want for this bunch of figs?", and Mac would always be able to translate for us.

That is where we are lucky. No other country has such a fountain of men who speak the language of the lands we are called upon to aid—no other country has such a reserve of men who understand the ways and have listened to their parents sing the folk songs and have tasted the wines of the land on the palate of their memory.

"This is a lucky thing for America because America is constantly on its way into Europe. You can be as isolationist as you want to be, but just as truly as Europe once invaded us with wave after wave of immigrants, now we are helping Europe with wave after wave of sons of immigrants, and, until there is a seeming stability throughout Europe, our people will have to stay in Europe and these Americans who stay in Europe will be extremely dependent on the sons of their recent immigrants, not only for language, but for wisdom and justice in the other things we think we have to offer to Europeans."

I speak of these things because America is still the great hope of mankind and everywhere in the world people are longing to become American citizens, as you have now become.

I remember in Genoa, Italy, a young Italian who wanted to be included in the very first quota of immigrants to America and when we asked him why he wanted to go to America, he thought for a moment and said, "I want to go to America because, because in America, it is Christmas every day."

Memorial Day Address By Hymie Greenspan

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. YARBOROUGH. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the text of a Memorial Day address delivered at Dallas, Tex., by Hymie Greenspan, one of the outstanding citizens of that Texas city.

Mr. Greenspan has a record of fighting for Americanism, and a record of patriotic service any person might envy. He is in his third term as national vice commander of the Jewish War Veterans of the United States, a veteran of 46 months service in World War II, and has been endorsed for national commander of the Jewish War Veterans of the United States by that organization's Department of Texas.

Mr. Greenspan is also a member of the executive committee, fifth district, American Legion; chairman of the legislative committee, Department of Texas, Disabled American Veterans; member, Dallas Committee on Employment of the Handicapped; member, board of directors of the Oak Cliff Kiwanis Club and the Oak Cliff YMCA; was named, in 1955, Kiwanian of the Year for outstanding community service; is immediate past president of the Congregation Agudas Achim, Dallas; and is president of the Boundary Merchants Association of Dallas.

Mr. Greenspan is a native of Waco, Tex., and was at one time news editor of the Jewish Observer, a newspaper in that city.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

MEMORIAL DAY

(Radio address, station WRR, Dallas, May 30 1957, by Hymie Greenspan, Dallas, Tex., national vice commander, Jewish War Veterans of United States)

Fellow Americans, to be here today, Memorial Day, is to experience a feeling of deep humility.

Memorial Day is a day to remember the dead.

Throughout the land, there lie in honored rest, men who fought in every war in which this country has engaged.

To those men, Memorial Day is a day to make a sacred promise.

To our dead, to ourselves, and to Almighty God we make this promise:

We, the living, shall do all that may be done with honor, to banish war and to enforce peace.

To keep this promise, we must keep America strong.

We must keep America strong enough to repel attacks of outside enemies.

We must keep America strong enough to withstand the stresses and strains that provide evil opportunities for hidden enemies within.

Today—Memorial Day—we have the assurance that the promise is being kept by 21 million living veterans.

If our war dead were able to see what their living comrades are doing, they would be filled with gladness.

They would see them turning aside from old, slower, hit-or-miss methods of production.

They would see them engaged in more than haphazard groping for routine jobs.

Our veterans know that to have a strong America, we must have a highly productive America. They are demonstrating it.

Our veterans know that the key to a highly productive America is trained manpower. They are providing it.

The America of today has become the leader of the free world.

Millions of trained veterans are in the forefront of our irresistible power.

One out of every six workers in the labor force is a trained veteran.

By their productive skills veterans have made it a dangerous gamble for totalitarian foes to attack us.

By their productive skills veterans have pushed the long arm of America's defensive might beyond the borders of the Western World.

By their productive skills veterans lessen each day the chances of an all-out war.

By the degree and the power of their skills, veterans are proving in office and shop, in factories and on farms, that they are keeping the promise to the dead.

Nor is the promise confined only to those who returned from war unharmed. It is being kept by those who bear on their bodies and in their minds lifelong reminders of the brutal impact of war.

Like their able-bodied comrades, disabled veterans are placing our country beyond the threat of attack. They are doing it on the job.

Disabled veterans have proved that a physical or a mental handicap need not be—and is not—a job handicap.

Disabled veterans are doing their full share of putting productive power into the making of a strong America.

In earlier times many a disabled veteran was turned aside as economic waste. That was bad economy, bad psychology, bad religion.

The character, the courage, the patience of our disabled veterans have helped the Nation turn to a better scheme of things.

Today, Memorial Day, it is clear to all that disabled veterans are keeping the promise to our dead.

They are making it difficult for inside enemies to maintain a foothold.

They are giving America the strength to repel outside enemies. And, there is another way in which veterans are making America strong. That job is being done literally on the homefront.

Millions of veterans and their families have been able, by the use of GI loans, to buy and own their homes.

GI home ownership has been good for the Nation's business growth. It has been good for civic progress. It has been good for our families, for our schools, and for churches.

It has been good for a strong America.

But there is still another element that veterans contribute to the strength of America.

Veterans know from deadly close-range experience what war actually means. They know the price of war in blood and pain. If all-out war can be avoided with honor, veterans want no more of armed conflict.

Veterans have the disciplined strength, born of battlefield experience, to keep emotions well under control when a crisis arises.

Veterans are the least likely among our citizens to confuse strength with loud, boastful talk. Idle threats are not sensible ways of behavior to those who have been to war, and who take the hazards of war seriously.

On the other hand, the veteran is the last man in America to place any value on the timid appeasement of an armed and aggressive enemy.

When it is possible to do so with honor, he avoids war.

But when our freedom is threatened by war, he has the courage to face up to it, and fight it if necessary.

These are thoughts appropriate to an American on Memorial Day.

Today, Memorial Day, we renew to ourselves, to our deceased comrades, and to Almighty God this sacred promise.

We will do our full part to keep America strong.

We will do our full part to keep America free.

We will do our full part to keep America righteous.

Only by the faithful fulfillment of this sacred Memorial Day promise can we truly, each of us, earn the right to say:

"I have fought a good fight; I have kept the faith."

Freedom of Debate in the Senate

EXTENSION OF REMARKS
OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. TALMADGE. Mr. President, on Tuesday, June 25, 1957, the special subcommittee of the Senate Committee on Rules and Administration taking testimony on proposed changes in Senate rule XXII had the privilege of hearing from Dr. Albert B. Saye, professor of political science at the University of Georgia.

Dr. Saye is one of the Nation's foremost scholars of political science. He is the author of a number of books, articles, and papers on the general field of government. He is eminently qualified to speak with authority on the subject of freedom of debate in the United States Senate.

In order that every Member of this body might have the benefit of reading his testimony, I ask unanimous consent that the text of his prepared statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

OBSERVATIONS ON PROPOSED CHANGES IN SENATE RULE XXII

(By Albert B. Saye, professor of political science, University of Georgia)

Gladstone described the United State Senate as "the most remarkable of all the inventions of modern politics." It occupies a unique place among legislative bodies. It was designed by the Federal convention as a check upon hasty action by the House of Representatives, as a participant in executive functions, as a guardian of State rights, and as a stabilizing influence in the whole constitutional system. Joseph Story called it the balance wheel in our Government. It has served its purpose well.

Since its organization on April 6, 1789, there has never been a time when the Senate, as an organized body, has not been available at the President's call, or in accord with the terms of its own adjournment, for the transaction of public business. Its rules, adopted 10 days after its organization, have remained in force from 1789 to 1957 without reaffirmation. Amendments to these rules have been adopted in the regular course of business, but it is a late date indeed to suggest that the Senate is not a continuous body. Every person with an appreciation of American history knows that it is. And serious students of American government know that any change in the Senate rules will have repercussions on our whole constitutional structure.

EFFECT OF RULES ON RELATIONS OF EXECUTIVE TO SENATE

No European state entrusts to its legislature the direct participation in executive functions which the Senate enjoys. Ours is a Presidential Government, with a check and balance accompanying a separation of powers. A contest for power between the Executive and Legislature is inherent in the separation principle. In the shift in power through the years, the President has tended to expand in power at the expense of the Legislature. Freedom of debate in the Senate has served as the most effective check on Presidential absolutism.

The prestige of the President's office and the opportunity for a constant stream of self-advertising gives the President an advantage in dealing with Congress. He does not have to face the House in open debate as does an English Prime Minister. When his party is the majority party in Congress, the President's party leaders have little difficulty in passing anything in the House. With its majority cloture and gag rules, the House is largely a rubberstamp. It is no accident that the collective judgment of the Senate produces superior legislation to that passed by the House which frequently represents no more than the hasty judgment of a few party leaders.

The Senate is the only forum in the Nation that can check on executive and party propaganda. It is the only forum where a majority President can be forced to explain the meaning of proposed legislation. It is the forum where minority criticisms can be effectively voiced and minority aspirations expressed. Alteration in rule XXII, as proposed by Mr. DOUGLAS (S. R. 17), Mr. MORSE (S. R. 21), or Mr. IVES (S. R. 28), would drastically alter the relation between the President and Congress. It would be a long step toward supplanting parliamentary government as America has known it, where legislators count as individuals and vote on legislation on its merits, by party government as it exists in European states, where legislators count but little as individuals and vote by blocs as the party leaders dictate, without incorporating the responsibility of the executive to the legislature which is viewed as the chief advantage of the cabinet form of government. A change in rule XXII is a far more serious matter than many people realize. For an excellent coverage of the significance of freedom of debate in the Senate to executive-legislation relations, I invite your attention to Lindsay Rogers' The American Senate (1931), a thoughtful study not written in a period of agitation.

PROTECTION OF MINORITY RIGHTS

The concept of majority rule is simple, but the concept of unrestrained majority rule is foreign to our written Constitution and to the spirit of American political institutions. A Federal union is not designed to enable one section to triumph over another, or the numerical majority in the Nation to force any section to the breaking point. There are areas in which self-restraint, tolerance for the opinion of others, and compromise are to be preferred to force. Calhoun's doctrine of the concurrent majority is constantly at play in American politics. Its stronghold is the consensus within our political parties. It finds expression in the selection of available candidates for office, and in the enactment of legislation. The unanimous-consent agreement made in the Senate on January 3 of this year for handling the motion by Senator ANDERSON to take up for immediate consideration rules for the Senate is a clear example of the doctrine in operation.

As John Fisher has pointed out (Unwritten Rules of American Politics, Harper's magazine, November 1948), "government by concurrent majority can exist only when no one power is strong enough to dominate completely, and then only when all of the contending interest groups recognize and abide by certain rules of the game.

"These rules are the fundamental bond of unity in American political life. They can be summed up as a habit of extraordinary toleration, plus 'equality' in the peculiar American meaning of that term. Under these rules every group tacitly binds itself to tolerate the interests and opinions of

every other group. It must not try to impose its views on others, nor can it press its own special interests to the point where they seriously endanger the interests of other groups or of the Nation as a whole.

"Furthermore, each group must exercise its implied veto with responsibility and discretion; and in times of great emergency it must forsake its veto right altogether. It dare not be intransigent or doctrinaire. It must make every conceivable effort to compromise, relying on its veto only as a last resort. For if any player wields this weapon recklessly, the game will break up—or all the other players will turn on him in anger, suspend the rules for the time being, and maul those very interests he is trying so desperately to protect. That was what happened in 1860, when the followers of Calhoun carried his doctrine to an unbearable extreme. Much the same thing, on a less violent scale, happened to American business interests in 1933 and to the labor unions in 1947 * * *.

"Now it is an unwritten but firm rule of Congress that no important bloc shall ever be voted down—under normal circumstances—on any matter which touches its own vital interests. Each of them, in other words, has a tacit right of veto on legislation in which it is primarily concerned. The ultimate expression of this right is the institution—uniquely American—of the filibuster in the Senate. Recently it has acquired a bad name among liberals because the southern conservatives have used it ruthlessly to fight off civil-rights legislation and protect white supremacy. Not so long ago, however, the filibuster was the stoutest weapon of such men as Norris and the LaFollettes in defending many a progressive cause."

TIMING OF CHANGE IN RULES

A rule is a prescribed guide for conduct. Rules serve their purpose best when adopted in a calm atmosphere and adhered to in moments of agitation. Is a time of agitation over enactment of highly controversial legislation an appropriate time to change the rule which has enabled the Senate to serve as the balance wheel in our whole constitutional structure?

Any change or proposed change at this time is likely to be influenced unduly by agitation on a single issue. The change made in 1949 has not been well reported in the press; and few people outside the Senate realize that section 3 added to rule XXII only an express statement of a provision already implicit in the existing rule, as repeatedly affirmed by action of the Senate.

Let the Senate abide in this period of agitation by the rule of freedom of debate that has served well since the Senate was organized in 1789. States wanting FEPC and kindred legislation are free to enact it.

The Federal constitutional system was designed to permit the people within each State to mind their own business within a broad range. Extremists on both sides agitating racial problems may already have had their heyday. There is a wealth of good feeling among the American people. Education, not force, is the answer to many of our sectional problems. The road may be longer, but it is much safer.

Executive Versus Judiciary Power

EXTENSION OF REMARKS
OF
HON. HARRY FLOOD BYRD
OF VIRGINIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. BYRD. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter written by Mr. Thomas L. Anderson, Washington, Pa., and published in the New York Times of June 12.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

EXECUTIVE VERSUS JUDICIARY POWER

To the EDITOR OF THE NEW YORK TIMES:

Your editorial of June 7 on "Jury Trial" and the adiministration civil rights bill gave an imperfect view of the situation. Summary punishment for contempt of a court injunction intended to guarantee the political right of a citizen to vote can be appreciated only in the light of the background of the ancient fear of the people of judicial tyranny under the guise of contempt proceedings, contending with the need to safeguard the administration of justice and avoid anarchy.

The result has been that for 125 years the legislative branch of the Federal Government has exercised the undoubted power. Many States have statutes to circumscribe the courts in defending their authority. Generally, courts may summarily punish criminal contempts committed in or about their presence only; otherwise jury trials are mandatory.

A strong Federal Executive has in more recent years demanded and Congress has granted an exemption from jury trials where the United States is plaintiff. The administration proposes to broaden the exemption to include a new type of proceeding in which the United States as plaintiff seeks by injunction to protect the citizen's vote.

Northerners as well as white and black Southerners should be astute to see the Federal Executive gets a foot no further in the crack of the door from which the judiciary has been evicted. What price rights for some at the cost of destruction of the rights of others? There must be a better solution to the problem.

THOMAS L. ANDERSON.
WASHINGTON, PA., *June 8, 1957.*

Russian Deportation of Lithuanians to Siberia

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a letter from the chairman and secretary of the Boston chapter, Lithuanian Community of America, relative to a mass meeting held in the municipal auditorium in South Boston, Mass., on June 15, 1957.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

LITHUANIAN COMMUNITY
OF AMERICA, BOSTON CHAPTER,
June 15, 1957.

The Honorable JOHN F. KENNEDY,
United States Senate,
Washington, D. C.

DEAR SENATOR KENNEDY: The Lithuanian Americans and their friends at a mass meeting at the municipal auditorium in South Boston, Mass., on June 15, 1957 to commemorate the 16th anniversary of the notorious deportation of Lithuanians from Lithuania to Siberia by Stalin's Red henchmen in 1941, are sending you their sincere gratitude for your efforts to restore all freedoms to Lithuania, forcibly and unjustly taken from her by Stalin in 1940, and they hope that you will continue your efforts leading to a free Lithuania.

Respectfully yours.

STASYS VAITKEVICIUS,
Chairman.
PRANAS AVERKA,
Secretary.

An Open Letter to Congress

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. TALMADGE. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an open letter to the Congress, written by Max Lockwood, editorial columnist for the Bulloch Herald, of Statesboro, Ga., and published in his column in the June 13, 1957, issue of that newspaper.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

IT SEEMS TO ME

(By Max Lockwood)

AN OPEN LETTER TO THE CONGRESS OF THE UNITED STATES

DEAR SIRS: I respectfully address this letter to the Members of the Congress at a time in human history when I deeply feel it is the right and the responsibility of every citizen to be heard.

I address this letter to you as a citizen of these great United States and the fact that I am a southerner is of no consequence as concerns these thoughts.

As Members of the Congress you have sworn to uphold the Constitution of the United States. As Members of Congress you have asked for and received the right to speak for the people of the various States as you represent them in National Government. As Members of Congress you have duties to perform which should and do, overshadow the selfish interests of any individual or any State.

Realizing these tremendous responsibilities I would remind you of the sacred trust which is yours in protecting the rights of all our people. In your division of government the people themselves have their only recourse to be heard and in your body they have placed grave responsibilities for the preservation of our Nation.

In this America, in less than a decade, we have seen grave changes in Government. Changes brought about, not by the wishes of the majority of our people but rather by selfish, arrogant, and greedy individuals and minority groups which have as their only aim the destruction of the very ideals of government which they profess to so strongly represent.

Since Pearl Harbor the people have watched a gradual concentration of power in the executive and judicial branches of Government which even now threaten to so dwarf the powers of Congress that it will in time become as a sounding brass.

Before you would, in your thinking, ridicule such a suggestion I trust and pray that you will give your attention and your consideration to the following thoughts.

Since the first bombs fell in the Pacific we have seen brought about a so-called unification of the Armed Forces. A complete change in the structure of our fighting forces which could conceivably destroy pride of

service which would lead to their destruction. This the Congress watched with little comment.

Since the battle of Britain we have watched by Executive order the abolition of segregation in the Armed Forces. A principle to which an entire section of this great Nation still today stands opposed. This clearly should have been submitted to the Congress for a decision but you, of course, remember that it was not so submitted.

Following the great war in Europe and Asia you have seen a President commit our troops to war in Korea when the Constitution clearly states that such a decision is reserved to the Congress.

Just a short while ago you watched our Supreme Court follow the dictates of an appointed official of Government and strike down principles of social justice by which we have lived for more than a hundred years. There can in this instance be no doubt but that the decision outlawing segregation in the State-supported schools is an encroachment on the rights of the States. To say the least the Court has written into law concepts of justice which clearly are the responsibilities of the Congress to so enact.

In your body this very day you see representatives of a Chief Executive as he sends messengers to you in a plain move to influence and dictate to you his thoughts concerning your discussion of the so-called civil-rights legislation. A few short years ago it would have been inconceivable that any court would want the right to try any American citizen and deny to him the fundamental right of a trial by jury. Yet, today, a President of the United States clearly requests, in fact dictates, that you pass legislation to this end.

Men of the Congress, it frightens me to be a part of the thinking of the people of our day who have abandoned the idea of majority rule and have substituted in its stead the rule of the minority. Minority rule in political parties, minority rule in decisions of the Supreme Court, minority rule in the election of a President, and minority rule in the expressions found in legislation submitted and approved in the United States Congress.

Today a President asks you for the right to veto any portion of the legislation which you submit for his signature. A clear-cut request for the right to accept only that portion of your legislation which is personally acceptable to him.

Respectfully, I would ask if the Congress has not been pushed behind a smokescreen of so-called social and civil rights maneuver to so divide and destroy its effectiveness as to allow the executive and judicial branches of Government to rule by executive direction.

You have seen a Cabinet official dictate to you on appropriations in the last few hours. You have seen an Attorney General all but destroy the effectiveness of the great Federal Bureau of Investigation with his foolish and childish use of it. You have seen a Supreme Court in the last few days virtually destroy the effectiveness of this same organization by making public the heart of its prosecution efforts.

On and on goes the story and I could relate to you page after page of decision after decision where not only the rights of the Congress have been abridged but have also been ignored or destroyed.

And so I would close this letter. In your thinking perhaps you may find the answer to this attack on the legislative powers of the Congress. It is an attack, and you can rest assured gentlemen, there is a reason for it.

Current Low Markets for Poultry and Poultry Products

EXTENSION OF REMARKS
OF
HON. NORRIS COTTON
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. COTTON. Mr. President, the current low markets for poultry and poultry products have had a serious effect on one of New Hampshire's major industries. Poultry producers in the Granite State have been deeply troubled by the state of the industry.

The agricultural advisory committee of the New Hampshire State Department of Agriculture recently met in Durham to discuss the situation and to make certain recommendations. The group expressed its opposition to continued Government loans for poultry expansion at a time when overproduction is one of the basic problems of the industry, and also urged a hard, cold look at the antitrust implications of the integration movement in poultry production.

I hope these points will receive the full consideration of appropriate agencies of the Government, and that the current study of the poultry industry by the Senate Committee on Agriculture and Forestry will specifically look into these suggestions.

I ask unanimous consent to have an article on this matter from the June 22 issue of Foster's Daily Democrat, of Dover, N. H., printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NEW HAMPSHIRE BOARD CALLS FOR END OF GOVERNMENT CREDIT IN POULTRY

DURHAM.—The Agricultural Advisory board of the State Department of Agriculture, holding its bimonthly conference here this week, went on record calling for an end to Government credit loans for expanding the poultry industry, while the present poultry emergency continues.

It also indicated it feels Government agencies should take a coldblooded look at poultry integration programs sweeping the country, to see if there is any violation of the Nation's antitrust laws involved and if so, take appropriate control action.

This advisory board of 10, one man from each county, spent considerable time delving into the current poultry mess which, all hands agreed is hitting big and little producers between the eyes and has driven some of New Hampshire nationally famous poultry leaders to the wall. Nobody can see the end of the upset or predict where New Hampshire finally will land in poultry income or importance.

There were reports of giant integration units starting out after control of the industry on a gigantic scale, even offering prices well above the going ones to curry favor and get a foothold in the control door.

Commissioner Fitts said that reports are that labor union moguls have entered the poultry scene in neighboring Maine, their goal the complete organization of farmers who own the growing facilities and produce the broilers.

DEPARTMENT BESIEGED

His department, he confessed is being besieged by many in the upset poultry industry, demanding that the State, as such, take a hand in doing something to straighten out the tangle and return profits to the business. He has no encouraging reply for them, he said, as nobody yet has been able to come up with anything the State can do in the complicated situation.

He said that poultrymen obviously are besieging their congressional delegates in Washington, D. C., for the answer and they in turn, seem to be trying to find it.

The question of calling a big State meeting on the poultry industry issue was debated at length with general agreement that all the headaches in the picture already have been thoroughly covered in sessions already held by several groups, and that airing the problems all over again in detail, would not add anything new to a solution.

The board, however, felt that an end to Government finance expansion moves and an antitrust look-see at mounting integration, are moves that are needed, with other points, hurry up expansion of research on use of poultry products, increased use of poultry products by the Government and other market expansion steps.

The board didn't indicate any conviction that an overnight plunge into complete Government control and dictation of the industry would solve anything. But the commissioner and his advisers did delve deeply into the details of such plans, now being offered in Washington.

Question is, Does the situation warrant quotas, controls, and penalties, even to being unable to buy a baby chicken without a Government purchase certificate, based on how many chicks a feller bought in the past 3 years? This plan, it was explained, would make it impossible for hatcheries to sell other than by certificate.

The Moral Climate in America

EXTENSION OF REMARKS
OF
HON. GORDON ALLOTT
OF COLORADO
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. ALLOTT. Mr. President, I have just read an editorial entitled "What Is the Moral Climate in America?" written by Louis B. Seltzer, editor of the Cleveland Press. In my opinion, the editorial comments forcefully on some of the happenings of our day and age. It is one of the most pertinent and poignant editorials I have read in many years. I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

WHAT IS THE MORAL CLIMATE IN AMERICA?
(By Louis B. Seltzer)

From a prison stepped Frank Costello, racketeer, thug, and thoroughly unsavory character, at whom a couple of weeks ago, a gangland enemy shot. Costello refused to talk.

The picture in our paper showed Costello surrounded by a crowd of admiring teenagers, a kind of hero worship on their excited faces.

WHY?

A trusted banker in Chesterland, 40-year-old Robert Cummings, took $28,800 from the bank which he, above all people, had the sacred trust of protecting. He used it to play the Canadian ore stock market.

The people out at Chesterland have risen to applaud, defend, and help him, arguing that he was a nice, polite, and human fellow who just did the wrong thing—and got caught.

WHY?

The other night this writer was among a group of businessmen. They travel. They have big expense accounts. They also have addresses which they exchange among one another.

They are addresses where they can keep an evening's company with women of their choice at somebody else's business expense, if that's the kind of entertainment they wish, and, so protected is all of this, that nobody is the wiser.

WHY?

In Cleveland, as in many others across America, men have by dishonest, illegal, unwholesome methods accumulated fortunes, and have managed, by one device or another, to keep out of the penitentiary.

Now that they have their large accumulations of cash an aura of respectability is accorded them. They get into the best clubs, are applauded, feted, sought after. They were smart. They didn't get caught. They are considered to be successes because they have money, no matter how they got it.

WHY?

Two judges of Cuyahoga County are deeply concerned about the spectacularly rising divorce rate both locally and nationally.

The percentage of divorces against the total number of marriages is really incredible. These two men have handled thousands of divorce cases. They are concerned about the lowered attitudes of people toward the sanctity of marriage, and the resulting destruction of moral standards. The rate is going up even higher.

WHY?

This is a great, wonderful, fabulously successful country, where comforts abound and interests are multiplying, a country which in a few hundred years, in a material sense, has accomplished more than other civilizations elsewhere on earth have achieved in thousands of years.

But something is happening to us—something deep, disconcerting, alarming, even when contrasted with all of the country's undisputed virtues, its superior knowledge, its more sophisticated attitudes. Sometimes that troubles a good many of us—something that unfortunately fixes the moral climate in which our children, more numerous than ever before, are being required to live, to think, to behave.

Frank Costello is a thug. He represents the worst in America—the worst by any standard. He has arrogantly flouted the law, paid off people to protect his illegal operations, hired to kill, cheated the Government and perverted all with whom he came in contact.

What is there in the moral climate of America today that makes it possible for teen-agers to glorify such an ugly and sordid character?

STOLE MONEY

Robert Cummings stole money—by his own admission. He was supposed to protect his depositors' interests. If a man picked another's pocket of $10, the presumption is that he would be arrested, tried and rather quickly convicted.

Nobody disputes that Robert Cummings is an extraordinarily affable personality, one who did little friendly and considerate things for people. But so, too, do politicians—like the State auditor of Illinois who robbed the taxpayers of a million dollars.

That doesn't justify his crime, and, hard as it is to say, neither does the fact that he is married and has children justify it.

If the people of Chesterland in effect condone Robert Cummings' act, raise money to pay his embezzlement and if he thus escapes legal punishment for his serious crime—what has happened again to the moral climate of this country, its willingness in modern days to compromise with what in other days there could be no compromise?

WHAT IS IT?

What is it in the air of America, the attitude of America, the moral climate of America which is causing these things—tearing us down in the basic moral respects while building us up to such astounding material heights?

Why are the newsstands of America bulging with filthy pornographic pictures and magazines and books, when there are plenty of laws already to get rid of this obscenity, but which is flourishing because there is enough public appetite for it? Why is the theater filled with it and the best sellers reeking with it?

Is it good? Is it bad? Is it deep and penetrating, or superficial and fleeting?

Where is our capacity for indignation at things we know in our hearts are wrong?

Herschel V. Jenkins

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Wednesday, June 26, 1957

Mr. TALMADGE. On July 1, one of the Nation's most distinguished and best beloved newspaper publishers, Hon. Herschel V. Jenkins, of Savannah, Ga., will retire at the age of 85.

As publisher of the Savannah Morning News and the Savannah Evening Press, Mr. Jenkins has won for himself and his newspapers the respect and admiration not only of his fellow Georgians, but also of his fellow journalists throughout the Nation. He and his newspapers have been identified with every constructive movement for the progress of the State of Georgia and the advancement of the welfare of Georgia people. Under his guidance and leadership, the Savannah Morning News and the Savannah Evening Press have been consistent and eloquent spokesmen for the maintenance of constitutional government and individual liberty in this Nation.

The biography of Herschel V. Jenkins is a truly American success story. In tribute to Mr. Jenkins and his myriad contributions to his State and Nation I ask unanimous consent that there be printed in the Appendix of the RECORD an account of his life and achievements, as prepared at my request by Hon. Joseph Lambright, editor of the Savannah Morning News.

There being no objection, the biography was ordered to be printed in the RECORD, as follows:

HERSCHEL V. JENKINS

Born October 5, 1871, in Effingham County, Ga., the son of John Jackson and Victoria Jenkins. His father was a schoolteacher.

His father died in 1888, when Herschel V. Jenkins found it necessary to leave school and come to Savannah in search of a job at the age of 17.

He became a clerk in the old Central Railroad Bank, which was owned by the Central Railroad & Banking Co., and which was then located on Bay between Bull and Drayton Streets.

From that time forward, according to his own words, he "never missed a day's pay."

Mr. Jenkins continued his association with the bank, receiving several promotions during the next 18 years. Here he began his long friendship with T. M. Cunningham, who was cashier of the bank.

In 1906 Mr. Jenkins became associated with the Central of Georgia Railway in the treasurer's office, and worked diligently here until he was named assistant treasurer in 1906. For the next 20 years he served as assistant treasurer of the Central, and in 1926, after a distinguished career of 38 years with the railroad, he acquired a controlling interest in the Savannah Morning News, embarking on his long newspaper career at the age of 55.

He was tendered a testimonial banquet by friends and his associates with the railroad in 1926 for his valuable services to the Central's clients and to the railroad and the community.

He immediately set about to learn as much about the newspaper business as possible, department by department, until he was familiar with every detail of operation.

In 1931, under his management, the Morning News acquired the Savannah Press, merging the business and mechanical departments of the two newspapers, but keeping the editorial departments separate.

He retained practically all employees of the Press so that no one would suffer by the merger. The name of the Savannah Press was then changed to Savannah Evening Press.

His ambition from the beginning was to keep his newspapers alive to the interests of the community and the section they served, to maintain high standards of journalistic ethics, and to improve service to readers and advertisers. Circulations of both papers have climbed steadily throughout Mr. Jenkins' leadership.

A man of great energy and enthusiasm, he had various other business interests and civic interests in addition to the newspapers. He was president of the Morris Plan Co., of Savannah, and under his leadership and direction this institution became strong financially and vigorous. Since 1935 he served as chairman of the coastal highway commission, was instrumental in construction of Eugene Talmadge Memorial Bridge across Savannah River.

He was elected chairman of Armstrong College commission in 1937, and served the interests of that institution. In 1942 the college named its auditorium in his honor, and in 1940 the students dedicated their annual to him. His interest in education was such that in 1956 Savannah's newest public high school was named by the board of education the Herschel V. Jenkins High School.

He served as a director of the Citizens & Southern National Bank, the Central of Georgia Railroad, and had various other business interests.

He was president of United Community Services, Savannah's community chest organization, and various other civic endeavors too numerous to list. He was active in the chamber of commerce.

He was recipient of the Lucas trophy as Savannah's outstanding citizen in 1945.

On April 25, 1899, he married Miss Bessie Y. Winn, and three daughters were born to this couple: Elizabeth, now Mrs. Porter A. Mackall; Margaret Anna, deceased; and Miss Victoria Jenkins, who makes her home with her father. Mrs. Jenkins died several years ago.

Under his direction, the editorial policies of his newspapers have been strong in their defense of basic conservative Americanism. He was an outspoken foe of novel governmental concepts foreign to the United States Constitution.

He will continue his guidance as editor emeritus of News & Press following changeover in ownership.

For Formosa

EXTENSION OF REMARKS
OF
HON. WILLIAM E. JENNER
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. JENNER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article concerning Formosa, written by Dr. Frederick Brown Harris, Chaplain of the United States Senate, and published in the Philadelphia Bulletin.

There being no objection, the article was ordered to be printed in the RECORD as follows:

THE SATURDAY SERMON FOR FORMOSA

(By Dr. Frederick Brown Harris)

Every true patriot is for America in spite of continual betrayals of our creed which shame our flag. Those who, without perspective, draw hasty conclusions from one episode in the Far East, and hurl vituperation at Taiwan, thus, unwittingly doing the Reds' bidding, should be asked this pertinent question: Why do you still believe in America when great metropolitan centers are honeycombed with corruption?

And especially when parts of the labor union movement, supposed to be dedicated to the uplift and rights of labor, are revealed as debauched by unscrupulous leadership?

Answer: Because we know that that is not all America or all of labor unions.

With all its flaws, we are still for America because it is humanity's last, best hope. Those who are against communism must be for Formosa. Facts which are stubborn things force one to that choice.

The lungs of free China are Formosa. And, praise God from whom all blessings flow, there is a free China.

Formosa is the free world's protest against the enslavement of the mainland by ruthless brigands. With all that is involved in that embattled island as at close range liberty faces tyranny, how fickle can those be whose own freedom is marked for destruction by the same foe now brandishing a bloodstained sword at the regime of their chief hate target, Chiang Kai-shek?

Now, as across the years, he scorns every sugared suggestion that he turn Benedict Arnold. How incredibly silly and shortsighted can alleged intelligent Americans be because of one unfortunate exploding incident?

MIRACLE OF TAIWAN

There are those, having expressed no wonder at the miracle of Taiwan, who talk now about being through with that vital field where but lately I saw the plants of freedom growing beautifully knee high.

This is essentially a religious article—not a retrial of an American charged with a killing. But isn't it fundamental in Christianity to put oneself in the other person's place?

With that in mind, without condoning the disgraceful acts of hotheads and yet following the admonition of the Man of Galilee, may we ask one question regarding the tragedy about which all the world is talking: If in America a Chinese soldier, one of an army on our soil, had shot and killed an American for an alleged offense of the nature charged and a Chinese court in America had allowed the defendant to go free on the testimony of no one but himself, what would be the American reaction? Do we not know America well enough to confess candidly that it would be one of resentment and, on the part of some, revenge?

A BOILING CALDRON

When into the caldron of these tense times, with boiling resentment and fiery anger already there, is added an element of dissatisfaction at the proximity of native penury and foreign plenty—and when into the black pot is poured some Communist ingredients—what a brew ready to explode.

Whatever elements came together to create the deafening noise with its sickening results, a situation is thus made to order for America's deadliest foes to defame America's loyal friend, Generalissimo Chiang Kai-shek.

In all this uproar let me remember that those who benefit most from any downgrading of the President of free China are blatant atheists, who believe in nothing above the ground and who deride our faith in spiritual verities. The target of their billingsgate is an humble, devout Christian, who being reviled reviles not again.

I have never met a man whose Christian spirit is more radiant and contagious. Last summer I listened to his affirmation of faith with admiration and uplift.

DEVOUT CHRISTIAN

In spite of all pressures, he spends at least an hour a day, rising at dawn, in private devotions. Every Sunday, he and his inspiring companion, so well known in America, worship in the church they love. One who has watched him from his youth declares: "He embraced Christianity almost in the New Testament sense, as a man who squares his whole life with his faith."

These two inspiring Christians are fostering more than 100 prayer groups in all parts of Taiwan. On that island, meeting all phases of human needs, they are making tremendous progress in lifting the levels of living.

The present government in Formosa is accomplishing Chiang Kai-shek's vast plans for the mainland. These welllaid policies were balked by conditions over which he had no control, including devastating invasions by a cruel foe. When advisers, even from free lands, gave him counsel which proved to be drastically wrong, he rightly took the attitude often expressed by Syngman Rhee: "You can't cooperate with a rattlesnake."

Chiang has turned in disgust from their repeated "'Come into my parlor,' said the spider" blandishments as they offer him a partnership alliance. For freedom's sake, he chose the West and turned his back on the seemingly invincible Japan.

SYMBOL OF CHINA

The able and worthy ambassador of Taiwan to the United States, Hollington Tong, does not exaggerate when he says, "For more than 30 years, through vicissitudes and trials which would have destroyed an ordinary man, Chiang has been the acknowledged symbol and conscience of a half-billion Chinese people."

His people have never repudiated him, as his enemies contend. Untold millions would eagerly rally to his standard now were he but on the mainland.

With unfeigned admiration, the late President Franklin D. Roosevelt declared: "President Chiang came up the hard way to accomplish in a few years what it took us 200 years to attain." To be for Formosa is to be for Chiang's cause; and to be for Chiang is to be for freedom as it fronts tyranny.

Government's Budgeting and Accounting Procedures

EXTENSION OF REMARKS
OF
HON. JOHN F. KENNEDY
OF MASSACHUSETTS
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. KENNEDY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD editorials concerning Senate bill 434, which recently passed the Senate unanimously and is now before the House, from the Union Leader, of Manchester, N. H., and the Journal, of Meriden, Conn.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the Manchester (N. H.) Union Leader of June 19, 1957]

It's about time the Federal Government's financial structure was placed on a sound accounting basis. And Senator JOHN F. KENNEDY, of Massachusetts, is to be commended for his sponsorship of Senate-approved bill, S. 434, which would convert appropriations to an annual expenditures basis. Much of the current confusion over appropriations and backlogs would be cleared up by Senator KENNEDY's bill, which would appropriate funds for each fiscal year upon estimates of expenditures actually to be made during that year.

In placing this Hoover Commission recommendation in bill form and pushing its passage, Senator KENNEDY also has performed a service for his colleagues, many of whom have become increasingly irritated over their lack of control over appropriations once they are made. These unexpended balances run into billions of dollars each year, and it takes some tall explaining to satisfy the public's increasing concern over this slipshod way of doing business.

We haven't always agreed with Senator KENNEDY, but this time he appears to be on solid ground.

[From the Meriden (Conn.) Journal of June 14, 1957]

KENNEDY BILL PASSES SENATE

The Kennedy bill, introduced by Senator JOHN F. KENNEDY, Democrat, Massachusetts, has been passed by the Senate. If the House approves a measure carrying the same provisions, the Government's budgeting and accounting procedures will be placed on an accrued expenditures basis, thus meeting one of the key recommendations of the second Hoover Commission.

Under the plan accepted by the Senate, agency budgets would be determined on a cost basis, agency accounts would be maintained on an accrual basis and appropriations would be made on an annual accrued expenditures basis. This is accountant's language, but it means simply that converting appropriations to an annual expenditures basis the Congress would appropriate for each fiscal year upon estimates of expenditures actually to be made during that year. Carryovers of unexpended balances of appropriations, which now run into billions of dollars each year, would be reduced to a minimum. Once appropriations have been made, Congress has little control over them.

Senator KENNEDY has worked energetically for this legislation, which was actively supported by a long list of economy-minded Senators.

The Hoover Commission produced its recommendations only after long and careful study. It is gratifying that this particularly useful recommendation has received the Senate's approval. The House should follow the Senate's example in endorsing a measure which would place Government budgeting and accounting on a much more businesslike basis than at present.

Senator Joseph R. McCarthy R. I. P.

EXTENSION OF REMARKS
OF
HON. BARRY GOLDWATER
OF ARIZONA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. GOLDWATER. Mr. President, there appeared in the weekly newspaper, Our Sunday Visitor, on Sunday, May 19, 1957, a very interesting and honest editorial entitled "Right or Wrong, Senator Joseph R. McCarthy, R. I. P." I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RIGHT OR WRONG, SENATOR JOSEPH R. MCCARTHY, R. I. P.

(By Father Richard Ginder)

In the obituaries about the late Senator McCarthy, there was much talk about his leap from relative obscurity into the headlines, about what a power he was in this country until his censure by the Senate.

The peculiar fact is that the power and stature of Senator McCarthy were built up by his enemies, by the very publicity intended to destroy him. For a year or two, every time you picked up a magazine or a newspaper you had McCarthy's picture beaming out at you, accompanied by a rabid, hate-slanted article describing the Senator's most recent activities. The daily press seemed to have become quite unbalanced on the subject, the result being that their writings were spoiled by all the vices they attributed to McCarthy and thus they only succeeded in discrediting themselves rather than him.

A friend once asked how it is that the daily press is so unanimous in taking a clearly predictable view on any given point. "It seems controlled," he said, "as by one supreme boss, who sits somewhere dictating the line to be followed as each issue arises."

The fact is that it takes very few people to control the American press. A handful of men in key positions with the wire services (UP, AP, INS), the Washington reporters who hash things out together over their bourbon at the National Press Club, and perhaps the editorial writers on the New York Times and the Herald Tribune. The rest of the press throughout the country takes its cue from them.

Then, alas, once it has been decided in the Press Club bar that any certain individual is a dirty so-and-so, he's had it. He's through. He couldn't redeem himself even if he joined the Trappists.

Of the people who read newspapers, it seems to me that there are three types: the critical and articulate readers—the clergymen, doctors, lawyers, professors, etc., who are informed students of public affairs and subscribe to several journals of opinion. These will often differ from a printed opinion, denounce it among their friends, and write an occasional letter to the editor.

But too many millions, unfortunately, allow themselves to be led around by the nose. They believe everything they read in the papers and it never occurs to them to challenge a slanted writeup, to ask for proof, to evaluate adjective and adverbs.

(Compare: "Flabby Senator Nobody lounged laxily across the desk, idly picking his nose."

("Hale and Hearty, a picture of vigorous optimism, Senator Nobody relaxed at his desk, stroking his nose in a gesture of momentary reflecting.")

Such reportorial skulduggery is swallowed whole by millions of the uncritical. For instance, one of the most amazing phenomena of the last campaign was the overnight acceptance of the "Liberal" canard that Nixon was somehow—not just the less desirable of the two candidates for the Vice-Presidency, but that he was somehow immoral, untruthful, perfidious, someone who really ought to be behind bars: "Tricky Dick."

Whenever I heard that expression used, I made it a practice to ask "Why? What has he done? What's wrong with him?"

It was pathetic in practically every instance (cab drivers, filling-station attendants, waitresses, etc.) to see the jaw drop and the baffled look creep over the face. Then the stammering and, finally, something inane: "I dunno. Seems like you always hear 'Trick Dick.' Nobody likes him. 'Tricky Dick.' That's all you hear. I dunno. . ."

Those are the uncritical millions who are manipulated by the press. They think and talk as they are told—though they sometimes have a nasty way of voting against instructions and so the press is occasionally surprised by the election returns.

Finally, there are the millions of good people not gifted with a talent for expression. They read their daily paper and they think their own thoughts. In the bull session at work, they let the glib fellows do all the talking, because they themselves don't have the gift of the gab. But they do form their own opinions, and they pray for their friends in public affairs, and they vote.

Senator McCarthy was destroyed by his own integrity. He was advised again and again to lay off the Army. But he was stubborn and he kept pressing the question "Who promoted Peress?" even when he saw that he was embarrassing that whole branch of the service.

Now in this country, the Army is always right. It never makes a mistake. It cannot be allowed to lose face. Especially when there is a general in the White House. In a conflict between anyone and the Army, it is not hard to predict whose side the President would take.

Thus, McCarthy had the choice of letting up or being broken. He would not let up.

But such was the man's integrity and persistence that when the principle of that case came up recently for a promotion in the Army, the others treated his difficulties with the Senate committee as so much cold coffee, ancient history, although they were careful not to say that he perjured himself, they admitted that the officer had been less than candid, that he had not told the truth. Senator McCarthy could not forget the man's lack of cooperation with a senatorial committee, and so, out of the whole Senate, he alone voted against the promotion.

During the days when the pack was in full cry against him, the shibboleth was "I like what he is doing but I don't like his methods." As far as this writer could see, his methods were exactly those used by every other Senate investigator over the years, used by Senator MCCLELLAN against Dave Beck just recently: McCarthy asked questions; pointed questions.

Nevertheless, in those days I wrote to Washington and asked for some transcripts of the hearings. They made a 2-foot stack on my desk. Then I sat down and did my homework. I read through that stack and ended with the conclusion that there was nothing wrong with McCarthy's methods.

After that, whenever I would hear a liberal sounding off about McCarthy I would ask, "Have you read the transcripts of the hearings?" The answers varied: "I don't need to"—"I saw Ed Murrow's show"—"I heard him on the radio"—"I read his Chicago talk"—but (and this is God's truth) I did not find one liberal who had done his homework.

I have a friend who is a lawyer and who made a practice of writing to Catholic liberals and putting precisely that question to them: Have you read the record? Practically all of them answered him, and you should read those letters—all the fumbling, hemming and hawing, excuses and apologies, all adding up to the preposterous idea that you really don't have to study the sources before making up your mind. His friends have often urged that lawyer to publish all that correspondence, but he is too charitable.

There are many who think that Senator McCarthy's religion and nationality were against him. This is undoubtedly true. When you think of the influence he enjoyed back in 1953 and 1954—how he secured the defeat of Maryland's Senator Tydings and was even mentioned for the Presidency. (I doubt that he would have run, but at the time it looked as though his large popular following would have given him some bargaining power at the convention and, who knows? Perhaps a Cabinet post in the new administration.)

All this must have struck terror in the hearts of the bigots and the ignorant. They were unqustionably among those who hated him.

There were the snobs, too. If only the Senator could have been lean and elegant, a graduate of some ivy-league school, with a fine old Anglo-Saxon name instead of that hopelessly Irish McCarthy. Why, it practically reeked of peat smoke and Roman Catholicism. Perish the thought. Perish the man.

Viewed in retrospect, Senator McCarthy's only fault was patriotism—his only vice, hatred of communism. May God have mercy on his soul.

Tribute by Oxford University to Adlai E. Stevenson

EXTENSION OF REMARKS
OF
HON. JOHN J. SPARKMAN
OF ALABAMA
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. SPARKMAN. Mr. President, recently a great honor was paid to a great American. An honorary degree was conferred upon Gov. Adlai E. Stevenson by Oxford University of England.

Governor Stevenson is spending several weeks abroad. He is making friends for America and helping to repair the deterioration that has taken place in recent years between us and our allies.

A well-known writer, Barbara Ward—Lady Jackson—was present on this occasion. She wrote a letter describing it to a charming American lady, Mrs. Jane Dick, of Lake Forest, Ill. I have a copy of the parts of this letter which describe the reception accorded Governor Steven-

I ask unanimous consent that the excerpts from this letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Part of a letter I received recently from Lady Jackson (the writer, Barbara Ward), containing such a vivid and heartwarming description of the tribute paid by Oxford University to Adlai, that I thought you might enjoy having a copy of it.

JANE DICK.

FROM A LETTER WRITTEN BY BARBARA WARD JACKSON TO JANE DICK

JUNE 4, 1957.

I thought you and Eddie might like to hear about the Governor's honorary degree at Oxford. It was a great occasion and I wish more of his friends could have been there. The Stevenson family were well represented—with Buffie and Ernest and Adlai III and Nancy, but Bill Blair and I were the only stand-ins for the circle of friends and supporters.

The celebrations began at 4 p. m. with a tea at the Vice-Chancellor's lodgings. I may say it was a day as bitterly cold as only an English May can produce, a day you would have thought daunting to audiences in the vast unheated spaces of the Sheldonian Theatre. But the Public Orator at tea said that none of his own family could go because every ticket had been disposed of weeks before. The Vice-Chancellor, Mr. Masterman, is the archetype of the University Don—gentle, elderly, urbane, witty, a bachelor. He was already in academic dress, morning coat, Geneva bands and voluminous gown. He complained of his mortarboard. On his first official occasion, he had to raise it 193 times in 30 minutes. "And," he added, "I have arthritic fingers." The Public Orator was also arrayed in white bands and robe and he circulated to the few guests the Governor's citation—the Latin praises which are read out before the conferring of the degree and record why the university has decided to accord the honor. You will no doubt see this citation—I haven't a copy—but I'll only say that it is one of the warmest and most flattering that I have ever read in a university not over-given to enthusiasm. While we struggled over the Latin, the Governor was tried out for length in his scarlet academic gown and for (mental) breadth in his flat black velvet Tudor bonnet. He looked like one of Henry VIII's rather less staid advisers.

Just before 5, we were drive to the Sheldonian, a large covered amphitheatre in shape. The academic community sat on the floor of the hall facing the tiers arranged in a semi-circle. In the centre of the tiers was the Vice-Chancellor's throne. The rows on each side of this were reserved for invited guests—and you needed the agility of a mountain goat to climb them to your seat. Behind and above were public galleries filled to overflowing. In fact, two Asian gentlemen had climbed on to a sort of pulpit arrangement on one side of the amphitheatre and two clerical students on the other. The faculty sitting in solid ranks below, wearing black and scarlet gowns, the women dons in our appalling academic bonnets, varied from the infinitely old to baby fellows just out of the egg, from the extremely somnolent to the eager, the talkative and the gay.

We waited about 10 minutes, perched on our high benches. Then a hush fell, and we all rose to our feet for the vice chancellor's procession. This entered from a side door. Four macebearers came first, carrying heavy golden maces, then two unidentified dons—possibly proctors—in academic dress, then the vice chancellor, looking remarkably shy. He raced through the arena, and with quite remarkable agility hoisted himself up to his steep chair. He then raised his mortarboard to the company, and I found myself compulsively keeping count (the final score was poor—only a dozen). The proctors and macebearers sat down below, and we all sat again and waited. There were confused sounds outside, a certain amount of cheering and, to the trained eye, the unmistakable flash of light bulbs in the gray afternoon light. The great doors at the end of the arena—facing the tiers—opened once, and a cautious face looked in. Through the crack we could see the distant figure of the governor, gorgeous in scarlet, standing beside the public orator and surrounded by a bedlam of press photographers. This only added to the hush and decorum within. The face that peered in must have been satisfied, for, a moment later, the proctors arose and marched back between the rows of faculty members, and once again we all got to our feet. The great doors swung open, the proctors righted about and stamped slowly back, followed by the governor, looking pale and moved, and the public orator. There was absolute silence until the procession reached the open space before the throne. There, in clear Latin, the public orator read out the citation, very gracefully, savoring every phrase (and, why not, for he wrote it), and then the governor advanced and climbed the excessively abrupt steps to the throne. The vice chancellor (I need hardly say) raised his mortarboard, then grasped the governor's hand, and declared him a doctor honoris causae.

Thereafter a really very surprising thing happened—for Oxford, at least. The assembled audience raised the roof. They clapped, they stamped, they banged the benches, and the hurricane went on for at least 2 minutes. Many of the dons were visibly surprised—and as visibly delighted. I am told that all over the upper tier, where the undergraduates were thickest, there appeared a rash of Stevenson buttons. The four conspicuous gentlemen perched in their pulpits almost fell to the arena in their excitement. It was a wonderful demonstration of affection and respect, and, I believe, unique in Oxford, at least in these last cynical, unemotional decades.

The governor then lectured for nearly an hour and was listened to with deep attention. I doubt if the acoustics of the Sheldonian are any too good, certainly not for the benches where we sat, since the lectern was immediately to the right of the vice chancellor's throne and slightly below it. But in spite of the fact that perhaps half the audience had to strain to hear, there was none of that coughing and restlessness which comes when people lose interest or lose heart. At times, there was that hush of complete communication when an audience is literally conscious of nothing but the speaker's words. And—since it was the governor speaking—there were some enchanting moments of humor and impromptu reaction, too. He won all hearts at the beginning by referring to the saying that Oxford is reputed the home of lost causes. Whom, then, could they more fitly distinguish than the man who was probably the world's greatest living exponent of the lost cause? Later, just as the governor mentioned a figure for foreign aid—$750 million or some such—a roll of coins fell from some listener's pocket and bounced noisily to the ground. The governor paused just long enough to say: "Now, see you retrieve them," and went straight on with his text. The audience gave a howl of pleasure.

At the end, the ovation was as warm as at the start—a test, indeed, after 55 minutes of oratory—and when the governor left in procession with the vice chancellor, a small army of students followed him until he was finally retrieved and bundled into a university car. Only, I think, those who know the normal temperature of Oxford's academic occasions will realize how warmly and decisively the faculty and the students demonstrated their appreciation of the governor's role in domestic and international politics. And the demonstration was all the more remarkable in that 1957 is not, alas, a year in which America is much loved in Britain. The Oxford occasion turned into a reaffirmation of our deeper links and only the governor could have achieved this.

MR. ADLAI STEVENSON

(Oration delivered by the public orator's deputy, the principal of Jesus College, in a convocation held on May 24, 1957)

This is a time when England extends to all American visitors an especially warm welcome, because we wish to leave the rest of the world in no doubt of the strong links which still bind our country to theirs: our common heritage of culture, our traditional tie of kinship, three centuries old this very year, and not least our fundamental friendship which allows us the privilege of friends, an occasional difference of opinion. Moreover, the eminent American citizen, whom we are happy to see with us today, is particularly welcome to a university audience. We all know his distinguished record in his own political arena and among the dissensions of the United Nations, and we see in him one who has never failed to exemplify just those virtues which it is the duty of a university to foster, the passion for truth, sound learning spiced with charm, wit without rancour, eloquence without self-advertisement.

Small wonder that with such endowments he was twice chosen as candidate for the supreme office of President; he failed in the high emprise, yet greatly failed. Through the campaigns he preserved his rectitude, his courtesy, his charm and at the very height of the election, his equanimity. We could tell from his courage in defeat what a great President he would have been, had the victory fallen to him. Our admiration might find expression in Addison's famous lines:

"Tis not in mortals to command success,
But we'll do more, Sempronius; we'll deserve it."

But why delay you longer by commending his great qualities, his learning and his eloquence when we are all eager to listen to his address as soon as our convocation is dissolved?

I present to you, for the degree of honorary doctors of civil law, Adlai Stevenson, amid the strains and stresses of national and international politics, the champion of humanism in word and deed, and himself the source.

Disappearance of Gerald Murphy, of Eugene, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. NEUBERGER. Mr. President, there is a saying that the flag follows every American, no matter where he may be. The Representative from Oregon's Fourth Congressional District—my esteemed friend, CHARLES O. PORTER—has been insisting that this axiom apply to our constituent, Gerald Murphy, the brave aviator from Eugene, who has disappeared mysteriously in the Dominican Republic.

I ask unanimous consent that the excerpts from this letter be printed in the Appendix of the RECORD.

Part of a letter I received recently from Lady Jackson (the writer, Barbara Ward), containing such a vivid and heartwarming description of the tribute paid by Oxford University to Adlai, that I thought you might enjoy having a copy of it.

JANE DICK.

FROM A LETTER WRITTEN BY BARBARA WARD JACKSON TO JANE DICK

JUNE 4, 1957.

I thought you and Eddie might like to hear about the Governor's honorary degree at Oxford. It was a great occasion and I wish more of his friends could have been there. The Stevenson family were well represented—with Buffie and Ernest and Adlai III and Nancy, but Bill Blair and I were the only stand-ins for the circle of friends and supporters.

The celebrations began at 4 p. m. with a tea at the Vice-Chancellor's lodgings. I may say it was a day as bitterly cold as only an English May can produce, a day you would have thought daunting to audiences in the vast unheated spaces of the Sheldonian Theatre. But the Public Orator at tea said that none of his own family could go because every ticket had been disposed of weeks before. The Vice-Chancellor, Mr. Masterman, is the archetype of the University Don—gentle, elderly, urbane, witty, a bachelor. He was already in academic dress, morning coat, Geneva bands and voluminous gown. He complained of his mortarboard. On his first official occasion, he had to raise it 193 times in 30 minutes. "And," he added, "I have arthritic fingers." The Public Orator was also arrayed in white bands and robe and he circulated to the few guests the Governor's citation—the Latin praises which are read out before the conferring of the degree and record why the university has decided to accord the honor. You will no doubt see this citation—I haven't a copy—but I'll only say that it is one of the warmest and most flattering that I have ever read in a university not over-given to enthusiasm. While we struggled over the Latin, the Governor was tried out for length in his scarlet academic gown and for (mental) breadth in his flat black velvet Tudor bonnet. He looked like one of Henry VIII's rather less staid advisers.

Just before 5, we were drive to the Sheldonian, a large covered amphitheatre in shape. The academic community sat on the floor of the hall facing the tiers arranged in a semi-circle. In the centre of the tiers was the Vice-Chancellor's throne. The rows on each side of this were reserved for invited guests—and you needed the agility of a mountain goat to climb them to your seat. Behind and above were public galleries filled to overflowing. In fact, two Asian gentlemen had climbed on to a sort of pulpit arrangement on one side of the amphitheatre and two clerical students on the other. The faculty sitting in solid ranks below, wearing black and scarlet gowns, the women dons in our appalling academic bonnets, varied from the infinitely old to baby fellows just out of the egg, from the extremely somnolent to the eager, the talkative and the gay.

We waited about 10 minutes, perched on our high benches. Then a hush fell, and we all rose to our feet for the vice chancellor's procession. This entered from a side door. Four macebearers came first, carrying heavy golden maces, then two unidentified dons—possibly proctors—in academic dress, then the vice chancellor, looking remarkably shy. He raced through the arena, and with quite remarkable agility hoisted himself up to his steep chair. He then raised his mortarboard to the company, and I found myself compulsively keeping count (the final score was poor—only a dozen). The proctors and macebearers sat down below, and we all sat again and waited. There were confused sounds outside, a certain amount of cheering and, to the trained eye, the unmistakable flash of light bulbs in the gray afternoon light. The great doors at the end of the arena—facing the tiers—opened once, and a cautious face looked in. Through the crack we could see the distant figure of the governor, gorgeous in scarlet, standing beside the public orator and surrounded by a bedlam of press photographers. This only added to the hush and decorum within. The face that peered in must have been satisfied, for, a moment later, the proctors arose and marched back between the rows of faculty members, and once again we all got to our feet. The great doors swung open, the proctors righted about and stamped slowly back, followed by the governor, looking pale and moved, and the public orator. There was absolute silence until the procession reached the open space before the throne. There, in clear Latin, the public orator read out the citation, very gracefully, savoring every phrase (and, why not, for he wrote it), and then the governor advanced and climbed the excessively abrupt steps to the throne. The vice chancellor (I need hardly say) raised his mortarboard, then grasped the governor's hand, and declared him a doctor honoris causae.

Thereafter a really very surprising thing happened—for Oxford, at least. The assembled audience raised the roof. They clapped, they stamped, they banged the benches, and the hurricane went on for at least 2 minutes. Many of the dons were visibly surprised—and as visibly delighted. I am told that all over the upper tier, where the undergraduates were thickest, there appeared a rash of Stevenson buttons. The four conspicuous gentlemen perched in their pulpits almost fell to the arena in their excitement. It was a wonderful demonstration of affection and respect, and, I believe, unique in Oxford, at least in these last cynical, unemotional decades.

The governor then lectured for nearly an hour and was listened to with deep attention. I doubt if the acoustics of the Sheldonian are any too good, certainly not for the benches where we sat, since the lectern was immediately to the right of the vice chancellor's throne and slightly below it. But in spite of the fact that perhaps half the audience had to strain to hear, there was none of that coughing and restlessness which comes when people lose interest or lose heart. At times, there was that hush of complete communication when an audience is literally conscious of nothing but the speaker's words. And—since it was the governor speaking—there were some enchanting moments of humor and impromptu reaction, too. He won all hearts at the beginning by referring to the saying that Oxford is reputed the home of lost causes. Whom, then, could they more fitly distinguish than the man who was probably the world's greatest living exponent of the lost cause? Later, just as the governor mentioned a figure for foreign aid—$750 million or some such—a roll of coins fell from some listener's pocket and bounced noisily to the ground. The governor paused just long enough to say: "Now, see you retrieve them," and went straight on with his text. The audience gave a howl of pleasure.

At the end, the ovation was as warm as at the start—a test, indeed, after 55 minutes of oratory—and when the governor left in procession with the vice chancellor, a small army of students followed him until he was finally retrieved and bundled into a university car. Only, I think, those who know the normal temperature of Oxford's academic occasions will realize how warmly and decisively the faculty and the students demonstrated their appreciation of the governor's role in domestic and international politics. And the demonstration was all the more remarkable in that 1957 is not, alas, a year in which America is much loved in Britain. The Oxford occasion turned into a reaffirmation of our deeper links and only the governor could have achieved this.

MR. ADLAI STEVENSON

(Oration delivered by the public orator's deputy, the principal of Jesus College, in a convocation held on May 24, 1957)

This is a time when England extends to all American visitors an especially warm welcome, because we wish to leave the rest of the world in no doubt of the strong links which still bind our country to theirs: our common heritage of culture, our traditional tie of kinship, three centuries old this very year, and not least our fundamental friendship which allows us the privilege of friends, an occasional difference of opinion. Moreover, the eminent American citizen, whom we are happy to see with us today, is particularly welcome to a university audience. We all know his distinguished record in his own political arena and among the dissensions of the United Nations, and we see in him one who has never failed to exemplify just those virtues which it is the duty of a university to foster, the passion for truth, sound learning spiced with charm, wit without rancour, eloquence without self-advertisement.

Small wonder that with such endowments he was twice chosen as candidate for the supreme office of President; he failed in the high emprise, yet greatly failed. Through the campaigns he preserved his rectitude, his courtesy, his charm and at the very height of the election, his equanimity. We could tell from his courage in defeat what a great President he would have been, had the victory fallen to him. Our admiration might find expression in Addison's famous lines:

"'Tis not in mortals to command success,
But we'll do more, Sempronius; we'll deserve it."

But why delay you longer by commending his great qualities, his learning and his eloquence when we are all eager to listen to his address as soon as our convocation is dissolved?

I present to you, for the degree of honorary doctors of civil law, Adlai Stevenson, amid the strains and stresses of national and international politics, the champion of humanism in word and deed, and himself the source.

Disappearance of Gerald Murphy, of Eugene, Oreg.

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Wednesday, June 26, 1957

Mr. NEUBERGER. Mr. President, there is a saying that the flag follows every American, no matter where he may be. The Representative from Oregon's Fourth Congressional District—my esteemed friend, CHARLES O. PORTER—has been insisting that this axiom apply to our constituent, Gerald Murphy, the brave aviator from Eugene, who has disappeared mysteriously in the Dominican Republic.

The fate of our constituent from Eugene had received little official action by Government agencies until Representative PORTER began a searching investigation of the circumstances surrounding his disappearance. Now, a full-scale investigation may be imminent. If our constituent, Gerald Murphy, is dead, others may escape his grim destiny because an Oregon Member of Congress chose not to let the issue drop.

Representative PORTER's activities in connection with the Gerald Murphy case have resulted in considerable acclaim in the national press. I ask consent, Mr. President, to have printed in the Appendix of the RECORD an editorial from the New York Times entitled "The Dominican Case," a portion of Mr. Drew Pearson's column from the Washington Post and Times Herald of June 23, 1957, and an article from the Island Times of San Juan, Puerto Rico, dated June 14, 1957, regarding Mr. PORTER's efforts to lift the mystery surrounding the disappearance of Gerald Murphy, of Eugene, Oreg.

There being no objection, the editorial and articles were ordered to be printed in the RECORD, as follows:

[From the New York Times of June 21, 1957]

THE DOMINICAN CASE

Generalissimo Trujillo, dictator of the Dominican Republic, has not even deigned to permit his Government to answer the May 2 note of the United States State Department. So far as is known he has not even extended the courtesy of acknowledging this formal note from a power that has been friendly to him for reasons of state.

The subject at issue is the disappearances, first of Jesús de Galíndez, a Spanish Basque professor at Columbia University, on March 12, 1956, in New York, and secondly of the young American pilot, Gerald Murphy, in the Dominican Republic on December 3, 1956. All the evidence in both cases points straight at Generalissimo Trujillo. The State Department, having established to its satisfaction the possibility of a connection betweeen the Galíndez and Murphy disappearances, asked for more information and also asked that the diplomatic immunity of the Dominican Consul General in New York at the time he waived in order that he should be amenable to the usual and lawful procedures in matters of investigation and trial in the United States.

General Espaillat, the man in question, is in the Dominican Republic and is still alive—one of the few figures known to be connected with these mysteries who has survived. Nothing has happened or been divulged since May 2 that in any way lessens the suspicions that the Dominican dictator is involved in these cases. On the contrary, the longer Generalissimo Trujillo hesitates to reply to the State Department the stronger these suspicions will grow.

It has all along been the obvious hope of the Dominican dictator that public interest in the United States will gradually disappear and that the State Department will either let the matter drop or pigeonhole it. But the American press and people cannot let this matter be forgotten. Moreover, there is a courageous spokesman in Congress, Representative CHARLES O. PORTER, who represents Murphy's constituency in Oregon and who is also determined to keep fighting for a solution to these mysteries. There is likewise a Federal grand jury in Washington studying the cases.

Generalissimo Trujillo is therefore simply making matters more difficult for himself by ignoring the State Department's note. Not even the Iron Curtain countries are so discourteous as to refuse to answer a formal communication from the United States Government.

[From the Washington Post and Times Herald of June 23, 1957]

THE WASHINGTON MERRY-GO-ROUND

(By Drew Pearson)

UNLOVED DICTATORS

How much Latin Americans dislike dictatorships has been revealed by the ovation given freshman Representative CHARLES PORTER, Democrat, of Oregon, who started the current campaign against dictator Trujillo, of the Dominican Republic.

PORTER has been deluged with invitations to visit Latin America, and last week he was almost mobbed by a crowd of cheering Costa Ricans at the San José Airport.

It happens that Gerald Murphy, the American pilot allegedly murdered by the Trujillo regime, came from PORTER's district in Oregon. After Murphy had helped to carry the body of Prof. Jesús Galindez, of Columbia University, back to the Dominican Republic, he mysteriously disappeared.

PORTER's battle to find out what happened to Murphy has resulted in a stiff State Department note to the Dominican Government, demanding that it produce the former Dominican Consul in New York, who is suspected of plotting the Galindez murder.

Chief result all over Latin America: PORTER has been hailed as a hero. El Tiempo, long-suppressed newspaper in Bogotá, has invited him to visit Colombia. The Honduran, Ecuadoran, and Uruguayan Governments have invited him to visit their countries. Two newspapers in Panama have invited him to be their guest.

The State Department has warned PORTER privately not to make these visits. Diplomats feared for his safety. However, he ignored State Department advice and went to Costa Rica. A crowd of 2,000 people welcomed him at the airport.

The State Department, in a quick reverse of policy, sent William Hieland, Director of Mid-American Affairs, to meet PORTER, while Robert Woodward, able Ambassador to Costa Rica, was genuinely hospitable.

[From the Island Times, San Juan, P. R., of June 14, 1957]

PUERTO RICO AND THE MODERN WORLD

(By Earl Parker Hanson)

I said it last week, and I say it again: The actions taken by Representative CHARLES O. PORTER in simply demanding that United States Government clear up the tangled and sordid mystery of the disappearance of one of his constituents amounts to the greatest blow struck in years against the worst of America's ditcatorships, and so also against dictatorships in general. At the present moment, it looks like another accident getting ready to happen—this time to a Latin American rather than a North American or a Basque.

Now PORTER is being hailed far and wide as the white hope of Latin America's people, as the greatest United States Latin American since F. D. Roosevelt, as a Latin American who belongs to Latin America. Had he been told 6 months ago that that would happen, he would have waved away the very thought as an absurdity. He is a plain Oregon lawyer who plays baseball and probably golf, puts his children in the Cub Scouts, and in all probability belongs to Rotary and attends a Protestant Church. What kind of Latin American is that?
